# AMERICAN BREEDER

A Farmer's Paper, Devoted to the Breeding and Care of Their Live Stock  
and the Welfare of Their Families and Homes.

Published Twice a Month. Subscription Price, One Year 50c, Three Years \$1.00

Volume VIII

Kansas City, Missouri, September 5, 1914

Number 1

Photo Fair Reports, Pages 1, 7, 9, 11, 15, and 17.

## AMERICAN BREEDER CAMERAS AT IOWA STATE FAIR.

1—Belgians "Going to War." 2—Johnny Jones. 3—"By Their Fruits Ye Shall Know Them"—Crownover's Farceur and Get; First Prize Entry. 4—First and Second Prize Mule Teams. 5—Anoka Farm's Two-year-old Champion Shorthorn. 6—"Whose Lead Is It?" 7—Winning by a Nose. 8—A Saddler "With the Flinx's On." 9—Premium Pork. 10—Hunter. 11—Tandem. 12—Beachy in His Biplane at a Mile-a-Minute. 13—"Ships of the Desert" at a Standstill. 14—A Clydesdale Walk. 15—"Do You Suppose Our Early Ancestry Was the Same?" 16—"Don't You Step on Me." 17—A "Percheron Type" from Singmaster's Barns. 18—India vs. Detroit. 19—Harris' Champion Hereford at the Bath. 20—Catching Step. 21—Where the Shire Shines. 22—Dismounting Informally. 23—Percheron Power. 24—How Would You Like to Plow With Them? 25—A Lots of Horse in a Small Package.

# BREEDING SCHOOL---OCT. 26 TO NOV. 7

HORSES, CATTLE AND HOGS.

The Only Term of Cattle and Hog Breeding Until Next Spring.

Two separate terms. The first week horses; second week cattle and hogs. The tuition fee is \$25 for one or both terms, which entitles the student to return at all other terms free of charge (a life membership.) This rate is good until August 1st, 1915; after that the tuition will be \$50.

This is the only recognized school (excepting veterinary colleges), that teaches the anatomy and physiology of the generative organs of domestic animals. No breeder can fully understand scientific breeding without this knowledge. This school gives a lot of new and useful information that is not taught by any other school in the world. This is the only breeding school. The principles taught have stood the investigation of the best posted graduate veterinarians on these subjects. All of the instructors but two are post graduate veterinarians who are doing work recognized by the United States Government.

Mares and cows are dissected and mares and cows, both dead and alive, are examined for the different diseases and abnormal conditions. Every student is required to take part in this work, under the instructions of experts. Students are impressed with facts about diseases of females in a way they will remember. Representative animals for this work are especially selected. Everything is made plain by demonstration and language that the average breeder can understand. All technical work that can be is eliminated. The object is to give a course that the average breeder can master in a short time.

**REMEMBER THE DATE---October 26 to November 7, Inclusive.**

SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females. Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse, Cow and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortions—Feeding—Testing—Determining a Mare's Breeding Condition—Buying—Defects—Horse Breeding—Rectal Examination—Conditions; also for telling

EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

Remember the date, you get here take Observation Park street car at Union Depot; get off at 12th street and walk one block east. all students to a free return privilege for life. For other information address

**The GRAHAM SCIENTIFIC BREEDING SCHOOL**  
225 West Twelfth St., Kansas City, Mo.

## THE KANSAS STATE FAIR

Under the Direction of the Board of State Fair Managers.

**HUTCHINSON**

**SEPTEMBER 12-19, 1914**

THE FAIR BY THE PEOPLE FOR THE PEOPLE.

The Great Agricultural and Live Stock Exposition of Kansas.

Grand Free Attractions—Best Obtainable.

The Best Show of Dairy Cattle, Dairy Products and Dairy Apparatus and Machinery Ever Shown in Kansas.

The Horse Show—Four Nights—Is a Popular Feature. When you see the Big Horses, see the Horses Beautiful and Useful also.

Corn Lecture by W. B. Otwell, of Illinois, Thursday A. M.

Entries in the Better Babies Contest close September 1.

Thaviu's Band, Grand Opera Singers and Tango Dancers.

Great Silo, Tractor and Farm Implement Show.

Something Doing Day and Night.

The Grand Old Fair will be Bigger and Better.

No Gambling—No Liquor.

All Exhibits Shipped To and From the State Fair Upon Payment of Freight One Way.

Special Trains, Special Equipment, on All Railroads.

Competition Open to the World.

Everybody Invited.

H. S. THOMPSON, President.

A. L. SPONSLER, Secretary.

## Kansas City Business College

A school that has for its object the thorough training of young men and women for success in life. Book-keeping, shorthand, touch typewriting, penmanship and all English and commercial branches. Free employment bureau. Highest indorsements. One of the strongest shorthand faculties in the entire West, teaching nine standard systems of shorthand and stenotypy. Dement, Pitman, Graham, or Gregg shorthand. Penmen of national reputation. Graduates placed in positions and students aided in defraying expenses while taking the course. Elegant new quarters; finest in Kansas City, especially designed for this school in the new modern fire-proof Young Women's Christian Association Building. For catalogue, address

C. T. SMITH, Y. W. C. A. Building, 1026 McGee St., Kansas City, Mo.

THE AMERICAN BREEDER

With which is combined  
THE STALLION AND JACK NEWS.

SEPTEMBER 5, 1914.  
Volume VIII. Number 1.

FRANK B. GRAHAM and T. W. MORSE,  
Editors.

Published semi-monthly (on the 5th  
and 20th of each month) by the  
GRAHAM PUBLISHING COMPANY,  
INCORPORATED,  
225 WEST TWELFTH STREET,  
Kansas City, Mo.  
BELL TELEPHONE, 4297 GRAND.

All communications for this paper  
should be addressed to the American  
Breeder, or the Graham Publishing  
Company, and not to individuals.

Subscription Rates within the United  
States: \$1 for 3 years; 50 cents for  
one year. All other countries, \$2 for  
3 years; \$1 for one year.

When sending subscriptions, please  
state whether they are renewals or  
new ones. Always renew under the  
same name and initials as previously  
used, and at least two weeks before  
your present subscription expires, so  
that you will not miss any number.  
When changing your postoffice ad-  
dress, state the old address as well as  
the new one.

If you miss your paper please notify  
us at once and all lost copies will be  
replaced.

DRAFT HORSE DEVELOPMENT.

An importer was recently heard to  
say that he would not like to start  
out to buy home bred horses because  
they were not large enough; too many  
of them were stunted and never fully  
developed.

It is a bad state of affairs, if this  
country with all its good feed, cannot  
properly develop the draft horse size.  
There are too many breeders who try  
to produce draft horses on scant ra-  
tions. There are thousands of draft  
horses that could have been fed and  
given a little extra care during their  
development which would have netted  
the owner a very handsome additional  
profit on all the extra feed. It is a  
fact that too many breeders try to  
raise a stud colt in a box stall, with-  
out enough exercise, fresh air, sun-  
shine or green grass. Last year we  
tried to encourage draft horse breed-  
ers to prepare for the development of  
their stud colts. We advised breeders  
to get together and those having a few  
colts to purchase a few more so that  
they could afford to fix up a good stal-  
lion pasture where these colts could  
be properly developed. It requires  
very little more attention to care for  
a few stud colts than it does any other  
kind of stock, if preparations are  
made. At the Iowa state fair, just  
held, a big dealer told us of buying  
six well grown two-year-old stallions  
from one pasture which had been  
handled in just that way.

In order to insure a continuous  
rapid growth the colt must be on full  
feed from the time it will eat until  
it is 30 months of age. A self feeder  
is the best feeder because each in-  
dividual colt knows how much it wants  
better than any man. In this manner  
it can eat often, which is a necessity  
in a young colt as the stomach is not  
large. A colt may be given two full

feeds twice a day, yet it will not  
develop like one which has been fed  
frequently. Those who wish to dis-  
pose of their stud colts for the best  
possible prices must think seriously  
of their development. An excellent  
market awaits those who will develop  
draft horses with good conformation  
and blood lines.

TIME EXTENDED ON MARE  
OWNER EDITIONS.

A number of breeders have written  
us that it would be impossible for  
them to complete by September 1 the  
lists they are preparing for Mare Own-  
er Editions. Several, busy with farm  
work, say they had not noticed the  
early announcements concerning these  
editions, and ask time to prepare their  
lists. Most of these men suggest that  
we postpone the Mare Owner Editions  
until October 5. This we have con-  
sented to do.

We noticed in checking up the lists  
that there are a good many substantial  
breeders (owners of excellent stallions  
and jacks) who have neglected to send  
in their mare owners. These men can-  
not afford to overlook this great oppor-  
tunity for cultivating the interest of,  
and educating their patrons. There  
are, of course, some who are not in-  
terested in increasing their trade or of  
being of any special benefit to their  
communities, who seem to be willing  
to allow their business to remain in  
that old fashioned rut. This means  
defeat sooner or later. No breeder  
who wants to progress can afford to  
overlook this opportunity. In almost  
any reasonably good community a  
breeder owning good sires can send in  
100 names to a good advantage. No  
breeder should fail to see that at least  
ten of his best patrons or prospects  
get these editions. Some may say  
that they do not know how to select  
these names. This is easy. Take a  
pencil and paper and make a start  
at some particular point, and canvass  
the territory by sections. Practically  
every breeder is familiar with a lot of  
business that he would like to have  
as well as what he gets. Every time  
the American Breeder reaches one of  
these possible customers he will think  
of the man who has remembered him  
and paid his subscription. This ad-  
vertising brings results.

Breeders should remember the state-  
ments which were printed in these  
columns a few months past, from those  
who had used the Mare Owner Edi-  
tions, and found them successful.  
Better proof could not be offered as to  
their great value, both in advertising  
and in education for their customers.

From a breeder's service record  
book he can secure a very good list of  
mare owners. A breeder who hesitates  
to spend at least \$10 for permanent ad-  
vertising and education should do some  
good, hard thinking. This is the op-  
portunity for those who wish to ex-  
pand their business and their influ-  
ence and add to their clear profit.  
The American Breeder placed in the  
hands of mare owners will work with  
them for the desired results.

We notify each customer from this  
office, giving the name of the one  
who has paid his subscription and  
asking him to remember the breeder  
for this courtesy. This makes new  
opportunities for stallion and jack  
owners to further extend their friend-  
ships and business connections. This  
is an age of advertising and expan-  
sion. The breeder who does business  
as his grandfather did will probably  
fall behind.

All mare owner lists must be in this  
office by October 1. The subscrip-  
tion price for Mare Owner Editions is  
ten cents each, in clubs of ten or  
more. Each mare owner for whom  
the editions are ordered will get the  
paper five months. This is the best  
offer we have ever made. Each ad-  
ditional subscription (more than the  
club of ten) will cost ten cents each.  
The papers they get will be the reg-  
ular editions of the American Breeder,  
containing with an abundance of ma-  
terial, especially prepared for mare  
owners. Many breeders annually  
send the names of 100 customers and  
each one gets the paper for five  
months, at a cost to the breeder of  
only \$10.

HOW SOME BOYS SEE THE  
FAIRS.

One hundred boys at the recent  
Iowa State Fair got more good out  
of their visit than did probably any  
thousand of other people in attend-  
ance.

How did they do it?  
By seeing the fair systematically  
and under proper guidance.

In the first place these boys came  
to the fair with a purpose, and the  
opportunity to come was won by do-  
ing, with a purpose, some other thing  
worth while. They were the right  
kind of boys to make the most of  
such an opportunity, and well they  
should be, for this "Boys' Camp," as  
it was called, represented the hun-  
dred or so rich agricultural counties  
of Iowa. Each boy had won the right  
to represent his county by the excel-  
lence of some work bearing on agri-  
culture which he had done in public  
school.

These boys' camps are coming to be  
important features in several state  
fairs, and a knowledge of how they  
are handled, and how they handle  
themselves, should help anybody to  
get more good out of the time they  
spend at such places.

It may just as well be understood  
at the beginning that these boys have  
plenty of fun; put a hundred big,  
stout, healthy boys together under  
reasonable conditions anywhere and  
trust to that. But they do not waste  
time. That is the secret. They make  
it count.

In the first place the Iowa camp,  
for example, was under the direct  
oversight of a good man (a breeder,  
by the way, and a graduate of the  
Graham Breeding School) who knows  
both fairs and boys. But when the  
boys started out mornings to see the  
exhibits, they divided into squads of  
convenient size, and their inspections  
of live stock and agricultural prod-  
ucts, good road work, dairy or vet-  
erinary operations, or whatever they  
were out to see, were made under the  
direction of men from the Iowa State  
College each especially trained along  
the particular line being observed by  
the squad of boys he had in charge.  
Ordinary fair visitors by the hun-  
dreds of thousands annually go  
around from one exhibit to the next,  
wondering whether this bull is a  
"White Durham" or just a peroxide  
blonde, and why some corn exhibit  
has long ears and short ears side by  
side; whether the white-faced cows  
would think of dining without first  
having their hair curled and if the  
flowers are real, which the Clydes-  
dales wear in their tails. They do  
not see with knowing eyes; they do  
not separate the essential from the  
fol-de-rol.

Not so with the boys of the state  
fair Boys' Camps. They are the kind  
who know a lot of things on their  
own accounts. Better still they know

SPECIAL

Subscription Offer to New  
Subscribers, for acceptance  
before November 1st: 50 cen's  
for the American Breeder un-  
til January 1st, 1916.

how to ask questions and to under-  
stand and heed the answers. Still  
better, they go about their business  
of learning with men at their elbows  
who not only can answer and explain,  
but who can arouse more interest in  
and inspire more respect for the big  
things of the state which are so well  
represented in that remarkable aggre-  
gation of exhibits, demonstrations and  
contests which go to make up the  
modern fair.

But the boys are not kept at a  
steady, all day round of studying ex-  
hibits. Part of each afternoon and  
evening they are detailed for regular  
duties which call for some exertion,  
place some responsibility on them, and  
give them a change. Their biggest  
job in this line was acting as ushers  
in the enormous amphitheater at the  
race track, where many of the special  
events as well as races are held.

Iowa people take to the "ushering" of  
these lively young fellows in Khaki  
outing suits (the Boys' Camp uniform,  
adapted to either work or play)  
"mother and the girls" following them  
docilely to any seats they indicate  
in the "grand stand" and when it be-  
comes generally known how much  
more these boys are getting out of  
the fair, than is anybody else, the  
Iowa people will begin to follow Boys'  
Camp rules for seeing the fair.

RECORD ASSOCIATIONS' RESPON-  
SIBILITY.

A record association has recently  
disqualified some stock registered in  
that association as the result of an in-  
vestigation. It is claimed that the  
animals did not meet the require-  
ments. The owner of the stock was  
not the individual who had them reg-  
istered. He brought suit against that  
record association and got a judg-  
ment. The court held that the asso-  
ciation should pay the damages to the  
innocent purchaser.

This decision defines, and thereby  
legally fixes the responsibility of rec-  
ord associations in such cases. It  
should greatly increase the confidence  
of those who buy stock registered in  
this association or other responsible  
record associations. To meet this re-  
sponsibility will it be necessary for  
record associations to require sworn  
statements from those not financially  
responsible? Or will it be necessary to  
increase the fees for recording live  
stock in order to meet these deficien-  
cies? Or will it be necessary for rec-  
ord associations to make their regula-  
tions more severe, prosecuting the of-  
fender, for instance, for receiving  
money under false pretenses?

This decision may possibly lead to  
other suits of a similar nature. For  
instance, we are informed that a party  
in Iowa purchased a stallion from Rob-  
ert Burgess & Son of Wenona, Ill. The  
certificate of registration was found to  
be unsatisfactory to the Stallion  
Registration Board, and a grade li-  
cense was issued. In the meantime  
this stallion had been mated with a  
number of pure bred mares. The party  
who purchased this stallion says that  
he has been unable to register colts  
sired by this stallion and that he has  
been seriously damaged.

We contend that these innocent pur-  
chasers should be protected by the re-  
cord association which has issued the  
certificate of registration.

HORSE BREEDERS' MEETINGS.

Several states have state horse  
breeders' associations. Every state  
should have one. The Iowa horse  
breeders met at the Iowa State Fair.  
The president, Wm. Crownover, of  
Hudson, Iowa, called on different men  
who happened to be present for  
speeches. The breeders present gave  
their views on various subjects of  
especial interest to draft horse breed-  
ers. There was an occasional differ-  
ence of opinion, which is necessary to  
cause men to think. The next meet-  
ing of the Iowa Draft Horse Breeders'  
Association will be held at Ames in  
January. Some special legislation will  
be asked for at the next legislature,  
including a lien on the mare and foal  
for 18 months from the last service.  
Some changes in the present stallion  
inspection law will be discussed.

A few enterprising breeders can  
start something in the way of an as-  
sociation very easily in states which  
do not have regular associations. After  
a temporary meeting is held, per-  
manent officers can be elected and  
have regular and called meetings.  
These meetings should be held as of-  
ten as there is opportunity, even  
though they have to be very informal,  
and the secretary should see that an  
early report of each, telling the real  
news of the meeting, should be pub-  
lished or in some way made to reach  
the absent members. We shall be  
pleased to print reports if the secre-  
taries of all such organizations will  
send them in.

BURGESS AND McMILLAN.

One of our readers asks us to give  
a reason why, in our opinion, Robert  
Burgess of Wenona, Ill., should not be  
allowed to exhibit registered draft

horses at state fairs. He asked us to state one particular case.

We are informed that the Percheron Society of America has refused for years to register home bred horses for Robert Burgess & Son. A circular was sent out by that record association to that effect. We are also informed that they cannot yet register home bred horses with this society. If the record association will not accept their statements why should the state fairs recognize this firm?

If there are any who wish to get the exact facts concerning Robert Burgess and the Percheron Society of America, they are requested to write to the secretary of the Percheron Society of America and get full particulars.

#### THAT WHEAT "INCREMENT."

Much talk has been created by the increase in wheat prices since the war in Europe began to threaten. Some of the rise would have taken place anyhow, as crop conditions in other lines and other countries, exerted their proper influences.

However, the rise in wheat (regardless of the cause) means a good deal, or will eventually. For example, the total crop in a territory equivalent to four or five states with Kansas City as the center, was about a third of a billion bushels. Of this amount, crop experts figure that a quarter of a billion bushels is still held by farmers and local elevators. The rise has been between 25 and 30 cents, adding a total of about \$68,000,000 to the value of wheat still locally held throughout the four or five states indicated. It is estimated that Kansas alone gets half of this increase.

All such figures, however, should be "taken with salt" to the extent of allowing for loss in storage, cost of insurance, interest and possibility of decline before all this wheat can be cashed. It is cause for much gratification that a good rise has been recorded, for the price at which wheat began to move left no profit for the grower, when all expenses were counted, and a general average struck.

Thirty-four million dollars looks like a big two-months' increment for one crop in one state but come to think of it, it is the state's greatest crop and no other state comes within 50 per cent of this mark. The population of Kansas is about 1,700,000, making this a gain of about \$20 per head. Would there be much comment in the papers if two months' events would put an extra \$20 in the pocket of each American in Chicago? We hardly think the Kansan is less deserving.

#### PURE BRED DAIRY CATTLE AN ATTRACTIVE BUSINESS.

To the American Breeder: Seven hundred and fifty dollars for a Colorado bred yearling bull is the long price which a youngster from a herd at Pueblo brought recently. This is not the record price which Colorado bred herd headers have brought, \$2,500 having been paid for a young Jersey bull of Colorado breeding a few years ago, but it indicates the possibilities of the breeding business for the man who will handle pure bred dairy cattle of high quality in the Rocky Mountain section.

The fact that the high altitude, dry climate and abundant alfalfa of the Rocky Mountain region develops superior constitution and vigor, makes Western bred dairy bulls most desirable to head herds and the demand for them great.

Eastern breeders have overlooked the recent dairy development of the West and particularly the demand for pure bred sires for grading up herds, and the field is an open one which Western breeders are unable to supply at this time, to say nothing of the increased demands of the future. Western farmers who start now in the business of breeding pure bred dairy cattle will be richly rewarded.—B. G. D. Bishop, Secretary Colorado Dairymen's Association.

## Things You Already Know About Fairs

And Some More You May Not Have Considered: Development of These Institutions; How Some Fulfill Their Opportunities and Where Others Fall Short; Some Figures on Yours and Twenty-five Others in the Table Opposite.

Beginning as an outgrowth of "Market Days"—neighborhood and community gatherings for "swapping" and social purposes—the institutions known as live stock shows, fairs and expositions have grown and spread until their annual or periodical repetition has become almost as much a certainty and matter of course as the activities of agriculture and other industries, and of the social life they represent. Whatever the faults, which are or have been peculiar to fairs, there seems always to have been factors present to stand the test of time, so that (excepting in years of adversity) their growth in interest and extent has been constant, until now our large fairs are as gigantic, as comprehensive and as complex, almost, as the life and business of the territories supporting them.

United States has led all other nations in the number, cost and patronage of fairs (although there are points in the conduct and influence of fairs which the examples of other countries might teach us) and the specializing in educational work has in late years reached a plane in some of the fairs of this country, probably not equaled elsewhere. But even in some of the fairs where this has been done there are big gaps of conflicting influence—for instance, between the "Midways" and the "State college exhibits." These are yet to be bridged. The fact that our most important and typical class of fairs (our state fairs) are for the most part state owned or controlled, make this question of fair management and improvement worthy the attention of every citizen and taxpayer, whether or not, he or she attends the fairs or exhibits thereat.

#### State Fair Problems Largely Similar.

Local fairs drawing from an average territory of one county, while exerting just as great an influence in the aggregate have many problems peculiar to certain localities and conditions. The organization, equipment and conduct of state fairs must largely be along similar lines and for that reason the investigations and observations which are the basis of this article have been made largely with the state fairs in view. Applications for information were sent to all the state fair secretaries whose addresses were available and fairly complete replies were received from 26. A study of the accompanying table compiled from their answers, emphasizes what has long been noticed by those who annually attend a considerable number of these fairs concerning the great discrepancies existing as to equipment, attendance, population of state, value of exhibits and publicity received.

No state which controls its own state fair, makes any pretense of running it for financial gain (though such a gain is doubtless possible in many cases); therefore, it is up to the fair to make adequate return in the form of education, advertising of resources and beneficial entertainment. Such so-called entertainment as does no good or does positive harm, is even affording healthful relaxation, is a positive damage and should be estimated as a liability against the fair and not an asset. When every citizen of the 26 states being considered, gets it into his head that he (as a citizen of an average state) is interested in a state fair equipment valued at a half million dollars (see table), not counting additional public appropriation and expense, he will begin to be a little more particular as to the sights, sounds and treatment he encounters, on his arrival at his own fair, after having paid railroad fare, hotel bill and admission at the gate. When he sees, by a study of the accompanying table, that his fair, for instance, with an equipment far above the average, with exhibits of the highest class, and a rich and well populated state back of it, draws less than half the average attendance proportionately that is enjoyed by other fairs, he will begin to look for the reason for this

failure to realize a proper return on his (his state's) money. For, granting that the best service a state's fair can render is to educate and entertain its people and advertise its resources, it follows that it can succeed in this only in proportion to its attendance.

#### Getting the People to Come.

Next, therefore, to making the state fair of such character that all who come will be benefited, the greatest problem is the problem of getting the people to come. This question (attendance) is the subject of constant study, effort, investigation and comparison of notes on the part of fair managers. In the answers which the secretaries have made to our questions bearing on "attendance getting" the reader will notice their almost unanimous agreement on the value of farm paper and newspaper advertising, but to many it may not occur that advertising to be effective, must be well backed up. Those fairs can get most good from their advertising which have the best things to advertise. They may not always do so, but this is their opportunity. Often too much effort is given to entertainment alone, to things which are merely novel and exciting. Where this is true (and few fairs can prove "not guilty"), it is time to study the fundamental features of the fair proper, and learn to make more available and multiply the education and entertainment they afford.

The secretary, or one of the principal officers of each association, could well be sent to Europe to study such shows as the Royal Agricultural Show in England, or the Paris Live Stock Exhibition, and see how much more fully every exhibit is understood and enjoyed because of the effort that has been made for education. At our state fairs it is a common thing for country people, as well as city people, to show ignorance of the names and characteristics of even our common breeds of domestic animals, and their interest is, of course, proportionately less. At the stock shows of Europe the breeds are known and prized by all. King's maintain herds and flocks and studs to stimulate interest, and every show, big or little, is officially opened by some dignitary. And as a result a world of newer countries (our own has done so for 100 years) still buy foundation stock and improving blood from a few little European states and countries. They do not let a man go to their stock shows and go away ignorant. We do, and at every big fair are hundreds of thousands of dollars' worth of exhibits affording the best possible subjects for illustrated lectures, yet in comparatively few cases are such lectures held. In almost as few is the placarding, announcing and cataloging so handled as to increase the popular interest in and knowledge of, the farm animals, farm crops, farm machinery and other products and equipment everywhere to be seen.

#### Colleges Help In Fair Instruction.

But this fault is rapidly being remedied, largely through the co-operation of the secretaries with the respective agricultural colleges. State fair boys' camps, regular schools of instruction, are successfully held at many fairs and growing in popularity. At the Missouri State Fair this year a "Silo School" will be held, using the silo exhibit, now a feature of most fairs, as illustration. Many fairs have live stock judging schools and contests. The Iowa State College was one of the first to bring a big exhibit to its state fair and keep lectures going throughout the week in many departments, such as household economy, farm drainage and farm mechanics, seed breeding, stock feeding, live stock vaccination, dairying, etc. Now these educational exhibits constitute one of the best forces in extending the work of the state schools. Nebraska's fair

has a large auditorium conveniently located, in which a good audience can be found during much of the fair, listening to speeches and music, but some of the political talks could well be replaced by lectures illustrated with popular and important features of the real fair exhibit. At the Kansas State Fair this year the state's Agricultural College will conduct a dairy school. Farm machinery demonstrations have been a big feature at the Oklahoma, and other state fairs, but in some cases these have been unregulated, each machinery exhibitor running a go-as-you-please race with some competitor. Under proper regulation these machinery demonstrations can be made immensely valuable.

By the use of rest and lecture rooms, band stands, playgrounds for small children and with the help of legitimately conducted races, absolutely every person who is fit to be at a state fair, can be interested, educated and entertained. There is no excuse for the cheap, noisy, indecent or fakish shows, and the "rough necks" who hang around, or conduct them. They do not help to make any fair, but they mar even the poorest. And in this class, the "low down," unsanitary eating places, which buy space and sell their noise and their filthy cooking on some of our most beautiful and best equipped fair grounds, should be placed, and condemned without limit. In pleasing contrast, and often on the same grounds, can be found eating places conducted by ladies and gentlemen of local churches, in which good, clean food at reasonable prices can be had. It is the state's disgrace that such as this should be forced to compete with "concessionaries" from the scum of the city's grafters, and that the inexperienced fair visitor should have no help, but his luck in escaping the barker of a "hot dog joint" and finding the tent of an eating place conducted by Christians.

#### Camping Gives Time to See.

Time to really see a fair is as essential, almost, as to go, or to have something to see on arrival. The Missouri and Iowa state fairs and several others (see the table) have a plan which should be followed by every such organization. A special rate is made for the entire show, which is cheaper than paying daily admission. This is called the "tenting" plan. A family can take suitable bedding and a few cooking utensils and rent tents at very reasonable prices from a firm engaged in this business. The camping ground is piped for water and should be well drained. Provisions may be purchased on the grounds so that it is not necessary to leave the show grounds during the entire exhibition. This offers an opportunity to inspect the live stock all week—any time early in the morning and late in the evening. It also offers an opportunity for making acquaintances which have a considerable value to most men interested. Those following this plan find the camping a recreation. A great many could be induced to follow this plan of attending state fairs. These people would increase the attendance rapidly and derive more benefit than perhaps any other one class.

There are some very important requirements to observe in the location of a state fair. The fair grounds must be located near a large city, with abundant cheap transportation to and from the city and plenty of good railroad facilities connecting the city with a large territory settled with people interested in agriculture. No state fair located contrary to these rules will ever fulfill its proper mission. There must be an opportunity for visitors to find suitable lodging at reasonable prices, and find clean, moderate priced restaurants. Special railroad service from all directions must be ample. Some of our state fairs have been located to satisfy politicians

Table Showing Location, Equipment, Attendance, Cooperating Forces, Publicity Methods, Etc., of 26 State Fairs.

State	State Population.	Where Held.	Number of Years Held, Consecutively.	Number of Years Under State Control.	Total Value of Buildings and Grounds.	Largest Week's Attendance Any Year. (\*) This fair (Arkansas) is supported by donations from citizens of Hot Springs.  
(a) Under auspices Georgia State Agricultural Society.  
(b) Kansas has not appropriated any money for this fair, but has made it the official state fair held under the auspices of the State Board of Agriculture.  
(c) Shreveport owns grounds and buildings. The State (Louisiana) gives \$7,500 a year for premiums, and the County \$10,000 for buildings and \$2,500 for premiums.  
(d) Tried out camping privileges in Indiana, but it was not a success.  
(e) We had 1,700 tents (Iowa) last fall, and 8,000 to 10,000 campers.  
(f) Four hundred and eighty-one country weeklies, 9 agricultural, 17 dairies, 5 magazines, 4 turf papers.  
(g) The beautiful camping ground was the original site of the fair, and the camp was the beginning of the fair.  
(h) New York has had 73 state fairs, but held at various places.  
(i) The North Dakota fair alternates between Fargo and Grand Forks. Last year it was at Grand Forks, so no figures on Fargo.  
(j) The attendance for 16 days was 701,000, and the 350,000 is our estimate for a week.—Editor.

rather than for the general good. There are several state fairs that could be re-located to good advantage. We always hesitate in speaking of these cases because there are many loyal citizens who have thought they were doing their duty in standing up for the selections made, who might take offense.

#### Question of Expensive Buildings.

While practically every citizen is glad to see his fair equipped with great, expensive buildings, we believe that in some cases much money is wasted in this direction. Instead of having a fortune invested in such expensive buildings as are now found at some state fair grounds, we believe that provision for making clear the features and merits of more exhibits through the use of tent auditoriums would be of more benefit for the tax payers in attendance.

The Royal Agricultural Show of England is conducted largely by the membership (scattered over England) of the Royal Agricultural Society. Its location is changed each year. The buildings are not very expensive and are easily moved. Practically all of the structures are put together with bolts, which makes moving easy. When this show is held in a new location the good influence in that vicinity can be noticed for years. This show is perhaps the strongest and most influential show in the way of education in the world. The average American interested in farm and live stock affairs, may not be always pleased with their entertainment and think that entirely too much time is devoted to hunters or high stepping horses, but their methods of exhibition are greatly in advance of this country.

## It Is Kansas' Opportunity

How the Greatest State Fair in the World May Be Built.

"Unsatisfactory" is the mildest word which can be applied to the state fair situation in Kansas—as it is now, and has been for twenty years. Dozens of times and in dozens of ways each season, is this fact emphasized by the observations and experience of those who annually make the rounds of the leading fairs.

Kansas, first in literacy, first in wheat, first in the quality of the agricultural publicity she has received, first in the proportion of her young people who attend colleges and universities, must be ranked as low as twelfth in the matter of state fairs. Kansas leads in her agricultural college and experiment station equipment, she leads in alfalfa, and the successful new forage crops, only two states excel her in cattle, only three in horses, only four in mules and hogs, only six in corn; no state excels her in its percentage of good roads or its enterprise in keeping track of what is going on in the world; she has every right to lead in the matter of state fairs, and yet ten or a dozen states outrank her.

Who is to blame? Certainly not the competent, aggressive "bunch" at Hutchinson, who for years kept up, as a private enterprise by far the best show the state has had, and have finally, by giving the state the benefit of their efforts, got their fair made the official one. Hutchinson will always have a big fair, and when Kansas "strikes her gait" and permanently puts her fair where trans-

portation, convenience of location and hotel facilities give it a chance to measure up to the state whose name it carries we could wish her no better luck than to have A. L. Sponsler for secretary.

But that suggestion is merely incidental. Persons and politics must be eliminated absolutely, if this question is to be considered on its merits. Quantity and quality of attendance should be the prime consideration. Years of study and investigation on this basis, and overlooking no other essential requirements, leads always to the conclusion that the state of Kansas has the opportunity to build itself the largest and best state fair in the world if it will first locate its fair grounds at Kansas City, Kans. This will connect it, by street car service alone, with over 400,000 people. Kansas City is one of the best cities in the United States for hotel facilities and for railroad connections to nearby agricultural territory, it is unequalled.

An almost exact counterpart of our situation here is found in Minnesota, which has the greatest state fair attendance of all, in proportion to its area. The "twin cities" of Minneapolis and St. Paul, where its fair is held, are located practically on the boundary and in about the same position relative to the balance of the state as are Kansas City, Kans., and Kansas City, Mo. But in both states all the main lines of transportation lead to the respective leading commercial points—undoubtedly the proper location for the fairs. From here on, the comparison is all in favor of the Kansas Cities. Within a radius of 150 miles around this point there are something like 3,500,000 people, while only about half that number live within the same radius drawn around Minneapolis and St. Paul. And think what must be the currents of commerce toward the Kansas Cities, to make this point lead the world as a hay market, a farm machinery market, a stocker and feeder market, and second to only one city in the world as a packing center.

But 150 miles does not take one-half way to the limits of Kansas City territory. It is the metropolis for Iowa, Nebraska, Oklahoma, Northern Texas and Eastern Colorado, as well as for Missouri and Kansas, and in this fact lies its greatest advantage when considering the fair as an advertising institution for its state. The fact that an imaginary line known as the boundary of two states, must be crossed in going from the Union Station to the fair grounds should be forgotten for all time. Kansas, more than any other two states in the Union, made Kansas City, U. S. A., what it is, and Kansas should use the city she helped to build.

In addition to seeing the fair, tending to business and "meeting home folks," many farmers and breeders from as far west as the Pacific coast are glad to visit here, and exhibitors of live stock, farm products and farm machinery, will (and do) come farther to make annual exhibits at this point than at any other in America. All they will ever ask is a real fair to bring out the people. It takes all kinds of people "to make the world"—or a big state—and it takes a real fair, with all kinds of farm crops, all kinds of live stock, all kinds of industries and business to bring the people out. Every successful fair in this country furnishes annual proof of this fact. Herein has lain the cause for the failure of the American Royal Live Stock Show as an attendance bringer. Cramped and unpopular quarters have made it impossible for this show to expand, or to make itself sufficiently attractive to bring out the city people at its gates. Even when visitors crowd every foot of seating, standing and walking space, to their own discomfort, only from a fifth to a tenth of a good big one day's state fair attendance can be accommodated.

If this opportunity is seized (and it is an opportunity for the two Kansas Cities, no less than for Kansas),

it will put an end to the factional fight which has split Kansas' fair support for many years. This year Topeka is running a fair in opposition to Hutchinson, both on the same week. Into Topeka run three main lines of railway and three branches. Into Hutchinson run two main lines and four or five branch lines. Into Kansas City, from Kansas territory, run eleven main lines (having many branches) and four interurban electric lines, while 14 or 15 more exhibit and attendance bringing railway lines come into Kansas City from the east.

Three-fourths of the farmers of Kansas can reach Kansas City more conveniently and at less expense than they can reach Hutchinson, and the same probably is true of half the farmers with regard to Topeka. The Kansas Agricultural College is serving its supporters with instructive exhibits at both the fairs, but many more farmers could be served, much more complete exhibits maintained, and the activities of the college vastly better represented with a big fair at the state's metropolis. Kansas can have the biggest state fair in the world, if she will.

#### COST OF PRODUCING DAIRY COW.

According to investigators in the Department of Agriculture the average net cost of raising a dairy heifer one year old on a Wisconsin farm is \$39.52 and of a two year heifer, \$61.41. These figures are applicable to other dairy districts in the North and East where land and feed values are similar to those in Wisconsin. They are based on data obtained from raising 117 calves from birth to the time they enter the dairy herd.

Live Stock, Hay and Grain  
Market Review

The expected buying of horses for war, began at this point on the fourth, when Maj. Charles V. Gunning of the army of Great Britain arrived in Kansas City. Already one thousand were ready for delivery to him at the stock yards, and he is to remain here indefinitely to purchase more.

There is no definite information as to how many he is to buy or what price he is willing to pay. The dealers anticipate, however, that the British government is ready to take a big order. One dealer said he believed twenty-five thousand horses would be taken from this market. Other estimates ran as low as five thousand.

The British order is not to be confined to cavalry horses. The specifications call for light and heavy artillery horses as well as the saddlers. Horses from 5 to 8 years old and from 14 1/2 to 15 1/2 hands high will come within the English specifications. Buying in Chicago, on practi-

cally the same basis, was reported two or three days earlier, and representatives of the French and Canadian governments are authoritatively said to be at the national stock yards, East St. Louis, purchasing horses for cavalry and draft.

Horses of the general class these men are buying have been costing the United States government from \$100 to \$175. All purchases, apparently, are being shipped to Canada.

Prior to this incident, the trade in horses and mules was dull, the volume of business being not larger than it was in the middle of July. The close relation the cotton market sustains to the trade in equines has been demonstrated, but not until the south begins to sell its cotton freely will it buy horses and mules. Because the south is in no position to buy, feeders are not taking many thin mules for feeding. Several plans have been advanced for handling the cot-

ton crop, and it is the general belief that in the next few weeks planters will be able to borrow money if no arrangement for actual selling can be made. Growers are confident that owing to the comparatively small crop produced elsewhere this year, and unsettled conditions in other producing countries their product will sell for high prices within the next few months. When the south returns to the market their trade in horses will expand.

Prices for both horses and mules now are the lowest they have been in two years past, and are low enough to afford an excellent buying opportunity. The small supply is so small however, that it restricts trade to a noticeable degree. Farmers are not disturbed by the low prices quot-

ed. They are selling comparatively few and such as they do sell are of the plainer classes. Most of the ordinary horses are coming thin and out of work, and their disposition is regarded as a fair clearance at nearly any price. Plugs are not wanted.

Combined receipts of mules in St. Louis and Kansas City in the past two weeks amount to less than 500 head, and owing to the low prices offered same were unsold.

Recent rains have improved the feed situation materially, especially in the matter of roughage and pas-

I sell more horses and jacks than all others. Terms always  
right: work always up to the highest standard.

ture. Farmers now are in a position to carry a good many animals through the winter at small expense and that will restrict supplies from that source.

At sales of range horses held in the northwest, buying for Canadian interest (presumably to supply England's war needs) has been reported, but owing to continued lack of demand from central markets, prices have hardly been maintained. Traders at central markets, however, are confident that the European situation will develop a broad demand in a short time. One firm has already bought some horses in anticipation of that outlet.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—  
 Drafters, 1700-pound extra quality.....\$200@225  
 Drafters, good to choice..... 150@195  
 Drafters, fair to good..... 125@150  
 Chunks, good..... 110@145  
 Chunks, fair..... 70@110  
 Southerners, good to choice... 85@115  
 Southerners..... 40 up

Mules—  
 13½ to 14½ hands.....\$ 80@100  
 14½ to 15½ hands..... 100@125  
 15½ to 16 hands..... 120@165  
 16½ or better..... 170@215

#### Good Demand for Cattle.

Receipts of cattle in the past two weeks were the most liberal of the season. The increased movement having started from the west and southwest but the supply from feed lots is slowly falling to almost the smallest numbers ever reported. There has been a good demand for all classes and while prices have weakened some on the sappy kind they have shown strength on the seasonably fat grassers and the fed cattle. The season's top price of \$10.50 was paid for several bunches, weights ranging from 1,275 to 1,650 pounds.

Some wintered western steers sold as high as \$9.60 and straight grassers up to \$9. Killers want grain fat steers and are paying a good premium for them. The western grassers are selling largely at \$7.75 to \$8.50. Some common steers from below the quarantine line going as low as \$5.25. The recent rains eliminated dry weather as a marketing influence and from now on the average quality of the offerings will improve. A large number of cattle will be held on grass until frosts drive them to markets. A few heavy steers are being taken to feed lots for a short finish and the big packers are placing all the fed cattle they can get on September contracts.

Quotations from the various grades of killing steers are as follows:

Price corn fat steers.....\$10.00@10.25  
 Good to choice steers..... 9.00@ 9.95  
 Fair to good steers..... 8.50@ 9.00  
 Common to fair steers..... 7.75@ 8.40  
 Meal fed, choice..... 9.00@ 9.75  
 Meal fed, common to fair... 8.50@ 9.00  
 Quarantine steers, fed.... 8.25@ 8.75  
 Quarantine steers, grass fat 5.75@ 8.00

#### Thin Cattle Below Requirements.

Recent rains put Indiana, Ohio and Illinois back in the competition for stock and feeding cattle, and in the past few days there have not been enough offered to go around. Missouri will soon be back in the market, and western states and Kansas are buying now whereas they were selling at this time a year ago. Prices are about as high as the trade can stand, and when they get too high there is a cessation in buying. Feeders will be in the market for thin cattle from now until cold weather, and a good many cattle now on grass will be turned to grain in December.

The following quotations are for the various grades of stock and feeding cattle:

**5,918,098**  
gallons Polarine sold last year

**1,536,232**  
gallons more than in 1912

# Polarine

FRICITION REDUCING MOTOR OIL

The constantly increasing use of POLARINE by thousands of motorists is indisputable evidence of its lubricating efficiency. It affords perfect lubrication to all makes and types of motor cars, motor trucks, motorcycles and motor boats. POLARINE maintains the correct lubricating body at any motor speed or temperature. POLARINE remains liquid at zero. POLARINE differs from all other motor oils, in that it lubricates perfectly at extremes of temperature.

 Stock cows..... 5.25@ 6.25  
 Stock heifers..... 5.50@ 7.00  
 Milch cows..... 60.00@110.00

#### Butcher Cattle Scarce.

Considering that the season for western cattle is well along and that ranchmen have not sold many cows for two years there is still a shortage in the supply. Packers are short in canned meats and are taking every old cow offered and country buyers are taking all female stuff that has any stock value. Calves, bulls and stags are in active demand.

The following quotations are for the various grades of butcher cattle:

Cows—  
 Choice.....\$7.00@ 7.75  
 Good to choice..... 6.40@ 7.00  
 Fair to good..... 5.85@ 6.35  
 Common to fair..... 5.00@ 5.75

 Common..... 6.00@ 7.25  
 Veal calves..... 7.00@10.50  
 Bulls..... 5.00@ 7.25

#### Hog Market Settled Again.

Following mild fluctuations that carried hog prices up and down \$1 to \$1.25 the first two weeks in August, the trade in the past two weeks has been well established along liberal lines with price changes small. In the past few days a well defined movement upward has occurred and the entire price list now is holding above \$9. In the third week this month a good many sick pigs were marketed. Their condition was caused by the early use of green corn. Others came in owing to the scarcity of water. Rains have relieved that situation and provided forage feed, so it looks as though September will develop nothing out of the ordinary in the pig run. Receipts are below normal and barely equal to urgent requirements.

The range in prices of hogs in Kansas City in the past two weeks:

	Preceding Week
Monday.....\$9.00@9.30	\$8.90@9.20
Tuesday..... 8.95@9.25	8.95@9.25
Wednesday... 8.90@9.25	9.10@9.40
Thursday.... 8.85@9.17½	9.00@9.37½
Friday..... 8.95@9.25	8.95@9.30
Saturday.... 8.85@9.15	8.85@9.20

The following quotations are for hogs:

## 'A World-Wide Response Greet

# The Silent Seven

Again the OLIVER has scored another triumph. Again it has raised the standard of typewriting, lightened labor for thousands of typewriter users, given greater speed, easier, smoother action.

Since our announcement of the new OLIVER NUMBER 7, it has aroused a furore of enthusiasm the country over. Experts have pronounced it the greatest advance in typewriter mechanics for a decade. Typists proclaim it perfection in lightness of touch, quick response and delightful ease of operation. Yet this beautiful machine, complete, equipped with Printype if desired, with all its added cost and value, is being sold at the same price as previous Oliver Models.

We earnestly urge you to see the new OLIVER NUMBER 7. In no other way can you so quickly appreciate the marvels of this masterpiece—so clearly understand its mechanical excellence—so surely convince yourself that in the new OLIVER NUMBER 7 typewriter building has reached finality.

# The OLIVER 7 Typewriter No. 7

*The Standard Visible Writer*

#### Automatic Devices

#### —Easy Action

Equipped with "cushioned keyboard," with "anchor keys" and with a score of improvements, refinements and automatic features that make this model supreme.

The result is less effort, less eye-strain, greater speed, and a 25 per cent greater value. And yet any typewriter user anywhere can buy this splendid Model 7, on the same terms as previous models, for our famous 17-cents-a-day plan still applies.

#### Now on Exhibition at Oliver Agencies

Go see the new OLIVER NUMBER 7 at any Oliver Branch or Agency in the United States. Mark the beautiful simplicity of its construction. Note the rapidity with which it writes; its smooth, silent movement, how the minimum of effort is needed. Inspect the automatic features. Then compare its work with that of any typewriter you know. Try it on many kinds of work no other typewriter will do.

The Oliver was first with visible writing, first with Printype and it is but fitting that it should be first with automatic methods of operation.

#### OLIVER BOOK DELUXE

We have just issued a richly illustrated catalog describing the Oliver No. 7. A copy will be mailed free with our compliments if you send your name. A postal will do.

**The Oliver Typewriter Co.**  
 102 W. 9th St., Kansas City, Mo.

## Special LOW Prices On Edwards STEEL Shingles

Prices on Edwards Steel Shingles have been chiselled down to bed rock. Never before could you buy these famous steel shingles at such low prices. This is the one big money-saving chance you have waited for. You can now buy steel shingles that won't rot, rust, crack, burn or leak for the cost of old out-of-date wood shingles. Edwards STEEL Shingles are in successful use on over 135,000 homes.

"Reo" STEEL Shingles

Edwards Griplock Roofing

Edwards Spanish Tile

Edwards "Steelcote" Fireproof Garage, \$49.50

#### Outlast Any Building!

Come in big clusters ready to put on. A few nails, hammer and the hired man's arm lay 100 at a clip. Ten times faster and ten times easier than putting on wood shingles. Absolutely rust and leak proof. Guaranteed against lightning damage under \$10,000 bond. Ask us about this.

#### We Sell Direct Freight Paid

—with no middleman's "rake-offs." We undersell and out-sell every one on high-quality steel roofing, steel garages and other steel building products. Drop us a postal. Simply say "Tell me about your steel roofing" and we'll send our startling low prices. (164)

**THE EDWARDS MFG. COMPANY**  
 926-976 Lock Street Cincinnati, Ohio

#### Sheep Prices Lower.

The movement of sheep from the west has assumed regular fall proportions in the past two weeks and receipts this week will total upward to \$400,000 at the five western markets. Prices have declined about \$1, for lambs and 25 to 35 cents for sheep. At the lower prices both killers and countrymen are buying freely and big supplies can be cared for in the next two months. Fat lambs are quoted at \$6.75 to \$7.25; yearlings, \$6 to \$6.50; ewes, \$4.50 to \$5.25; wethers, \$5 to \$5.50 and feeding lambs, \$6 to \$6.75.

#### Rapid Rise in Wheat.

The war situation in Europe, which will ultimately cause a big demand for American grain, has caused a rapid rise in prices. Wheat, which is the cereal of largest export worth, rose 18 cents in the past two weeks, and the May future rose 25 cents. Corn is lower, and oats are up 10 cents.

Hay Prices Rise, Too.

All varieties of hay were quoted up 50 cents to \$1 a ton, and at that advance demand was broad. Receipts have been liberal.

Quotations are as follows: Alfalfa, new, choice, \$14.50@15; No. 1, \$13.50@14; standard, \$12.50@13; No. 2, \$11@12; No. 3, \$9@10.50; prairie choice, new, \$11.50@12; No. 1, \$10@11; No. 2, \$8@9.50; No. 3, \$5@7.50; timothy, choice, \$15@16; No. 1, \$14@14.50; No. 2, \$13@13.50; No. 3, \$11@12.50; clover mixed, choice, \$14@14.50; No. 1, \$12.50

@13.50; clover, choice, \$14@14.50; No. 1, \$11@12; straw, \$4.50; packing hay, \$5.

August Live Stock Receipts.

In August receipts of live stock at the five Western markets were 3/4 millions short of the same month in 1913. The decrease was 145,000 cattle, 326,000 hogs and 284,000 sheep. August receipts last year were extremely heavy, owing to the drouth, and this year while dry weather existed it was relieved before countrymen were forced to ship. In the first five months this year the five Western markets received 628,000 fewer cattle than in the same period 1913, and 1,252,000 fewer hogs, and an increase of 337,000 sheep.

GROUNDING FENCE WIRES TO PROTECT STOCK.

To the American Breeder:—Grounding fence wires affords considerable protection from lightning and is a worth while investment for farmers. As hundreds of valuable animals are struck by lightning in this state every summer, many of the casualties being directly due to currents carried

along pasture fences, such advice is particularly timely.

To secure the best results ground wires ought to be placed about 100 feet apart and closely stapled to the post, so as to form a contact with every one of the fence wires. The ground wires should also extend slightly above the fence post, and like a lightning rod, should penetrate the soil far enough to reach moist earth. No 8 or 9 wire is most satisfactory for this purpose.—Frank M. White, Wisconsin College of Agriculture.

To the American Breeder:—I Think it pays well to send the Mare Owner Editions to your customers. I want to send them again this time. I think it did me a great deal of good last year. I don't believe people blame the stallion owner if they do not get colts, like they did before reading your valuable paper.—J. T. Watson, Ralls County, Mo.

**CORN** HARVESTER with binder attachment, cuts and throws in piles on harvester or winrows. Man and horse cut and shock equal to a corn binder. Sold in every state. Price only \$20.00. "Your corn harvester a ally you claim for it; cut, tied and shocked 65 acres milo, cane and corn last year." Testimonials and catalog free, showing pictures of harvester. Address **PROCESS MFG. CO., Salina, Kans.**

GUNN'S & MORSE GUIDER ROAD BUILDER

Sold on 15 days trial. Guaranteed to move more dirt with less draft than any machine made. Two levers, one lifts the blade any angle, one raises and lowers the rear end of blade, leaving the dirt where you want it, crowning road bed smooth.

ASK FOR TESTIMONIALS. Made in 3 sizes: 5-6 blade, \$200; 7-8 blade, \$250; 9-10 blade, \$300. D. B. Gunn, RED OAK, IOWA.

HUMANE STALLION COLLARS

These collars are the only kind suitable for working on a stallion. We make them to fit any size and kind of trace. In ordering describe style of hames you use. If single trace hames be sure to state width of trace and length of hame tug from hame to buckle. you use chain or Moeller hook traces, so state.

Sizes 15 to 25 inches, \$7.50 each; larger than 25 inches, 50 cents extra. We prepay shipping charges.

**BREEDERS' HARNESS & WHIP CO.** Williamson Bldg. Kansas City, Mo.

## Tractor vs. Horse in Farm Work

By WAYNE DINSMORE, Secretary Percheron Society of America.

The American farmers who contemplate purchasing tractors for general use in farm operations will do well to considered thoughtfully the experience of Canadian farmers, who have made the most extensive use of tractors of any farmers in the world.

Reasons for the general use of tractors in Sask., Alberta and Manitoba were:

1st. Large areas of prairie sod purchased at low prices, and of such character as to render feasible operation of from 500 to 2,000 acres per field.

2nd. High prices of horses and refusal of horse owners to sell unless substantial cash payment were made.

3rd. Willingness of tractor companies to sell complete outfits, costing from \$4,000.00 to \$10,000.00, on very small initial payments, and long time notes, most of them running for three years.

4th. Knowledge that such outfits had been known to break from 20 to 30 acres of sod per day when handled by experts.

5th. Lack of knowledge as to depreciation and cost of operation of such engine outfits, especially in comparison with the cost of horse operations.

The result was the purchase of thousands of tractors in the Canadian northwest. They have now been used from two to five years, and the Canadian farmers, business men, and bankers have had experience enough to know their advantages and disadvantages. The net result is an overwhelming decision against such outfits for general farm work. A few have been successful with tractors, but even these can not show returns that will indicate any advantage over horse outfits.

Briefly stated, Dominion farmers have found that it costs more to plow, disc, seed or harvest, with tractors, than with horses, when interest on investment and depreciation in value are properly figured in. The writer in July, 1914, made an extended trip through northwestern Canada, and secured detailed cost figures from many farmers. To give all, is out of the question in this article, but the detailed data supplied by Mr. Charles Esterbrook of Alberta is given for illustration:

### Daily Cost Figures on Tractor Plowing With 45 H. P. Gas Engine—25 H. P. on Drawbar—Plowing Strip Ten Feet Wide.

Cost of engine and plows	\$3,990.
Interest on same at 7%	
\$279.30 per year, or on 313 working days, per day	\$.88
Depreciation 25% on total \$3,990, or \$997.50 per year, or \$3.19 per day	3.19
Gasoline 45 gals. per day—33 1-3c delivered at farm, per day	15.00
Cylinder oil, 3 gals. at 80c per gal.	2.40
Gear oil, 1 gal. per day, at 30c per gal.	.30
Hard oil and transmission grease, estimate per day 10c	.10
Engineer, per day	5.00
Competent plowman, per day	3.50
Board of same, two men at 50c each per day	1.00

Total . . . . . \$31.37  
Average plowed per day, 20 acres, or average cost per acre of . . . 1.57

In the preceding we did not figure in the cost of sharpening plows as he uses disc plows, sharpens but once a season at 50c per disc, or \$7.00 per season for 14 discs.

Mr. Esterbrook had not figured his horse plowing costs, but on request gave the following actual cost figures.

### Daily Cost Figures on Horse Plowing—Gang Plow—Two 12 Inch Plows—Six Horses Worked Together.

Cost of gang plow, 2 12-inch plows and two extra shares	\$90.
Interest on same at 7%, \$6.30 per year, or 313 days, 2c per day	
Depreciation 10% per year; repairs 5%; total \$13.50 per year, or 4c per day	.04
Value of six horses used on gang \$150 per pair, or \$450 for the six small horses. Interest on same at 7%, \$31.50 per year, or 10c per day	.10

Depreciation nil—Increase in value of young animals being broken, and produce from mares offsetting loss and depreciation.	
Cost of man at \$40 per month, per day, \$1.53	1.53
Board of man per day	.50
Feed for six horses—	
Each 18 qts. of oats per day at 32c per bu. for 6	1.08
Each 21 lbs. of hay per day at \$7 per ton for 6	.57
Harness, 3 sets at \$40 per set, \$120. Interest on same at 7%, \$8.40 per year, or per day	.0268
Depreciation on harness 10% per year; repairs 5%, total 15% or \$18.00 per year, per day	.057
Sharpening plow points, estimated at 30c per day each gang	.30
Total	\$ 4.16
Average plowed per day 5 acres. Cost per acre	.83

Mr. Esterbrook in commenting on the matter remarked that he himself had not previously recognized how great the difference was, and added that his chief purpose in buying the tractor was to have his own threshing outfit, as he had found it difficult to have this work done in time to escape snowfall. He added that he had been planning to decrease the field work done with the tractor, holding it principally for other work.

Other farmers who gave detailed cost figures confirmed in substance the data given by Esterbrook. All were agreed in declaring that 20 acres was the maximum acreage plowed per day when a season's work was considered, and the majority were of the opinion that this was above the average.

The highest cost figure given by any farmer for horse plowing was 83 cents; the lowest cost given by any on tractor plowing was \$1.55. All agreed, also, that the tractor suffered a still greater disadvantage in the lighter work, such as discing, seeding and harvesting.

Still more significant of the judgment of Canadians on this question was their actual field procedure, seen in an extended auto trip in Alberta at a time when summer fallowing was in progress. But three tractor outfits were seen at work, but we passed hundreds of horse drawn plows. At numerous places we found tractors idle in the farm yards or sheds, while the farmers were doing the field work with horses.

Leading bankers and managers of land and loan companies were interviewed regarding the financial success of farmers who operated with tractor outfits as compared with farmers who used horses. Without exception, they declared emphatically that men who held to horses had scored much the greater success. Several declared that they would rather, ten to one, loan money to farmers who operated with horses; and several stated that they had no money to loan to farmers who bought tractor outfits, unless the buyer had sufficient resources to lose all he had put in the tractor and still remain solvent. Even then, the loan was not favored.

Commercial men, familiar with conditions, expressed substantially the same views. The consensus of opinion was that tractors were effective in sod breaking, and that their use has hastened the tillage of Canadian broad prairies; but it was also felt that the purchase and use of such outfits had bankrupt thousands of farmers, and that their use should be discontinued save for threshing, road work, and the breaking of prairie sod.

Over-investment in machinery has been a costly mistake made by thousands of American farmers. Men who can profitably use tractor outfits under our farming conditions are not the rule, but the exception. No tractor has yet been devised that will utilize the rough feeds and grasses of the farm as fuel, and none have been built that will reproduce themselves by breeding while carrying out the work of the farm.

## Important Announcement to Percheron Buyers

To the American Breeder:—We have been disappointed in getting our last importation of horses from Europe on account of the war, but hope to get them later, but we are more fortunate than many as we have for several years made it a practice to import most of our stock as yearlings, and having so many mares on hand from which we raise many of our colts, we are well fixed to supply the fall and winter trade.

Heretofore we have sold off our stock so closely that we could not well show at any of the early fairs, but this last year we have refused to part with some of our very best at any price, hence we have at this time more good big stallions and mares of first class quality than we have had for several years at this season, and we will show to visiting breeders the very best lot of imported and home bred stallions and mares that we have ever possessed, mostly one, two and three years of age, and if your readers will come to Keota we will give them a COLT SHOW that will open their eyes to the possibilities of the home bred draft horses.

We will show some home bred three year old Percheron stallions that weigh 2,100 lbs., good enough to stand well toward the top at the INTERNATIONAL in Chicago in 1913 as two year olds; home bred two year olds that weigh more than 1,975, and would weigh considerably over a ton if we had kept them in the barn and fed them like some do, but we prefer to give them the liberty of the pastures while growing, as much as possible, hence they are not so fat as some, but they have the frame and vitality that makes the best draft horse in the end.

In yearling stallions home bred we have them from 1,450 to 1,600 lbs., sound as a bullet, with frame and bone to carry the ton easy when the time comes. In suckers we are not so fortunate, as all we have this year are quite late, hence will not show the size that older ones will, but for quality, conformation and style, age considered, we think them the equal of any we have seen in the state.

We will show about 18 mares and among them we have three year olds that weigh more than a ton, two year olds that weigh over 1,700 lbs., and yearlings that tip the beam at more than 1,350, and remember all of these ran in the pastures day and night until August 15th, when we took them up during the heat of the day. Our imported stock is equally as good and if we finally get what we bought in Europe this summer we will not hesitate to show numbers and quality against any firm in the United States, having bought more high priced stock and prize winners at the shows of the old world than any one firm this summer.

We hope to show and convince the American farmer that as good or better draft horses can be produced in this state and country as in Europe, if they will only pay the price (as we have to) to get the good ones to breed from, and then properly fed from the day they are born until fully developed, but if the farmers persist in buying the poorer kind because they are cheaper to start with, and then only give them half a chance to develop, we will have to continue to send our money to Europe for the best, as we have been for the last sixty years.

Many tell us that they could not make any money on the extra good stock if they did produce it, as they could not sell them for near what we sell them for. In reply we say that we recently paid a farmer \$1,000 for a mare and to another \$2,350 for three colts, and we are more than willing to pay these same prices again when we find the right kind of stock.

WRITE AT ONCE FOR SPECIAL FALL PRICES.

## Singmaster & Sons KEOTA, IOWA

### Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

GEORGE EGGERT, Newton, Iowa.

## A BRAND NEW IMPORTATION!

I was in France and Belgium all through May, making early, careful selections from the best stallions and mares to be found. These are now at my barns and ready for sale, along with some desirable American bred animals. It is a good time to buy.

LONZO McCLAIN & SONS, LIMA, OHIO.

### WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

### WAR NOT TO STOP SAN FRANCISCO EXPOSITION.

To the American Breeder:—The European war will make no change in the plans of the Panama-Pacific International Exposition. Of the thirty-seven foreign nations that are taking part in the exposition, not to exceed five will be effected by the conflict of arms. It is not certain that this will apply to more than three.

The exhibition palaces of the exposition are completed and exhibits are being installed. The states of the American Union are erecting their buildings. The gardens of the exposition are planted and will be ready to bloom throughout the months of the exposition. The department of live stock will house as many exhibits as if there were no complications in Europe. Trade relations will be established with the countries of Central America, South America and with Japan and China.

### BELGIAN, SHIRE AND PERCHERON STALLIONS

and mares, also Standard bred stallions and mares, \$200 and up. E. P. Hamilton & Sons, Garden Grove, Ia. (Mention this paper). 23 miles S. W. of Chariton, Ia., 82 miles south of Des Moines, Ia., at Leroy.

### IMPORTED AND HOME BRED STALLIONS AND MARES. PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

### TWO IMPORTED REGISTERED MARES.

For sale. Scaling over two tons. One black; 7 years; an International prize winner; other gray; 13 years; a Springfield championship winner. Both sound, clean, unblemished; good breeders and workers of outstanding class as their show records evidence, and again in foal to Jupiter 11. \$1,200 for pair.

W. T. WILKINSON, Eureka, St. Louis County, Mo.

The total cash appropriations for prizes and transportation amounting to \$400,000 will be available. The exposition will be given within the dates originally fixed, February 20th to December 4th, 1915.—D. O. Lively, Chief of the Department of Live Stock,

# HORSE, CATTLE AND HOG BREEDING SCHOOL.

The next term of school in scientific breeding will begin October 26 and will last until November 7, inclusive. The first week will be devoted entirely to horse breeding; the second week will be devoted to cattle and hogs. Any breeder who is interested can come either the first or the second week or remain through all of it. The tuition fee will be \$25 for one or both terms, and this entitles the student to return to as many terms as he cares to without paying further tuition. This will be the only cattle and hog breeding school held this year. Those who expect to attend a school of this kind must be on hand at this particular term.

Those who plan to attend the breeding school for either horses or cattle should arrange to attend this year as next year, beginning with the August

term, the tuition fee will be double. We wish to make this statement very plain; beginning with the August term next year the tuition fee will be \$50 instead of \$25, which is the price at the present time. Hundreds and hundreds of students who have notified the school that they would be on hand, keep putting it off. The attendance has not increased as was expected but the expense has been greatly increased, so that after this year the tuition fee will have to be higher.

This will give every one fair notice of the raise in the tuition. There are thousands of breeders who expect to attend this breeding school, and who have been convinced beyond any question or doubt that it is the intelligent thing for them to do, but most of them are busy and think they cannot find time to leave home. This is partly imagination. Any breeder working to be of greater service to himself and his community can well spare this small amount of time. There is only one way to arrange for a proposition of this kind and that is to decide to be on hand at a certain date.

The best term of school ever held for breeders of live stock will be the next term. Practically every breeder of horses is interested more or less in cattle and hogs. Nearly every breeder interested in cattle and hogs is also

## AT THE IOWA FAIR.

1—THOS. KIDDOO & SON'S FIRST PRIZE SHIRE FILLY. 2—SINGMASTER'S FIRST PRIZE SUCKLING STALLION, BY JALAP. 3—M. J. NELSON'S SECOND PRIZE PERCHERON FILLY COLT. 4—JUDGE'S FIRST PRIZE PERCHERON FILLY, A CAPSULE COLT.

## Belgian Emporium of America

Largest collection of Belgian Draft Stallions and Mares in America. Home of Jules Remi, first prize Belgian stallion, Iowa State Fair, 1912 and 1913. Also some very good Percheron stallions and mares.

We have 100 pure bred mares and colts in 11 different pastures. We never had as large and as choice a collection of mares as at present. Come to Cedar Rapids or Iowa City, Iowa, and take the Interurban to Lefebure Station, and telephone to Fairfax for auto to meet you at the Interurban. We defy competition in quality and prices.

Four large farms all adjoining; 7 large barns. Illustrated catalogue free.  
H. LEFEBURE & SONS,

FAIRFAX, LINN COUNTY, IOWA.

## Paramount Stock Farm

Breeds and Imports

### Percherons, Belgians and Shires

Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. He is proving an excellent stock horse. Send your good mares to him and raise the best. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 pound horses.

WM. CROWNOVER,

Hudson, Iowa.

#### THIRTY PERCHERONS AND BELGIANS

both imported and home bred Stallions and mares of all ages for sale.

and one Shire. They range in age from 1 to 7 years; all sound and heavy boned; weighing from 1,800 to 2,200 pounds. There are 17 stallions and 13 mares. I will also sell my herd stallion, Jupiter 65723, coming 5 years old; weight, 2,200.

These stallions are all sold under a guarantee to be 60 per cent foal getters. I have four year olds that weigh 2,200; 2 coming 3 that weigh 1,800. Can sell a good ton stallion for \$750; sound and right in every way; some a little higher, and some lower. I will sell at a bargain to early buyers. I have

PETER J. EGGERS, DENISON, IOWA.

### Choice Percherons

For sale or trade for cattle—three Percheron mares with colts at foot; one colt by the great horse, Victoria, the sire of the champion, Pink. Mares weigh from 1,800 pounds to a ton. Colts sired by ton imported horses; one of mares imported. Mares and colts all blacks.

One dark brown Percheron stallion, six years old, weight a ton. Stock all registered in P. S. A. This bunch will be sold cheap, as owner has other business and cannot attend to them.

W. H. THOMAS, BLUFF CITY, VA.

#### FIFTY STALLIONS AND MARES.

\$250 to \$1,000 Each.

Write for my illustrated Circular telling why I can save you money on the purchase of Percheron or Belgian stallion or mare.

A. W. GREEN, Middlefield, Ohio. R. R. Sta., E. Orwell, on Penna. Ry., between Ash-tabula and Warren.

#### REGISTERED PERCHERONS

For sale. One extra good three year old stallion; two dark gray yearling stallions and two high class weanling stallion colts, sired by imported Jan-tier, second prize three year old at International, 1912.

Also one dark gray five year old mare safe in foal to the above horse.

F. E. AIKMAN,

Lyons, Clinton Co., Ia. R. R. 3, Box 35.

### MUST SELL

Financial difficulties compels me to sell my imported Percheron stallion; 10 years old; weight 1,800 pounds; in good flesh; extra good breeder; colts to show; fine disposition; pasture broke; just right for range use. This horse cost \$1,850 at six years old. Best offer takes him.

H. B. SMITH, Coldspring, Mo.

## Drouth Prices

On registered and high grade Percheron stallions, mares and colts. For particulars, address,

C. G. WELSH,

Palmyra, Mo.

Rte. 4

### IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

A. LATIMER WILSON, Creston, Iowa.

## CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2. Plainfield, Ill.

### Percheron Stallion

For sale. Registered; black; 8 years old; large bone; good disposition and a sure breeder. Has booked over \$1,400 this year. Must sell and will sacrifice.

WALTER ALLEN,

DUNLAP, Peoria County, ILL.

#### PERCHERON STALLION

For sale or trade. Imported; gray; weight 2,000 pounds or better; sound and sure; colts to show; work in all harness; gentle, anybody can handle him. Will sell cheap for quick sale or would trade for pair of pure bred Percheron mares, two years old or older. Write for full description.

E. R. THOMAS, Box 52, RYE, COLO.

#### PERCHERON STALLION

For sale or trade. Osmer, recorded in P. S. A. 89263; color steel gray; foaled April 9, 1911; weight 1,850 pounds; sound; licensed to stand in Nebraska. Will trade for registered fillies or registered Shire or Belgian stallion. Can use good, big jack, 15 hands or over. This ad appears but once.

T. B. McCLELLAN, Stratton, Hitchcock Co., Nebraska.

### TWENTY-FIVE HEAD OF HORSES

FOR SALE—These are three year old geldings and are sired by a good stallion; are all halter broke and gentle. A nice, even bunch of good quality, and priced to sell.

ORVAL HOLLOWAY, Broadwater, Neb.

## WANTED

Aged, solid black or brown Belgian stallion. Must be right every way.

L. R. Dillon

Bixby, South Dakota

#### FOR SALE OR TRADE

Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth Jack, 6 years old; second prize Jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. BURNS,

Argonia, Sumner County, Kansas.

#### ROYAL BELGIAN STALLIONS.

The best collection of Belgian draft stallions, 2 to 4 years old, that was ever imported to Texas, for sale at reasonable prices. Three blue ribbon winners, a champion and a sweepstake winner. Can be seen in Galveston, Houston and at my farm at Cedar Bayou. All first class breeders and well acclimated. LEON VAN MELDERT, Cedar Bayou, Harris County, Tex.

### Registered Percheron Mares and Stallions

For sale. Two grey mares, four and five years old; full sisters; mate well; bred. Two stallions, two and eight years old.

COL. E. H. URTON, Clarksville, Ohio.

#### TREATMENT FOR OVEREATING.

To the American Breeder:—Some one left the oat bin door open, the horses were loose and we all know the rest. The thing to do if the accident is detected an hour or so after the grain has been eaten is to get a veterinarian as soon as possible and pump as much out of the stomach by the aid of a stomach tube as possible. Then administer a purgative and anti-ferments. It sometimes happens that expert help is not available; if such is the case then the matured horses should receive from one and one-half to two quarts of raw linseed oil and two ounces of turpentine. Many neglect a horse that has over eaten until the symptoms of colic appear and then call a veterinarian who may have difficulty in saving the horse.

The same precautions should be taken when a cow has accidentally eaten a part of a sack of oats, wheat or corn. From one to three pounds of epsom salts given to a cow immediately after such a large feed may save the cow's life and also prevent her being foundered. The thing to remember is to do something for the cow immediately after the accident has been discovered.—C. L. Barnes, Colorado Agricultural College.

## LIVE STOCK AT THE COMING WORLD'S FAIR.

By I. D. Graham, Asst Chief Live Stock Dept.

The European war will make no change in the plans of the Panama-Pacific International Exposition. The gates will open to the world on February 20, 1915. The Department of Live Stock will hold a continuous exhibition of domestic animals and birds during the period from February 20 to December 4, 1915, a longer time than ever before attempted in any great exposition.

The competition for premlums which usually constitutes the whole of any live stock show will only be one of its features. More money has been appropriated for supplemental cash prizes by the pure bred record associations than was ever given by these bodies to any former exposition; and more different states of the Union have appropriated money for live stock premiums and transportation than ever before. There will be available for cash prizes and transportation of live stock a total of \$400,000, of which the Exposition has set

I. D. GRAHAM

aside \$175,000 for prizes, and the breed record associations and various states in the Union have added \$225,000.

The buildings of the Department of Live Stock will be a part of the exhibit for the reason that they are not constructed as have been those of former expositions nor with the idea of farm utility. They have been planned as the models which will be followed by future expositions when building for live stock show purposes. To illustrate this it may be stated that every known convenience and accessory which should belong to the barn will be included, and in addition, the animals will be placed in stalls which stand at an angle of 45 degrees instead of 90 degrees as is customary. This gives the visitor an opportunity to see the entire animal instead of the tailhead only.

First among the special events will be the benching of the dogs which will run the International Field Trials, and the awarding of prizes. This event will be participated in by some of the most famous hunting dogs in existence and is expected to prove a great attraction not only to lovers of field sports but to lovers of animals as well. The Universal Polo Tournament will be represented by expert teams of many different countries and will continue for six weeks after March 15, 1915. Great interest is manifested in this special event.

Harness races will occupy two weeks in June and two weeks in October, at which a total of \$227,000 in purses and stakes will be offered. There will be one trotting and one pacing race in the June meet for \$20,000 each and the same awards for like events will be made in the October meet. Special attention will be given to the saddle horse in the way of liberal prizes for the breeding classes and also for the special horse

show, and in connection there will be pulled off the State Saddle Horse Futurity, which will be worth about \$6,000. The Special Horse Show will also include types of various breeds and classes of horses and ponies and will supply a full programme for six continuous days.

There will be military events provided under a special programme, sanctioned by the proper officials, in which prizes and trophies will be awarded for officers of the regular armies as well as the National Guard and cash prizes will be given to the enlisted men who are winners in the numerous events provided. Altogether, the horse will receive his full share of attention both in the premium list and in the prominence which will be given him in the special events of the Department. In addition to the liberal premiums provided for saddle horses, roadsters, drivers, hunters and jumpers, there will be special classes for draft horses in harness, for the high school horse and all this in addition to the regular classification provided for breeding animals of the different breeds, and then there will be a liberal classification for Jacks and Jennets and for mules.

In connection with the sheep show, which promises to be very large and comprehensive, there will be held some special events of more than passing importance. A wool grading and sorting contest will be held for the purpose of demonstrating to the people of the world the best methods which now apply in those countries where wool growing is a prominent industry. The adoption of such methods would save many thousands of dollars to the flock masters and farmers each year. There will also be in this connection an international sheep shearing contest which will be participated in by men and women from different countries where the sheep industry is prominent. This will be followed by old-fashioned sheep dog trials in which the quality and training of this most useful animal will be demonstrated.

The International Egg Laying Contest will be conducted by the Department of Live Stock under the supervision of the Poultry Division of the California Agricultural College. This contest will begin on November 1, 1914, in order that it may continue for twelve full months and close within the Exposition period. There will be a poultry show of large proportions and vast interest. More than \$11,000 has been set aside for premiums on poultry and it is confidently believed that there will be not less than 12,000 birds on exhibition. There will be a continuous display of poultry, and there will also be a competition for premiums in the kennel and cat shows to be held in November.

The utility features possible in such a show have not been neglected. These will be especially manifest in the continuous dairy demonstration in which problems of production, feeding, care of animals, the care of milk and its products, the reduction of bacterial count and the various methods of the Medical Milk Commission will be demonstrated in a continuous dairy cattle show.

Ample provision in the way of liberal premiums has also been made for exhibits of car lot classes of hogs, cattle and sheep. In these there has been a distinction made between finished market animals of the lard type of hogs and those of the bacon type, which is entirely new in exposition giving.

In its comprehensive scope and in the many points where its activities touch the utility side of life, as well as make ample provision for the breed improvers, the Department of Live Stock is absolutely unique, and its origin and plans must be credited to Chief D. O. Lively.

The grand climax of the numerous activities of the Department of Live Stock, only a few of which have been mentioned here, will be found in the show of children's pets which will immediately follow the regulation pet stock show, and to which children from all the world will be invited to come and bring their pets and show in competition for the prizes which will be offered.

## PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Summer number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

9695. Ladies' Dress with Tunic Skirt. Cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires  $5\frac{3}{4}$  yards of 36-inch material for a 36-inch size. Price, 10c.

9680. Ladies' Kimono. Cut in 3 sizes: Small, medium and large. It requires  $5\frac{1}{2}$  yards of 44-inch material for a medium size. Price, 10c.

MUSIC IN RURAL SCHOOLS.

In order to make music acceptable and beneficial to the pupils no text books should be used, because it is impossible to find a book suitable to the different ages of the pupils. We, therefore, recommend that teachers

should teach major scales in all keys to the do-re-mi syllables, also using the five Italian syllables, la-le-li-lo-loo, as a means of making their voices more musical. All trashy songs should be abolished. Such songs as Brahms' "Lullaby," Marshall's "Childs Song," "Annie Laurie," "Old Folks at

Home," "Swanee River," "Old Kentucky Home," and Cardinal Newman's beautiful hymn, "Lead Kindly Light," can be used to good advantage and sung well by having a little patience.

Teachers should also encourage their pupils to be patriotic by singing such songs as "America," "Star Spangled Banner," "Columbia," "The Gem of the Ocean," and "Glory, Glory, Hallelujah." There should be an American flag in the school room and before singing their patriotic songs the pupils should be asked to rise and on beginning to sing should extend the right arm toward the flag.

Above all, teachers should see that the pupils sing and not yell.—Alexander Emslie, Director of Music, Colorado Agricultural College.

BUTTER RECORD FOR BROWN SWISS.

College Bravura II, a 9-year-old Brown Swiss cow, owned by the Michigan Agricultural College, has established a new world's record for milk production for her breed. In the years test just ended she yielded 19,304.6 pounds of milk, which tested 4.102 per cent and made 1,000.5 pounds of butter.

WOMEN AND CHILDREN'S BUILDING, IOWA FAIR.

## Humane Horse Collars

Editor's Note:—A short time ago we received, from a Texas subscriber, a complaint concerning Humane Horse Collars. We published his complaint in full and asked for complaints from all other subscribers who had them to make, for if we are advertising any article which is "no good" we want to know it. Following are all the letters received on the subject, printed just as they were received, and without comment.

### Cannot Agree With Mr. Turner.

To the American Breeder:—In looking over the American Breeder I see a statement written by Stanley Turner, Tom Green County, Texas, condemning the humane collar. I, for one, cannot agree with Mr. Turner, for I have been using the humane collar for a number of years and find them one of the best all round collars there is; for this reason, they are cool on the shoulders and can be made to fit any size horse. I can take a horse with sore shoulders and neck and put a humane collar on him and work him every day and heal his shoulders up. You can take a horse with a fistula and work him every day with a humane collar, and this is something you cannot do with a regular collar, for I have seen it done. I, for one, say the humane collar is all O. K.—E. E. Cox, Wyoming, Ill.

### Knocked Out Two Horses With Them.

To the American Breeder:—You ask what I think of the humane collar. I bought two of them five months ago. I was doing heavy hauling and had men adjust them that claimed to have used them. I knocked out two horses for a time and gave them up. I tried to trade them to our dealer for other collars but he did not want them. One of them burned up in my barn when the barn burned and I have often said I wished the other one had burned, too, so it would be out of the way.—Geo. E. McCone, Julesburg, Colo.

### Works Their Stallion In It.

To the American Breeder:—Replying to the gentleman concerning the practical use of the humane collar, I beg to state that our 1,600-pound Percheron stallion has work one for several hours each day since December 1, 1912, and has been used on the road to spring wagon, in the collar hauling manure boat, in the field to a No. 19 Oliver Chilled Plow, and to the largest size slip scraper leveling ground and grading roads. But for the humane collar we would not be able to work this horse, on account of his irregular shaped neck, being too hard to fit with any other style collar.—Loma Tiva Ranch Co., El Paso, Texas.

### An Offer From Oklahoma.

To the American Breeder:—We see in your paper of August 5th where a Mr. Turner of Texas does not like the humane collars, and states in the paper that he will give them to any one who wishes to take them. Now we will help him out of his trouble and if he will send the collars to us here at Waurika we will send him a draft for \$5.00, if the collars are in good repair. We use the humane collars every day and like them.—Kelly Bros., Jefferson County, Okla.

### Refused Hard Pulls In Them.

To the American Breeder:—In regard to humane collars, as mentioned on page 5 of the August 5th issue, I will give you my experience. I used one on the stallion and he worked all right at ordinary field work on the farm, but when it came to heavy work like hauling grain from the threshing machine in the fields, and in bad places on the road, he would refuse to pull. While worked in an ordinary collar no load was too heavy for him. Farmers in this vicinity who have tried them did not purchase the second time and dealers have ceased to handle them as they are not as good as they were supposed to be.—V. Lyness, McHenry, N. D.

### Used Them On All Kinds.

To the American Breeder:—I see you want to know the experiences with humane collars. Will say I have used them on all kinds of domestic animals; would have no other. Have used them on mules, horses and stallions. They can't be beat for a stallion to work in.—J. A. Swearingen, Breckenridge, Okla.

### Suggests an Improvement.

To the American Breeder:—I see in the American Breeder that you want the experience of every reader that has used the humane collar. I have a pair of the Whipple humane collars and for common, ordinary work they do first rate, but I don't like them for a large horse as I don't believe the draft leathers are wide enough for a horse that weighs over 1,400 pounds, but for horses under that weight they fit pretty good. Think Mr. Turner of Texas must not have had his collars adjusted just right, as I have never had the least bit of trouble to get the horses to work in them. I think the bottom of the draft leathers should be about two inches above the point of the shoulder joint, and they should fit up snugly to the sides of the horse's neck. There is no danger of a horse getting a sore neck when worked in a humane collar, as there is not a bit of weight or friction on the horse's neck when the collar is adjusted right.—E. O. Hubler, Altoona, Kas.

### Kansas Man Wants Them.

To the American Breeder:—In your August 5th issue, Stanley Turner of

## Miller Stock Farm

A Big Tract of Rich Land Devoted to Improved Live Stock Production.  
AUGUST BULLETIN.

**WE WANT** One good registered Percheron stallion, right in every respect; one good registered Hereford bull, and can handle work mules and heavy mares any time.

### FOR SALE OR TRADE.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old. Standard bred and registered stallions as follows: Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you, the prices mean business.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Give Particulars Fully and Truthfully; We Trade No Other Way.

**F. M. LORIMER, Mgr.**

**Olathe, Kansas**

Tom Greene County, Texas, has a pair of humane collars that he says any one is welcome to. If he will send them to me I will gladly pay the express charges on them. I would like to give them a trial, as I have been thinking of buying a pair for my stallions.—I. S. Owen, Oskaloosa, Jefferson County, Kas.

### Every Farmer Should Have a Pair.

To the American Breeder:—In answer to your request for humane collar users' experience, will give mine. From July 1, 1908, to February 20, I used a pair of these collars at heavy hauling for a bridge contractor in Nebraska. One 1,700-pound horse with a sore neck for an indefinite time, was worked steady and with no treatment but humane collar. Neck healed completely in six weeks and remained so. The above horse was 17 years old at time I speak of. The other horse in team was a chronic balker and with humane collar he was always ready to pull all one could ask. One shoulder

**BREEDING BUSINESS FOR SALE** or lease for term of years. Sikes stallions and breeding business; the oldest established breeding business, located in one of the richest stock and farming counties in Western Illinois. No competition. Farm consists of 200 acres good farm land; fine shaded summer feed lot; large, light and best ventilated breeding barn in county; never failing spring well of purest water. Terms cash or good paper, or will consider a trade of breeding business and stallions together with 160 acres best Ransom County, North Dakota farm land, for small improved farm or good paying business. Write today, as this ad will not appear again. Address, N. C. SIKES, R. F. D. 2, Dallas City, Ill.

## Hackneys, Jack Stock and Percheron

### FOR IMMEDIATE SALE.

Four Hackney mares; three Hackney stallions; one 2-year-old jack; two jennets; one Percheron stallion. All choice stock.

**CHARLES G. MUNROE, Rushville, Ill.**

## Horses for Sale

Car load or more of well bred horses, geldings and mares from 3 to 7 years old, weighing from 1,200 to 1,600 and over; gentle. Nearly all have been handled and some are well broke. Address,

**A. G. JOHNSON, St. Joseph, Mo. Dak.**

### FOR SALE OR EXCHANGE

One of the best imported German Coach stallions in this part of the state; also one jennet. Could use automobile, motor cycle or good bull. This horse has plenty of colts to show and is a sure breeder. Might use other stock. Write what you have.

**J. W. ETHRIDGE, R. R. 4, Mt. Vernon, Ill.**

## For Sale or Trade

The German, Hanoverian and Oldenburg Coach stallion, Louis 4399-49686; foaled 1901; coal black; weight 1,600; sound; sure and right. A splendid producer of coach colts and is good enough to head a herd of registered mares. Will exchange him for a good, large jack, draft stallion or Percheron mare.

**L. D. NORRIS, Redding, Iowa.**

on this horse, where a bunch had been cut out and healed rough, had a small sore about the size of a quarter, through no fault of collar. I think if humane collars are properly adjusted as to width and draft, one can work them as well if not better than other collars. Through faulty adjustments I have seen horses with very sore shoulders when worked in humane collars. I am strongly in favor of humane collars and think at least a pair of them should be on every farm working many horses. R. E. White, Della, Alberta, Canada.

### "Humane Collar Absolutely All Right."

The "Humane Collar" is absolutely all right. I had four of them and used them with good satisfaction on Meadow Brook Farm near Harper, Kas., some years ago. I sold the farm and all my stock and chattels at a sale. In the spring of 1912 I began operations on my farm here and I bought six fine registered Percheron mares with which to do the work and raise colts. A part of the mares were two years old coming three, and a part were three coming four the next fall. When I went to fit harness on them I found I must get extra sizes and our harness man ordered them for me with hames and collars. One was a 20-inch collar; the rest were 22, and

## WHAT OF THE TOMORROW IN EUROPE WHEN THE WAR HAS SPENT ITSELF?

(An extract from an article in the London Chronicle by Harold Begbie.)

This war means the sudden stopping of a clock by which we moderns have regulated not only our meals, not only our journeys, but the habits of our minds. The big stick of brutal force has been suddenly thrust into the exquisite and delicate mechanism of civilization. The wheels cease turning, the hands are arrested, and the peaceful, friendly and most familiar tick-tack of our human existence dies into a silence not yet broken by the clangor of guns, the groans of the dying and the noise of falling thrones. Already, now at this moment, civilization stops—stops dead. \* \* \* And where are good manners gone? Look for them in Asia, but not in Europe. At every Christian frontier you can pick up a broken treaty and a dishonored bond.

"Mr. Norman Angell told me this morning that out of this war—'everybody fighting and nobody wanting to fight'—two changes of transcendent importance will emerge. We shall have a Cossack Europe, and New York will henceforth be the center of credit. Russia must win. She calls a million sixteenth-century peasants from the fields, and Germany mows them down. Another million take their place. Death again. Another million. And yet another million of these sixteenth-century peasants. And when it is all over, those who are left will go back to their fields.

"But Germany, France, England, particularly England and Germany, where will they turn when the million dead are shoveled under bloody soil? The bricks and mortar of industry may be still standing; but where will credit be found? And what will the millions of starving factory hands be doing? How shall we get upon our feet? Where is the clock-maker who will mend the smashed wheels and set the pendulum swinging once again? Happy the Russian peasant who will go back to his sixteenth century and his field, telling the time by the sun's shadow. Industry in Europe, with other things of older date, will lie in ruins.

"In three months from now the democracies of Europe will be crying out for a return to normal conditions. The war fever will have spent itself. The war lords will be confronted by their outraged and maddened victims. What will they answer? Men will want work, they will want wages, they will want food. Europe will ask for these things, and the war lords will be driven to answer. Which of them, with all his wisdom and strength, will be able to restore three centuries of human progress? Normal conditions! These normal conditions are the fruit of 300 years of evolution, 300 years of moral and intellectual evolution—a labor not of yesterday nor of pigmies. Destroy normal conditions and you destroy today, yesterday and all the yesterdays of European civilization. Expect, then, a bewildering tomorrow.

Armaments have broken the back of the laborer; and with the fall of the laborer all things fall, all things come to earth. Because of the war lords, and only because of the war lords, the man of science is paralyzed and civilization stops. Humanity has been fooled. Too late it discovers it.

"Remember this, too. Among the young conscript soldiers of Europe who will die in thousands, and perhaps millions, are the very flower of civilization; we shall destroy brains which might have discovered for us in ten or twenty years easements for the worst human pains and solutions for the worst of social dangers. We shall blot these souls out of our common existence. We shall destroy utterly those splendid burning spirits reaching out to enlighten our darkness. Our fathers destroyed those strange and valuable creatures whom they called 'witches.' We are destroying the brightest of our angels."

160-ACRE FARM FOR SALE.  
Creek bottom land; Improved; 40 acres in alfalfa; fenced hog tight; black sandy soil; good water; good buildings. Priced for quick sale at \$10,000; will carry \$3,500 at five per cent.

H. H. BURNS,  
Argonia, Sumner County, Kansas.

WANTED—To hear from owner of good farm for sale. Send description and cash price. D. F. Bush, Minneapolis, Minn.

they all fit well. I soon had trouble with sore shoulders, but far the greatest trouble I had was with sore necks on top under the collar pads. I finished the season, however, and the mares were turned out to run with the colts for the winter. When I began getting ready for spring work in 1913 I found my mares had been growing. Three of them weighed over a ton, one of them weighing over 2,100. The largest collars I had were too small for any of them and I again went to the harness man with my troubles. I bought "Humane Collars" from him, trading him the collars I had got of him and used the season before as part pay. I fitted these "Humane Collars" on my mares and put them to work. They have worked in them now practically two seasons to the plow, the harrow, the disc, the cultivator and the binder and they have not had a sore shoulder nor a sore neck. I can quickly adjust these "Humane Collars" to fit a horse with a much smaller neck, but the common collars are not adjustable and if they fit a horse properly at the beginning of the work season they are too large as the horse works down in flesh and a collar pad is used to take

up the shrink of the horse. The collar pad is a hot thing. It is wet from sweat and often scalds the shoulders and makes a sore where the "Humane Collar" would not. I have no interest in the manufacture of "Humane Collars." I do not even know the people who make them. I am of the opinion Stanley Turner of Texas failed to get his collar properly adjusted. I can take any two of my mares in their "Humane Collars" and pull anything that is loose at both ends; providing the double trees will hold. I cannot understand why many more "Humane Collars" are not used on horses whose shoulders get sore easily and whose necks are so big and thick on top that a common collar pinches them and makes them sore.—C. M. Lewelling, Beaver City, Neb.

Thinks Manufacturers Should Be Prosecuted.

To the American Breeder:—The humane collar hit me as it did the Texas man. I never squealed as I was ashamed of the price. My horse would not pull in them. Just look at the thing; it just mashes the horse together in the shoulder. The firm that

Wood and Water

The farmers of our great prairies will appreciate the value of a country with plenty of wood and water, along with good farm land. You can get all that on the KANSAS CITY SOUTHERN RAILWAY. Ask for particulars.

#### REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

**RICHARD SELLMAN, Rochelle, Texas.**

#### BLACK HAWK MORGANS.

For sale, or will exchange for young, small, unbroke range horses, six registered black stallions; two matured; 15½ hands; 1,200 pounds; two, three years old and two, two years.

**E. F. BROWN, DERBY, IOWA.**  
**R. F. D. No. 2.**

#### RIDING AND DRIVING MARE WANTED

Need not be registered, fancy or five galloped, but must be serviceably sound, perfectly safe for lady to drive, have an easy canter and be in a healthy condition for breeding. Will pay only a moderate price. Please give full description and price in first letter.

**AMOS BURHANS, Waterloo, Iowa**

#### SADDLE STALLION, PERCHERONS AND 10 JACKS.

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

**W. L. Graham,**

## SHETLAND PONIES

For sale—Three choice Shetland stud colts; spotted and nicely marked; bred from pure Shetlands.

### S. T. CAMPBELL,

**43rd & Center Sts., Omaha, Neb.**

makes them should be prosecuted for cruelty to animals. The horse is the best friend of man.—**Wm. Hales, Bantry, N. D.**

#### Used Them Five Years; All Right.

To the American Breeder:—I saw a letter in your August 5th issue from a Texas man condemning the humane collar. Have used a set of these collars for five years and they are all right. Keep from six to eight work horses and change from one horse to another and never had but one horse to refuse to pull. The first time horses ever had these on put them on heavy loads and they pulled as well as in other collars. Cannot use them on our stallion as they do not widen enough, but they fit every other horse we have.—**Conway Bros., Casey, Ia.**

#### HINNIE SUCCESS WILL REQUIRE CAPSULES.

To the American Breeder—I have had about 40 years' experience as a breeder, in Texas. I think it absolutely impossible to foal anything like a paying per cent of jennets or burros to a horse in the natural way. It

possibly might be made practical by careful, scientific men, with the capsule system. I doubt it, however. **H. L. Johnson, Ward County, Texas.**

#### SADDLE AND STANDARD BRED.

Peter Volo 2:04½, who made last year the world's record for a two-year-old, has trotted this year the fastest three heats ever made in one race by a stallion. He is now talked of as the greatest of the many good ones sired by Peter the Great.

How is this for a family of sons that were good ones—the produce of Beautiful Bells: St. Bel 2:24½, Chimes, Bell Boy 2:19½, Bow Belis 2:19½, Electric Bell, Belsire 2:18, Adbell 2:23 and Monbells 2:23½. Beautiful Bells, the dam of this string, lived to be 32 years old.

A New York writer says that six years ago with Republican Secretary Wilson at the head of the Department of Agriculture, only one seventh of our draft animals were mules, but that now, with Democratic Secretary Houston at the agricultural helm, one-fifth of our draft stock are mules. Well?

A record price for recent years, viz: \$30,000 is said to have been paid for Peter Scott 2:07½, by Peter the Great. The buying was done by an agent who did not name his principal.

Missouri King, champion saddle stallion in some important shows three years ago, died recently, the property of E. R. Maier of California. Missouri King cost Mr. Maier \$50,000.

The owner of Lassie McGregor 2:05½ is said to have removed one of her most dangerous racing rivals from the competition, by buying at long price Peter Scott 2:07½. This, even in racing, is found a place for the famous political maxim: "If you can't beat 'em, jine 'em."

The famous bay saddle gelding, Jack Barrymore, has been sold by Matlick & Shropshire for \$5,000. The buyer is H. B. Thornbury of Los Angeles, Cal.

When the pacer, William, won three straight at Grand Rapids, in 2:00½, 2:00 and 2:02½, we were reminded of the dog's story about the rabbit which escaped it, by climbing a tree. To the fox's objection that rabbits couldn't climb, the dog replied that "this rabbit had to." So with William; there were other two-minute pacers right after him.

#### HOW AUTOS WILL HELP WORK HORSES

To the American Breeder:—Will the autos hurt the draft horse market? Will the autos take the place of draft horses? Yes, and more. Autos can take the place of some draft horses and some draft mares, and take the interest in draft horses so far away from the owner of the auto that he will neglect his breeding and horse business or sell out and quit the horses entirely.

Here we have a neighbor, John. He raised some horses on the range, keeping two or three stallions, but not the good kind. John's old father died, leaving \$30,000 or \$40,000 to John in

lands and money. (Brother breeders how many of you would think of the good foundation stock you could buy with John's money if it was yours?) John sells his horses and buys a Ford and says: "I just bought this Ford to learn to run it and then I'll buy the best \$3,000 auto I can find." Twenty-six cars in one train went to Kansas all loaded with autos. Now 75 or 80 per cent of this train load of autos will go to farmers and their sons.

How many of these men will raise more horses while they run the autos than they did before. We all know they will raise less horses and many none at all. They will think they don't have use for so many horses and may sell some now on hand. But wait! In three or four years these men will want farm horses and most of them will have to buy. They will not buy the best draft horses because this class of horses will sell too high and when they look for a good farm horse or mare they will find them scarce, because they and their neighbor owners of autos, sold a few and neglected to raise more.—**N. P. Mayhew, Cherry County, Neb.**

The Missouri State Fair, which this year occupies the dates of September 26th to October 3d, inclusive, is uniformly one of the most enjoyable of the fall fairs. Missouri has one of the coolest, most slightly and best equipped state fair grounds in America, and no fair anywhere is attended by a better natured, more hospitable, pleasure-loving class of people than those who attend the Missouri State Fair at Sedalia. The various colleges of the Missouri State University has taken a leading part in making the educational feature of this fair second to none. We are proud to present its advertisement and to urge every Missouri reader, as well as those who conveniently can go from other states to put in several days attending this fair.

The Kansas State Fair, located at Hutchinson, Kansas, holds this year, September 12 to 19, inclusive, its second annual exhibition as the official fair of Kansas, and about its tenth annual exhibition as the most successful fair in the state. The secretary and management of this fair are among the most successful attendance getters in the business, and every one who exhibits at Hutchinson feels that he has displayed his goods before a profitable audience. The Kansas Fair advertisement in our columns shows that this year's event will be the most educational, as well as the most interesting, in its history.

**James Houchin, Jefferson City, Mo.**, provided the saddle horse department of the recent Iowa State Fair with its greatest single attraction by exhibiting therein his famous champion show and breeding stallion, Astral King 2805. If you ever saw Astral King, try to imagine a flashy, chestnut stallion, with the grandest style and most perfect manners and conformation ever seen in a saddle horse. You will not miss it much.

The beginning of the fair season and extensive use of photographs made in these columns, affords all the evidence necessary as to the desirability of owning a kodak on any stock farm. The Eastman Kodak Company of Rochester, N. Y., the originators and proprietors of the "Kodak," advertise with us regularly and should be addressed for any information in this line. If the American Breeder has helped to develop your appreciation of true photographs, please tell the Eastman people so when you write.

The happy ending of many a trip to New York is made over the Hudson River Day Line Steamboats, advertised regularly in these columns.

The Edwards Manufacturing Company, 926-76 Lock St., Cincinnati, Ohio, is one of our most regular advertising patrons. This company has gone farther than any other in the introduction of permanent and economical fireproof roofing material among the readers of the American Breeder. We will be glad to be mentioned in connection with any inquiries to this company.

The S. R. Fell Company, Department A. B., Cleveland, Ohio, show in every advertisement of "Sal Vet" the reliability and right intention of its manufacture. None but a reliable company could sell its goods on the terms this company offers and still make a living profit. We leave it to our readers, after examining the advertisement of this company, whether or not it is doing business on the square. As to

## What Is He Worth?

AMERICAN BREEDER

Here is a photograph of my registered jack colt, Big Boy; 23 months old (will be two years old October 1); weighs 910 pounds in medium flesh; is 62 inches high; 68 inches around heart with a tight tape; 8¼ inch bone.

I want to know what you Kentucky and Tennessee and Missouri jack raisers think of him. I gave notice about ten months ago in this paper that I had you all skinned, and one man in Tennessee (J. J. Murray) stated that he could show me one as good some time in the future. But he never did show him. I am going to contest for the premiums at the Fort Worth Stock Show, October 10 to 17; also at the Dallas fair, October 17 to 30.

As I am a grocery man and not a jack man, this jack is for sale. Don't you think he is worth \$2,000?

**S. M. COOPER**  
**Rio Vista, Tex.**

#### KENTUCKY JACKS AND SADDLERS.

A splendid lot of big bone, Kentucky mammoth jacks from colts to six years old. A fine lot of saddle stallions, mares, colts and fillies. We are making very attractive prices to parties who buy in the fall. A guarantee with every animal sold. Home grown blue grass seed and cedar fence posts.

**COOK FARMS,**  
**Box A. 436, Lexington, Ky.**

#### JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

**Phil Walker, Moline, Elk County, Kas.**

**BLACK MAMMOTH JACK**  
For sale. 15.1 inches high; standard; black, with white points; six years old; weight around 1100 pounds; quick as a horse. Will guarantee him in every way. Cost \$1000 three years ago. I have sold all my stock and am going out of the business. Can have at a bargain if taken soon.

**B. R. LEWIS,**  
**Coffeen, Montgomery Co., Illinois.**

## MAMMOTH JACKS

For sale—Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

**JOHN HENRY, Fairfax, Ia.**

#### FAIRLAND JACK & JENNET FARM.

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

**U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.**

## JACK---DUROC HOGS

For sale. A black jack; light points; six years old; 15½ hands high. Also Duroc hogs.

**LOUIS KOENIG, Solomon, Kans.**

#### GOOD JACK WANTED.

I have a few young jacks and 17 jennets and must sell the bunch at once or make some trade to get a jack not akin and good enough to breed the jennets to. They are big, black, mealy nosed and good.

**JOHN A. EDWARDS, Englewood, Kas.**

M. F. PROETT, ALEXANDRIA, NEB.

the merit of Sal Vet, any breeder can't for the asking the statements of any practical men who have used it. L. M. Monahan & Sons, Smithton, Mo., at auction, October 20 and 21, 1900, and jennets. This simple statement is attracting the attention all over this continent of men who know the value of good jack stock and where

such stock is being produced. When we add, in the way of particulars, that this great offer of 100 head will include 25 selected animals which had been reserved for the exhibition at the San Francisco World's Fair next year, it will be seen that no auction event of equal importance in the jack line was ever before advertised. In fact, Messrs. Monsees themselves guarantee that this will be the best offering of any breeder, firm or corporation will put up this year. Everybody wants a catalogue, of course. Be sure to mention the American Breeder when writing for one.

A. Latimer Wilson, Creston, Iowa, starts his regular ad in this issue. He has imported and home bred stallions and mares and invites our readers to visit his barns.

S. T. Campbell, Omaha, Neb., whose ad appears in this issue, has three choice Shetland stud colts for sale.

L. D. Norris, Redding, Iowa, is offering for sale his German Coach stallion, or he will trade for a good, large jack, draft stallion or Percheron mare.

F. E. Alkman, Lyons, Iowa, has three registered Percheron stallions, two weanling stallion colts and one five year old mare safe in foal, for sale.

H. B. Smith, Coldspring, Mo., is compelled to sell his imported Percheron stallion. This horse cost \$1,850.

C. G. Wells, Palmyra, Mo., is offering "drouth prices" on high grade Percheron stallions, mares and colts. Write him for particulars.

Col. E. H. Urton, Clarksville, Ohio, is advertising two Percheron mares and two Percheron stallions for sale in this issue. He is also a live stock and gen-

eral auctioneer. If interested, write and get his prices.

Nixon E. Beard, Lamesa, Texas, has a good herd jack to sell or will exchange for one equally as good.

R. S. England, Mercer, Mo., is offering a bargain in the way of a large Mammoth jack, eight years old. See his ad.

Trumans' Pioneer Stud Farm, Bushnell, Ill., write: "We were very fortunate in shipping over in May last a very choice selection of Shire stallions and our July importation consisted of the very best Percheron and Belgian stallions that we could find for sale in their respective countries. This places us in a position to take care of our trade, notwithstanding the fact that the English, French and Belgium governments have prohibited the shipment of horses from their respective countries. This will delay our regular August importation but we have plenty of high class stallions of either breed to show our customers. Early buyers this year will have the advantage."

W. E. McKee, Braddyville, Iowa, wants to sell a 151-acre farm in Anderson County, Kas., and will take a good draft stallion, jack or automobile as part pay.

Amos Burhans, Waterloo, Iowa, is in the market for a riding and driving mare, and asks for full particulars and price in first letter. See the ad.

J. W. Ethridge, Mt. Vernon, Ill., has a German Coach stallion and a jennet to sell or trade for an automobile, motor cycle, bull or other stock. Write him what you have.

S. M. Cooper, Rivoli, Texas, is advertising his jack colt, Big Boy, for

# FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address J. C. HUCKSTEP, Eolia, Pike County, Mo.

# JACKS AND SADDLE STALLION

FOR SALE OR TRADE. Jacks are 14 and 15 hands high; right in every way. Saddle stallion is 16½ hands high. Will trade part or all for good automobile. Will sell cheap or will consider anything on a trade as I am going out of the stock business.

J. T. TAYLOR, FOLEY, MO.

# BIG MAMMOTH JACKS AND JENNETS.

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles North of Monett on Frisco R. R., and six miles Southwest of Hoberg on Mo. Pac. R. R. Write for prices to Henry Obermann & Son, Freistatt, Mo.

sale for \$2,000. Mr. Cooper is in the grocery business and has not the time to care for this jack. Look for the ad in this issue.

# DID YOU SEND FOR IT?

The Catalog of Our Great Jack and Jennet Offering to be Sold at—

## PUBLIC SALE Oct. 20 and 21

Gives descriptions and breeding, illustrated with actual, true-to-life photographs, of the

## 100 HIGH CLASS ANIMALS

Which we guarantee the best offering any breeder, firm or corporation will put up this year—think of that. Buying early is best at all times, but this year, more than for many years, the buyers at this sale will not only get the best, but will get it at a saving not possible in the later sales. The day is past when the money making mule can be produced by the using of little cheap sires, and really **HIGH CLASS JACKS ARE NEEDED** more urgently than ever before. The world knows that this firm handles permanently the good kind, and our decision to combine two big sales in one and sell this fall, is your opportunity.

**BE SURE TO SEND FOR OUR SALE CATALOG AT ONCE**

Asking for any information you want, and mentioning the American Breeder.

**L. M. MONSEES & SONS, Smithton, Mo.**

Remember, We Sell the Great Show Herd of 25 Head, Selected and Reserved for the San Francisco World's Fair Next Year. Nothing Sold Before the Sale.

Headed West, For the Panama-Pacific Exposition.  
Who Will Be the Lucky Men to Carry Them  
On and Win?

### 14 Good Mules For \$1,500

Three 4-year-olds, broke to work.  
Four 3-year-olds and seven 2-year-olds.  
All in good condition and cheap at the price.  
W. F. DUSELL, Montevideo, Minn.

### A BARGAIN In Mammoth Jennets

I have 17 good big black jennets, which on account of other business, I want to sell. There is a bargain here for somebody who has the right kind of a jack to breed them to. A few jacks for sale also.

JOHN A. EDWARDS, Englewood, Kas.

J. O. Singmaster & Sons, Keota, Iowa, send a partial list of prizes won by them at the Iowa State Fair, as follows: Third on Jalap, aged stallion. Second on Luron, three year stallion. Third on Stanley "S," three year stallion. Second on Malais, two year stallion. First on McClure's Choice by Jalap, yearling stallion. Fifth on Keota Idea, yearling stallion. First on Keota Jalap, stallion colt. Third on Stanley "S," three year stallion, bred by exhibitor. First on McClure's Choice, two year stallion, bred by exhibitor. First on Huppe, for produce of mare, showing Stanley "S" and McClure's Choice. First on five stallions, Jalap, Stanley "S," McClure's Choice, Luron and Malais (ten entries). Third on best five stallions (Lical, Jungo, Mateur and Ali and Keota Jalap). First on Stanley "S" Percheron Special A. First on McClure's Choice, Percheron Special B. First on McClure's Choice, Percheron Special C. First on five stallions, Percheron Special J. Third on five stallions, Percheron Special J. First in Futurity, McClure's Choice. Fifth in Futurity, Maple Grove Snowball. Fifth in class, same, one year and under two. Third on Jacande aged mare. Fourth on Kibitka, aged mare. Second on Huppe, mare and foal. Fourth on Luth, mare three years old and under four. Fourth on Malice, mare two years old. Second on Keota Huppe, weanling filly. Reserve champion stallion, McClure's Choice. Champion stallion, owned in Iowa, McClure's Choice. Second on stallion and get, Honorable, showing Stanley "S," McClure's Choice, Keota Idea and Keota Irls.

## What Breeders Say About Jacksorine

The Greatest Remedy Yet Discovered For All Sores on Jacks, Horses or Mules.

Price \$3.50 Per Can.

"I have used two cans of your Jacksorine and I regard it as being as good for jack sores as anything I have ever used. Have been in the jack business for over 30 years.—J. W. McCause, Mt. Vernon, Mo."

"I have a fine jack which got one of his front legs in the pit, and he got to gnawing it and made a very bad sore which refused to heal for all remedies until I got a box of Jacksorine and cured it with half a box.—J. A. Johnson, Erick, Okla."

"I have tried your Jacksorine and find it the only medicine for jack sores. I can recommend it to any one who has jacks with sores on them.—Sam Molen, Frazer, Ky."

"I have used your Jacksorine, and after having a jack with five different sores on him, and trying every remedy that I could hear of, and giving him up as incurable, I got a box of your Jacksorine and cured him inside of 60 days. I consider it has no equal.—A. M. Perkins, Washington, Ind."

"I had a jack with a bad sore. I tried two veterinarians on him but they failed to do him any good. I saw Jacksorine advertised and sent and got a box and it cured him sound and well. I think Jacksorine is everything that it claims to be.—H. D. Power, Alto, Texas."

Under new management and partly as a result of greatly increased sales, the price of Jacksorine has been reduced from \$5 to \$3.50. Its old high standard of quality will be absolutely maintained.

Jacksorine undoubtedly is the best remedy for jack sores ever put out. It is put up in large self sealing containers from a scientific prescription and was long used with absolute success by the president of this company on his own stock. Remember, the price is \$3.50 per can, postpaid. Remit by P. O. order or bank draft to

**O. P. WILSON & CO., Lock Box 489, Kansas City, Mo.**

"Make my claim for Jacksorine as strong as you wish. I used it and found it O. K.—H. G. Belt, New Salem, Ohio."

"I have used several cans of Jacksorine and have found it to be the best thing I ever used for jack sores.—Willey Clouston, Ness City, Kans."

"We have never used Jacksorine on jack stock, but have used it on a very bad case of grease heel on a stallion, which use gave very satisfactory results. We can recommend it as being a No. 1 ointment.—Jas. and W. R. Clelland, New Hampton, Mo."

"I have used Jacksorine for two seasons with good results. Will want another can soon.—O. A. Seaton, Jewell, Kans."

"I am using your Jacksorine with good success. Would recommend it to all as a reliable remedy for jack sores.—Cliff Hutton, Hennessey, Okla."

"I got a can of your Jacksorine which I used on a mare that had an old sore on her hip, caused from mad itch. It sure does the work and does it well.—J. C. Starkey, Marquard, Mo."

"I have used your Jacksorine to my entire satisfaction. I find it to be absolutely the best remedy for jack sores I ever used. Can heartily recommend it to anybody.—O. W. Layson, Hatton, Mo."

# Questions and Answers

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1247—SORES ON LEGS**—I have a mare that has nursed a colt for three and a half months. The colt is fine, but she has a breaking out on her legs; small boils which break and run bloody matter; they have a bad odor; then dry up.—Minnesota Subscriber.

**REPLY**—Such a case should by all means be subjected to a careful examination at the hands of a qualified veterinarian, inasmuch as the animal is showing suspicious symptoms of glanders. At any rate, you cannot afford to take any chances and you should feel it your duty to call in some of the state authorities and decide the point in question. If it proves to be only a harmless skin disease it will be time enough to take up the matter of treatment later.

**1248—SWELLING ON NECK**—Please tell me what is the matter with my jennet. She is six years old; I bred her the 4th of March and took her colt off of her and she began to improve in flesh; appeared to be healthy and all right every way. About a week ago she came up and was badly swollen on both sides of the upper part of neck. It is six inches across the top of her neck, but it does not appear to be sore. I can pinch it and she does not flinch. I have rubbed with liniment, but it has not improved any.—Texas Subscriber.

**REPLY**—It is quite likely that this animal is developing a deep abscess at the point mentioned and we would suggest that you apply the liniment you are using sufficiently often until it produces some blistering effect, and then discontinue its use for a while.

**1249—CLOSURE OF OS**—How long after breeding, providing the mare gets with foal, does the os close and the plug form in os?—New York Subscriber.

**REPLY**—Closure begins shortly after subsidence of estrum in the event the mare conceives.

**1250—ENLARGEMENTS ON HEAD**—I have a colt that has knots on forehead; one over each eye; has been there from birth. They are oblong with point down; the upper end largest; they are hard like bone and sharp. I want to know if they can be taken off without injury to the colt. It is a very fine colt and they disfigure its head very much. They grow as the colt grows.—Arkansas Subscriber.

**REPLY**—It will prove more satisfactory to you to have the colt examined personally by a graduate veterinarian, inasmuch as your letter does not make it clear just what structures are involved in the growth.

**1251—WEANING COLTS**—As I have four colts foaled from April 20th to May 10th, to wean, I write to ask what is the best age to do so. Also in what way and how to dry off the mares, as they are all good milkers. Am working three of them; the other runs to grass.—Minnesota Subscriber.

**REPLY**—One is governed much by circumstances in weaning colts. As a rule, a colt may be weaned without checking its growth at six months of age. By that time the colt should have been accustomed to a little oats, bran and oil meal so that the change is not too abrupt. The period of suckling is generally arranged to be less frequent and the mare should be milked out between these intervals so as to prevent inflammation of the udder. Practice the same general principles you would in drying off a milk cow. Scanty rations, especially of grain, with infrequent milking is ordinarily all that is necessary. Do not neglect to supply the colts with good food to take the place of the milk.

**1252—SORE LEGS**—I have a large four year old jack that is broken out nearly all over his legs. He seems to bite his legs; is worse on his front legs than hind legs. He has a good appetite. Has been fed on sheep oats, timothy hay, bran (wheat) and ship stuff, wet. Have just started the jack on a course of Fowler's solution. Will greatly appreciate any assistance you can give me.—Missouri Subscriber.

**REPLY**—Arrange for the jack to take plenty of exercise and feed

grass as much as possible with but little grain. Apply the following to the legs three times a day; sugar of lead two ounces; rain water one quart. Shake well together. Continue the Fowler's Solution in the feed three times a day, giving one-half ounce at each dose. Spray the limbs with some fly preparation to prevent annoyance and infection from these pests.

**1253—STALLION WITH SORE FEET**—I have a pure bred Percheron stallion that seems to have gotten stiff or sore in both his front feet. It seems as though his front feet are either too soft or sore to step down on. He is six years old; is otherwise in good health and condition. Kindly advise me what the trouble is and give me a remedy.—North Dakota Subscriber.

**REPLY**—It is quite likely you need the services of a good veterinarian who can have an opportunity to look this animal over carefully with a view of discovering why his feet are sore. It may be that he has been foundered or that he has been roaded without proper protection, such as is sometimes needed from shoes. Again he may be rheumatic. Have him cared for by some one that can study his needs which will be based on what is found to be the difficulty.

**1254—MARES FAIL TO CONCEIVE**—I have some good mares from four to nine years old. Some of them were bred in March and April and did not come in heat until the last two weeks; some have been bred every 21 days since in February; are in good shape inside and out. I have tried breeding

to two different horses and two different jacks. Tried one at a time; then tried horse and jack both the same heat. Tried capsules and tried natural service. Some of them settled the first service and some of them are still in heat. They are running in pasture. I have never seen any signs of abortion. I also have some working that are the same way.—California Subscriber.

**REPLY**—There are so many reasons why mares fail to conceive that to an ordinary observer appear to be perfectly healthy, that we are unable to offer suggestions in your case. Every non-producing mare is a problem within itself and it is rarely found in a bunch of shy breeders that failure to breed is due to a common cause, unless it is the fault of the stallion or they are infected with some infectious disease.

**1255—ENLARGED NAVEL**—About a month ago, on one of my filly colts, a bunch came where the navel cord healed about the size of a small hen's egg. Had I best try to treat it to remove it, and how?—Minnesota Subscriber.

**REPLY**—Your colt may be afflicted with hernia, in which event you should seek the advice of a good veterinarian.

**1256—OBSTINATE WOUND**—I have a mule which got her foot cut just above the hoof on the right side of the right front foot. It got cut the latter part of April. It was not cut deep enough to make her lame, but it won't heal up. We tried everything we could hear of. The veterinarian said to use fish oil and turpentine; some said to use air slack lime; some said to use baking soda and pulverized alum. We tried everything we could hear of but it is not well yet. It looks as nice as any wire cut I ever saw; no signs of proud flesh at any time. It is a two year old mule; is in good shape.—California Subscriber.

**REPLY**—You should have the raw surface removed by a competent veterinarian so that the part which no doubt projects above the surrounding skin is lowered.

**1257—UNABLE TO RETAIN URINE**—I have a mare colt that apparently has weak kidneys. She is unable to hold her urine; it drops from her almost continuously; a few drops at a time. She has been afflicted ever since she was about three weeks old and she is three months old now. She looks

Order by number.

BREEDERS' HARNESS & WHIP CO., Williamson Bldg. Kansas City, Mo.

well and has grown fairly well. We have no veterinarian in this country which is the reason I appeal to you for advice.—Colorado Subscriber.

**REPLY**—It is questionable if anything will help this case, inasmuch as a paralysis of the muscles that surround the neck of the bladder exists. We would suggest that you give the colt 20 drops of the fluid extract of nux vomica mixed with a grain ration three times a day for several months.

**1258—STIFF IN HIND LEGS**—I have a 15 months' old stallion that is stiff in hind legs. I can't tell whether it is in the stifle or gambrel joints. He

has plenty of exercise; out every night and part of the day when flies are not too bad. He has not been over-fed or kept too fat; just in good shape. I hate to have anything happen to him.—Minnesota Subscriber.

**REPLY**—The mere statement that your stallion "is stiff in hind legs" does not indicate anything very definite of the nature and location of the trouble. There are so many things that might give rise to this symptom that it would be foolish in us to undertake to suggest treatment. The best way would be to call a competent veterinarian so that an opportunity for careful examination may be made. Do not delay as the condition may become chronic and incurable.

**1259—BRITTLE FEET**—My Jack's front feet are badly cracked; are very brash. Have rubbed them with three parts tar and one of lard. I have kept his front feet shod. He runs in a paddock; has an open stall. Would it be best to take his shoes off?—Texas Subscriber.

**REPLY**—Keep the jack away from manure as much as possible where he can have a run at grass and his feet contact with clean mother earth. It will be better if the shoes are removed provided his feet do not break badly. Instead of the lard use vaseline. Once every three weeks apply the following just above the hoof line, rubbing it in well for about one and one-half inches above the upper margin of the hoof. Make one application only at a time and leave on for 24 hours, at the end of which time the parts may be washed with warm water and soap; powdered cantharides one ounce, vaseline six ounces. Mix well together and apply with the finger, rubbing briskly for five minutes. This will blister the parts moderately. Tie the animal's head up so he cannot reach the parts with his nose until the washing off has been done.

**1260—BRITTLE HOOF**—I have a jack that his feet are rough and scaly and a horse that his feet are brittle and crack and split. What is good for them?—California Subscriber.

**REPLY**—See answer to a similar inquiry in these columns.

**1261—GROWTH ABOVE HOOF**—I have a stallion that has a growth between the ankle and hoof. It has been growing about a year; it healed up last winter, but when warm weather began it got sore. I asked a veterinarian about it and he said it would be hard to cure. Can you give a remedy?—Illinois Subscriber.

**REPLY**—Inasmuch as you have access to the services of a veterinarian we would suggest that you permit him to take charge of the case so he may give it his personal care. He is perhaps correct in stating that it will be difficult to cure, hence our advice to allow some one to give it personal attention.

**1262—WIND PUFF**—What is good to take wind puffs off of the legs of a driving horse? They are just above the ankles and seem to be hard.—California Subscriber.

**REPLY**—There is no application that you can make that will remove these bursal enlargements.

**1263—STIFF JACK**—I have a fine young jack 11 months old, that can't get up when he lies down; he seems to be stiff and weak in the back. I lost one after nine months of helping him up. They eat heartily but stay thin. Will you tell me what to do?—Illinois Subscriber.

**REPLY**—It is very difficult to prescribe for an animal with such a meager description of symptoms. There are several things that could ail this jack. For instance, he might have been injured in some way in the back; may have rheumatism of the lumbar muscles; may be infested with internal parasites. Better have a good, competent, graduate veterinarian look this case over for you.

**1264—RESTORING NORMAL COLOR OF HAIR**—What is good to make the hair come in the right color, bay or black, the same as the rest of the horse?—California Subscriber.

**REPLY**—As a rule, a little carbolic vaseline is all that is needed in cases of this kind.

**1265—ANGORAS AND RAMBOUILLETS**—Please give me, through the American Breeder, the names of parties breeding Angora goats and Rambouillet sheep. I want registered stock.—Texas Subscriber.

**REPLY**—In the same mail with this inquiry came a letter from another Texas reader, mentioning among other things, the uniform success he has had finding buyers by advertising in the American Breeder. Any one having Rambouillets or Angoras to sell, or, in fact, any kind of good breeding stock, few or many, should advertise in our columns. It is a means of money saving as well as money making.

**1266—LOCATION OF DRAFT HORSE RECORDS**—Can you give me the name and address of the French Draft Registry Association, and also the American Percheron Association?—Missouri Subscriber.

**REPLY**—The National French Draft Horse Association is located at Fairfield, Ia. C. E. Stubbs is secretary. The Percheron Society of America is located at the Stock Yards, Chicago, Ill. Wayne Dinsmore, secretary. The American Breeder publishes from time to time complete lists of the live stock records, giving all secretaries' addresses. These lists should be preserved.

#### WHY MEAT IS HIGH.

For example, James Walker, farmer, of Scottville, Macoupin County, Ill., sold at Chicago, August 19, 1914, five cars of cattle (80 head) for \$11,784.15, of which 47 steers averaging 1,475 lbs. brought \$10.60 per 100 pounds, or \$154.45 per head, while 26 steers averaging 1,378 lbs., brought \$10.50 per 100 pounds, or \$144.70 per head. These are the highest prices he ever received for such stock. Mr. Walker is 81 years old and has fed cattle and hogs for the Chicago market continuously for 52 years. Within this period he has sold the best cattle as low as \$3.75 per 100 pounds and the best hogs at \$2.50, and has seen corn selling at eight cents per bushel such as now brings eighty cents.

### FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

# Have Healthy Hogs!

If your hogs are not doing well—if they are not growing and putting on flesh as they should—in spite of plenty of feed—if any of them are runty—thin—rough looking—scrawny, or if they cough **Look Out For Worms!** In nine cases out of ten you will find these deadly parasites are at work by the hundreds in the stomach and intestines, sucking the blood, stealing the food and pulling the helpless animals down in flesh and vitality.

Remember worm-infested hogs are usually the first to be stricken when cholera breaks out, and least likely to recover, while healthy worm-free hogs are not only in the best possible condition to escape the disease, but stand a far better chance to recover if attacked. Prevention is the only sure weapon for fighting this terrible plague and the first step is to **get rid of the worms.** You can't afford to neglect this important matter a single day, especially when I make you this liberal offer.

## I'll Rid Your Hogs of Worms I'll Prove It Before You Pay

I don't ask you to risk one penny. All I ask you to do is to fill out the coupon below—send no money. I'll feed all your stock 60 days before you pay. Why go on wasting feed—losing profit—inviting disease into your herd and risking terrible losses, when I offer to rid your stock of worms or no pay? Fill out the coupon—mail today.

Mr. Feil is a registered Pharmacist under the Ohio State Laws, a graduate of the Cleveland School of Pharmacy and of the National Institute of Pharmacy. He has been engaged in compounding Veterinary Remedies for the past 25 years.

*Sidney R. Feil Pres.*

# SALVET

I Take  
All  
The Risk

I'll Feed Your  
Stock 60 Days  
Before You Pay

REG. U.S. PAT. OFF.

Sal-Vet is the wonder-working, worm-destroying, medicated salt you have heard and read so much about. It not only destroys the worms that cause 90 per cent of all live stock diseases, but it aids digestion, sharpens the appetite, relieves constipation and makes all farm animals thrive better and grow into profit faster.

**No Dosing No Drenching They Doctor Themselves No Starving No Trouble at All**

Sal-Vet is easy to feed. You simply place it where all your farm animals can have free access to it, and they doctor themselves. Sal-Vet is the biggest money-maker and money-saver you can find. Nothing else pays you such big profits and prevents so many losses. Read these letters:

"Hog cholera swept this part of the country the past fall. It got into the herds of my nearest neighbors on both sides. I am sure my hogs were exposed, because one of them took the disease, but recovered. SALVET kept my hogs healthy." M. D. WILLIAMS, Bimford, North Dakota.

"Greatly pleased with SAL-VET. I never knew a horse could have so many worms and live. SAL-VET surely brings them—big and small. The horses to which I fed SAL-VET act one hundred per cent better, and what we formerly thought was colic and meanness, proved nothing but worms and worms."

J. E. TERKEURST, 271 Dauphin Street, Mobile, Alabama.

Hundreds write like this. Can you afford to be without Sal-Vet? The cost is only a trifle. For only one-twelfth of a cent a day any sheep or hog can run to it freely. You have everything to gain and nothing to lose by accepting this liberal offer.

## Send No Money—Just the COUPON

Just tell me how many head of stock you have and I will ship you enough Sal-Vet to last your stock 60 days. You pay the freight charges when it arrives—and feed the Sal-Vet according to directions for 60 days. At the end of that time report results. If Sal-Vet has not done all I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon now.

Questions and Answers

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1247—SORES ON LEGS**—I have a mare that has nursed a colt for three and a half months. The colt is fine, but she has a breaking out on her legs; small boils which break and run bloody matter; they have a bad odor; then dry up.—Minnesota Subscriber.

**REPLY**—Such a case should by all means be subjected to a careful examination at the hands of a qualified veterinarian, inasmuch as the animal is showing suspicious symptoms of glanders. At any rate, you cannot afford to take any chances and you should feel it your duty to call in some of the state authorities and decide the point in question. If it proves to be only a harmless skin disease it will be time enough to take up the matter of treatment later.

**1248—SWELLING ON NECK**—Please tell me what is the matter with my jennet. She is six years old; I bred her the 4th of March and took her colt off of her and she began to improve in flesh; appeared to be healthy and all right every way. About a week ago she came up and was badly swollen on both sides of the upper part of neck. It is six inches across the top of her neck, but it does not appear to be sore. I can pinch it and she does not flinch. I have rubbed with liniment, but it has not improved any.—Texas Subscriber.

**REPLY**—It is quite likely that this animal is developing a deep abscess at the point mentioned and we would suggest that you apply the liniment you are using sufficiently often until it produces some blistering effect, and then discontinue its use for a while.

**1249—CLOSURE OF OS**—How long after breeding, providing the mare gets with foal, does the os close and the plug form in os?—New York Subscriber.

**REPLY**—Closure begins shortly after subsidence of estrum in the event the mare conceives.

**1250—ENLARGEMENTS ON HEAD**—I have a colt that has knots on forehead; one over each eye; has been there from birth. They are oblong with point down; the upper end largest; they are hard like bone and sharp. I want to know if they can be taken off without injury to the colt. It is a very fine colt and they disfigure its head very much. They grow as the colt grows.—Arkansas Subscriber.

**REPLY**—It will prove more satisfactory to you to have the colt examined personally by a graduate veterinarian, inasmuch as your letter does not make it clear just what structures are involved in the growth.

**1251—WEANING COLTS**—As I have four colts foaled from April 20th to May 10th, to wean, I write to ask what is the best age to do so. Also in what way and how to dry off the mares, as they are all good milkers. Am working three of them; the other runs to grass.—Minnesota Subscriber.

**REPLY**—One is governed much by circumstances in weaning colts. As a rule, a colt may be weaned without checking its growth at six months of age. By that time the colt should have been accustomed to a little oats, bran and oil meal so that the change is not too abrupt. The period of suckling is generally arranged to be less frequent and the mare should be milked out between these intervals so as to prevent inflammation of the udder. Practice the same general principles you would in drying off a milk cow. Scanty rations, especially of grain, with infrequent milking is ordinarily all that is necessary. Do not neglect to supply the colts with good food to take the place of the milk.

**1252—SORE LEGS**—I have a large four year old jack that is broken out nearly all over his legs. He seems to bite his legs; is worse on his front legs than hind legs. He has a good appetite. Has been fed on sheep oats, timothy hay, bran (wheat) and ship stuff, wet. Have just started the jack on a course of Fowler's solution. Will greatly appreciate any assistance you can give me.—Missouri Subscriber.

**REPLY**—Arrange for the jack to take plenty of exercise, and feed

grass as much as possible with but little grain. Apply the following to the legs three times a day; sugar of lead two ounces; rain water one quart. Shake well together. Continue the Fowler's Solution in the feed three times a day, giving one-half ounce at each dose. Spray the limbs with some fly preparation to prevent annoyance and infection from these pests.

**1253—STALLION WITH SORE FEET**—I have a pure bred Percheron stallion that seems to have gotten stiff or sore in both his front feet. It seems as though his front feet are either too soft or sore to step down on. He is six years old; is otherwise in good health and condition. Kindly advise me what the trouble is and give me a remedy.—North Dakota Subscriber.

**REPLY**—It is quite likely you need the services of a good veterinarian who can have an opportunity to look this animal over carefully with a view of discovering why his feet are sore. It may be that he has been foundered or that he has been roaded without proper protection, such as is sometimes needed from shoes. Again he may be rheumatic. Have him cared for by some one that can study his needs which will be based on what is found to be the difficulty.

**1254—MARES FAIL TO CONCEIVE**—I have some good mares from four to nine years old. Some of them were bred in March and April and did not come in heat until the last two weeks; some have been bred every 21 days since in February; are in good shape inside and out. I have tried breeding

to two different horses and two different jacks. Tried one at a time; then tried horse and jack both the same heat. Tried capsules and tried natural service. Some of them settled the first service and some of them are still in heat. They are running in pasture. I have never seen any signs of abortion. I also have some working that are the same way.—California Subscriber.

**REPLY**—There are so many reasons why mares fail to conceive that to an ordinary observer appear to be perfectly healthy, that we are unable to offer suggestions in your case. Every non-producing mare is a problem within itself and it is rarely found in a bunch of shy breeders that failure to breed is due to a common cause, unless it is the fault of the stallion or they are infected with some infectious disease.

**1255—ENLARGED NAVEL**—About a month ago, on one of my filly colts, a bunch came where the navel cord healed about the size of a small hen's egg. Had I best try to treat it to remove it, and how?—Minnesota Subscriber.

**REPLY**—Your colt may be afflicted with hernia, in which event you should seek the advice of a good veterinarian.

**1256—OBSTINATE WOUND**—I have a mule which got her foot cut just above the hoof on the right side of the right front foot. It got cut the latter part of April. It was not cut deep enough to make her lame, but it won't heal up. We tried everything we could hear of. The veterinarian said to use fish oil and turpentine; some said to use air slack lime; some said to use baking soda and pulverized alum. We tried everything we could hear of but it is not well yet. It looks as nice as any wire cut I ever saw; no signs of proud flesh at any time. It is a two year old mule; is in good shape.—California Subscriber.

**REPLY**—You should have the raw surface removed by a competent veterinarian so that the part which no doubt projects above the surrounding skin is lowered.

**1257—UNABLE TO RETAIN URINE**—I have a mare colt that apparently has weak kidneys. She is unable to hold her urine; it drops from her almost continuously; a few drops at a time. She has been afflicted ever since she was about three weeks old and she is three months old now. She looks

BREEDERS' HARNESS & WHIP CO., Williamson Bldg. Kansas City, Mo.

well and has grown fairly well. We have no veterinarian in this country which is the reason I appeal to you for advice.—Colorado Subscriber.

**REPLY**—It is questionable if anything will help this case, inasmuch as a paralysis of the muscles that surround the neck of the bladder exists. We would suggest that you give the colt 20 drops of the fluid extract of nux vomica mixed with a grain ration three times a day for several months.

**1258—STIFF IN HIND LEGS**—I have a 15 months' old stallion that is stiff in hind legs. I can't tell whether it is in the stifle or gambrel joints. He

has plenty of exercise; out every night and part of the day when flies are not too bad. He has not been over-fed or kept too fat; just in good shape. I hate to have anything happen to him.—Minnesota Subscriber.

REPLY—The mere statement that your stallion "is stiff in hind legs" does not indicate anything very definite of the nature and location of the trouble. There are so many things that might give rise to this symptom that it would be foolish in us to undertake to suggest treatment. The best way would be to call a competent veterinarian so that an opportunity for careful examination may be made. Do not delay as the condition may become chronic and incurable.

1259—BRITTLE FEET—My jack's front feet are badly cracked; are very brash. Have rubbed them with three parts tar and one of lard. I have kept his front feet shod. He runs in a paddock; has an open stall. Would it be best to take his shoes off?—Texas Subscriber.

REPLY—Keep the jack away from manure as much as possible where he can have a run at grass and his feet contact with clean mother earth. It will be better if the shoes are removed provided his feet do not break badly. Instead of the lard use vaseline. Once every three weeks apply the following just above the hoof line, rubbing it in well for about one and one-half inches above the upper margin of the hoof. Make one application only at a time and leave on for 24 hours, at the end of which time the parts may be washed with warm water and soap; powdered cantharides one ounce, vaseline six ounces. Mix well together and apply with the finger, rubbing briskly for five minutes. This will blister the parts moderately. Tie the animal's head up so he cannot reach the parts with his nose until the washing off has been done.

1260—BRITTLE HOOFS—I have a jack that his feet are rough and scaly and a horse that his feet are brittle and crack and split. What is good for them?—California Subscriber.

REPLY—See answer to a similar inquiry in these columns.

1261—GROWTH ABOVE HOOF—I have a stallion that has a growth between the ankle and hoof. It has been growing about a year; it healed up last winter, but when warm weather began it got sore. I asked a veterinarian about it and he said it would be hard to cure. Can you give a remedy?—Illinois Subscriber.

REPLY—Inasmuch as you have access to the services of a veterinarian we would suggest that you permit him to take charge of the case so he may give it his personal care. He is perhaps correct in stating that it will be difficult to cure, hence our advice to allow some one to give it personal attention.

1262—WIND PUFF—What is good to take wind puffs off of the legs of a driving horse? They are just above the ankles and seem to be hard.—California Subscriber.

REPLY—There is no application that you can make that will remove these bursal enlargements.

1263—STIFF JACK—I have a fine young jack 11 months old, that can't get up when he lies down; he seems to be stiff and weak in the back. I lost one after nine months of helping him up. They eat heartily but stay thin. Will you tell me what to do?—Illinois Subscriber.

REPLY—It is very difficult to prescribe for an animal with such a meager description of symptoms. There are several things that could ail this jack. For instance, he might have been injured in some way in the back; may have rheumatism of the lumbar muscles; may be infested with internal parasites. Better have a good, competent, graduate veterinarian look this case over for you.

1264—RESTORING NORMAL COLOR OF HAIR—What is good to make the hair come in the right color, bay or black, the same as the rest of the horse?—California Subscriber.

REPLY—As a rule, a little carbolated vaseline is all that is needed in cases of this kind.

1265—ANGORAS AND RAMBOUILLETS—Please give me, through the American Breeder, the names of parties breeding Angora goats and Rambouillet sheep. I want registered stock.—Texas Subscriber.

REPLY—In the same mail with this inquiry came a letter from another Texas reader, mentioning among other things, the uniform success he has had finding buyers by advertising in the American Breeder. Any one having Rambouillets or Angoras to sell, or, in fact, any kind of good breeding stock, few or many, should advertise in our columns. It is a means of money saving as well as money making.

1266—LOCATION OF DRAFT HORSE RECORDS—Can you give me the name and address of the French Draft Registry Association, and also the American Percheron Association?—Missouri Subscriber.

REPLY—The National French Draft Horse Association is located at Fairfield, Ia. C. E. Stubbs is secretary. The Percheron Society of America is located at the Stock Yards, Chicago, Ill. Wayne Dinsmore, secretary. The American Breeder publishes from time to time complete lists of the live stock records, giving all secretaries' addresses. These lists should be preserved.

#### WHY MEAT IS HIGH.

For example, James Walker, farmer, of Scottville, Macoupin County, Ill., sold at Chicago, August 19, 1914, five cars of cattle (80 head) for \$11,784.15, of which 47 steers averaging 1,475 lbs. brought \$10.60 per 100 pounds, or \$154.45 per head, while 26 steers averaging 1,378 lbs., brought \$10.50 per 100 pounds, or \$144.70 per head. These are the highest prices he ever received for such stock. Mr. Walker is 81 years old and has fed cattle and hogs for the Chicago market continuously for 52 years. Within this period he has sold the best cattle as low as \$3.75 per 100 pounds and the best hogs at \$2.50, and has seen corn selling at eight cents per bushel such as now brings eighty cents.

### FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colic and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

I'll Feed Your  
Stock 60 Days  
Before You Pay

# SAL-VET

I Take  
All  
The Risk

Sal-Vet is the wonder-working, worm-destroying, medicated salt you have heard and read so much about. It not only destroys the worms that cause 90 per cent of all live stock diseases, but it aids the appetite, relieves constipation and makes all farm animals thrive better and grow into profit fast.

No Dosing No Drenching **They Doctor Themselves** No Starving No Trouble at All

Sal-Vet is easy to feed. You simply place it where all your farm animals can have free access to it, and they doctor themselves. Sal-Vet is the biggest money-maker and money-saver you can find. Nothing else pays you such big profits and prevents so many losses. Read these letters:

"Hog cholera swept this part of the country the past fall. It got into the herds of my nearest neighbors on both sides. I am sure my hogs were exposed, because one of them took the disease, but recovered. SAL-VET kept my hogs healthy." M. D. WILLIAMS, Bimford, North Dakota.

"Greatly pleased with SAL-VET. I never knew a horse could have so many worms and live. SAL-VET surely brings them—big and small. The horses to which I fed SAL-VET act one hundred per cent better, and what we formerly thought was colic and meanness, proved nothing but worms and worms."

J. E. TERKEURST, 271 Dauphin Street, Mobile, Alabama.

Hundreds write like this. Can you afford to be without Sal-Vet? The cost is only a trifle. For only one-twelfth of a cent a day any sheep or hog can run to it freely. You have everything to gain and nothing to lose by accepting this liberal offer.

**Send No Money—Just the COUPON**

Just tell me how many head of stock you have and I will ship you enough Sal-Vet to last your stock 60 days. You pay the freight charges when it arrives—and feed the Sal-Vet according to directions for 60 days. At the end of that time report results. If Sal-Vet has not done all I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon now.

Sidney R. Feil, Pres.

**PRICES**

40 pounds.....	\$ 2.25
100 pounds.....	5.00
200 pounds.....	9.00
300 pounds.....	13.00
500 pounds.....	21.12

Special discount for larger quantities. No order filled for less than 40 pounds on 60 day offer. Never sold in bulk; only in Trade-Marked SAL-VET Packages. 60 day trial shipments are based on 1 pound of SAL-VET for each hog or sheep and 4 pounds for each horse or head of cattle, as near as we can come without breaking regular sized packages.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

# AMERICAN BREEDER

A Farmers Paper, Devoted to the Breeding and Care of their Live Stock  
and the Welfare of their Families and Homes

Published Twice a Month. Subscription Price, One Year 50c; Three Years, \$1.00

Volume VIII

Kansas City, Missouri, September 20, 1914

Number 2

American Breeder Cameras at Nebraska, Colorado and Kansas Fairs  
See Pages 1, 4, 5, 6, 7, 9, 10, 13, 14 and 15

HERE AND THERE ON THE NEBRASKA STATE FAIR GROUNDS, AT LINCOLN.

1—The airship starts. 2—But that doesn't concern me. 3—Or me. 4—Or any of us. 5—The airship returns. 6—Drafters. 7—Gallopers. 8—Porkers. 9—Pictures. 10—Representing one of Nebraska's greatest products. 11—A newer live stock industry among the "Cornhuskers." 12—"The Girl With the Auburn Hair"—and her sister. 13—"The Last of a Dying Race." 14—"Safety First"—Red Cross hospital tent. 15—Sons of Nebraska live stock exhibitors. 16—Herefords and Shorthorns waiting to parade. 17—Indian performers watch the airship. 18—The last ribbon is tied. 19—"Now crowd up close and get your money ready."

# BREEDING SCHOOL

October 26 to November 7, Incl.

## HORSES, CATTLE AND HOGS

The Only Term of Cattle and Hog Breeding Until Next Fall

A CLASS OF SUBSTANTIAL BREEDERS LEARNING THE INSIDE FACTS OF THEIR BUSINESS.

Two separate terms. The first week horses; second week cattle and hogs. The tuition fee is \$25 for one or both terms, which entitles the student to return at all other terms free of charge (a life membership.) This rate is good until August 1st, 1915; after that the tuition will be \$50.

This is the only recognized school (excepting veterinary colleges), that teaches the anatomy and physiology of the generative organs of domestic animals. No breeder can fully understand scientific breeding without this knowledge. This school gives a lot of new and useful information that is not taught by any other school in the world. This is the only breeding school. The principles taught have stood the investigation of the best posted graduate veterinarians on these subjects. All of the instructors but two are post graduate veterinarians who are doing work recognized by the United States Government.

Mares and cows are dissected and mares and cows, both dead and alive, are examined for the different diseases and abnormal conditions. Every student is required to take part in this work, under the instructions of experts. Students are impressed with facts about diseases of females in a way they will remember. Representative animals for this work are especially selected. Everything is made plain by demonstration and language that the average breeder can understand. All technical work that can be is eliminated. The object is to give a course that the average breeder can master in a short time.

**REMEMBER THE DATE---October 26 to November 7, Inclusive.**

### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse, Cow and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

Remember the date and prepare to be here next term. When you get here take Observation Park street car at Union Depot; get off at 12th street and walk one block east. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

**The GRAHAM SCIENTIFIC BREEDING SCHOOL**  
225 West Twelfth St., Kansas City, Mo.

This is not a veterinary college, but it does teach how to prevent diseases. Prevention is better than a cure. A large number of animals are used for each class. The most interesting work for the average breeder is that of making examinations on a string of dead mares, supported in natural position. The average breeder has very little conception as to what he will find on the inside of a mare or cow; neither do they understand the why or wherefore, nor will they understand this until they have this special education.

Fathers and mothers need not be afraid to send their boys to this school, as it is a clean institution, and they will learn things that will make them better men and eliminate many of the dangers that men are subject to. Profane or vulgar language is not permitted among the students at any time.

The one drawback of this school is that some students who have attended are not anxious that their competitors do likewise. We do not know of one dissatisfied student and this from a territory which represents nearly every section of the United States and several foreign countries. At the end of each term all students have had opportunity to get their tuition refunded if not satisfied. This offer is still in effect. There are no restrictions to it. The student alone is his own judge, and there have been no takers. This is remarkable compared with the large army of men who have attended.

Any breeder can well afford to investigate this proposition offered anywhere to make yourself an expert breeder; to learn to avoid dangers in the breeding business that cause so much loss to owners of good stock.

### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

# THE AMERICAN BREEDER

With which is combined  
THE STALLION AND JACK NEWS.

SEPTEMBER 20, 1914.  
Volume VIII. Number 2.

FRANK B. GRAHAM and T. W. MORSE,  
Editors.

Published semi-monthly (on the 5th  
and 20th of each month) by the  
GRAHAM PUBLISHING COMPANY,  
INCORPORATED,  
225 WEST TWELFTH STREET,  
Kansas City, Mo.  
BELL TELEPHONE, 4297 GRAND.

All communications for this paper  
should be addressed to the American  
Breeder, or the Graham Publishing  
Company, and not to individuals.

Subscription Rates within the United  
States: \$1 for 3 years; 50 cents for  
one year. All other countries, \$2 for  
3 years; \$1 for one year.

When sending subscriptions, please  
state whether they are renewals or  
new ones. Always renew under the  
same name and initials as previously  
used, and at least two weeks before  
your present subscription expires, so  
that you will not miss any number.  
When changing your postoffice ad-  
dress, state the old address as well as  
the new one.

If you miss your paper please notify  
us at once and all lost copies will be  
replaced.

Entered as second class matter No-  
vember 28, 1911, at the postoffice at  
Kansas City, Mo., under the Act of  
March 3, 1879.

## MARE OWNER EDITIONS.

Most mare owners are ordinary  
farmers. They have not always had  
the opportunity to learn the necessity  
of doing certain things, yet they are  
very anxious to learn. The average  
individual is of the opinion that when  
a breeder makes statements which di-  
rectly interests him, that it is for  
some special selfish reason, which  
may be to get his patronage. But  
when they read the information in a  
reliable publication, which is recog-  
nized as the leader on such subjects,  
and read and criticized by the best  
of authorities, then it must be true.

Stallion or jack owners can educate  
their customers to better advantage  
by sending them the Mare Owner Edi-  
tions, than in any other manner. If  
a breeder undertakes to educate a  
customer by talking, how long will he  
have to talk to each customer to give  
them all an amount of information  
equal to that which the American  
Breeder could give. He would talk  
his head off without accomplishing  
this.

In the Mare Owner Editions, to  
start next month, a lot of special  
material will be prepared to interest  
mare owners. Cattle, hogs and farm  
subjects will be given for the purpose  
of interesting these men, so that they  
all will read the other material. Every  
stallion or jack owner sending in a  
list of names for the Mare Owner Edi-  
tions will find this the very best of  
advertising. Every time the Ameri-  
can Breeder comes to one of his cus-  
tomers he will think of the breeder  
who has paid his subscription. He  
will get the paper for five months, but  
the education and the advertising will  
be permanent.

Information on breeding subjects is  
most sadly needed in every commu-

nity. If breeders were better posted  
a greater per cent of foals would result.  
The Mare Owner Editions are the reg-  
ular issues of the American Breeder  
in which special material for aiding  
colt production appears. They will  
begin October 5 and run five months  
—two issues each month. The price  
is ten cents per subscription in clubs  
of ten or more. Additional names will  
cost ten cents each. We notify each one  
of the mare owners that his subscrip-  
tion has been paid by the breeder send-  
ing in the list of names. He will  
look for the paper and remember the  
favor. We believe every breeder  
who owns a good stallion or jack,  
and expects to stay in the business,  
can well afford to send in one hun-  
dred subscriptions, which will cost  
\$10. No breeder can afford to over-  
look this proposition entirely, and  
should at least send in a small list.  
All lists of names must be in this  
office by October 1st. Anyone who  
is not a regular subscriber can in-  
clude his own name as one of the list.  
The paper will stop at the end of the  
time for which it is paid. Those who  
wish to increase their business should  
not overlook this proposition. It  
means dollars to the owners of good  
stallions and jacks.

## PHOTOGRAPHS OF LIVE STOCK.

There is much to be learned from  
true-to-life photographs of excellent  
animals. Our plan of reporting state  
fairs by this method has been high-  
ly commended by the best of authori-  
ties. There are many who do not  
have an opportunity to visit the best  
live stock shows. There are also  
some who do not get close to the  
prize winners, even though they at-  
tend such shows.

We should like for all our readers  
to study the conformation of these  
prize animals. It is worth more than  
a casual glance. Each individual  
should be closely scrutinized. There  
are, however, peculiar conditions in  
some photographs. For instance, in  
the last issue a photograph of Chas.  
Irvine's roan yearling Belgian stallion  
is made to appear as having a large  
hock joint. The light reflected on a  
part of the other leg; that part shows  
in the photograph, but the shadow of  
the body did not take, making it ap-  
pear as though the leg was large. This  
particular colt has good, clean hocks.

For lack of space it is impossible to  
run all of the good photographs we  
would like. Some photographs do not  
develop satisfactorily and are not used.  
There are some exhibitors who do  
not understand the value of this pub-  
licity and are not willing to have  
their stock photographed for the pub-  
lic good. It will be noticed that nu-  
merous other publications are using  
more photographs in their columns  
since the American Breeder started  
this method of showing prize winners  
from the state fairs. However, no  
other publication prints as many pho-  
tographs of prize winning live stock  
as does the American Breeder.

## HARNESS HORSE RACING.

At the various state and county fairs  
numerous attractions have been in-  
augurated. A careful observer will  
notice that shortly after noon a great  
majority of the attendance gradually  
makes its way toward the race track.  
When the horses begin to score the  
outside visitors will get a little closer  
to the fence or the grand stand. It  
matters not so much about the speed  
as it does the close finishes. The har-  
ness horses are governed by certain  
rules requiring animals to start in spe-  
cial classes so that each race will  
have a number of contestants which  
are usually very close in speed per-  
formance. Much credit should be  
given to the association for adopting  
rules and regulations. It requires a  
considerable honesty among drivers  
and owners to continue in the racing  
game. If a driver sees there is no  
opportunity to place his horse he may  
not make an exciting finish excepting  
to "beat the flag." We might say also  
that when a driver knows that he has  
the race won easily he is not anxious  
to drive his horse faster, which may  
require the animal to take a faster

mark than is necessary, but in nearly  
every case there is a close finish,  
which is exciting to the audience.  
Since this method of racing in this  
country has been inaugurated the in-  
terest has grown steadily. This is  
evidence that it is profitable to be  
honorable in this as in other sports.

## HOG CHOLERA CONTROL.

Is it not time that something was  
being done to prevent the spread of  
hog cholera? The annual loss should  
be serious enough to enforce better  
methods of handling this dangerous  
disease. How long will the existing  
conditions prevail

About the first thing that happens  
when hogs get sick or begin to die, is  
the shipment of many to market,  
which tends to scatter the infection  
all the way from the infected prem-  
ises to the markets, as well as in the  
stock yards at their destination. The  
worst danger, however, may be from  
infected stock cars. Others ship hogs  
in the same cars while still others

## SPECIAL

Subscription Offer to New  
Subscribers, for acceptance  
before November 1: 50 cents  
for the American Breeder un-  
til January 1, 1916.

ship other animals in these cars, which  
in turn are liable to carry infected  
material from these cars to other  
premises. Just so long as hogs infected  
with cholera are shipped here and  
there, will the cholera continue to  
spread and break out in new districts.

The Canadian government has a bet-  
ter method of dealing with this dis-  
ease than has this country. Their  
plan is to slaughter every infected  
herd, giving the owner the appraised  
value for the healthy hogs and two-  
thirds of the appraised value for an-  
imals that show infection. After this  
the premises are disinfected and strict-  
ly quarantined until said premises are  
free from infection. The present plan  
in this country is very profitable to  
the serum plants, but expensive to  
the producer and the consumer. Ig-  
norance and over-confidence along  
these lines is also serving to spread  
the disease.

At the Nebraska State Fair a breed-  
er visitor who had just previously  
stated that all of his hogs were dying  
with cholera, walked right in among  
a fine show herd. His shoes may eas-  
ily have been carrying sufficient in-  
fection to scatter hog cholera. The  
exhibitor, being a gentleman, said af-  
ter that man left, that he fully expect-  
ed to have hog cholera in his herd, but  
did not say anything to the visitor.

Another means of spreading this in-  
fection is from those who are not qual-  
ified to administer the virus. One drop  
of this material dropped on the prem-  
ises may start hog cholera. It would  
seem to us at this time that enough  
money was being lost through this  
disease for the federal government to  
establish the strictest quarantine,  
which we believe will eliminate this  
disease.

The punishment for those disobeying  
necessary quarantine rules should be  
a jail sentence. Just so soon as hogs  
get sick the federal government should  
take charge of the case. A special ap-  
propriation by congress should be pro-  
vided for the elimination of this dis-  
ease. The prospect of shortage in food  
for humanity alone warrants stringent  
rules by the federal government.

## CAPSULE COLTS.

There seems still to be a disposition  
among some few men to doubt that  
capsule colts are as good as those  
produced by natural service. Many  
state and county fair exhibits have  
proven beyond a question that just  
as good colts are produced from cap-  
sule breeding as by any other method.

At the last Iowa State Fair the first  
prize Percheron filly colt was a cap-  
sule colt. The photograph of that colt  
appeared in the last issue of the  
American Breeder. It is owned by Mr.

Judge of Carroll, Iowa. The mare  
was bred by C. F. Jones of Rippey,  
Iowa.

The arguments made against cap-  
sule colts are usually produced by  
some individual who has an ax to  
grind, or, in other words, it is usually  
made by the owner of a stallion or  
jack who does not wish to use cap-  
sules. The writer has visited many  
places where a large number of colts  
could be seen together, some of which  
were capsule colts, and he has never  
seen a man who could pick out the  
capsule colts, unless he was acquaint-  
ed with the colts and knew how they  
were produced.

## WHICH RECORD ASSOCIATION?

To the American Breeder:—I want to  
know what one of the Percheron reg-  
istering societies is the most reliable?  
You state in the last issue that the  
American Percheron Registry Associa-  
tion is not reliable. You also state that  
the government does not recognize  
either one. Now what one is the most  
reliable?—Missouri Subscriber.

Questions as to recognized regis-  
try associations have been among the  
most frequently answered through  
our column, and so long as there are  
any who have not a clear understand-  
ing of this matter, we are glad to  
repeat the answers. Some years ago  
the United States Department of  
Agriculture withdrew its recognition  
from all of the live stock record as-  
sociations in the United States. This  
does not necessarily mean that none  
of our live stock record associations  
were worthy of recognition. The ac-  
tion, however, was supposed to be  
due to the fact that investigations  
had shown a few of the records to  
be unworthy, and possibly (until the  
worthiness of all records could be  
satisfactorily demonstrated) the gov-  
ernment authorities concluded the  
safest plan would be to withdraw the  
recognition which had previously  
been extended. Possibly also some  
of the records which had been under  
investigation did not wish to be  
singled out as the only ones to lose  
government recognition and succeed-  
ed in obtaining a general withdrawal  
of recognition. Since that time con-  
ditions in some of the records under  
investigation are known to have be-  
come very much improved, but the  
government authorities have an-  
nounced no change in their attitude  
either toward such records or toward  
the records against which there never  
has been any complaint. It is the  
opinion of some that governmental  
recognition will not again be extend-  
ed to this country's live stock record  
associations excepting as they shall  
come under direct governmental su-  
pervision.

Our statement in the last issue (See  
question No. 1228) did not say that  
we considered the American Percher-  
on Association not reliable. What  
we said is that we do not advise our  
readers to patronize it. Even assum-  
ing all other things to be equal it  
would be the most business-like to  
patronize the record association most  
actively engaged in promoting the  
welfare of the breed in question, and  
with which the greatest number of  
active and desirable business as-  
sociates are interested. Measured by  
this standard we believe the Percher-  
on Society of America will be the  
choice of any man when once he  
has become thoroughly acquainted  
with the facts.

## JACKS.

An argument was heard some time  
ago between two individuals concern-  
ing jacks. A bystander said that he  
would not have one of those indi-  
viduals on his farm, because they  
were very ugly and noisy and un-  
profitable. The man who was holding  
the jack replied, "This is one of those  
subjects upon which you are not  
posted. This animal does not require  
any more attention than a cow except  
during the breeding season. I own a  
stallion which requires my time  
through the breeding season. I can  
try all the mares for this jack with  
that stallion. The time taken for  
breeding the mares to this jack is very  
small indeed. It is not necessary that  
I change this jack, as in the case of  
a stallion; his fillies will not breed.

This jack has been on my farm for nine years and has made me more money each year than any stallion in my county. He is an exceptionally good one and I often breed from six to ten mares at one service with the capsule system. After you look at this jack awhile and realize the amount of money he earns each year he will not look so ugly to you. We do not mind the noise he makes, it sounds like money to me. When the neighbors hears that noise they know that I have a jack for public service, which is a good advertisement. After you have studied this matter as much as I have you will decide that a good jack is the most profitable animal that any man ever owned in a community where good mules are wanted."

After these few statements the bystander began to sit up and take notice that he had something yet to learn in the breeding game. He found that he could keep a jack with very little additional expense. He was also surprised at the profit from such an animal. It is sometimes profitable for each of us to study the other man's game a little, and especially those who have made money and have been of some service to their community.

#### CONTAGIOUS ABORTION IN COWS.

Contagious abortion is found among all of our domestic animals, but perhaps more pronounced and of a more serious nature among cows. Very frequently this disease gets a foothold in a herd and affects practically every female in the herd. Prevention is the best remedy.

A short time ago a breeder owning a fine herd of Shorthorn cattle bred a neighbor's cow, which happened to be infected with contagious abortion. That one animal cost this man thousands of dollars. There is practically only one way to introduce contagious abortion into a herd and that is by breeding outside females. Those who do not wish to have that disease brought into their herd should breed all outside cows with an instrument. This is being done quite successfully and eliminates the principal means of infection. Every outside female should be looked upon with enough suspicion to require the making of a thorough examination before the service is made.

#### THE POLAND CHINA JOURNAL.

Receipt of a copy from the second issue of The Poland China Journal, published in Kansas City, calls (even at this busy time) for a statement of our appreciation of its owner and editor, C. H. Walker. Mr. Walker is widely known as one of the best, best liked and most successful live stock advertising man in the great territory, at the metropolis of which his paper is published. If Mr. Walker makes this new paper as valuable to the Poland China breed as his brother, Hayes Walker, has made the Hereford Journal valuable to Hereford cattle, he will more than justify his judgment and even strengthen his already strong following among the people he serves. His paper is a good looker, full of (hog) "meat" and the American Breeder wishes it every success.

#### WILL NOT CUT AMERICAN BREEDER.

To the American Breeder: I think so much of my American Breeder that I do not wish to cut it, but I want to help make the paper still better. Will you please send me a blank "Information Wanted." I am going to the State University at Lexington to take the two years' course in agriculture and aim to specialize in animal husbandry. Will start the 14th inst., so be sure to send blank at once so that I can get it before I leave home.—Melvin W. Moore, Logan County, Ky.

Dr. J. K. Nabours, sent to make agricultural investigations in Russia, by the Kansas Agricultural College, has cabled home that he is safe in Moscow. Dr. Nabour's work included the study of Karakule sheep and their products and the safety of his photographs and specimens as well as himself, were a matter of some concern.

AMERICAN BREEDER CAMERA AT THE NEBRASKA STATE FAIR.

1—Billiter's first prize yearling Percheron stallion. 2—Rouselle's prize winning Percheron. 3—Rhea Bros.' prize winning yearling Percheron. 4—Jardine's champion Jack. 5—Jardine's champion Standard bred stallion. 6—Miller's champion Angus cow. 7—Badger & Frost's champion Holstein bull. 8—Kerr's first prize yearling Percheron filly. 9—Tice & Son's prize winning yearling Percheron. 10—Billiter's first prize two-year-old home bred Percheron. 11—Taylor's champion saddle mare. 12—Smith's first prize aged jack. 13—Herkelman's first prize aged Shorthorn cow. 14—Riverbank Farm's champion Jersey cow.

### Partially Personal

A Nebraska Indian school is out at the fairs with a good, well handled display of Holstein cattle.

"Temperature of the Bee Colony" is the title of a new government bulletin. The temperature of the only bee colony we ever investigated was about 740 in the shade, at point of contact.

There were more buggies than automobiles in the machinery exhibits on the Iowa State Fair Grounds last month, and the buggy men have tumbled to some auto conveniences, such as storm doors, protecting dashboards, good lamps and better construction. Again competition has borne good fruit.

Ninety-five prisoners in the United States military penitentiary at Fort Leavenworth are taking work in the Kansas State Agricultural College. The work at this prison was established by Prof. George E. Bray, industrial engineer in the division of college extension, who has been exceedingly successful in carrying on similar work in the Kansas state penitentiary.

The Missouri State Fair will cover a period of eight days this year, one day having been added to the usual time. The dates are September 16 to October 3, inclusive.

Stall cards, similar to those suggested in these columns a year ago, were supplied by the Iowa State Fair management for all cattle and horse exhibitors, but many exhibitors were slow about putting them up. The cards provided for giving the animal's name and class and the names of its sire and dam.

The Berkshire World has come out in the new short, three-column page form, now affected by a half dozen or more breed papers.

A big attendance of city people from Des Moines comes out Sundays at the Iowa State Fair and enjoys a quiet inspection in the stalls of one of the biggest animal live stock displays in this country. No country crowd could show more real interest.

Farmers' Bulletin No. 574, which can be gotten from the Department of Agriculture, Washington, D. C., is devoted to the subject of poultry house construction. It is about time to construct.

One of the really good farm papers of this country is edited in one state, printed and mailed in another, claims to be the oldest farm paper of a third and makes a point of its circulation in a fourth and a fifth state, but not in the states where it is edited and mailed. No, we don't know the answer.

"The Crop Reporting Board of the Bureau of Crop Estimates of the United States Department of Agriculture estimates," says a recent bulletin put out by this board, "that the condition of the cotton crop on August 25 was 78 per cent of a normal, as compared with 76.4 on July 25, 1914; 68.2 on August 25, 1913; 74.8 on August 25, 1912, and 73.4, the average on August 25 of the past ten years." From all of which we infer that in the "estimate" of the "Crop Reporting Board" there "ain't no sich animal" as a normal condition. What does "normal" mean, anyhow?

"Can you name the most popular saddle horse in Missouri?" asks the Missouri Stockman. No, but we can name a half dozen different parties who own it.

Friends of Prof. Trowbridge of the Missouri Agricultural College will be relieved to learn of his return "whole" from the hospital where he was taken for treatment to ward off consequences from appendicitis.

## DIAGNOSING ILLS OF HORSES

### Lesson VIII. Mouth and Throat Troubles.

Inflammation of the mouth parts of a horse may be induced by a variety of things. Any strong irritating agent that may be licked by the animal may produce an inflammation of the mucous membrane of either the tongue or that lining the oral cavity or both. Such agents are sometimes in the form of strong acids or alkalies, one of the common ones being quick lime. The food supply may contain irritants, such as burrs or beards. Oftentimes sand burrs, cockle burrs or buffalo burrs are found mixed with the hay. Horses that are permitted access to stacks of straw during the late fall and winter season frequently are annoyed by the beards from wheat and barley accumulating in the space between the tongue and molar teeth. Such foreign substances have been observed to collect in quite extensive amounts and cause great wounding to the mucous parts on account of their sharp nature.

Shredded corn fodder or cane will often cause lacerations of the tongue or neighboring parts. The consumption of food that is covered with ice, frost or mould frequently produces local lesions. There is no question but what certain germs are capable of producing extensive sloughing of these surfaces as has been repeatedly observed in young colts, calves and pigs. Perhaps the latter animal affords the most striking example, as any stockman, familiar with pig raising knows, of the effect of that oftentimes virulent disease so commonly known as cankerous sore mouth. There are seasons when this disease almost decimates the entire pig crop in some localities.

The evidences of sore mouth are governed considerably by the severity of the attack. As a rule the animal will be disinclined to eat, will slobber and in the course of time will emit an offensive odor from the affected parts.

An inspection of the mouth will often reveal a reddened state, with possibly small blistered surfaces; or again there may appear more pronounced wounds with ulceration. The mouth feels hot to the touch. In some cases the mucous membranes adjacent to the teeth need to be carefully examined for excoriations that may have been produced by the projecting sharp points of those organs. Teeth causing such injuries are frequently responsible for imperfect mastication of the food, faulty digestion and unthrift. While inflammation of the mouth is occasionally met with, the lesions produced are inclined to be local in character, such as wounds from the teeth or from foreign bodies. In inflammation of the structures further back, such as the throat or pharynx, the inflammation becomes more generalized and is inclined to involve the entire organs. An inflammation of the throat is hindered from recovering because the parts are concerned in the act of swallowing. The pharynx is that loose-walled cavity extending from the base of the tongue to the beginning portion of the gullet oesophagus. Its mission is to transfer the liquid or solid food or saliva from the mouth to the oesophagus.

The cases of inflammation at this point are largely the same as those occasioning a sore throat in the human family. Besides the several causes responsible for sore mouth, which may produce a similar condition in the more remote pharynx, there is no doubt but what micro-organisms are often responsible for the rather frequent epidemics of pharyngitis which occur among the members of the human family as well as horses.

The pain incident to swallowing naturally causes the animal to refrain from eating particularly coarse, harsh food. In severe cases if the animal undertakes to partake of water or liquid nourishment the material is returned through the nostril on account of the inability of the muscles of deglutition being capable of performing their function. The animal often is unable to swallow its saliva and that liquid dribbles from the mouth. The

head is frequently extended on the neck as the animal in taking this position obtains relief from pain due to pressure on the inflamed parts. At the same time the channel through which the air passes to the lungs is opened by this position, which makes breathing easier.

Swelling in the region of the throat latch occurs in severe cases which becomes quite noticeable on account of the disease extending into the deeper parts of the pharyngeal wall. Pain becomes very apparent when the skin is pressed upon this locality, and the animal shows it by wincing and elevating the head.

Pharyngitis may be only slight in its effect or it may provoke sufficient swelling so as to mechanically close the passageway to the lungs, causing the animal to suffocate for want of air. Again, abscesses may form, necessitating surgical work to relieve. These abscesses sometimes break so far back that the pus escapes into the upper end of the windpipe, permitting infectious material to gravitate into the lungs, making favorable an infection in those organs which generally destroys the animal's life. Sometimes the animal in its effort to eat is unable to control swallowing to such an extent that particles of food gravitate into the lungs, again giving rise to an intractable case of pneumonia due to the foreign substances.

One of the unfortunate results of a severe case of pharyngitis is defective wind. Some of these recovered cases remained so thickened in the throat region that they are noisy and unsatisfactory when put to hard or fast work. The disease sometimes permanently impairs the functions of certain nerves that control some of the organs of the larynx, leaving them in a paralyzed condition ever afterwards, and giving rise to that class of thick-winded horses known as "roarers." This latter affection is altogether incurable with medicine and a surgical operation is the only thing to which one can turn for relief.

The oesophagus is not very frequently diseased, but may receive injuries from within from sharp substances or severe contusions from without by coming suddenly in contact with hard objects, including blows from the hoofs of mates. The local injury to this organ may not prove to be as serious as the after results. A case of inflammation of the oesophagus, particularly if due to local injury, may recover under proper treatment in a short time, but in such cases there may result a constriction at the point of injury which may mechanically interfere with the passage of food to the stomach. Such constrictions incline to be productive of choke which may still further irritate the spot and be instrumental in causing further stricture.

Aside from stricture being a cause of choke in horses, such a condition might be brought about by a horse eating too ravenously. Some horses when hungry choke on their grain, particularly oats, because they undertake to eat so greedily that the oats are neither masticated or moistened with saliva.

Horses may choke on almost any kind of feed in the way of grain, hay or grass, as well as numerous foreign bodies. As a rule, the horse is more careful about mastication than the ox and does not choke as readily upon large objects as does that animal. Still horses have been known to choke upon objects like small ears of corn, corn cobs, apples, various roots, etc.

The symptoms of choke are quite easily recognized early in the trouble. Later after sensation has been benumbed a choke might at first be overlooked, particularly if it was low down in the oesophagus. In the beginning the horse is usually greatly distressed. The animal coughs with great vigor, moves about in a restless manner, betrays distress in the bulging eye and anxious expression. Repeated efforts are made at swallowing and mastication

movements are performed. As a rule, choked horses at some time during the attack extend the head on the neck and cramp the neck muscles, the neck at the time being drawn downward, and at the same time the animal emits a squeal. During this ordeal some of the food is dislodged and is returned through the nose. If the choke is high, that is, is in the region of the neck, its outline may be felt on the left side of the animal. On the other hand, if the choke occurs on that part of the oesophagus that is within the thoracic cavity, such enlargement cannot be discovered. A wave can often be seen running up and down the oesophagus on the left side in either case. An inability for the animal to swallow liquids is quite positive evi-

dence that the animal is choked, provided it can be demonstrated that interference with swallowing is not due to some lesion in the region of the throat.

The effect of choke when occasioned by stricture at some point along the course of the oesophagus is to cause a dilatation immediately above the constriction. This serves to weaken the walls of the oesophagus at that point and further aggravates matters. The pressure of the mass at the point where the choke occurs encourages inflammation and local swelling. It must be remembered that the material responsible for the choke ordinarily swells under the influence of the heat and moisture from the body. Chokes are serious for the reason that they

## American Breeder Camera at the Nebraska State Fair

1—Kerr's champion Percheron. 2—Eggert's champion Shire stallion. 3—Rouselle's champion Belgian stallion. 4—Harris' champion Hereford cow. 5—Eggert's champion Shire mare. 6—Kerr's first prize, three-year-old Percheron mare. 7—Rhea Bros.' champion home bred Percheron. 8—Bellows Bros.' champion Short-horn bull.

incline to recur when relieved. Their relief is not always easy for the reason that the choke is so often so remote that it cannot be reached by means that are safe. The practice of undertaking to forcefully relieve a case in the manner so often practiced by laymen in which long, rough appliances like whip sticks or wire is crowded down the oesophagus is to be condemned. Many animals are ruined by this harsh procedure and such cases when treated by the skilled veterinarian are not subjected to forceful measures of removal except as a last resort.

### At Nebraska State Fair

AMERICAN BREEDER

1—Dr. Anderson's first prize team of mature mules. 2—Rhea Bros., second prize aged Percheron. 3—Kelly & Son's prize winning two-year Percheron. 4—River Bank Farm's champion Jersey bull.

### FARM ADVISER HELPS START A FAIR.

A large poster which came to this office recently indicates the efforts put forth by W. A. Posey, Farm Adviser of Clay County, Iowa, toward establishing a fair in that county. No regular county fair has been held heretofore, so an association was organized and \$1,200 raised by subscription to cover the expenses of the fair this year. The fair will be an agricultural event strictly and no admission will be charged. In the draft horse department \$220 will be divided in premiums, most of it going to draft teams, single mares or geldings, brood mares with colts, yearlings and colts. In beef cattle the prizes amount to \$200; all for pure bred animals of Short-horn, Hereford and Angus breeds. One hundred dollars will go to hogs and \$52 to sheep. Many special prizes are offered and a lot of special events, such as plowing contests, will be pulled off.

## Live Stock, Hay and Grain Market Review

An order from England for army horses caught the market at a time when extreme dullness prevailed, and the effect of taking 10,000 head, which the order is said to call for, worked a wonderful effect in the trade in certain classes. English army officers are inspecting about 200 horses each day in Kansas City, and a similar number in St. Louis, and sending them to Montreal by quick rail service. From there they are being transported to a European point. Already 6,000 have been shipped from these two markets, and 4,000 more are to go. Most of these horses have been bought in the country by buyers operating under the firms holding the order from the British government. Reported country prices are in the extreme \$50 to \$125 a head, but the English are paying considerably more than that. The firm buying stands the loss that is encountered in rejected and crippled animals. Dealers say this is only the beginning of buying by foreign countries involved in the war. The first 10,000 horses will be easy to get, but the second order will be harder to fill and should a third order come, offerings will be scarce and prices higher. The quality of the horses taken on this first order is unusually plain, and while they are for cavalry use, some for artillery, the United States government would not accept a third of them, and even in a season of extraordinary demand the South would not have them. One benefit is that the country is being cleared of a class of horses for which there would be little demand were it not for the war order.

The trade lines not directly affected by the war order are dull, and report continued lack of demand. There is little or no trade in heavy drafters, in fact none are offered. The East is bearish under the effects of the European war, and is not buying. The South is still unable to move its cotton crop, only in limited quantities and owing to the lack of ready cash is not buying horses. Few mules are selling, and dealers advise against shipments. The general situation in the market will remain unsettled until the South or East begins buying.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

<b>Horses—</b>	
Drafters, 1700-pound extra quality.....	\$200@235
Drafters, good to choice.....	160@200
Drafters, fair to good.....	130@155
Chunks, good.....	120@150
Chunks, fair.....	80@115
Southerners, good to choice.....	95@145
Southerners.....	40 up
<b>Mules—</b>	
13½ to 14½ hands.....	\$ 80@100
14½ to 15½ hands.....	100@125
15½ to 16 hands.....	120@165
16½ or better.....	170@215

### Big Receipts of Western Cattle.

Monday, September 14, more than 73,000 cattle were received at the five Western markets, the largest supply this year. Nearly 50,000 of this number were received in Kansas City and Chicago, and the bulk of this supply came from Western and Northwest ranges. The attraction for the big movement was the high prices that prevailed in the preceding week, together with big shipments from the range country being over due. At the same time bankers are not looking with favor on the renewing of cattle loans and now is a good time to market cattle. While the range country sent out big shipments, the supply from feed lots was scant, and outside of Chicago few strictly prime beefs were offered.

Prices in the past ten days have fluctuated within a narrow range, and except for a small loss in the medium grades there has been no important net change. The top price in Chicago went to \$11, and the prime offerings there are selling at \$10.50 up. The highest previous price in Chicago, \$11.25, was paid in December, 1912. At Missouri river markets the top price

was \$10.75, but only a few bunches were finished and good enough to sell at \$10, and better. Wintered Western steers sold up to \$9.40, and the top for grassers held around \$9.10. The bulk of the Western steers are selling at \$7.25 to \$8.50 on the native side and at \$5.75 to \$6.50 on the quarantine side.

Quotations from the various grades of killing steers are as follows:

Price corn fat steers.....	\$10.00@10.75
Choice to good steers.....	9.25@10.00
Fair to good steers.....	8.25@9.25
Common to fair steers.....	7.65@8.20
Meal fed, choice.....	9.00@9.75
Meal fed, common to fair.....	8.40@9.00
Quarantine steers, fed.....	8.00@8.65
Quarantine steers, grass fat	5.25@7.75

### No Change in Cow Prices.

With need too urgent to pass up a chance to get supplies, prices for cows and heifers have not changed in the past two weeks, aside from possible fluctuations. Prices now are higher than a year ago, and much higher than was expected at this season of the year. Few Western cows are coming, and for the few offered, killers have to meet the competition of country buyers. Veal calves declined 25 cents and bulls held steady.

The following quotations are for the various grades of butcher cattle:

<b>Cows—</b>	
Choice.....	\$7.00@7.75
Good to choice.....	6.40@7.00
Fair to good.....	5.85@6.35
Common to fair.....	5.00@5.75
Canners.....	4.25@5.00
<b>Heifers—</b>	
Choice.....	\$9.00@9.50
Good to choice.....	8.00@9.00
Plain to fair.....	7.25@8.00
Common.....	6.00@7.25
Veal calves.....	7.00@10.50
Bulls.....	5.00@7.25

### Country Needs Cattle for Grass.

The recent heavy rains which have developed fall pastures far above expectations are causing a broad demand for thin cattle. Every surplus corn state has bought some cattle within the past ten days and orders have been placed for more. Prices now are at a point where they cannot advance much more and cattle are too scarce for them to decline. Trade is working along in about an established trade groove. Choice stockers and feeders

are extremely scarce, and the usual run of choice range calves is surprisingly small.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders.....	\$ 8.00@ 8.60
Good to choice feeders.....	7.50@ 8.00
Fair to good feeders.....	6.75@ 7.45
Plain to fair feeders.....	6.25@ 6.70
Selected stockers.....	7.85@ 8.35
Good to choice stockers.....	7.50@ 7.80
Plain to fair stockers.....	6.25@ 7.40
Stock calves.....	7.00@ 8.50
Stock cows.....	5.25@ 6.25
Stock heifers.....	5.75@ 7.50
Milch cows.....	60.00@110.00

### Big Decline in Hogs.

With shipping support removed from the hog market, prices moved down rapidly and Wednesday were 60 to 70 cents under closing quotations in August. Receipts have not been large, but owing to the plain quality of the offerings, packers claimed that prices had to be lowered to stop their loss on the fresh product. Packers have their eyes on the opening of the winter packing season which begins

## Ford Two-Compression Starter

Differs from all others. Positively guaranteed to start. Write for circular. Sandbo Starter Co. Rock Island, Ill.

**BINDER** ATTACHMENT with corn harvester cuts and throws in piles on harvester or in windrows. Man and horse cut and shock equal with a corn binder. Sold in every state. Price only \$20.00 with fodder binder. J. D. Borne, Haswell, Colo., writes: "Your corn harvester is all you claim for it; cut, tied and shocked 66 acres mlo, cane and corn last year." Testimonials and catalog free, showing pictures of harvester. Address PROCESS MANUFACTURING CO., Salina, Kansas.

## A Department For Women

TELEPHONE AND MAIL BOXES FOR COUNTRY SCHOOLS.

To the American Breeder:—The telephone and mail box should form part of the equipment of every rural school. They would bring the parents and the outside world into closer touch with both teacher and pupil, and help solve many of the rural teacher's problems. In case of illness or severe storm the teacher might know in advance of the absence of the pupil. In case of sudden need the pupil might be more readily summoned home from school.

Many progressive schools take daily newspapers and one or more farm journals. All should do so and should receive in addition many valuable free bulletins issued by the United States Department of Agriculture, Washington, D. C., and by our own Department of Agriculture, University Farm, St. Paul. A mail box for each school would bring this material regularly to the teacher's desk instead of to her boarding place or to the home of one of the directors from which it might not be forwarded. A mail box would enable those who distribute such material to place the school on its mailing list to remain there year after year. At present the usual plan seems to be to put the teachers on the mailing list and as teachers too often change each year, great confusion results.

These conveniences cost very little. Bring the matter up at your next meeting and see that they are put

into your schools. Few investments will pay larger dividends in the education of your boys and girls—T. A. Erickson, Rural School Specialist, University Farm, Minn.

"IT IS FINE FOR THE BOYS."

To the American Breeder:—I think the American Breeder is the best paper I ever saw. I only wish it was a weekly, for I get so much information out of it that I would never get out of any other paper. It is fine for the boys.—A. W. Johnston, Madison County, Iowa.

THE ANIMAL WHICH SUFFERED.

"Little boy," asked a well-meaning reformer, "is that your mamma over yonder with the beautiful set of furs?"

"Yes, sir," answered the lad.

"Well, do you know what poor animal it was that had to suffer in order that your mamma might have those furs?"

"Yes, sir—my papa."—Houskeeper.

PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Summer number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

9821. Ladies' One-Piece Corset Cover. Cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 1½ yards of 36-inch material for a medium size. Price 10 cents.

1008. Ladies' Dressing Sack. Cut in 3 sizes: Small, Medium and Large. It requires 3¾ yards of 27-inch ma-

terial for a medium size. Price 10 cents.

9998. Ladies' Kimono. Cut in 3 sizes: Small, Medium and Large. It requires 3¾ yards of 44-inch material for a medium size. Price 10 cents.

9743. Ladies' House Dress. Cut in 6 sizes, 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size. Price 10 cents.

1018-1010. Ladies' Costume. Waist, 1018, cut in 6 sizes, 34, 36, 38, 40, 42 and 44-inch bust measure. Skirt, 1010, cut in 6 sizes, 22, 24, 26, 28, 30 and 32-inch waist measure. It requires 7¼ yards of 40-inch material to make the dress for a 36-inch size. The skirt measures about 1½ yards at the lower edge. Two separate patterns, 10 cents for each.

1012. Dress for Misses and Small Women. Cut in 4 sizes, 14, 16, 17 and 18 years. It requires 7¾ yards of 44-inch material for a 17-year size.

**CLOSE NO SCHOOL FOR AN EPIDEMIC.**

To the American Breeder:—"Epidemic? Close the schools!" says the average man. "All wrong," says Dr. H. W. Hill, executive secretary, Minnesota Public Health Association. "It costs money, wastes time, and does not stop the epidemic. But keeping the schools open, under proper supervision, does stop an epidemic, not only in the school, but in the community." How? Dr. A. J. Chesley, of the Preventable Diseases Division, says: "If an epidemic exists in the community, in summer when the schools are

WOMEN'S AND CHILDREN'S BUILDING, MISSOURI STATE FAIR GROUND.

## A World-Wide Response Greet The Silent Seven

Again the OLIVER has scored another triumph. Again it has raised the standard of typewriting, lightened labor for thousands of typewriter users, given greater speed, easier, smoother action.

Since our announcement of the new OLIVER NUMBER 7, it has aroused a furore of enthusiasm the country over. Experts have pronounced it the greatest advance in typewriter mechanics for a decade. Typists proclaim it perfection in lightness of touch, quick response and delightful ease of operation. Yet this beautiful machine, complete, equipped with Printype if desired, with all its added cost and value, is being sold at the same price as previous Oliver Models.

We earnestly urge you to see the new OLIVER NUMBER 7. In no other way can you so quickly appreciate the marvels of this masterpiece—so clearly understand its mechanical excellence—so surely convince yourself that in the new OLIVER NUMBER 7 typewriter building has reached finality.

# The OLIVER 7 Typewriter No. 7

The Standard Visible Writer

Automatic Devices

—Easy Action

Equipped with "cushioned keyboard," with "anchor keys" and with a score of improvements, refinements and automatic features that make this model supreme.

The result is less effort, less eye-strain, greater speed, and a 25 per cent greater value. And yet any typewriter user anywhere can buy this splendid Model 7, on the same terms as previous models, for our famous 17-cents-a-day plan still applies.

Now on Exhibition at Oliver Agencies

Go see the new OLIVER NUMBER 7 at any Oliver Branch or Agency in the United States. Mark the beautiful simplicity of its construction. Note the rapidity with which it writes; its smooth, silent movement, how the minimum of effort is needed. Inspect the automatic features. Then compare its work with that of any typewriter you know. Try it on many kinds of work no other typewriter will do.

The Oliver was first with visible writing, first with Printype and it is but fitting that it should be first with automatic methods of operation.

OLIVER BOOK DELUXE

We have just issued a richly illustrated catalog describing the Oliver No. 7. A copy will be mailed free with our compliments if you send your name. A postal will do.

**The Oliver Typewriter Co.**  
102 W. 9th St., Kansas City, Mo.

closed, we can handle it successfully; but in winter with the schools open, we can handle it still better, and more quickly. We examine the school children, and send all infected children and their brothers and sisters home; the uninfected children can then go to school safely. Why not? What is there left at school to hurt them? Then we go to the homes and follow up the infection there. Serious epidemics have been stopped in this way, which could not have been controlled with the schools closed."

Whatever you do in your schools this winter, don't be so out-of-date as to close a school for an epidemic of any disease. Notify the state's department of education, the Minnesota Public Health Association, or the state board of health direct, and save your money, your time, and the health of the community.—Minnesota University Press News.

#### HEALTH INSPECTORS FOR THIS COLLEGE.

A college physician was hired at the Kansas State Agricultural College for the first time last year. Dr. R. T. Nichols was the man employed. He so well demonstrated the value of the work which might be done toward keeping the student body well that he is to have an assistant this year.

A capable woman, Dr. Marie A. Greene of Kansas City, Kas., has been hired for this place. Her duties will be to prescribe for college students who consult her, especially the young women, to make physical examinations of young women with relation to their work in the department of physical training, to give a series of lectures to young women on hygiene, and, if her other duties permit, to teach the classes in human physiology to which young women are assigned.

#### CANNING PEACHES WITHOUT SUGAR.

"If the price of sugar is prohibitive one may can peaches so that they will keep indefinitely by using plain water instead of syrup. The following recipe may be used:

"Remove skins from peaches by immersing in boiling water for about one minute and then dipping in cold water. Place whole peaches in glass jars or tins and fill jars with hot water. Place rubber and top in place and sterilize for 15 minutes in hot-water-bath outfits, 12 minutes in water-seal, 10 minutes at 5 pounds steam pressure or 5 minutes at 10 pounds steam pressure.

"Of course the peaches when removed from the jar will not taste so sweet as those canned in syrup. However, if sweetening is desired, it may be added when the fruit is to be eaten.

"This same method is good for canning with syrups containing varying amounts of sugar. A very thin syrup may be used if the housewife does not wish to dispense entirely with the sugar.

"Apples may also be canned (for apple-sauce, pie filling, etc.), using plain water instead of a sugar syrup. Department specialists have repeatedly canned them by this method. In the case of apples, jars should be sterilized 16 minutes in hot-water-bath outfits, 12 minutes in water-seal, 10 minutes under 5 pounds of steam and 4 minutes under 10 pounds of steam."

The above directions are sent out by the United States Department of Agriculture. The Department, however, advises housewives to consider carefully the total cost of preserving, with sugar high and fruit low, as compared with conditions other years.

#### TO MAKE A SQUARE CORNER.

To the American Breeder:—In the construction of corrals and in many other of the simpler problems of farm construction or surveying it is often desirable to lay off a right angle. This may be very easily constructed by tying knots in a string at intervals of three, four and five yards or rods. Then the string may be closed into a triangle with the three knots at the three corners. The shorter

two of the three sides are the sides of your square. The larger the triangle the smaller will be the probable error. This method was used by the Egyptians many thousands of years ago.—S. L. MacDonald, Colorado Agricultural College.

#### PUBLIC SCHOOL DAY AT MISSOURI STATE FAIR.

Public schools of the state will have a big feature at the Missouri State Fair on Monday, September 28. Special entertainment and educational features will be provided to amuse and instruct the thousands of school children who visit the fair at that time.

Throughout the central part of the state it is the intent to have the schools dismiss for a holiday and visit the fair on that day. Although this announcement has just been made it has already aroused great interest in educational circles. School boards and teachers feel very enthusiastic over the opportunity thus afforded of a day's visit to Missouri's wonderful display, which among hundreds of other attractions has an educational display that is of rare merit.

All children under twelve years old will be admitted to the fair grounds free on that day, and many of the schools will attend the fair in a body.

As special incentive to create a more general interest in "State Fair School Day," a beautiful Missouri state flag, adopted at the last general assembly, will be presented the school having the largest attendance. In awarding this prize, the distance and size of the school will be considered in figuring the percentage.

Professor W. P. Evans, state superintendent of schools, will be chairman of the special committee to determine what school is entitled to the flag. The flag bears the coat of arms of Imperial Missouri and will instill increased state pride in whatever school is successful in securing it. It is well worth a special effort to obtain.

#### FEDERAL QUARANTINE FOR ILLINOIS CATTLE.

To the American Breeder:—All cattle in five counties in northeastern Illinois will be under a Federal quarantine for bovine tuberculosis after October 1, 1914. The governor and the sanitary officials of Illinois will co-operate actively with the federal authorities in making this quarantine effective. The five counties affected are Lake, McHenry, Kane, DuPage and Cook.

Under the terms of this quarantine no cattle can be shipped from the five counties for dairy or breeding purposes unless they are accompanied by a certificate showing that they have been subjected to the tuberculin test and found free from disease. These certificates must be issued by an employe of the Bureau of Animal Industry, United States Department of Agriculture.

The necessity for this quarantine, which has been recognized by the state authorities, arises from the misuse on the part of a limited number of cattle owners and shippers of the privilege of inspection by private veterinarians. In some cases it has been found that health certificates have been issued for cattle which were obviously diseased. As a result twelve states now refuse to accept

Illinois cattle unless accompanied by a certificate of federal inspection.—Office of Information, U. S. Dept. of Agriculture.

#### HERE'S A LAW EVERY STATE NEEDS.

The state of Virginia at the recent session of its legislature has passed a novel dog law, which it is believed will enable that state to raise sheep successfully on a large amount of waste land heretofore idle. This law makes it a misdemeanor, punishable by a fine up to \$50 for the owner to allow his dogs to run at large in the country.

This waste land, while entirely suitable for sheep raising, was not well adapted to cattle, for the reason that winter feed in those districts was too high to make the wintering of beef cattle profitable. All that stood in the way of a profitable sheep industry was dogs, which were kept in large numbers in the shanty settlements. These dogs, which were rarely fed at home, lived on the young game during the spring and summer and preyed on the sheep whenever they were not watched, and especially in winter.

The old dog-license law merely meant that a dog was commonly \$2 a year hungrier for sheep. The general law permitted a sheep owner whose flock had been ravaged to sue the owner of the dog, but commonly the owner owned nothing but dogs and the sheep farmer could not recover. Moreover, if the sheep owner shot a stray dog on his premises, the owner of the dog could sue the farmer for damages. The farmers of Virginia grew tired of having their waste land idle and finally induced the legislature to pass the accompanying dog law. This law, when adopted by a county, makes it a misdemeanor for the owner of a dog to allow that dog off his own property unless he is with the dog. In the case of incorporated villages and towns the law permits the licensing of dogs, but makes it a misdemeanor for them to be alone outside of the incorporated limits.

The indirect effect of this law is to allow any farmer to shoot a lone dog on his property. The owner of the dog, before he can bring suit for damages for the killing of the dog, necessarily must establish proof that the dog was at large and thus subject himself to a fine up to \$50.

Although the law was passed very recently, a number of counties have signified their intention of making it a county rule, and in these counties owners of waste land are already making preparation to establish flocks of sheep.

The text of the law is as follows:

Be it enacted by the General Assembly of Virginia, That it shall be the duty of every person owning or having in charge any dog or dogs, to at all times confine such dog or dogs to the limits of his own premises or the premises on which such dog or dogs is, or are, regularly kept; Provided, That nothing in this act shall be construed to prevent the owner of any dog or dogs, or other person or persons having such dog or dogs in his or their charge, from allowing such dog or dogs to accompany such owner or other person or persons elsewhere than on the premises on which such dog or dogs is, or are, regularly kept.

Any person violating this act shall be deemed guilty of a misdemeanor and shall be fined not less than two nor more than fifty dollars, one-half of such fine to be payable to the officer

## Wood and Water

The farmers of our great prairies will appreciate the value of a country with plenty of wood and water, along with good farm land. You can get all that on the KANSAS CITY SOUTHERN RAILWAY. Ask for particulars.

WM. NICHOLSON,  
Immigration Agent,  
Room 671, K. C. S. Bldg.,  
Kansas City, Mo.

#### 160-ACRE FARM FOR SALE.

Creek bottom land; improved; 40 acres in alfalfa; fenced hog tight; black sandy soil; good water; good buildings. Priced for quick sale at \$10,000; will carry \$3,500 at five per cent.

H. H. BURNS,  
Argonia, Sumner County, Kansas.

#### Johnson County, Kas. Stock Farm

for sale. 80 acres; 40 acres corn, 10 acres alfalfa, balance wheat stubble, orchard, etc; 7-room house; 3 barns, 48x50, 32x36 and 20x65, including shed. Machine shed and double poultry house; 2 good wells and 1 good cistern; 18 miles from Kansas City. Price, \$10,000. E. W. BRECKENRIDGE, Olathe, Kas.

#### FOR SALE BY OWNER AT BARGAINS

Four choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

Wm. M. SPRINGER  
621 Gas and Electric Bldg., Denver, Colo.

## FOR SALE OR TRADE

Good Eastern Kansas farm, part bottom and part upland; some timothy and clover meadow; eight acres of alfalfa. Good house and barn; close to town and school. Will trade for registered stallions, mares or jacks.

BOX 16 - - - Paola, Kansas

#### FARM FOR SALE OR TRADE.

151-acre farm in Anderson County, Kansas; close to Garnett. Will consider a good draft stallion, jack or automobile in good condition, as part payment. W. E. MCKEE, Braddyville, Iowa. R. R. 1

or other person furnishing the evidence upon which such owner or other person having such dog or dogs in his charge is convicted of such violation. This act shall not apply to the running at large of any dog or dogs within the corporate limits of any city or town in this state that require a license tag to be kept on dogs. But this act shall not apply in any county in this state until the same has been adopted by the board of supervisors of such county.

#### MORE LIGHT ON HUMANE COLLARS.

To the American Breeder: In regard to humane collars, will say I have worked horses and mules on the farm for 35 years and find when the weather is hot and the loads are heavy to haul, it is hard to keep the team's shoulders from getting sore and "galded." Seven years ago I bought a set of humane collars, later I bought more. Would not do without them. Have not been bothered with sore shoulders and necks since under ordi-

## Aside From The Stock Show at Pueblo, Colorado

1—Aviator Cook starting. 2—Where he died. 3—The sheriff and his daughter?

nary use. If some of the readers who are opposed to the humane collar would follow the directions that come with the collar, in fitting them on the horse, I think they would get better results and would use more humane collars.—C. H. Giese, Woodson County, Kansas.

#### HOW DO YOU GROW COLTS?

To the American Breeder:—There is one subject I would like to have dis-

cussed by the readers of your paper. Some people claim that if a colt is crowded (some call it pampered), from birth to maturity, that the colt will never make as tough or as good an animal, or will not stand as much as the one that is not crowded or just left to do for itself. For my part I will take the one that is kept growing from birth; the quicker it is made to grow into a horse, the better for me. H. F. WISE, Alberta, Canada.

Editor's Note:—In considering this

question it is important to know what weights a colt can make, say at one month, six months, twelve months, twenty months and thirty months, without affecting it as to soundness or endurance. If a colt stays sound and healthy everybody agrees that the more growth, the better for work stock. Now let's have as many actual weights as possible, for the ages given. Always state the breed, if pure, and if grade, give breed of sire, and weight of dam.

## American Breeder Camera at The Colorado State Fair.

1—Zang's champion Percheron stallion. 2—Dillon's second prize aged Percheron. 3—Champion Standardbred stallion. 4—Boys showing colts. 5—Shorthorn cow. 6—Wm. Henn's champion Shorthorn bull. 7—Hughes' champion Suffolk stallion. 8—Zang's champion Percheron mare. 9—Fisher's champion Belgian stallion. 10—Fancy drivers, coach size. 11—Parker's champion Guernsey bull. 12—Henn's champion Hereford bull. 13—Crewsdale Farm's champion Holstein bull. 14—Woodcroft Farm's champion Holstein cow. 15—McClenahan's champion Jersey bull. 16—McClenahan's champion Jersey cow. 17—Parker's champion Guernsey cow. 18—Ready for the race.

## TWENTY-FIVE HEAD OF HORSES

FOR SALE—These are three year old, geldings and are sired by a good stallion; are all halter broke and gentle. A nice, even bunch of good quality, and priced to sell.

ORVAL HOLLOWAY, Broadwater, Neb.

### Horses for Sale

Car load or more of well bred horses, geldings and mares from 3 to 7 years old, weighing from 1,200 to 1,600 and over; gentle. Nearly all have been handled and some are well broke. Address,

A. G. JOHNSON,

Box 14, St. Joseph, Mo. Dak.

IMPORTED AND HOME BRED STALLIONS AND MARES. PERCHERONS, BELGIANS, SHIRES. The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. Address Hart Bros., Oneida, Iowa.

### ROYAL BELGIAN STALLIONS.

The best collection of Belgian draft stallions, 2 to 4 years old, that was ever imported to Texas, for sale at reasonable prices. Three blue ribbon winners, a champion and a sweepstake winner. Can be seen in Galveston, Houston and at my farm at Cedar Bayou. All first class breeders and well acclimated. LEON VAN MELDERT, Cedar Bayou, Harris County, Tex.

## CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2, Plainfield, Ill.

## Registered Percheron Mares and Stallions

For sale. Two grey mares, four and five years old; full sisters; mate well; bred. Two stallions, two and eight years old.

COL. E. H. URTON, Clarksville, Ohio.

### FIFTY STALLIONS AND MARES.

\$250 to \$1,000 Each.

Write for my illustrated Circular telling why I can save you money on the purchase of Percheron or Belgian stallion or mare.

A. W. GREEN, Middlefield, Ohio. R. R. Sta., E. Orwell, on Penna. Ry., between Ash-tabula and Warren.

### TWO IMPORTED REGISTERED MARES.

For sale. Scaling over two tons. One black; 7 years; an International prize winner; other gray; 13 years; a Springfield championship winner. Both sound, clean, unblemished; good breeders and workers of outstanding class as their show records evidence, and again in foal to Jupiter 11, \$1,200 for pair.

W. T. WILKINSON, Eureka, St. Louis County, Mo.

## Drouth Prices

On registered and high grade Percheron stallions, mares and colts. For particulars, address,

C. G. WELSZ,

Palmyra, Mo. Rte. 4

### PERCHERON STALLION

For sale or trade. Imported; gray; weight 2,000 pounds or better; sound and sure; colts to show; work in all harness; gentle, anybody can handle him. Will sell cheap for quick sale or would trade for pair of pure bred Percheron mares, two years old or older. Write for full description. E. R. THOMAS, Box 52, RYE, COLO.

### Registered Shires

For sale. A few good stallions and mares, different ages, colors and weights. JOHN R. LOVE, R. R. 6, Albia, Iowa.

### GOOD RESULTS FOR OHIO ADVERTISER.

To the American Breeder:—Inclosed find personal check for \$9.50, for which please publish inclosed ad for two months in your valuable paper, beginning with the last issue in September. I have neglected to thank you for the good results received from my last ad with you, but the inclosed order will show my appreciation more than anything I could say. Wishing you success, I am, M. E. Lyons, Delaware County, Ohio.

# MODERN ANIMAL BREEDING

A few years ago an investigator decided to visit a number of the largest breeding establishments in the country in order to find the most successful breeder. After visiting a large number he decided that the principal thing these men could easily explain was that in case the female failed to settle she would be rebred at the next heat period. He then visited a breeder who has probably bred more pure bred Percheron mares than any other man in the world. He was expecting great things at this establishment, and to his surprise the same "information" was obtained.

Many big breeders to whom the breeding world look for knowledge on breeding subjects are not well posted on such subjects, as a rule. These men stick out their chests, put their thumbs in their suspenders and look wise. They do not wish to humble themselves and show their ignorance in order to be up to date at this time. Ignorance is keeping more men away from the Graham Scientific Breeding School than all other things combined. They are afraid to show their ignorance.

These are plain facts. The individual who has reached the point in life where he does not wish to learn any more, or who thinks he knows it all, is a dangerous character. Many of the best posted breeders in the country have attended the Graham Scientific Breeding School, and the more they know, the more they praise that institution. Any intelligent man has realized that it will be impossible for one man to know everything, and that it is very easy to learn something anywhere.

There are some who do not believe that it is possible for them to be made proficient breeders during one week's time. Some state that it requires several years for a veterinarian to learn these things. This Breeding School does not propose to teach everything that a veterinarian college does. It gives a plain, practical course, largely through demonstrations, leaving off the technical names. Then again it does not require a great length of time to get familiar with only one set of organs—the generative organs. Breeders who are not familiar with these organs and what they do can never be proficient breeders. Talk to the average stallion owner about making an examination of a mare and he will say that he "opens them up." This is about the smallest part of the breeding business. More damage than good is usually done by the opening process of the average breeder. A breeder should be able to make a thorough examination of the kidneys, ovaries uterine ducts, uterus, cervix, vagina, mucous membrane and a lot of other things. These can all be taught satisfactorily during a very short period of time, by having a number of mares destroyed and hung up in their natural position.

It is remarkable how much a class of breeders can learn in one week, because they are interested and make the very best students, not only while at the breeding school, but it prepares them to see and learn many things from experience, which they never saw before, and for reading literature and studying the subject from a scientific basis. It lays the ground work so that they can increase their knowledge for years to come. Practically every breeder has an opportunity to dissect mares or other animals which have died or been killed. In this school there is a wonderful opportunity for breeders who wish to be more proficient. The individual who is in the rut and does not wish to learn will find that his business will get harder each year.

In 1910 the Graham Scientific Breeding School employed some of the best posted graduate veterinarians in the country and examined one thousand barren mares. After months of labor and a lot of expense the germ has been isolated that is causing barrenness in a lot of mares which should breed. This is conveyed by stallions from one mare to the next through the act of copulation. Breeders are taught

how to diagnose this disease, as well as other diseases. By dissecting mares and cows having this disease (a case of practical demonstration), breeders will learn to recognize these conditions when they see them.

This school gives a condensed course. Just the practical work is given, not studies requiring breeders to learn a lot of technical work that they will never use. Practically everything that will confront a breeder of horses, cattle or hogs is demonstrated.

Breeders from California, New York, Canada, Mexico, Belgium, France and England have attended this school, making the trip for this special purpose. A thousand have come from nearer states. Not a single individual has ever complained. At each term of school each student has had an opportunity to get his tuition refunded if he is not satisfied with the course. Not a single one has ever claimed that privilege. That guarantee is still in effect, and will be. There are still thousands of breeders living near Kansas City who could attend this school with a very little outlay in car fare. Every one of these men could well afford to visit this school and see what it is. No intelligent breeder can doubt the statements of hundreds and hundreds of breeders who have been in attendance. A few dollars car fare, and a little time will satisfy any fair-minded man. If the school is not satisfactory they can go home without paying any tuition. The wonder is that more of them do not investigate this most important offer. The next term of school will cover two weeks; the first week horses and the second week cattle and hogs. This will be the last class on cattle and hog breeding until next fall.

The tuition fee is \$25 for a life membership. This admits the student to any and all terms of school. After August 1, next year, the tuition fee will be \$50. Every breeder who expects to attend the cattle and hog breeding school for the tuition fee of \$25 must be on hand at the next term. This will be an exceptional opportunity for those living a distance to attend both terms and get special instructions upon a subject pertaining to the breeding of live stock. Will the breeders wake up and quit breeding in the dark? This is the place to learn.

A great many men state that they do not have the time. Is it not better to spend a few days during the fall than to spend a lot of extra time and energy of the breeding stock during the busy breeding season, and lose money? Practically every breeder gets from 10 to 20 mares for either his stallion or his jack, that require three or more services. Why not eliminate those worthless services? Make every service count. This is more important for the breeder who is compelled to breed by natural service, because he must make every service count. Capsule breeders can take some chances as using up the extra semen will not cost anything.

Some breeders contend that they cannot adopt modern methods in their community. That is a mistake. By sending their customers the Mare Owner Editions of the American Breeder, which begins with the next issue, all obstacles to doing this can be easily removed. As a further help the breeding school sends experts to lecture in communities where graduates of the school wish to extend their patronage. The methods taught have long passed the experimental stage and modern practices are now upon a solid foundation for all who wish to get busy and make money and be of some service to their community. Don't forget to be on hand Monday morning, October 26.—Advertisement.

**LARGE NUMBER OF INQUIRIES.**

To the American Breeder: I am just in receipt of a large number of inquiries about the jacks and jennets. The advertisement which you have written this time wakes the public. I hope to be able to do some business within the next two or three weeks with these parties.—John A. Edwards, Greenwood County, Kas.

**Oak Lawn Stock Farm**  
Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.  
**GEORGE EGGERT, Newton, Iowa.**

## WHITEOAK STOCK FARM

**American Bred Percheron Stallions and Mares.**  
The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to **D. Augustin, Carlock, Ill., R. F. D. No. 2.**  
Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

### THIRTY PERCHERONS AND BELGIANS

and one Shire. They range in age from 1 to 7 years; all sound and heavy boned; weighing from 1,800 to 2,200 pounds. There are 17 stallions and 13 mares. I will also sell my herd stallion, Jupiter 65723, coming 5 years old; weight, 2,200.  
These stallions are all sold under a guarantee to be 60 per cent foal getters. I have four year olds that weigh 2,200; 2 coming 3 that weigh 1,800. Can sell a good ton stallion for \$750; sound and right in every way; some a little higher, and some lower. I will sell at a bargain to early buyers. I have

### Percherons, Belgians and Shires

Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. He is proving an excellent stock horse. Send your good mares to him and raise the best. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 pound horses.

**WM. CROWNOVER, Hudson, Iowa.**

## Belgian Emporium of America

Largest collection of Belgian Draft Stallions and Mares in America. Home of Jules Remi, first prize Belgian stallion, Iowa State Fair, 1912 and 1913. Also some very good Percheron stallions and mares.  
We have 100 pure bred mares and colts in 11 different pastures. We never had as large and as choice a collection of mares as at present. Come to Cedar Rapids or Iowa City, Iowa, and take the interurban to Lefebure Station, and telephone to Fairfax for auto to meet you at the interurban. We defy competition in quality and prices.  
Four large farms all adjoining; 7 large barns. Illustrated catalogue free.  
**H. LEFEBURE & SONS, FAIRFAX, LINN COUNTY, IOWA.**

### THREE COLTS FROM ONE SERVICE.

To the American Breeder:—You will please find picture of three colts, the product from one cover, three out of four capsuled mares. These are the

colts which I mentioned last winter; three out of four by capsule breeding. I am coming to the Breeding School again this winter and think I will scare up about three new students to bring along. Hoping you are having success, and with best wishes, I am,  
**G. F. Lucore, Lincoln County, Colo.**

TREBLING AN INCOME THROUGH MODERN METHODS.

**FOR SALE OR TRADE**  
Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth Jack, 6 years old; second prize Jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. HURNS,  
Argonia, Sumner County, Kansas.

## MUST SELL

Financial difficulties compels me to sell my imported Percheron stallion; 10 years old; weight 1,800 pounds; in good flesh; extra good breeder; colts to show; fine disposition; pasture broke; just right for range use. This horse cost \$1,850 at six years old. Best offer takes him.

H. B. SMITH, Coldspring, Mo.

### REGISTERED PERCHERONS

For sale. One extra good three year old stallion; two dark gray yearling stallions and two high class weanling stallion colts, sired by imported Janter, second prize three year old at International, 1912.

Also one dark gray five year old mare safe in foal to the above horse.

F. E. AIKMAN,  
Lyons, Clinton Co., Ia. R. R. 3, Box 35.

### IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

A. LATIMER WILSON, Creston, Iowa.

### BELGIAN, SHIRE AND PERCHERON STALLIONS

and mares, also Standard bred stallions and mares, \$200 and up. E. P. Hamilton & Sons, Garden Grove, Ia. (Mention this paper). 23 miles S. W. of Charlton, Ia., 82 miles south of Des Moines, Ia., at Leroy.

## For Sale or Trade

Percheron stallion; registered; black; 8 years old; large bone; good disposition and an excellent breeder for Percheron mares, young mules or Shorthorn cows.

WALTER ALLEN, Dunlap, Ill.

### Grey Percheron Stallion

For sale; 5 years old; weight 1900 pounds; registered in P. S. of A.; extra good breeder; fine disposition; best draft horse in Southeast Missouri. Cost \$1,000. In order to settle up deceased husband's estate will take \$500 if sold by October 15.

MRS. J. B. THOMPSON  
R. R. No. 3, West Plains, Mo.

### GOOD PERCHERON FOR SALE.

My registered Percheron stallion, No. 53973; black, with star in forehead; 4 years old; sound and an extra breeder; weighs 1850 pounds and works in all harness on the farm. This is a grand young horse with fine action; heavy bone and absolutely tight. A chance to buy a good stallion cheap, for quick sale.

A. A. FOLTS, York, Nebr. R. F. D. 1.

### PERCHERON STALLIONS.

I have for sale two black-grey Percheron stallions, registered in the Percheron Society of America; they are two year olds, weighing over 1,800 pounds each; will mature to better than ton horses; heavy boned and right every way. They are priced to sell. If you want the best at the right price, write me. M. E. LYONS, R. F. D. 4, Delaware, Ohio.

### STALLIONS FOR SALE

Or Will Exchange for Cattle, Hogs, Horses or Mules.

One imported Shire stallion; weight, 1,980 pounds; color, brown, stripe in face; three white legs; age 10. Also one dapple grey Percheron stallion; weight about 1,500 pounds; pure bred; age 7 years; a sure foal getter; colts to show. A bargain if taken at once. Reason for selling: going out of business. For price and particulars, write A. E. CLEM, Route 1, Beason, Ill. Railway station, Chestnut, Ill., half way between Chicago and St. Louis, on I. C.

## Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.

C. G. ANDERSON, Hector, Minn.

### Percheron, Belgian and Shire Stallions and Mares

from suckers up to six years old, including my herd stallion Adore, first premium and champion Belgian stallion at American Royal in 1912. All priced very cheap; good terms on bankable paper.

J. M. NOLAN, Paola, Kas.

## Questions and Answers

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

### 1267—CURVATURE OF THE SPINE

I have a fine, large three year old mare. We worked her carefully this spring. In the last part of June we turned her onto clover and timothy pasture. Soon she began to run down and get poor, while the other horses became fat. Her neck became low and her back bent up in the loins. What was the cause of her being this way? She was bred the second and last time the 16th of June. She was in good condition when we let her on the pasture and seems to be gaining now and her back has straightened out more to its natural shape. Is it advisable to begin working her now?—Minnesota Subscriber.

REPLY—We would judge from your description that your mare has been seriously wrong and we would advise against working her this early. Give her plenty of time to recover, which she is seemingly promising to do.

### 1268—LAME MARE

I have a mare 17 years old. When we were through with spring work we turned her onto good clover and timothy pasture. When she had been on pasture a while she began to limp on her left front foot at certain times; then it changed off to her left hind foot. When she stepped on this foot it would bend in the hock and give way under her weight. Since then this lameness has affected all of her legs. In pulling her hind legs bend in the hock and she swings her head from side to side. She does not seem to have full control of her feet and slips about very much when walking on wet ground. She gained and became fat when in pasture and her legs were all right when she quit spring work. What is the cause of this lameness? Is it the clover pasture? How can it be remedied? This same mare seemed to be in heat early this spring; later on we tried her with the stallion every week for the whole season, but could not catch her in heat. She was in heat the first of this month, however. She has had seven colts and been quite a sure breeder. Why did she not come in heat this spring? She was in good condition and healthy except for the lameness.—Minnesota Subscriber.

REPLY—This mare appears to have suffered from some injury that has produced a partial paralysis of the organs of locomotion, and on account of her age it is doubtful if one can do much good with medicine. We would advise longer rest in the shape of a continuation of pasture.

1269—PIN WORMS—I have a three months' old colt that rubs itself whenever it can find a place to rub. It rubs its hips and tail and some on the back. I have looked for lice but can't find any, but I notice it has pin worms. Will this cause it to rub? What will I feed it to get rid of the worms? Colt is in good condition. It runs with its mother in pasture most of the time.—Canada Subscriber.

REPLY—Inject a quart of warm water containing a teaspoonful of table salt, by means of a fountain syringe, into the rectum every two or three days until relief from the worms is secured.

1270—WELSH PONIES—Is there any place in the United States where Welsh ponies are raised, where a stallion could be purchased?—Colorado Subscriber.

REPLY—There are several firms in the United States breeding Welsh ponies, but the whereabouts of many of them is being kept a secret. Should any of them decide to take the buying public into their confidence our advertising columns are open to them.

1271—PTALISM—I have a mare that has slobbered the year around for about two or three years, but it isn't her teeth. Can you tell me what causes it and what to do for it? She takes spells for three or four days that she won't eat about three or four times a year. She is fat all of the time.—Ohio Subscriber.

REPLY—There are a number of things that will induce the symptoms complained of. One is the teeth, which should again receive a thorough examination at the hands of a qualified veterinarian. Paralysis of the lips, either partial or complete,

will cause an animal to slobber, and when from that cause is very difficult to correct. The food consumed has an influence, as is well known. Again the salivary glands are over stimulated, leading to an excessive flow of saliva. The cause of the difficulty must be first worked out before anyone can prescribe with any assurance of giving relief to this case.

### 1272—SPAVIN OR THOROUGHPIN

I have a registered horse with spavin or thoroughpin on his left hind leg. About two weeks ago I noticed a small lump on the outside of hock. I have worked this horse on the ranch for a year. When he is resting this leg, and I press on this, it seems to go through on the inside. This is a valuable horse and any information would be appreciated.—Oregon Subscriber.

REPLY—There is a difference between the two diseases called spavin and thoroughpin, and in either case we would not be able to prescribe for the case so you could treat the animal yourself. You are in need of a good veterinarian, who may be given the opportunity of making a careful examination and study of the case, and after doing this he will be in position to advise you what you can expect from treatment.

1273—UMBILICAL HERNIA—I have a Standardbred mare colt about four months old with a rupture at the navel about the size of a half dollar. It has been there for about two or three months. Will the colt outgrow this? If not, what is best to do for it?—Illinois Subscriber.

REPLY—It is always a good plan to have such cases operated on by a competent veterinary surgeon while young, as an operation done at that time nearly always insures a cure. Some of these cases do recover themselves without treatment, but one can never tell in advance what the termination will be. As these cases grow older an operation is not so satisfactory, and it has been found that animals two and three years old are very difficult to relieve by any method.

1274—SKIN ERUPTION—About two months ago I noticed small spots of hair coming off my horse's neck about a quarter of an inch in diameter, some smaller. The flies were very bad and I thought they were the cause. There would be kind of a scurf—could hardly call it a scab—where the hair came off; rather whitish in appearance. Recently I notice he wants to rub as though it was itchy; he bites himself and is getting sore below his knees. Do you suppose it is mange? What do you think would be the proper treatment?—Kansas Subscriber.

REPLY—It is quite likely your animal is affected with eczema. If possible give the horse a run at grass, giving sufficient grain twice a day to maintain the proper amount of flesh. Give one-half ounce of Fowler's solution in each grain ration. Apply a 2 per cent solution of iodine in alcohol to the parts once a day.

1275—FEEDING SEPARATED MILK—What tendency has good, sweet, separated milk have on a colt 16 months old? I am feeding mine about 12 quarts a day; believe it is good for

Warranted to Give Satisfaction.

## Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diptheria. Removes all Bunches from Horses or Cattle.

## Miller Stock Farm

A Big Tract of Rich Land Devoted to Improved Live Stock Production.  
SEPTEMBER BULLETIN.

**WE WANT** One good registered Percheron stallion, right in every respect; one good registered Hereford bull, and can handle work mules and heavy mares any time.

### FOR SALE OR TRADE.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old. Standard bred and registered stallions as follows: Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you, the prices mean business.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Give Particulars Fully and Truthfully; We Trade No Other Way.

**F. M. LORIMER, Mgr.**

**Olathe, Kansas**

## ASTRAL KING 2805

Here is a household name in every home where the World's most beautiful breed of horses is appreciated.

### WHY?

Because the horse that bears it represents the acme in every quality which in this breed has reached its highest development, and so faithfully has he reproduced his kind that his colts have advertised him everywhere. Ask his owner,

**JAMES A. HOUCHIN**  
Jefferson City, Missouri

### REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

**RICHARD SELLMAN, Rochelle, Texas.**

### Registered Morgan Stallion

For sale. Good breeder; fine disposition.

Also 6 year old registered jack; hard to beat in quality and breeding; quick to serve. For particulars address

**J. T. HESTER, Saybrook, Ill.**

### BLACK HAWK MORGANS.

For sale, or will exchange for young, small, unbroke range horses, six registered black stallions; two matured; 15½ hands; 1,200 pounds; two, three years old and two, two years.

**E. F. BROWN, DERBY, IOWA.**  
**R. F. D. No. 2.**

### SADDLE STALLION, PERCHERONS AND 10 JACKS.

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

**W. L. Graham,**  
Mackville, Washington County, Ky.

### RIDING AND DRIVING MARE WANTED

Need not be registered, fancy or five gaited, but must be serviceably sound, perfectly safe for lady to drive, have an easy canter and be in a healthy condition for breeding. Will pay only a moderate price. Please give full description and price in first letter.

**AMOS BURHANS, Waterloo, Iowa**

### FOR SALE OR EXCHANGE

One of the best imported German Coach stallions in this part of the state; also one jennet. Could use automobile, motor cycle or good bull. This horse has plenty of colts to show and is a sure breeder. Might use other stock. Write what you have.

**J. W. ETHRIDGE**  
**R. R. 4 Mt. Vernon, Ill.**

**PERCHERON STOCK WANTED**  
in a trade on the following, or will sell any or all cheap for cash: 1 registered Trotting stallion; black; 1,050 pounds; has a mark of 2:15 and can beat it today; 1 registered French Coach stallion, 1,200 lbs; 1 registered Clydesdale stallion, 2 years, 1,400 lbs; 1 bay road gelding, 1,100 lbs., trots 12 miles an hour on road and can pace in 2:15. Stallions sure breeders. Write me what you have and how you will trade.  
**W. F. GIBBONS Reading, Mass.**

him. Would like to hear from some one else.—Minnesota Subscriber.

**REPLY**—Feeding separated milk to a colt of this age should produce a good growth in the animal, and the fats that are taken out through the process of separation could be supplied quite well by adding a little ground flax seed to the milk. Again, if food containing a goodly proportion of starch is fed, it will help to balance the ration.

**1276—SUPPOSED THRUSH**—I have a valuable Belgian stallion that has a bad case of thrush. I have tried different remedies but so far they have all failed to cure. Last season this same stallion got the skin broke on the right front pastern joint which resulted in an ugly sore. I treated it all summer but it did not heal until cool weather. This summer it has broken out again and is now about the size of a silver half dollar, and so far I have failed to heal it. Would appreciate your advice for treatment.—Missouri Subscriber.

**REPLY**—Possibly your stallion has contracted a more obstinate disease of the feet than thrush ordinarily proves to be. The disease called canker manifests itself very similarly to thrush, but is far more difficult to cure. First wash the affected parts and scrape them with some blunt instrument, so as to free them of all foreign matter. Always keep the animal in a clean, well bedded box stall and remove all excrements twice or three times a day. Apply once a day for three or four days the following, with a small syringe, taking plenty of time to work it well into all the affected parts: Formalin, two ounces; alcohol, six ounces. As soon as the parts appear dry, discontinue the application. The wound mentioned has become a "summer sore" and needs the personal attention of a veterinarian.

## October 20, 21

For on those days we sell an offering which we guarantee the best that any breeder, firm of corporation will put up this year—100 Head—including the Great Show Herd of 25 head, selected and reserved for the San Francisco World's Fair next year.

Nothing sold before the sale. Send for catalog now, mentioning the American Breeder.

## L. M. MONSEES & SONS

Smithton, Missouri

## R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

## A BARGAIN

### In Mammoth Jennets

I have 17 good big black jennets, which on account of other business, I want to sell. There is a bargain here for somebody who has the right kind of a jack to breed them to. A few jacks for sale also.

JOHN A. EDWARDS, Englewood, Kas.

## MAMMOTH JACKS

For sale—Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

### FAIRLAND JACK & JENNET FARM.

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.

### FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right.

J. C. HUCKSTEP, Eolia, Pike County, Mo.

### JACKS AND SADDLE STALLION

FOR SALE OR TRADE. Jacks are 14 and 15 hands high; right in every way. Saddle stallion is 16½ hands high. Will trade part or all for good automobile. Will sell cheap or will consider anything on a trade as I am going out of the stock business.

J. T. TAYLOR, FOLEY, MO.

### BIG MAMMOTH JACKS AND JENNETS.

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles North of Monett or Frisco R. R., and six miles Southwest of Hoberg on Mo. Pac. R. R. Write for prices to Henry Obermann & Son, Frelstatt, Mo.

### JACK---DUROC HOGS

For sale. A black Jack; light points; six years old; 15½ hands high. Also Duroc hogs.

LOUIS KOENIG, Solomon, Kans.

## 11Worth County Jack Farm

Twenty-five head of jacks and jennets for sale.

CORSON BROS., Potter, Kans.

W. B. CARPENTER  
14th & Grand Ave., Kansas City, Mo.  
Specialist in Auction Sales of  
LIVE STOCK AND LAND.

## What Is He Worth?

Here is a photograph of my registered jack colt, Big Boy; 23 months old (will be two years old October 1); weighs 910 pounds in medium flesh; is 62 inches high; 68 inches around heart with a tight tape; 8½ inch bone.

I want to know what you Kentucky and Tennessee and Missouri jack raisers think of him. I gave notice about ten months ago in this paper that I had you all skinned, and one man in Tennessee (J. J. Murray) stated that he could show me one as good some time in the future. But he never did show him. I am going to contest for the premiums at the Fort Worth Stock Show, October 10 to 17; also at the Dallas fair, October 17 to 30.

As I am a grocery man and not a jack man, this jack is for sale. Don't you think he is worth \$2,000?

## S. M. COOPER

Riovista, Tex.

### JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

### BLACK MAMMOTH JACK

For sale. 15.1 inches high; standard; black, with white points; six years old; weight around 1100 pounds; quick as a horse. Will guarantee him in every way. Cost \$1000 three years ago. I have sold all my stock and am going out of the business. Can have at a bargain if taken soon.

B. R. LEWIS, Coffeen, Montgomery Co., Illinois.

# FREE TRY-ON

## The Neatest Work Shoe Made

# HY-D-Rubber-Wood Manure and Waterproof SHOES

Will Outwear Six Pair of Ordinary Shoes

Thousands and thousands of dollars spent yearly by workers on farms and creameries for work shoes and their repairs can be saved by wearing these HY-D-RUBBER-WOOD manure and waterproof shoes.

These shoes are not only cheaper right at the start, than good leather shoes, but once purchased, they absolutely stop the drain on your pocket book, by giving you almost unlimited service, while keeping your feet dry and happy.

### Leather is Porous and Absorbs Moisture Regardless of Its Toughness and Thickness

You know how leather shoes become water-soaked. You know how they get out of shape and weaken in every part, and no matter how carefully you dry a wet pair of shoes, the soles curl up and become hard—the uppers warp, wrinkle and frequently crack.

You have seen this happen many times. Then comes the expense of half soles and patches, and you are lucky if you do not have to buy a new pair of shoes.

Why spend \$12.00 to \$20.00 a year for leather soled work shoes when one pair of HY-D-RUBBER-WOOD manure and waterproof shoes will wear you for months without repair expense, and keep your feet healthy and happy? Why not stop this drain on your pocketbook?

### KEEP YOUR FEET WARM AND DRY WITHOUT THEIR SWEATING

Just stop and think what this means to you, in health. Rubber boots and artics may keep water out, but they usually make the feet sweat and open their pores. What is the result?

After you have worked all day in leather soled shoes, rubber boots, or artics, with the feet perspiring and pores open, the result is colds, stiffness, rheumatism and the many other troubles that are unquestionably due to wet or perspiring feet.

Having an innersole of non-conducting, selected kiln-dried wood,

which is the most comfortable substance in the world upon which to walk, you can walk or stand all day in these shoes and have dry, comfortable, happy feet at the close of the day's work.

Acids in milk, manure, soil, and especially in creameries where rubber boots rot to pieces has practically no effect on HY-D-RUBBER-WOOD manure and waterproof shoes.

These unsurpassed materials, combined with the highest grade of skilled workmanship, enables us positively to guarantee absolute satisfaction from every pair of HY-D-RUBBER-WOOD manure and waterproof shoes.

The HY-D-RUBBER-WOOD manure and waterproof shoes are made in exactly the same sizes as all leather work shoes. If in ordering, you are not sure of your size, send an outline of your foot, for we guarantee these shoes to fit perfectly.

### The Danger of Becoming Flat-Footed

Thousands of people suffer because the arch of the foot has become badly weakened or has broken down completely.

Do you know that this trouble is caused by the giving way of the arch support in leather shoes? Can you imagine the torture of standing flat-footed all day, without any support to the arch of your feet?

These HY-D-RUBBER-WOOD soles give you an unbreakable and perfectly balanced support to your feet. To the man who suffers from foot trouble, this support alone has frequently been the means of putting his feet again in good condition.

## EVERY PAIR SOLD HAS "MADE GOOD"

### These Shoes Are Good-Looking, Too

Most work shoes are ugly and cumbersome. But these shoes look well and can be worn anywhere. HY-D-RUBBER WOOD Soles are sound proof, yet they do not give that creepy soft feel of rubber boots or over-shoes. You have an honest vibrating step when you walk, and you can walk into any parlor without any danger of scratching or marring the floors.

### Warning! Watch Your Good Health!

Save your health by keeping your feet dry, no matter how long you work in snow, slush or mud. If you work on a farm, in a creamery, on cement floors, in a mine, or in a lumber camp, anywhere in fact where your feet would be exposed in leather soled shoes, you will find them perfectly dry, comfortable and happy in our shoes.

### Think of the Spells of Sickness You Have Had

The sickness of your family or neighbors has usually started with a bad cold, the result of wet, cold, clammy or perspiring feet. Surely you do not want to continue exposing yourself to all these troubles, when you can not only prevent them and enjoy greater comfort, but can save considerable money on your shoes in a year.

### This Shoe is Built for Hard Usage

The sole is made of a special grade of rubber, mixed with Sea Island cotton canvas and put under a ton of hydraulic pressure and hardened almost to the toughness of armor plate. The shoe is very light and comfortable, weighing less than any heavy all-leather shoe.

The uppers are of the best old-fashioned tannage of AA grain leather which is soft but heavy and waterproof. Uppers are attached to the HY-D-RUBBER-WOOD soles by a special process, which makes them positively waterproof all the time.

### Comfortable, Healthy Feet

Think of having dry, happy and healthy feet, free from bunions, corns, chafings and pain. Consider the absolute security in which you live without any fear whatever of such dreaded diseases as rheumatism, neuralgia, stiffness of the joints, sore throat, quinsy, pneumonia, any of which may result from wet feet.

It is not wiser to pay \$2.80 for shoes like these rather than to pay for shoes that offer you no surety of health and the most limited wear?

### Just Look at the Leather Shoes You Bought Last

If you have worn them for two months, note the run down heels and their general break down. Then consider how these HY-D-RUBBER-WOOD manure and waterproof shoes will look after the same period of wear. No leather soles to shrivel up and harden, but a firm, straight pair of soles to stand on, with the arches well supported and the entire shoe retaining its good appearance and comfortable shape, until completely worn out.

### Thousands of Farmers Will Buy These Shoes in Place of Rubber Shoes and Over-Shoes

Out in all kinds of weather, farmers want shoes that will not only keep their feet warm, but dry. They cannot take the chance of sweaty feet in rubber boots and overshoes. These shrewd farmers want our shoes because they know that HY-D-RUBBER-WOOD soles not only keep the feet dry and warm, but they furnish a non-sweating dry warmth that is

## SEND FOR A FREE, TEN-DAY, NO RISK TRY-ON

healthy. Once they wear the HY-D-RUBBER-WOOD soled shoes, they will not take the long risk of wearing porous leather soles, which offer practically no protection for the feet in winter in snow and slush or in rain-soaked fields and roads, not to speak of the sloppy barn yard any day of the year.

Every Shrewd Man Sufficiently Values His Health and the Saving of His Dollars and Cents to look into a proposition that means as much to him as does the HY-D-RUBBER-WOOD manure and waterproof shoes, especially when he can do so with absolutely no risk.

Forgetting the manure and waterproof features and the assurance of good health, we say to you and to all other careful and shrewd buyers that for wear alone, these shoes for \$2.80 the pair are the biggest bargain and the best purchase you ever made.

### WARMER THAN FELT BOOTS

For those who wear felt boots or suffer from cold feet, we make a special shoe, lined with an extra weight of red flannel.

This lined shoe is warmer than a felt boot or a felt house shoe, and may be worn out of doors, on the stormiest day or in wet places.

In every respect it is the same as our regular shoe, only made extra warm for those who require it.

We specially recommend this shoe as a substitute for felt boots and charge 25 cents a pair extra to cover the exact cost of extra material and work required.

### FREE TEN-DAY TRY-ON By Prepaid Insured Parcel Post

Let us send you a pair of HY-D-RUBBER-WOOD soled manure and waterproof shoes on ten days' trial. You may try them on. Wear them around the house, and if they fail to convince you in the slightest respect or if you are not perfectly satisfied, you may simply send them back, at our expense, and you will receive back every cent you paid for them. You must be satisfied, or we do not want you to keep the shoes at any price.

Send \$2.80 for a pair of HY-D-RUBBER-WOOD manure and waterproof shoes and prove to yourself that you can have perfect foot ease and comfort every minute you wear them. Prove that you can also save from \$12.00 to \$20.00 per year in your shoe bills.

Remember you take no chances. We absolutely guarantee to please you, or back goes your money to you without a kick or any delay.

We want your trade and will do any reasonable thing to get it. But, if you "are from Missouri" and do not need the shoes immediately, we will be glad to send you our free booklet, telling Why and How we are able to give such a splendid value for \$2.80.

You take chances by delaying, but that is up to you. Send for the booklet, but better yet, send for the shoes. You will be a pleased man when you put your foot in them. We know it. We have sent out 3,000 pairs this summer without a complaint of any kind.

Therefore, we say again, fill out the coupon and send it today and learn for yourself what is real work shoe comfort and economy.

Bilger Bros.,  
508 So. Dearborn St.,  
Chicago, Illinois.

Gentlemen:—Enclosed find \$2.80. Please send me one pair HY-D-RUBBER-WOOD manure and waterproof shoes (size.....) for a free, no risk, ten days' try-on, as per your advertisement.

Smith's champion home-bred Shire mare, Eureka Diamond. 9—Chas. Lord & Sons' first prize home-bred Shire stallion, Harold Dasher. 10—D. Augstin's champion home-bred Percheron mare, Rosline. 11—Soderberg's champion Clydesdale mare, Osco Darling. 12—Owen Fitch's junior champion Devon cow, Phony. 13—Riverbank Farms' champion Jersey cow, Grey Portia. 14—Homewood Farms' junior champion Guernsey bull, Mar of Homewood. 15—Leemon's Stock Farm's first prize yearling Percheron stallion, Bawn's Pride. 16—John Myers' second prize draft team in harness. 17-18—Trumans' champion Shire stallion, Boro Blusterer, coming and going. 19—Weir Bros' mule colts, the best one a capsule colt. 20—M. A. Steele's two year old prize winning saddle stallion, Blue Blood. 21—J. P. Detweiler's first prize aged home-bred Percheron stallion, Bonaparte. 22—Trumans' first prize Shire stallion, Fayette Royal. 23—G. S. Perkins' first prize home bred two year old Belgian mare, Louviere. 24—Soderberg's champion home-bred Clydesdale stallion, Come Again. 25—Trumans' champion Percheron mare, Joie.

# BREEDING SCHOOL

October 26 to November 7, Incl.

## HORSES, CATTLE AND HOGS

The Only Term of Cattle and Hog Breeding Until Next Fall

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

Two separate terms. The first week horses; second week cattle and hogs. The tuition fee is \$25 for one or both terms, which entitles the student to return at all other terms free of charge (a life membership.) This rate is good until August 1st, 1915; after that the tuition will be \$50.

This is the only recognized school (excepting veterinary colleges), that teaches the anatomy and physiology of the generative organs of domestic animals. No breeder can fully understand scientific breeding without this knowledge. This school gives a lot of new and useful information that is not taught by any other school in the world. This is the only breeding school. The principles taught have stood the investigation of the best posted graduate veterinarians on these subjects. All of the instructors but two are post graduate veterinarians who are doing work recognized by the United States Government.

Mares and cows are dissected and mares and cows, both dead and alive, are examined for the different diseases and abnormal conditions. Every student is required to take part in this work, under the instructions of experts. Students are impressed with facts about diseases of females in a way they will remember. Representative animals for this work are especially selected. Everything is made plain by demonstration and language that the average breeder can understand. All technical work that can be eliminated. The object is to give a course that the average breeder can master in a short time.

This is not a veterinary college, but it does teach how to prevent diseases. Prevention is better than a cure. A large number of animals are used for each class. The most interesting work for the average breeder is that of making examinations on a string of dead mares, supported in natural position. The average breeder has very little conception as to what he will find on the inside of a mare or cow; neither do they understand the why or wherefore, nor will they understand this until they have this special education.

Fathers and mothers need not be afraid to send their boys to this school, as it is a clean institution, and they will learn things that will make them better men and eliminate many of the dangers that men are subject to. Profane or vulgar language is not permitted among the students at any time.

The one drawback of this school is that some students who have attended are not anxious that their competitors do likewise. We do not know of one dissatisfied student and this from a territory which represents nearly every section of the United States and several foreign countries. At the end of each term all students have had opportunity to get their tuition refunded if not satisfied. This offer is still in effect. There are no restrictions to it. The student alone is his own judge, and there have been no takers. This is remarkable compared with the large army of men who have attended.

Any breeder can well afford to investigate this proposition offered anywhere to make yourself an expert breeder; to learn to avoid dangers in the breeding business that cause so much loss to owners of good stock.

**REMEMBER THE DATE---October 26 to November 7, Inclusive.**

### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse, Cow and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

Remember the date and prepare to be here next term. When you get here take Observation Park street car at Union Depot; get off at 12th street and walk one block east. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

## BUYING PURE BRED FEMALES.

A subscriber asks if it is any as-  
surance that a female will continue to  
breed if she has progeny by her side.  
There will always come a time when a  
female will cease to produce, owing to  
advanced age. There are also numer-  
ous other things that might be consid-  
ered in answering this question, but  
the principal thing that every buyer  
of female breeding stock should under-  
stand is examination for diseased  
ovaries.

The writer would not buy a mare or  
cow for breeding under any considera-  
tion without making this examination.  
Both ovaries may be in a very bad  
condition and yet the female be preg-  
nant. Mares in this condition are  
usually shy breeders. The ovaries  
may be diseased in mares to the ex-  
tent that they never can be made pro-  
ducers. The mare which is a shy  
breeder from the effect of bad ovaries  
is not profitable as a producer, as a  
rule. Neither can she be cured, as a  
rule, though some benefit may be de-  
rived from manipulation.

A breeder recently purchased a  
pure bred cow at a very long price,  
but she probably will never breed. She  
had been examined by a lot of indi-  
viduals who should thoroughly under-  
stand how to make the ovarian exam-  
ination. None of these gentlemen  
seemed to have thought of this im-  
portant point. A great many similar  
cases might be mentioned. A school  
boy can easily be taught by a compe-  
tent instructor how to make this ex-  
amination on either mares or cows.  
There is practically no danger con-  
nected with it when properly done.  
We would not advise anyone, however,  
to attempt this without having some  
special instruction from one thorough-

ly familiar with the anatomy of these  
organs.

Most of the other breeding defects  
of mares or cows can be remedied,  
but if the ovaries fail to discharge,  
no results can be expected. Ovarian  
trouble should be looked for in fe-  
males which have been closely housed,  
pampered, and without having had  
plenty of exercise, fresh air and sun-  
shine.

Aside from the ovarian trouble, if  
a female having progeny by her side  
is handled correctly she has the best  
evidence of being a regular producer.

## A COLLEGE MAN ON LIVE STOCK PHOTOGRAPHS.

The American Breeder's wide use of  
live stock photographs, particularly in  
portraying the prize winning types at  
the leading fairs and stock shows, has  
caused the widest comment and praise  
and spurred other live stock publica-  
tions to improving their service in this  
respect. The importance of our policy  
as an educational influence is con-  
trasted with the cheap and harmful  
practice followed by some breeders as  
well as some papers, in the following  
article by E. J. Iddings, animal hus-  
bandry instructor of the Idaho Agricul-  
tural College:

"In the days when photography was  
in an imperfect stage of development  
our pictures of live stock were made  
by artists who used the living animal  
as a model, afterward retouching the  
picture to show the individual to the  
best possible advantage. As a result  
of these 'corrections' applied to the  
original sketch the animal and the  
finished picture not only differed in  
many essentials, but often bore little  
resemblance to each other.

"The ease of securing in our day  
good photographs of animals and animal  
life renders unnecessary the more  
expensive and less accurate method of  
representation by means of drawings.  
The photograph is a reasonably fair  
reproduction of the animal's strong and  
weak points, showing him as he really  
looks and should be used much more ex-  
tensively by live stock breeders. For  
advertising and illustrative purposes  
in the live stock press cuts can be  
made at a reasonable cost and the true  
animal likeness reproduced for the  
benefit of a very great number of  
people.

"In spite of the accuracy of the pho-  
tographic method and of the relative  
cheapness of cuts from photo prints,  
many live stock men still prefer to  
use cuts from distorted drawings to  
represent their animals. We see fat  
chunky pigs with useless sorts of  
heads and legs, great prancing and un-  
real horses, sheep of a form that does  
not now and never did exist, and dis-  
torted views of beef and dairy cattle  
in catalogues and live stock journals  
and are less well informed as to the  
idea to be conveyed after gazing upon  
such a picture than if we had not seen  
it. Such cuts certainly have no educa-  
tional value.

"Let us throw aside those old pic-  
tures and cuts that mean nothing and  
come to the practical, accurate and  
modern method of animal photography,  
showing in catalogues and in the ad-  
vertising pages of our press the typi-  
cal form and carriage of our live  
stock. A good picture or cut from the  
same means something and conveys  
useful and practical information to  
those who look upon it, and used in  
advertising matter is certain to bring  
good results. If our stock will not  
stand accurate representation by the  
photographic method let us leave out  
the illustrations or get the kind of live  
stock that will bear the closest scru-  
tiny of the camera or of the eye of  
the visitor."

## FARMERS AND BREEDERS.

Some farmers believe that it is not  
necessary for them to be posted on  
live stock subjects but that they must  
know the market value of grain; that  
it is only necessary for breeders of  
fancy stock to be familiar with live  
stock.

This is a serious mistake. Every  
man who uses farm land or expects  
to, should be familiar with live stock  
and its use and benefits. The strictly  
grain farmer is hauling the fertility  
of his soil to market each year. The  
productiveness is surely being removed  
from his premises.

If it is necessary to keep live stock  
why not keep a profitable kind and  
handle it in the best possible man-  
ner? Practically every big breeder in  
this country started with a very small  
beginning, but they were not the men  
who had decided that it was not nec-  
essary for them to learn about live  
stock and its management.

Quite frequently one notices two

farmers living in the same vicinity,  
one of whom makes money every year  
and the other probably loses. Is it  
the man who strives to be posted on  
these subjects who makes money?  
Can a little extra information be of  
any value to a man? Every live stock  
breeder should take a live stock pub-  
lication which supplies the necessary  
information for farmers and breeders,  
and which makes a specialty of that  
kind of material. No matter how  
many farm papers, how many books  
or what education one has, this up-  
to-date, special knowledge has great  
value. Those who have boys could  
not do anything of more interest to  
the rising generation than to keep  
good live stock and properly handle  
it.

It is surprising to know how many  
people there are in the world who be-  
lieve that all of this good material  
should belong to the other fellow and

## SPECIAL

Subscription Offer to New  
Subscribers, for acceptance  
before November 1: 50 cents  
for the American Breeder un-  
til January 1, 1916.

not to themselves. The progress in  
live stock improvement depends large-  
ly on the knowledge of farmers and  
breeders. Until more interest is taken  
by the small farmers in this country  
in this subject this country will have  
to go to other countries for breeding  
stock. The millions of dollars that  
have been sent across the water is a  
charge against American progress.

We should like to ask every man  
interested in live stock improvement  
to show the American Breeder to his  
friends and neighbors. Ask them to  
subscribe for a special live stock  
paper dealing with subjects of especial  
importance for them. Show them  
the photographs of prize winning live  
stock so that they may have an idea  
of what constitutes a good animal.

A lot of new and useful information  
along lines which have never received  
attention in any publication, will be  
started soon, in a connected series for  
effective study. With the assistance  
of our loyal readers we expect to  
make the American Breeder the big-  
gest and best live stock publication in  
the world.

## A FIGHT THAT TOUCHES EVERY- BODY.

All over the world newspapers and  
periodicals are commenting on the re-  
markable reports coming from Russia  
concerning the results of a prohibition  
measure put in force there by royal  
proclamation. As a part of the im-  
perial war policy the czar prohibited  
the sale of vodka, the national intoxi-  
cant, in all public houses. This meant  
a much more nearly complete prohi-  
bition of alcoholic liquors than if the  
sale of beer was prohibited through-  
out the United States.

Immediately following the enforce-  
ment of this order officials of Russia  
began to remark upon the improve-  
ment of conditions in both villages  
and towns throughout the empire, and  
this at a time when the war was  
creating an unprecedented interrup-  
tion of industrial and civic activities.

If prohibition in Russia can more  
than offset the exhaustion and distur-  
bances caused by war and war prepara-  
tions, what could it not do for this  
country in time of peace. A local dry  
worker recently has preached national  
prohibition in the United States by  
1920. It looks like an unnecessary  
concession to make the date even as  
late as that, although if that could be  
assured it would surpass all other wel-  
fare factors now in its benefits. When,  
however, the southern states, one  
after another (throughout the terri-  
tory which has been considered the  
cradle of the "personal liberty" idea)  
are voting for prohibition, it is hard  
to imagine the northern states linger-  
ing very far behind. Virginia is the  
latest southern state to go over en-

tirely to the cause of temperance, de-  
cency and sobriety, but in a recent lo-  
cal option election held in Kentucky  
where a barrel of "moonshine" used  
to be thought by some outsiders to  
be a part of the state's coat of arms,  
nine counties out of the few remain-  
ing wet ones, were voted dry. Mis-  
souri as a state would have been dry  
long ago had it been left to the coun-  
try districts, but an organization  
made up of the brewers, distillers, sa-  
loon men and allied interests and poli-  
ticians, has been strong enough to de-  
feat the move even though the state  
has been voting "dry" one county at  
a time until only 23 or 24 counties  
remain in the "wet" column.

There is no question of public pol-  
icy now before the people of the  
United States or any other locality  
which is of more immediate or im-  
portant concern to those who are rais-  
ing families and paying taxes in the  
sections where this question is an is-  
sue. No one so situated can afford for  
a minute to assume that he is not con-  
cerned. Outspoken protests should be  
made on all occasions, not only  
against the drinking, sale and tolerance  
of intoxicating liquors, but against  
the interference of liquor partisans in  
public affairs of every sort. The  
brewers and saloon men respect no-  
body and no conventionality in the  
effort they are making to keep their  
immensely profitable and infinitely  
harmful business alive, and every man  
who is not in with them is their vic-  
tim to some degree, so long as they  
exist. Let all who are not "in with  
them" act accordingly.

## GRAFTING SUBSCRIPTION AGENTS.

Of late years state fairs and other  
similar gatherings have attempted to  
eliminate some of the pests connected  
with certain newspapers. A very dis-  
agreeable individual to meet, to say  
the least, is one of those fellows who  
is continually stopping those who may  
be in attendance by offering to give  
them his paper along with a lot of  
other worthless junk. If these graft-  
ers are not given access to ply their  
special trade in the regular newspa-  
per stand they will go singly to a  
horse barn or some other place where  
the picking is good, and offend a lot of  
people who do not sympathize in the  
graft they are working.

A few days ago a newspaper which  
is still forced to get its circulation in  
that manner, had a man in charge of  
a number of these grafters. He had  
a lot of knives that they were giving  
away as premiums. When he had to  
leave his own tent in charge of his  
so-called agents, he would remove all  
of these premiums to another tent,  
whose occupants were all strangers  
to him, and he made the remark that  
he was afraid to leave anything with  
his agents for fear they would steal  
him blind. He must certainly have  
had a very good opinion of the men  
in his own employ. There seems to  
be nothing that these grafters will  
not do. What right has a publisher to  
turn them loose on the public?

Perhaps the best thing connected  
with this kind of graft occurred at a  
state fair where there is a large game  
preserve. In this inclosure a great  
variety of wild fowl could be found.  
A "subscription agent" stationed him-  
self here and represented to the  
prospective subscriber that the paper  
which employed him owned all of  
these fowls, and in order to thorough-  
advertise that particular publication  
they were giving away a choice of  
these beautiful birds with each sub-  
scription. He requested each one to  
come there to make their selection  
that evening at a certain hour; also  
arrange some way to take the fowls  
home with them. After greatly in-  
creasing the circulation of that par-  
ticular publication during the day, he  
quietly left the premises. It was not  
long until a large gathering of inno-  
cent purchasers came there to get  
their birds. They looked very care-  
fully for this agent until they were  
informed that neither he nor the pa-  
per had any interest whatever in the  
birds. Some had brought baskets,  
others sacks, strings and different

means for taking home their premiums. What will be the opinion of such a publication by its new subscribers when they were defrauded in the very first act of their acquaintance.

The writer has attended a majority of the leading state fairs this fall and has come in contact with these leeches at every gathering except one, and this in spite of an agreement among the state fair managers that this is prohibited. An honest effort has been made by some of the fair managers, at least, to make these grafters obey the rule (which all fair managers in the association published), but it looks as though the owners of the papers themselves (and they are really the ones at fault) would have to be made responsible for their regulation.

#### A VETERAN'S ENDORSEMENT.

To the American Breeder:—I have the first copy I ever read of your valuable paper, and like to see it come; read it closest of any other paper. Have taken \_\_\_\_\_ and other magazines, but the American Breeder has more horse news and information than all the others. I like the stand it takes for honor in breeding. Am 72 past and am getting too stiff in the legs to handle stallions, but would like to see every farmer take the paper. Have sent in a few names and may send more later. If I was young I would attend the Breeding School. I wish the paper good success.—N. DeMott, Scotts Bluff County, Neb.

#### WHAT AN AUSTRALIAN SUBSCRIBER THINKS.

To the American Breeder:—I will take the opportunity to say that I am indebted to the Breeder for much information of a very valuable nature. It is a paper which should be in the home of every breeder. Such articles as the "Lessons in Horse Breeding," and the "Fundamentals of Breeding" are of particular value, whilst one can obtain a fund of knowledge from your "Answers to Correspondents" columns. With good wishes for your continued success.—E. B. Comant, New South Wales, Sydney, Australia.

#### FAIR FACTS APPEAL TO MR. NELSON.

To the American Breeder:—I want to compliment you on your very excellent State Fair table as published in the American Breeder. I do not know when I have seen a piece of newspaper work that appealed to me as more worth while.—W. L. Nelson, Missouri State Board of Agriculture.

#### WANTS THOSE "HUMANE COLLARS."

To the American Breeder: You will find inclosed my order for mare owners' editions. Send them the September 5th issue if you can. I could not send it sooner. I wish you would please send me the name of the Texas man that did not like the "Humane Collar." If he wants to sell them so badly it is likely I can buy them. I find them all O. K. Luck to you with your cracking good paper.—W. A. Sayre, Morrison, Noble County, Okla.

#### "HUMANE COLLARS" ON REGISTERED PERCHERONS.

To the American Breeder: I, for one, have used the Humane Collar and think I have given it a fair test. The one I used is a Whipple collar, just like the cut shown in the paper, but didn't cost as much as the man paid in Texas. It cost \$7.50. I have used it on two different stallions four seasons, and on a mare two seasons. Stallions and mare were registered Percherons. It has always given entire satisfaction, as neither of them ever had a sore neck or shoulder. I think the man in Tom Green County, Texas, surely got stung a little when he paid \$20 for a pair.—A. M. Ewbanks, Alva, Woods County, Okla.

## Bettering the "Average Animal." Tenth Lesson

By Prof. H. W. Vaughan, Iowa Agricultural College

A nation's greatness in the live stock world is determined, not by the comparatively few pure-bred animals which it may have, but by the average value of all the animals within its borders.

Persons interested in live stock work desire to see the average value of all kinds of farm animals increased to a marked degree. It is impractical to advocate that this shall be done by supplanting all common stock by pure-bred animals, because the latter constitute only about one per cent of all our live stock. The improvement must come about through the use of pure-bred males on the common stock of the country.

This, then, is the function of pure-bred animals—to supply as many sires as possible for use on common stock. We shall make progress just so fast as farmers come to realize the value of the pure-bred sire and just so fast as breeders of pedigreed stock are able to send out good sires at reasonable prices.

Most breeders of pedigreed live stock recognize the part they play in live stock betterment. They are studying the demands of the open market, setting their ideals accordingly, and molding their pure-bred animals to this ideal. When a stallion, bull, ram, or boar goes out from such a breeder to be used on the common stock of the country, the right step has been taken toward raising the average value of the animals in the community to which the sire is taken.

Hence, a knowledge of market requirements is essential to the breeder of pedigreed stock, for he is engaged indirectly, but most certainly, in the production of animals for the open market. Some breeders overlook this point and with them breeding is a mere hobby. The breeder who ignores the lessons to be learned in the open market will never be able to build up an active demand for his stock. Buyers insist that a thoroughly useful animal shall accompany the pedigree, and the inferior animal does not receive approval, no matter how glowing his family history may be.

Some people imagine that the breeders of pure-bred stock are mostly concerned with the minor or so-called "fancy" points in their animals, but this is not true in the great majority of cases. The useful and soundly practical characters are insisted upon first of all, and the minor points receive only secondary consideration.

What, then, is a pure-bred animal? A pure-bred animal is one eligible to registry in the book of record of that breed; second, it is an animal possessing characteristics which make it useful for some important special purpose; third, it is descended from a long line of ancestry of the same type as itself; and fourth, being backed up by an ancestry of useful animals like itself, it has the power to reproduce this useful type in its offspring.

What is a common or scrub animal? The scrub animal has no definite type and has an ancestry including animals of all shapes, sizes, colors, and sorts, few if any of which were highly useful animals. If the scrub male is mated with common females like himself, he does nothing to raise the average value of our farm animals.

When the pure-bred male is mated with common stock he has the ability to transmit half of his characters to the offspring, and these characters will be, for the most part, highly useful ones. Hence the first cross of a pure-bred male on common stock gives offspring of much higher average value than the dam. In some instances, one such cross upon common stock results in improvement which seems really marvelous.

When the pure-bred male is crossed on common females the resulting offspring are called grades. If these grade animals are again mated with a male of the same breed as their pure-bred parent, or with a male of some other breed, the result will still be a grade.

When common or scrub stock has been improved by three or more crosses by sires from the same breed, the resulting offspring will possess 87.5 per cent or more of pure-bred ancestry and will be called high-grades.

How much can the farmer afford to pay for a pure-bred male to be used in such a grading-up process? How much should be paid for a beef bull to be used on grade beef cows to produce beef for the market? The first question is too general to be answered here, but the second will be considered.

As the bull is half the herd, considerably more money should be invested in him than is represented in any one of the cows. No progress whatever will be made by using other than a pure-bred bull and continuing in the same breed when other herd headers are bought. The grading-up process must be continued, and where this has been done through a number of generations, herds will be found that are, for all intents and purposes, pure-bred, so far as production for the market is concerned.

The price the breeder is justified in paying for a bull will depend upon the conditions. Some very satisfactory bulls have been bought at moderate prices. If a full quota of cows is at hand for breeding, not less than \$100 should be invested in a beef bull, and more often it will be advisable to pay \$200, \$250 or more, rather than \$100. A small increase in the value per head of one season's crop of calves by the higher-priced bull, as compared with the cheap one, will return the difference in the price of the two animals. Furthermore, when the heifer calves by the higher-priced sire are gone over with a view to keeping out certain ones for use in the breeding herd, there will result a breeding herd of higher average merit than otherwise, and the improvement thereafter will be doubly fast.

The man who sees no farther than first costs when purchasing a bull is surely doomed to failure. As to which breed of beef cattle to patronize when selecting a bull for grading-up work, that is a matter to be decided somewhat by the conditions, but it is largely a matter of personal preference. Each breed has its own special advantages and there is no best breed of beef cattle.

Fancy, pure-bred, registered beef cows and bulls frequently sell for \$1,000, and wonder is sometimes expressed that a bull or cow can command such a price. Only when it is remembered that the sons and daughters of these high-priced animals will not be sold to the butcher, but will be used as improvers in herds that produce cattle for the butcher, is it realized that such prices do not necessarily represent a foolish waste of money. It may be several years before many descendants of such an animal reach the market, they being multiplied in the meantime; but when the market finally feels the good influence of such an animal, the benefits are lasting and society in general is repaid many times the price of the original bull or cow.

The foregoing considerations apply with equal force to the selection of a dairy bull to be used on common dairy cows, or to the selection of a stallion, ram, or boar for mating with common or grade females of their respective kinds.

Among Wisconsin farmers there has been started a pure-bred sire league whose members agree to use only pure-bred sires in all their breeding operations. Whether this league proves a success or not, one thing is certain, namely, that until pure-bred sires are much more generally used we can not hope to increase the value of our farm animals to any marked degree.

The average horse in the United States now has a value of \$109.32, the average mule is worth \$123.85, the

average dairy cow is worth \$53.94, the average beef cow, \$31.13, the average hog \$10.40, and the average sheep \$4.04. These figures speak for themselves.

This series of articles is now brought to a close. The writer trusts that these "lessons" have been reasonably clear, and that readers have gleaned enough food for thought to make their publication worth while. It is hoped that these articles have helped to remove the vast amount of superstition and ignorance which surrounds most breeding subjects, and that the business of breeding pure-bred live stock has been discussed in such a way as to bring to the pure-bred sire better appreciation and much greater patronage.

#### TWO DRAFT CROSSES ON A ROADSTER MADE 2,250-LB. GELDING.

A striking lesson in "breeding up" was afforded at the Illinois State Fair by the Truman Pioneer Stud Farm's first prize draft gelding, Woodrow Wilson—No. 19, opposite page of illustrations. This gelding, weighing 2,250 at five years, was got by the imported Shire stallion, Milestone Harold; its dam (weight 1,550) was by a Percheron stallion and out of a roadster bred mare weighing 1,050 pounds. This gelding was purchased as a four-year-old by the Trumans in the auction at the East St. Louis, Ill., market at the record price of \$625. It was bred in Edgar County, Ill.

#### FOUR SEASONS UNDER A STALLION LICENSE LAW.

To the American Breeder:—Before giving any figures or facts relative to the operation of our stallion license law, it might be well to make a brief statement as to the purpose of a stallion license law.

The purpose of a stallion law is to require stallion owners to represent and advertise their stallions for just what they are and to give mare owners a means of knowing exactly what they are patronizing. It takes absolutely nothing from the stallion owner that rightfully belongs to him. It simply puts the public service stallion business on an honest, square-deal basis.

When the law went into effect in 1910 the majority of our stallion owners thought that the law meant a lot of restrictions that would ruin their business, and because of this misunderstanding we found considerable opposition. But as the real purpose of the law became apparent, opposition disappeared very rapidly except from one class of stallion owners—the men who were misrepresenting their stallions and knowingly deceiving their patrons.

During the year 1909 before we had a stallion license law over 2,000 grade and scrub stallions were found to have been advertised in newspapers definitely and specifically as pure-breds. In 1914 not a single grade or scrub was advertised as a pure-bred in Kansas.

During the year 1910 the state licensed 2,599 pure-breds and 3,766 grades and scrubs to stand for public service. That means that 40.8 per cent were pure-breds and 59.2 per cent grades and scrubs.

During the year 1914 the state has licensed 3,055 pure-breds and 2,544 grades and scrubs to stand for public service. In other words, 54.5 per cent are pure-breds and 45.5 per cent are grades and scrubs.

A study of our records shows that 456 more pure-bred and 1,222 fewer grade and scrub stallions were licensed to stand for public service during the year 1914 than during the year 1910. This means an increase of 17.5 per cent in the number of pure-breds and a decrease of 32.4 per cent in the number of grades and scrubs licensed to stand for public service. Judging from past experience, the state, through the Live Stock Registry Board, has saved the horsemen of Kansas \$100,000 annually by eliminating the unscrupulous stallion peddler who formerly did a flourishing business selling as pure-breds to inexperienced purchasers at prices ranging from \$500 to \$4,000 grades and scrubs.

# American Breeder Camera At Illinois State Fair.

1—Crouch & Sons' champion Belgian stallion, Distingue. 2—Robinson's first prize two year old home-bred Percheron stallion, Marley Forest. 3—D. Augstin's first prize yearling Percheron stallion, Marley Forest. 4—Ben M. Green's jack, General Wolfe. 5—Warren T. McCray's champion Hereford bull, Imp. Farmer. 6—W. W. Rose & Sons' champion Polled Durham bull, Sultan's Creed. 7—Taylor & Jones' prize winning two year old Percheron stallion, Mazarin. 8—G. A. McCarty's first prize Belgian stallion, Bristol De Stalbrille. 9—E. R. Stoutmeyer's fourth prize yearling Percheron filly, Queen Quality. 10—C. D. & E. F. Rose's champion Polled Durham cow.

with fake and fraudulent pedigrees. These results, due to the operation and enforcement of the stallion license law, are certainly worth while.

Twenty states now have stallion license laws.—C. W. McCampbell, Secretary Kansas Live Stock Registry Board.

## CHIPPEWA INDIANS HOLD AGRICULTURAL FAIR.

Two thousand persons, 500 of whom

were whites, attended the big day of the Indian fair at Red Lake, Minn., which, according to Walter F. Dickens, superintendent of the agency, was not only a bewildering surprise to visitors, but probably was the first Indian fair ever held that was devoid of dances.

Exhibits of grain grown by the Indians included specimens of oats, barley, and wheat that would average twenty-five bushels to the acre, and yellow dent corn fully matured.

The stock display included regis-

tered Holstein and Shorthorn cattle.

There was also a fine display of vegetables and fruits, all of which were raised by the Indians. The exhibits included cantaloupes and sugar-sweet watermelons. There were also crab apples and displays of other apples and fruits.

The women and girls had exhibits of bread, pies, cakes, jellies, preserves, pickles and other dainties. But probably the most artistic and beautiful display ever seen at a county

fair was found in the display of beaded work. The exhibit included, among other things, head dress, sacques, mocasins, dresses, belts, hat bands, banners, buckskin leggings, and jackets.

There was no disorder nor intoxication.—New York World.

The Minnesota fair has struck a great lead in advertising through moving pictures exhibited throughout the state. This advertising campaign was started last fall soon after the fair

### 3A Folding Pocket KODAK

A Pocket Camera—so simple that the beginner can make good pictures with it from the very start, even to the developing and printing. Capabilities that appeal to those who know photography in every detail. Made of aluminum, covered with fine seal grain leather. Has a superior rapid rectilinear lens and Kodak Ball Bearing shutter with automatic speed of 1-25, 1-50 and 1-100 of a second—also the "bulb" and time exposure action. Has reversible brilliant finder, two tripod sockets, rising and sliding front, automatic lock. Uses Kodak film cartridges, (can also be fitted for plates), loading in daylight for six or ten exposures. Is right in every detail of construction and finish. Pictures postcard size (3 1/4 x 5 1/2). Price \$20.00.

KODAKS \$6.00 and up.

Ask your dealer, or write us for Kodak catalogue.

## Live Stock, Hay and Grain Market Review

Except horses suitable for cavalry mounts there is no important demand St. Louis and Kansas City dealers have about filled the first order from the British Government for 10,000 and are expecting a further order soon. It is the general belief that the British will continue buying horses as long as the war lasts. It is also reported that the Greek Government has placed an order for 10,000 horses, with an Oklahoma firm, and specifications for them are more strict than for horses going to the British. This general demand for horses is going to clear this country of a big lot of light horses that otherwise would not have been in much demand, owing to the general situation in the cotton states. The general specifications call for horses 14 1/2 to 15 3/4 hands high and for animals sound, 4 to 7 years old, and well built. In the rush to buy a strict age and quality line has not been maintained. One feature, however, in the demand is that many mares are being sold. While they are not choice in quality, they would bring a good mule colt or could be graded up by heavy drafters. Evidently this foreign buying will leave the country short in supplies of the medium classes.

The South is still unable to get itself in a position financially to buy the horses it really needs. General plans are materializing to care for this year's cotton crop, but unless some definite plan is determined on soon, the usual fall orders will be carried over until spring.

The East, the largest users of draft horses, is in as bad a shape nearly as the South, and orders from that source are practically suspended indefinitely. Farmers, however, are not offering to sell their heavy horses at prices quoted, so that receipts remain small. Conditions that will improve Southern demand will improve Eastern demand also.

There have been several feelers started by the British Government for American mules, to use in the South African campaign. These feelers, however, have resulted in no orders as yet, but it would not be a surprise to the trade to see general buying start at any time. The general situation in mules now is as dull as it has been for the past six weeks, and that arm of the trade is seriously in need of assistance. Feeders have purchased few thin mules for fattening this winter, and on present prospects are not liable to.

Country producers, however, realize that the conditions in both the horse and mule trade are only temporary, and as soon as financial stringency is relieved trade will improve.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—	
Drafters, 1700-pound extra quality.	\$200 @ 240
Drafters, good to choice.	165 @ 200
Drafters, fair to good.	140 @ 160
Chunks, good.	125 @ 155
Chunks, fair	90 @ 120

Southerners, good to choice.	100 @ 150
Southerners.	50 @ 100
Mules—	
13 1/2 to 14 1/2 hands.	\$ 80 @ 100
14 1/2 to 15 1/2 hands.	100 @ 125
15 1/2 to 16 hands.	120 @ 165
16 1/2 or better	170 @ 215

### Big Movement of Western Cattle.

The last two weeks in September developed a normal movement of range cattle from the West and Southwest. That supply, however, was large, compared with previous periods this year, as cattle have been held back, owing to good grass. From point of numbers Kansas and Texas offered the bulk of the supply, though Arizona, New Mexico, Utah, Colorado and the Northwest contributed freely. The general situation, save for a moderate price decline, has not changed. Demand is large, and the offerings have been cared for in such a shape that any tendency to decreasing supplies will be met by a quick rebound in prices. The money situation, which operated as a drawback to large country buying for a time, has improved and commission men in the past two weeks have been able to float considerable cattle paper. The preference of bankers in making loans seems to be for cattle intended for feed lots, and that encouragement has enabled feeders to buy 1,100 to 1,250-pound half fat steers with considerable freedom. The scarcity of thick fleshed steers still remains a problem with killers. Markets uncovered a \$11 and \$11.05 tops, and October is expected to duplicate that figure, maybe surpass it. Wintered Western and thick fleshed grassers are being used freely owing to the scarcity of fed heaves. Kansas fed steers sold up to \$10.90, Missouri steers \$11, Texas steers \$8.85, and Colorado steers \$9.50; all had been fed. Wintered Western steers are bringing \$8.40 to \$9.25, and grass fat steers \$6.25 to \$8.40, on the native side, and \$5.25 to \$7.25 on the quarantine side. These prices are considered 25 to 40 cents lower than two weeks ago.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers.	\$10.00 @ 11.00
Choice to good steers.	9.00 @ 9.95
Fair to good steers.	8.15 @ 9.00
Common to fair steers.	7.00 @ 8.10
Meal fed, choice	8.75 @ 9.50
Meal fed, common to fair.	8.25 @ 8.70
Quarantine steers, fed	7.75 @ 8.50
Quarantine steers, grass fat	5.25 @ 7.70

### Some Butcher Cattle Lower.

The only impression killers were able to make in prices for butcher cattle were the medium grades. They declined 25 to 35 cents, but "canners" and choice cows and heifers remain firm. The demand for canning material is large, and killers are put to the

### We Want Men With Rigs or Autos to Deliver

the ALADDIN on our easy plan. No previous experience necessary. Practically every farm home and small town home will buy after trying. One farmer who had never sold anything in his life before writes: "I sold 61 lamps the first seven days." Another says: "I disposed of 34 lamps out of 31 calls." Thousands who are coming money endorse the Aladdin just as strongly.

**No Money Required** We furnish capital to reliable men to get started. Ask for our distributor's plan, and learn how to make big money in an unoccupied territory.

**TWICE THE LIGHT  
ON HALF THE OIL**

necessity of buying by recent foreign orders. Scarcity figures as the principal factor in the active demand for fed cows and heifers. Yearling steers sold up to \$10.50, heifers \$9.75, veal calves \$10.50. Most of the "canner" cows are bringing \$4.25 to \$4.65, and bulls \$4.75 to \$5.75. Hide values are a big factor in determining prices of butcher cattle.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice.....	\$6.75@ 7.50
Good to choice.....	6.00@ 6.75
Fair to good.....	5.50@ 6.00
Common to fair.....	4.85@ 5.45
Canners.....	4.25@ 4.85
Heifers—	
Choice.....	\$9.00@ 9.75
Good to choice.....	8.25@ 9.00
Fair to good.....	7.25@ 8.15
Common.....	6.00@ 7.25
Veal calves.....	7.00@ 10.50
Bulls.....	4.50@ 7.00

### Feeder Movement Increases.

September showed nearly a normal movement of stockers and feeders to the country. Temporary checks that operated against general buying was tight money and scarcity of feed in some localities. However, both these conditions were improved and purchases in the last week of the month were the largest of the season. Prices have declined on the common to fair kinds, but continue firm for those of choice quality.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders.....	\$ 8.00@ 8.75
Good to choice feeders.....	7.35@ 8.00
Fair to good feeders.....	6.50@ 7.30
Plain to fair feeders.....	6.00@ 6.50
Selected stockers.....	7.75@ 8.25
Good to choice stockers.....	7.25@ 7.75
Plain to fair stockers.....	6.00@ 7.20
Stock calves.....	7.00@ 8.50
Stock cows.....	5.25@ 6.25
Stock heifers.....	5.75@ 7.50
Milch cows.....	60.00@ 110.00

### Big Decline in Hog Prices.

Hog prices dropped 65 to 75 in the past two weeks and are \$1.10 to \$1.15 lower than closing quotations in August. This loss is the result of a general bear campaign, which packers have directed. Their object is to lower prices as far as possible before the winter packing season begins. To force this decline in prices packers sacrificed both numbers and quality, as a strong order trade prevailed the entire month. Shippers in the past two weeks culled out the supply at all markets at 30 to 50 cents above packers' bid, and this left the common hogs for packers. Receipts have been light, and on the basis of the supply the market should go no lower, but if packers persist in depressing prices it will be because they store no product. Further decline will place prices where general demand will increase.

The following quotations are for hogs:

Choice, 250@300 lbs.....	\$7.90@ 8.25
Medium, 200@250 lbs.....	8.00@ 8.30
Mixed, 190@215 lbs.....	8.10@ 8.30

## Profitable Live Stock Breeding

In order to make the most profit from the least expense every female kept for breeding purposes should produce regularly. It is amusing to hear a lot of men talking about shy breeding females and discussing the probable causes. Those who wish to be posted on such subjects should be in attendance at the next term of the Graham Scientific Breeding School. This will be the last opportunity to attend the cattle and hog breeding school for the low tuition fee of \$25. The next term in cattle and hog breeding will not be held for a year. After August 1st next, the tuition fee will be advanced to \$50. This offers an opportunity for farmers and breeders to attend both terms of cattle and hogs with one railway fare.

A very large attendance should be on hand for this next term. There are those who believe it will be impossible for them to get away from home for two weeks. Asking oneself a question should solve that problem: can any breeder afford to stay away from the school and do without this information, which he can use for years? Can he not spare the time better now than later during some very busy season? Can he afford to keep or breed meanwhile a lot of females which are not producing? Can he afford to serve a diseased female which will carry that infection to his own stock or other stock, causing great damage, and loss of time and money? There is just one way for people to attend the breeding school and that is to make arrangements to be on hand at the next term. Sickness should be the only thing to prevent any breeder from being on hand if he cares to come. Those who do not come between now and the first of next August will pay double the price. Every breeder will overlook something who fails to be on hand.

An army of men have attended the school and all have been satisfied. The work of the school has won national recognition. Those not familiar with it should read the advertisement in this issue and send for further particulars. Here are some of the letters from a few more of our many successful graduates:

Sept. 21, 1914—I cannot praise the

Graham Scientific Breeding School or their instructors enough. I think any man handling stock cannot spend a week to better advantage.—Ed Darnell, Rochester, Minn.

Sept. 21, 1914.—I attended the school one term and felt it my duty to drop you a few lines to encourage the work along the line of advance breeding and for the betterment of the live stock industry. I think it will pay any man, old or young, who is interested in live stock breeding, to attend, and as to the moral standing, it is the very best.—G. O. Fleming, Jewett, Ohio.

Sept. 18, 1914.—The Graham Scientific Breeding School to me was a step from darkness into light along the line of breeding, and I think there are many people who need a term at the school to learn what it means and is to have a good, clean character, which I think doubles the value of the school many times. I thank you many times for the good the school has done me.—G. S. Vollmer, Edon, Ohio.

Sept. 18, 1914.—The Graham Scientific Breeding School is a necessity to any breeder and a benefit to any man whatever business he is engaged in. Your course is just the thing for live stock auctioneers and I expect to be with you at least twice a year.—Louis A. Wilson, Logan, Iowa.

Sept. 21, 1914.—I think the Graham Scientific Breeding School is fine. I expected it to be good but it was far better than I expected it could be. I want to attend the last term this season. We are getting ready for our fair and colt show the 24th to 26th.—J. H. Griswold, Agra, Okla.

Sept. 19, 1914.—I attended the Graham Scientific Breeding School December, 1913, and March, 1914. I learned more at either term than I could have learned at home in a life time. I expect to go every year; if it

wasn't so far would attend every term. No man in the stock business  
(Continued on page 12.)

**Warranted to Give Satisfaction.**

## Gombault's Caustic Balsam

**Has Imitators But No Competitors.**  
A Safe, Speedy and Positive Cure for  
Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.  
As a Human Remedy, for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address  
The Lawrence-Williams Co., Cleveland, O.

## Don't Have a Blind One

# "VISIO"

**A Remedy for Moon Blindness**  
(Ophthalmia), Cataract and Conjunctivitis  
Shying horses all suffer from diseased eyes.  
"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been affected. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE. \$2.00 per bottle, postpaid on receipt of price.  
VISIO Remedy Ass'n, 245 Belmont Ave., Chicago, Ill.

## FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.  
Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

# I'LL STOP YOUR LOSSES FROM WORMS!

**Read These Letters**

"I was surprised at the rapid improvement my fattening hogs showed during the sixty days I had been feeding 'Sal-Vet'. None of those I butchered showed any signs of worms. Have fed different remedies to expel worms, but 'Sal-Vet' beats them all."—T. A. Jackson, Wharton, Iowa.

"I never invested money in anything from which I derived as much benefit as I did from 'Sal-Vet'. My horses were in bad shape before I began feeding it and after using 'Sal-Vet' a short time, they rapidly picked up and now are in better shape than ever before. I also used 'Sal-Vet' on a bunch of seventeen hogs and never had better hogs than these. They average 210 lbs. a piece, and are less than five months old."—H. W. Ury, Evansport, Ohio.

"I have used 'Sal-Vet' for two years, within which time I have not lost a single hog. I consider it a sure preventive of cholera. I have fattened 74 head of May pigs that we sold December 10th, which averaged 207 lbs. each. They took 'Sal-Vet' every day and never stopped growing."—F. R. Dairymple, Carthage, Indiana.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding 'Sal-Vet'."—Thomas Cannedy, Roodhouse, Illinois.

"Keep on making 'Sal-Vet'; I had lost 40 head of hogs up to the time I began feeding it. After giving 'Sal-Vet' to those I had left, it was not long before they were on the road to market. I enclose a check for another 200-lb. barrel."—B. De Voer, Rt. No. 3, Corsica, S. D.

**PRICES** 10 lbs., \$2.25; 20 lbs., \$3; 30 lbs., \$3.75; 50 lbs., \$5.21.12. Special discount for large quantities. No orders filled for less than 40 lbs. on 60-day trial offer. Never sold in bulk; only in trade-marked SAL-VET packages.

**SIDNEY R. FEIL, Pres.**  
**THE S. R. FEIL COMPANY,**  
Dept. AB10-5-14 CLEVELAND, O.  
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

## I'll Rid Your Stock of Worms!

### I'll Prove It BEFORE You Pay—I'll Prove It or NO Pay

Worms are the cause of 90% of live stock diseases and losses. They rob farmers of millions of dollars yearly. Let me drive out these deadly pests that steal your profits. Let me make every worm-sick animal on your place worm-free, and put them in a thrifty, healthy, vigorous condition. I'll make them look better and bring you greater profit. I'll prove all this before you pay—if you will just send me the coupon on the right.

**The Great WORM Destroyer**  
**SALOVET**  
**The Great LIVE STOCK Conditioner**

Insure death to all stomach and free intestinal worms. It is safe, cheap and easy to feed. You can let your stock run to it freely. They doctor themselves. For worms in horses and as a conditioner, SAL-VET has no equal.

### Here's My 60 Day Before-You-Pay Offer

Just send me the coupon—tell me how many head of stock you have and I'll send you enough SAL-VET to last them 60 days. You simply pay the freight charge when it arrives, and when the 60 days are up, report results promptly. If SAL-VET does not do what I claim—I'll cancel the charge—you won't owe me a cent.

**Don't send any money—Just the coupon at the right.**

Thursday. . . . .	7.75@8.37½	8.15@8.55
Friday. . . . .	7.75@8.35	8.10@8.50
Saturday. . . . .	7.65@8.30	8.00@8.35

### September Live Stock Receipts.

In September receipts of cattle, hogs and sheep were short of those in the same month of 1913. The decrease in cattle was 164,000, in hogs 305,000 and in sheep 318,000. In the nine months the shortage in cattle was 775,000, hogs 1,560,000, and sheep increased about 56,000.

### Grain Prices Lower.

Liberal receipts of wheat, without enough export demand to keep the stocks at principal markets from showing a material increase, have resulted in lower prices. Cane is feeling the effects of the nearness of the new crop. Prices are lower. Oats and other feed products are down also.

### Hay Prices Lowered.

Owing to recent rains which have increased forage crops prices for hay have declined 50 cents to \$2 a ton. The market is weak at the decline.

Quotations are as follows: Alfalfa, choice, \$13.50@14; No. 1, \$12.50@13; standard, \$11@12; No. 2, \$9@10.50; No. 3, \$7.50@8.50; prairie choice, \$13@13.50; No. 1, \$10@12.50; No. 2, \$7.50@9.50; No. 3, \$4.50@7; timothy, choice, \$15; No. 1, \$13.50@14.50; No. 2, \$10@13; No. 3, \$6@9.50; clover mixed, choice, \$14; No. 1, \$12@13; clover, choice, \$12@12.50; No. 1, \$10.50@11.50; straw, \$5.50@6; packing hay, \$5.

## Questions and Answers Department

**1277—FIXING SEX**—Have owned a stallion for three years and during that time three-fourths of his colts have been horse colts; another stallion in this neighborhood has gotten nearly three-fourths mare colts. Would like to know whether it is in the stallion or just happened so.—Iowa Subscriber.

**REPLY**—An animal that is descended from a line largely of one sex is more inclined to transmit that feature than one coming from families of equal sex division. It must also be remembered that certain crosses tend to fix sex also.

**1278—WORMS**—Please give me a remedy for worms in colts and horses. Saw one in your paper some time ago, but have lost the paper.—Iowa Subscriber.

**REPLY**—A teaspoonful of sulphate of iron may be given in the feed twice a day as a remedy to destroy worms in horses, which may be continued for a week if necessary. Laxative food should be given in the meantime, as the iron is more or less constipating.

**1279—INJURY TO SPINE**—My father has a mare he has been trying to get in foal for seven years—trying every year. She is 9 years old and has always been in good health. Just shortly before I arrived home they had bred her and since that time she has been sort of paralyzed all over; she almost falls down at times; she cannot walk in a straight line. I thought it was her spine. She works all the time; eats good and feels good. Could this mare be in foal to cause this trouble? This mare's mother was a fine breeder and easy to get in foal. Please advise me what to do.—Arizona Subscriber.

**REPLY**—It is quite likely that the mare has in some manner been injured in the spine and no doubt will require the services of a veterinarian to locate the seat of injury. Treatment will be unsatisfactory until a more specific diagnosis has been made.

**1280—RING BONES**—I have a 2-year-old jack that I fed corn to last summer and let him run on alfalfa pasture. He got sores on his hind legs above the hocks and seemed to have the scratches above the hocks. Took the grain from him and he got about well. I thought I had to give him some grain so gave him chop and wheat bran once daily and he is worse now and seems to have ring bones coming on his legs. They look full above the hocks, and I can feel and see from the raised hair what looks to me like a ring bone. Am not feeding him any grain now. On the worst leg the hoof feels soft for some distance below the hair line. In the summer the hoofs split badly and the fronts broke off, and to look at his legs from the rear he looks to be a little stocky and larger around the hocks. When he walks his right leg pops and slips above the hoof. I can hear it and see him give over in this joint. Please advise me what to do for him.—Kansas Subscriber.

**REPLY**—If your jack is positively affected with ring bones and other serious defects, you should not think of using him for a breeder. It is by breeding to such animals that the serious diseases are chiefly propagated.

**1281—WARTS**—Please tell me how to remove warts on horses.—Kansas Subscriber.

**REPLY**—Where the wart projects above the surface so as to permit, a strong string may be tied tightly around its base, when in a few days it will drop off. In the event the warts are large they should be removed by a competent and experienced surgeon.

### 1282—STOCKINESS IN HORSES—

Please tell me what to do for stockiness in horses.—Kansas Subscriber.

**REPLY**—We presume you refer to stocking of the limbs. When necessary to confine horses they should be kept on clean dirt floors, which should be well bedded. If possible an animal that stocks badly should have access to pasture, so as to move about and take exercise, which tends to prevent filling of the limbs.

**1283—PARROT MOUTH**—Please explain what a parrot mouth is and if it is an unsoundness, and if a horse should be disqualified in a show ring for the above stated reason and for being stocky and having warts.—Kansas Subscriber.

**REPLY**—Parrot mouth is a condition wherein the upper jaw projects anterior to the lower jaw, the incisor teeth not contacting. A horse with a parrot mouth is not a normal horse, therefore should be classed as unsound. Of course, the degree of parrot mouth should be taken into consideration as some animals are only slightly so. On account of the teeth not contacting, such teeth will in the course of time become sufficiently long so as to interfere with the act of eating. So far as warts are concerned they can usually be removed and the horse then be practically sound.

**1284—ATROPHY**—My neighbor has a fine mare that I bred for him this season. About three months ago the flesh shrank away on her hip, just inside of hip bone. She has never been lame. What is the trouble? Can I do anything to fill it out again?—Missouri Subscriber.

**REPLY**—It is possible that certain nerves that supply these muscles have in some way been injured, which sometimes occurs during the act of foaling. If the mare is not lame, the muscles will fill out in the course of time if the animal is put to light work.

**1285—USE OF SULPHUR**—Does sulphur have anything to do with breeding a mare? I bred a mare for a man this season and did no good until he quit feeding oats that he had put sulphur on when he stacked them to keep mice out of them.—Missouri Subscriber.

**REPLY**—Our attention has not heretofore been called to the effect sulphur may have in preventing conception, but must be remembered that no mare is in the best condition for breeding if her system is loaded with any drugs.

**1286—SUSPECTED RIDGLING**—I own a valuable stud colt, 16 months old, that I desire to let run for breeding purposes. One testicle has been down for several months, but I cannot even feel the other one. When it was a suckling colt it had two down and they seemed to be normal. Is there anything to be done to bring the other one down?—Arkansas Subscriber.

**REPLY**—It is too early to condemn your colt, but the chances are not in his favor towards the descent of the other testicle. Nothing will aid in the matter excepting time, which should be given in a valuable animal up until he is three years old.

**1287—REGISTRATION**—If a man breeds a registered saddle horse to a thoroughbred running mare, can he have colt or filly registered in the American Saddle Horse Breeders' Association?—Arkansas Subscriber.

**REPLY**—We suggest that you make your inquiry direct to Roger R. Lillard, Secretary of the American Saddle Horse Breeders' Association, Lawrenceburg, Ky.

## Missouri State Fair Winners; See Opposite Page.

1—Swofford & Son's champion mule (4 years old). 2—Snyder Bros. first prize 3-year-old mule. 3—M. G. Holloway's first prize 2-year-old mule. 4—C. S. Miles' first prize yearling mule. 5—G. V. ## Amazing Prices on STEEL Shingles

A lifetime bargain on Edwards Steel Shingles to a limited number—a sensational opportunity to those who write at once. You can buy the patented genuine Edwards Reo Steel Shingles—that won't rot, rust, crack, burn or leak—for the same price as good wood shingles.

### Wood Shingles Out of Date

Wood Shingles are no longer popular since Edwards Interlocking Steel Shingles have proven to be the best. In all kinds of tests, over 135,000 successful farmers now use Edwards Steel Shingles.

### Easy to Lay—Saves Time

Come in big clusters ready to put on. A few nails, hammer and a little time—10 times faster and 10 times easier than putting on wood shingles, one at a time. Edwards Shingles are rust and leak proof.

### \$10,000 Guarantee Bond

Get a copy of our \$10,000 guarantee bond protecting all Edwards Reo Steel Shingle roofs against dangerous lightning. We believe in protecting our customers.

### How We Figure Prices

We sell our Steel Shingles at actual factory cost plus a small profit—our large business permits this. You get the jobber's profit, dealer's profit and salesman's profit, as we sell direct to you and we pay the freight.

### Write Before We Are Overlaid

This unusual offer won't last long. So write for prices and Catalog 1076 today—give us dimensions of your roof if possible. We manufacture all kinds of steel roofs for buildings, steel garages, etc.

The Edwards Manufacturing Company  
1026-1076 Lock Street, Cincinnati, Ohio

## You Can't Beat Galloway Prices Anywhere

You can't get Galloway quality at anywhere near my price. I get one small manufacturing profit, the rest of your dollar buys what you need. The other way your dollar pays the profit of the manufacturer, the jobber and the dealer. You have tried the old way. Now try my way and see what you save.

**Cash, Credit, Note or Easy Payments.** One of these will suit your needs. Any plan allows you 30 days for trial of Engine, Cream Separator or Manure Spreader. If not satisfied that they are as good as any you ever saw or heard of, the goods come back and you're nothing out.

**Catalog Free!** Write for catalog you want. Get full particulars and my special prices, extra low on Engines, Separators and Spreaders. Address: Wm. Galloway, Pres., Wm. Galloway Co., 1717 Galloway St., Waterloo, Iowa.

My commission expires September, 1917.

# American Breeder Camera at The Missouri State Fair, Sedalia

SEE PAGE 10 FOR OWNERS, CLASSIFICATIONS AND WINNINGS OF THE ANIMALS SHOWN ABOVE.

## COLLIES

Pups two months old, sired by my imported dog, and registered bitches; extra individuals with the best of breeding and plenty of grit, and make the best of workers with little training. Priced to sell quick.

EMPORIA KENNELS,  
M. H. RICHARDS, EMPORIA, KAS.

### QUILT PATTERNS.

Every quilter should have our book of 450 designs, containing the prettiest, queerest, scarcest, most grotesque patterns, from old log cabin to stars and puzzle designs; also crazy stitches and Cat. All post-paid, for 12c, or club of 3 sets for 30c.

LADIES' ART CO.,  
Block 196, St. Louis, Mo.

### DRAFT HORSES.

#### FOR SALE OR TRADE

Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. BURNS,  
Argonia, Sumner County, Kansas.

## Drouth Prices

On registered and high grade Percheron stallions, mares and colts. For particulars, address,

C. G. WELSZ,  
Palmyra, Mo. Rte. 4

## 40 HEAD OF PERCHERON

#### Stallions and Mares

Now on hand at Woodlawn Stock Farm. Prices right. Write us.

SPOHR & SPOHR,  
Latham, Butler County, Kansas.

### TWO IMPORTED REGISTERED MARES.

For sale. Scaling over two tons. One black; 7 years; an International prize winner; other gray; 13 years; a Springfield championship winner. Both sound, clean, unblemished; good breeders and workers of outstanding class as their show records evidence, and again in foal to Jupiter 11. \$1,200 for pair.

W. T. WILKINSON,  
Eureka, St. Louis County, Mo.

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT,  
Cedar Bayou, Harris County, Texas.

## Percheron, Belgian and Shire Stallions and Mares

from suckers up to six years old, including my herd stallion Adore, first premium and champion Belgian stallion at American Royal in 1912. All priced very cheap; good terms on bankable paper.

J. M. NOLAN Paola, Kas.

## Special Price

On 11 Percheron mares, from yearlings to aged mares; two young studs. All recorded in Percheron Society of America. Will sell one or all. Special price on the bunch. If you want a bunch of mares, get busy.

T. J. WYLAND, Kirkman, Iowa.

### BELGIAN, SHIRE AND PERCHERON STALLIONS

and mares, also Standard bred stallions and mares, \$200 and up. E. P. Hamilton & Sons, Garden Grove, Ia. (Mention this paper). 23 miles S. W. of Charlton, Ia., 82 miles south of Des Moines, Ia., at Leroy.

### Registered Shires

For sale. A few good stallions and mares, different ages, colors and weights.

JOHN R. LOVE, R. R. 6, Albia, Iowa.

# 440 ACRE STOCK FARM and 62 BREEDING ANIMALS

Write at once for catalog; terms of sale, etc., and mention the American Breeder when writing

## HENRY BECK

Litchfield, Nebraska

### CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2.

Plainfield, Ill.

### PROFITABLE LIVE STOCK BREEDING.

(Continued from page 7.)

I can afford to miss this school. I surely appreciate the school advocating a higher standard of living. The school takes great pains and interest in teaching the students; everything is uplifting and educational. They will make you feel at home when you go there.—John Wilson, Wayside, Ill.

Sept. 12, 1914.—I attended the August term of the Graham Scientific Breeding School and have surely been benefited many times over the cost and expenses. One cannot praise this school too much as it is everything it claims to be. If breeders could know how much damage they do to mare owners and themselves every year by not being able to diagnose diseased mares, they would either attend your school or quit the business.—Arthur J. Delanne, Napoleonville, La.

Sept. 17, 1914.—I think the Graham Scientific Breeding School is the greatest help to breeders that is known. I try to get the breeders to go to it, and the mare owners, too; it would benefit any man and pay him if he had only one mare.—L. P. Kessler, Iowa City, Iowa.

## Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.

C. G. ANDERSON Hector, Minn.

### Percherons and Belgians

For sale—Three registered Percherons, one three-year old Belgian stallion—one of the big draft kind.

Imported Belgian mare; seven years old; with five months old filly by her side, and in foal again. These horses have size and quality and are sound.

L. P. YOCUM, Clarenc, Iowa.

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

GEORGE EGGERT, Newton, Iowa.

## A BRAND NEW IMPORTATION!

I was in France and Belgium all through May, making early, careful selections from the best stallions and mares to be found. These are now at my barns and ready for sale, along with some desirable American bred animals. It is a good time to buy.

LONZO McCLAIN & SONS, LIMA, OHIO

Sept. 18, 1914:—I think the school is O. K.; much better than I expected. I am satisfied and aim to go again. I think every horse or jack man ought to attend the school.—C. C. Angle, Advance, Mo.

Sept. 16, 1914:—I think the Graham Scientific Breeding School is one of the finest and best. If only more people would realize the value of breed-

## WANTED

Draft mares, fillies or mules in exchange for auto, Mitchell touring car; five passenger; fully equipped.

Will pay cash for two Clydesdale weanlings, pure bred or high grades. State what you have in first letter.

BIG MIAMI STOCK FARM,  
North Bend, Ohio.

### FOR SALE AT HALF THEIR VALUE.

One 2,200-pound blue roan Belgian stallion 6 years old; one of the biggest draft horses in Iowa. One black Percheron; 4 years old; 1,900 pounds. One chestnut sorrel Belgian; 7 years; 1,800 pounds. One very dark bay Clydesdale; 1,700 pounds. One big black jack 15½ hands; big bone and a fine looker; sure and well broke to mares. This stuff will be sold cheap as I am making a change in my business.

This is not old trading stuff. We can prove their value here at home where they have been successfully used and never overdone.

We breed the big, smooth Poland China hogs and ship them on approval east or west; no money until you see them. Will refer you to any bank in our city.

M. P. LYDON,  
Cresco, Howard County, Iowa, R. F. D. No. 1.

## For Sale or Trade

Percheron stallion; registered; black; 8 years old; large bone; good disposition and an excellent breeder for Percheron mares, young mules or Shorthorn cows.

WALTER ALLEN, Dunlap, Ill.

### IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference any bank in Creston, Iowa.

A. LATIMER WILSON, Creston, Iowa.

### PERCHERON STALLIONS.

I have for sale two black-grey Percheron stallions, registered in the Percheron Society of America; they are two year olds, weighing over 1,800 pounds each; will mature to better than ton horses; heavy boned and right every way. They are priced to sell. If you want the best at the right price, write me. M. E. LYONS, R. F. D. 4, Delaware, Ohio.

# American Breeder Camera at The Oklahoma State Fair

1—Marion Wolf's second prize (Oklahoma class) Percheron mare, Letha. 2—J. H. Jackson's first prize (Oklahoma class) aged Percheron stallion, Core. 3—Thrale Bros.' first prize three-year-old mule. 4—Lee Bros.' first prize two-year-old Percheron mare, Monette. 5—J. H. Smith's first prize two-year-old jack. 6—J. H. Jackson's first prize (Oklahoma class) Percheron stallion colt, Johnny. 7—J. H. Smith's first prize three-year-old jack, Big Ben. 8—W. E. Smith's first prize aged jack, Highball. 9—J. C. Jones' grand champion Jersey cow, Gold Mejoran. 10—T. E. Smith's junior champion Hereford bull, Beaut Modesta 2nd. 11—Eastview Farms' grand champion Jersey bull, Noble's Oxford. 12—Lee R. Patterson's champion Shorthorn cow, Young Butterfly. 13—L. A. Hampton & Son's first prize filly Percheron colt, Cozel. 14—Lookabaugh's undefeated Shorthorn heifer, Lord's Violet. 15—N. D. Pike's first prize (Oklahoma class) two-year-old Hereford cow, Margaret. 16—J. B. Coin's grand champion Guernsey bull, Harcourt I Am. 17—Do elephants run wild in Oklahoma? 18—At least they are civilized enough to bathe. 19—For "them as likes it." 20—Sadly retrospective: he has seen Lookabaugh's Shorthorns. 21—Actors "In one of the vaudeville acts; a troupe of trained "Arabians."

## Paramount Stock Farm

Breeds and Imports

### Percherons, Belgians and Shires

Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. He is proving an excellent stock horse. Send your good mares to him and raise the best. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 pound horses.

WM. CROWNOVER, Hudson, Iowa.

#### THIRTY PERCHERONS AND BELGIANS

and one Shire. They range in age from 1 to 7 years; all sound and heavy boned; weighing from 1,800 to 2,200 pounds. There are 17 stallions and 13 mares. I will also sell my herd stallion, Jupiter 65723, coming 5 years old; weight, 2,200.

These stallions are all sold under a guarantee to be 60 per cent foal getters. I have four year olds that weigh 2,200; 2 coming 3 that weigh 1,800. Can sell a good ton stallion for \$750; sound and right in every way; some a little higher, and some lower. I will sell at a bargain to early buyers. I have

PETER J. EGGER, DENISON, IOWA.

both imported and home bred  
Stallions and mares of all ages for sale.

#### WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares. The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

## Miller Stock Farm

A Big Tract of Rich Land Devoted to Improved Live Stock Production.  
SEPTEMBER BULLETIN.

**WE WANT** One good registered Percheron stallion, right in every respect; one good registered Hereford bull, and can handle work mules and heavy mares any time.

#### FOR SALE OR TRADE.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old. Standard bred and registered stallions as follows: Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you, the prices mean business.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Give Particulars Fully and Truthfully; We Trade No Other Way.  
**F. M. LORIMER, Mgr. Olathe, Kansas**

#### FIFTY STALLIONS AND MARES.

\$250 to \$1,000 Each. Write for my illustrated Circular telling why I can save you money on the purchase of Percheron or Belgian stallion or mare.

A. W. GREEN, Middlefield, Ohio.  
R. R. Sta., E. Orwell, on Penna. Ry., between Ash-tabula and Warren.

## Breeding Farm for Sale

Cass County, Missouri. 80 acres; 35 in corn, balance in grass, clover and alfalfa; orchard, etc.; 8-room house; 2-room summer house; wood house; 2 hen houses, 10x40; granary; corn crib and wagon shed; hog house, 18x26 and shed; 2 barns, one 64x36; 2 silos; breeding barn, 20x26, with large lot; 3 cisterns, one good well.

Two registered Percheron stallions; one jack. Stallions eight years old, black and four years old, dark gray; jack four years old. All good and sure breeders. A very good location and good paying neighborhood. Not over six colts not paid in eight years' business. Have been using capsule method four years. Stock and farm if taken soon, \$10,000. 55 miles south and east of Kansas City; 8 miles southeast of Harrisonville, Mo. For further information, call or write,

D. G. KAUFFMAN, Garden City, Mo.

## FOR SALE

One car choice jennet burros, bred to horse. Write,  
N. A. SCHWALB, Maxwell, N. M.

#### INNIE PROPOSITION—EVERYTHING FURNISHED.

800 acre ranch improved; all ready to occupy; with an abundance of outside range; everlasting water; close to railroad town (2½ miles); equipped with 100 burros, with one stallion broke to serve Innies. Garden, cows, chickens, saddle horses—everything ready to go to work. Located in central part of New Mexico. Pasture the year around; no feed necessary. Will contract with right party for a term of three years to divide the profits equally. The party accepting this proposition should have money enough to run him one year. Any one interested should write or call soon. Arrangements must be made before the 20th of this month.

CARL E. FREEMAN, 801 BATES COURT, KANSAS CITY, MO.

## Astral King Won

In the Recent \$2,500.00 Missouri State Fair Saddle Horse Stake in the Most Hotly Contested Saddle Horse Ring Ever Shown.

## What Else Could You Expect?

We have for sale 15 of his weanlings and a few of his young stallions—two and three years old.

**JAS. A. HOUGHIN, Jefferson City, Mo.**

Sept. 17, 1914:—I think the Graham Scientific Breeding School is all that is claimed for it, and more, too. I think a person can learn more there about the breeding business than anywhere else.—S. L. DeWitt, Blue Springs, Mo.

Sept. 18, 1914:—I am surely glad that I had the opportunity to attend the Graham Scientific Breeding School. With such an advantage as your school has I really think that any young man can afford to spend the money it costs if he never bridles a stallion or jack. I think the science in breeding is wonderful and I am sure that men get ideas there that they never will get anywhere else, and the instructors are gentlemen and moral men. Go and try it.—W. E. Gaddis, McCune, Kas.

Sept. 19, 1914:—I think the Graham Scientific Breeding School is a great thing for any breeder and worth many times its cost. One can get valuable information there that cannot be had anywhere else. I can cheerfully recommend it to any breeder. It also has a moral side that is elevating and good for the younger members. Success to the American Breeder and all its readers.—A. J. Dunaway, Chilhowee, Mo.

Sept. 17, 1914:—The Graham Scientific Breeding School has no equal. It is not only an uplift to the breeders of the land, but to the human family as well. This school is a place that no young man can afford to miss. I can say that I was doubly paid for the time and money I spent there last winter. I would encourage anyone who has never attended this school to do so.—Leath Smith, Jonesboro, Ind.

Sept. 24, 1914:—I think the Graham Scientific Breeding School is all right. It is a good moral school as well as a breeding school. It is well worth the price for any man. I think parents need not be afraid to send their boys for they will be enlightened in such a way that will make them better citizens and better husbands.—Wm. F. Meinke, Maquoketa, Iowa.—Advertisement.

#### THE BUSHNELL HORSE SHOW.

To the American Breeder:—The Seventh Annual Bushnell Horse Show will be held on Thursday and Friday, October 15th and 16th. The show promises to be the best one we have ever had. In addition to our show (the largest and best of its kind in the United States) we will have with us the six-horse draft team owned by the Union Stock Yards Company of Chicago. These noted geldings, driven by the veteran, William Wales, will give an exhibition each day of the show. The Shire Horse Society of Great Britain is giving two gold medals; the American Shire Horse Association two gold medals; the Belgian Draft Horse Association two gold medals, which,

#### REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

RICHARD SELLMAN, Rochelle, Texas.

## Registered Morgan Stallion

For sale. Good breeder; fine disposition.

Also 6 year old registered jack; hard to beat in quality and breeding; quick to serve. For particulars address

J. T. HESTER, Saybrook, Ill.

#### BLACK HAWK MORGANS.

For sale, or will exchange for young, small, unbroke range horses, six registered black stallions; two matured; 15½ hands; 1,200 pounds; two, three years old and two, two years.

E. F. BROWN, DERBY, IOWA.

#### R. F. D. No. 2.

#### SADDLE STALLION, PERCHERONS AND 10 JACKS.

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

W. L. Graham, Mackville, Washington County, Ky.

#### RIDING AND DRIVING MARE WANTED

Need not be registered, fancy or five gaited, but must be serviceably sound, perfectly safe for lady to drive, have an easy canter and be in a healthy condition for breeding. Will pay only a moderate price. Please give full description and price in first letter.

AMOS BURHANS, Waterloo, Iowa

#### EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

## Shetland Ponies

I have 19 head of full blood Shetland ponies for sale. A stallion, brood mares, 2-year-olds and yearlings. Variety of sizes and colors.

O. M. JOHNSON, ERIE, KAS.

## For Sale

Registered Delaine Rams.  
I. W. GEORGE, New Comerstown, Ohio.

818 Walnut St., Kansas City, Mo.

## R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

## JACKS AND JENNETS AT STATE FAIR

At the the Oklahoma State Fair Last Week  
J. H. SMITH, Propr., Kingfisher Valley Stock  
Farm, Kingfisher, Okla.,

Took more money and more ribbons than all other exhibitors of jacks and jennets combined.

### FAIRLAND JACK & JENNET FARM.

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.

### FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14 1/2 to 16 1/2 hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP, Eolia, Pike County, Mo.

### BIG MAMMOTH JACKS AND JENNETS.

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles North of Monett on Frisco R. R., and six miles Southwest of Hoberg on Mo. Pac. R. R. Write for prices to

Henry Obermann & Son, Frelstatt, Mo.

### JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

## MAMMOTH JACKS

For sale—Large, heavy boned, 15 to 16 hands high. Prices from \$250 up Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

### GOOD JACK WANTED.

I have a few young jacks and 17 jennets and must sell the bunch at once or make some trade to get a jack not akin and good enough to breed the jennets to. They are big, black, mealy nosed and good.

JOHN A. EDWARDS, Eaglewood, Kas.

## FOUR JACKS

For sale or trade. All blacks, white points; from 14 1/2 to 16 hands high; from 3 to 6 years old. Priced right for cash. Mules to show. Can use registered Belgian or Shire stallion. Jacks guaranteed right every way or your money back.

T. B. McCLELLAN, Stratton, Nebr.

## MAMMOTH JACKS

For sale. Registered; well boned; one to six years old. If you need a high class jack, we have them. Prices right.

NEILD BROS., Ogden, Boone County, Ia.

### TWO JACKS

For sale. One weighs 1,150 pounds; stand 15.2 standard; age 9. Other one sired by him; think will be as large; 4 years old. Both registered and licensed sound; good performers; guaranteed all sound and right.

A. CALENDER, New Lyme Station, O.

## JACK---DUROC HOGS

For sale. A black jack; light points; six years old; 15 1/2 hands high. Also Duroc hogs.

LOUIS KOENIG, Solomon, Kans.

## FOR SALE BY OWNER AT BARGAINS

Four choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

Wm. M. SPRINGER

621 Gas and Electric Bldg., Denver, Colo

## ONE HORSE---THREE JACKS

For sale. Imported Belgian horse; 10 years old. This horse is an extra good individual; color bay, with star; weight 1900 pounds. Price \$800. Three extra good jacks. As we are closing out, this stock will be sold for the best offer.

BRACKENRIDGE BROS., R. F. D. No. 5, Olathe, Kans.

## Advertising Briefs

The Antiser Harness Mfg. Company of St. Joseph, Mo., will send you, on application, a catalog of harness, saddles, buggies, etc., which shows the real value of everything in this line. To get this catalog address Department 22, as per their advertisement in this issue.

The Sunshine Safety Lamp is 300 candle power. For information, address Sunshine Safety Lamp Co., 204 Factory Bldg., Kansas City, Mo.

Absorbine is probably the most widely used remedy of its class. Few experienced horsemen are without it, and the best druggists sell it. If your druggist does not, address W. F. Young, P. D. F., 388 Temple Street, Springfield, Mass.

The Wm. Galloway Company, 1717 Galloway Station, Waterloo, Iowa, is constantly giving lower prices and better values in a great variety of staple farm machinery and supplies. Three specialties are now being advertised by this company in the American Breeder, but when you answer the advertisement do not fail to ask for catalogue also. It is a means of money saving.

The Eastman Kodak Company makes the camera and supplies used in securing photographs for illustrations in the American Breeder, as well as in a majority of other publications. A letter to 448 State Street, Rochester, N. Y., addressed to the Eastman Kodak Company, will bring catalogue and full information. Read the special advertisement in this issue.

A. Calender, New Lyme Station, Ohio, is advertising two jacks for sale, one nine and the other four years old. Both registered.

N. A. Schwald, Maxwell, New Mexico, has a car of choice jennet burros, bred to horse, for sale.

J. H. Smith of Kingfisher, Okla., took more money and more ribbon at the Oklahoma State Fair this year, than all other exhibitors of jacks and jennets combined. Anyone in the market for jack stock should not fail to correspond with Mr. Smith.

L. P. Yocum, Clarence, Iowa, has three registered Percheron stallions, one Belgian stallion and one Belgian mare advertised for sale in this issue.

The Mantle Lamp Company, 390 Aladdin Bldg., Chicago, Ill., advertise in this issue, not only a lamp of remarkable brilliance but also a guarantee which will make everybody take notice, and a good proposition to agents. Kindly mention the American Breeder when answering this ad.

The Edwards Mfg. Company's advertisement in this issue should remind every stock man to make sure at once concerning the condition of his barn and shed roofs. Get a catalogue and see what this company can offer you in durable and economical roofing material. Address 1026 to 1076 Lock Street, Cincinnati, Ohio, and mention the American Breeder.

The first big public sale this season will be held October 28, by Henry Beck, Litchfield, Neb. Mr. Beck not only sells a big collection of breeding stock, draft stallions and mares and jacks and jennets, but he also sells his stock farm. For description and terms find his advertisement in this issue, and send for catalogue at once.

L. M. Monsees & Sons' great sale of jacks and jennets will be held October 20 and 21 at the farm near Smithton, Mo. This firm just repeated at the Missouri State Fair one of its many show yard successes, winning all the championships, all the first prizes but one and most of the second prizes. Read the advertisement in this issue and mention the American Breeder when asking for a catalogue.

The photographs of Astral King in this issue should be studied by everyone interested in saddle horses. They were taken at the Missouri State Fair during the show in which Astral King won first in the \$2,500 saddle stake against the strongest competition ever brought together.

The Hotel Convention, 12th and Broadway, Kansas City, Mo., advertise regularly in the American Breeder.

The Brooks Rupture Appliance Company's advertisement in this issue should be answered by everyone who is interested. The company is reliable, otherwise its advertisement would not be in these columns. Address them at Marshall, Mich.

## 11Worth County Jack Farm

Twenty-five head of jacks and jennets for sale.

CORSON BROS., Potter, Kans.

# WHO SAID JACKS?

Well you know the firm that for a third of a century in state fairs, world fairs and public auctions has been a leader in Jacks and Jennets, and whose sales have totaled over a million dollars.

We just returned from the Missouri State Fair, where we won every Jack and Jennet championship, every first prize but one and most of the second prizes --- yet we showed only a ---

Smithton, Missouri

From a photograph of Mr. C. E. Brooks, inventor of the Appliance, who cured himself and whose experience has since benefitted thousands; if ruptured, write today, to Marshall, Michigan.

# The Truth About Rupture

The Wonderful Success of the Brooks Appliance Has Caused Many Irresponsible Parties to Seek to Imitate It.

Do Not Be Tricked by These "Fly-by-Night" Advertisers Who Offer Such Wonderful "Guarantees," But Who Have No Responsibility to Back Up Their Promises.

*The Brooks Appliance Has Been Manufactured and Sold By Us for More Than 30 Years.*

Our Customers Include Thousands of Physicians, Many Noted Men and Women. OUR LARGEST SINGLE CUSTOMER IS THE U. S. GOVERNMENT. Our Business is Conducted Along the Same High Plane of Business Integrity as that of the Largest Banks and Mercantile Houses. There Are No "Ifs and Ands" When You Deal With Brooks, and the Appliance is

## SENT ON TRIAL TO PROVE IT!

The London, England, Home of the Brooks Rupture Appliance Co., Cor. Kingsway and Portugal St.

The Home of the Brooks Rupture Appliance Co. at Marshall, Mich., U. S. A. Owned and entirely occupied by the Brooks Company. 15,000 sq. ft. of floor space. Largest establishment of its kind in the world.

The Amsterdam, Holland, Home of the Brooks Rupture Appliance Co., at No. 4 Paleisstraat.

**The Most Universally Endorsed Appliance for the Retention and Cure of Rupture in the World.**

The Brooks Appliance is the result of 30 years' experience and stands today as the most perfect device ever invented for the relief and cure of all forms of rupture. It brings instant relief, and in an astonishing percentage of cases, accomplishes an ABSOLUTE and PERMANENT CURE.

There are no "salves," no "harness," no "paraffin"—no lies.

The Brooks Appliance is never sold in drug stores, nor in any other way than by mail, direct from the maker, and every Appliance is especially built for the case for which it is intended.

It is small and pliable, and can not be detected through the clothing. Can be washed without injury, is ventilated and a real pleasure to wear. One of these appliances will make life better worth the living for every ruptured man, woman or child.

It is sent on trial and you are the judge whether our claims are true or not.

Fill out the FREE COUPON today and mail it at once, whether you try this appliance or not. It will bring you much valuable information and should prove the first step toward your final and complete cure.

**Endorsement from Surgeon-General of U. S. Army.**

Let us send you a fac-simile endorsement from the Surgeon-General of the U. S. Army. We have sold hundreds of Appliances to the Government for use in Army Hospitals. The Surgeon-General says: "In each case the Appliance was satisfactory."

**Southern Physician Cures Himself.**

In writing to you sometime since, endorsing your Appliance, I was conscientious in giving, as I believed, its just deserts but since, I am even more agreeably pleased to state in addition thereto a "supplement"—a positive cure. Had engaged a surgeon to operate on me about 1st of February inst. but no recurrence of trouble for the past four months assures me my trouble is over and no knife needed. I have (and deem this necessary in all cases) been strict in observing all careful directions and am happy in the enjoyment of its fruits, for the trouble was a serious one and now I am as well as I ever was. Thanking you for courtesies and your invaluable appliance, I am, believe me,

Most gratefully yours,  
(Address) W. W. HILL, M.D., D.D.S.  
Washington, Ga.

**Kentucky Physician—Says "I Cannot Overestimate Its Value"**

Frankfort, Ky.

Brooks Rupture Appliance Co.,  
Marshall, Mich.

Gentlemen:—I have for several years used your Rupture Appliance to the exclusion of all others with perfect satisfaction. It has not failed to give relief in any case in which I have used it. It is especially to be relied on in old chronic cases—in old persons, especially laboring men. I cannot overestimate its value to my patients. Every old chronic case that I have applied it to has sent another sufferer to me for one.

Sincerely yours,  
U. V. WILLIAMS, M.D.

**Cured at the Age of 76.**

Mr. C. E. Brooks, Marshall, Mich.  
Dear Sir:—I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable. Very sincerely yours,  
SAM HOOVER.

High Point, N. C.

**REMEMBER.**

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon and mail today. No salves—no harness—no plasters—no lies—no false or misleading promises.

## American Breeder Camera at Fort Worth Stock Show

1—Fort Worth Live Stock Pavilion. 2—Ravenstone's grand Champion Short horn bull, Inglewood's Best. 3—Shorthorn beeves coming. 4—Dr. Van Meldert's first prize three-year-old Belgian stallion, Escadron du Balkan. 5—J. C. Robison's champion Percheron stallion, Injureux. 6—Hereford beeves going. 7—L. R. Kershaw's grand champion Angus heifer, May of Rosemere. 8—W. J. Davis' grand champion Hereford heifer, Vernet Princess 23d. 9—H. M. Robinson's grand champion carload of lambs. 10—W. J. Davis & Co., grand champion Hereford bull, Vernet Prince 18th. 11—J. C. Robison's champion Belgian stallion, Javitor. 12—V. O. Cudd inspecting a jack. 13—First prize carlot of fat yearlings. 14—Grade Zebus (East India cattle) in a bunch of range bulls. 15—J. H. Murphy's saddle stallion, Garrard Chief. 16—Cavalry horses sold to the French government.

# THE HORSE BREEDING SCHOOL

## December 7 to 12, Inclusive

The Week Following the International Live Stock Show

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

The tuition fee is \$25, which entitles the student to return at all other terms free of charge (a life membership.) This rate is good until August 1st, 1915; after that the tuition will be \$50.

This is the only recognized school (excepting veterinary colleges), that teaches the anatomy and physiology of the generative organs of domestic animals. No breeder can fully understand scientific breeding without this knowledge. This school gives a lot of new and useful information that is not taught by any other school in the world. This is the only breeding school. The principles taught have stood the investigation of the best posted graduate veterinarians on these subjects. All of the instructors but two are post graduate veterinarians who are doing work recognized by the United States Government.

Mares are dissected and mares, both dead and alive, are examined for the different diseases and abnormal conditions. Every student is required to take part in this work, under the instructions of experts. Students are impressed with facts about diseases of females in a way they will remember. Representative animals for this work are especially selected. Everything is made plain by demonstration and language that the average breeder can understand. All technical work that can be is eliminated. The object is to give a course that the average breeder can master in a short time.

This is not a veterinary college, but it does teach how to prevent diseases. Prevention is better than a cure. A large number of animals are used for each class. The most interesting work for the average breeder is that of making examinations on a string of dead mares, supported in natural position. The average breeder has very little conception as to what he will find on the inside of a mare or cow; neither do they understand the why or wherefore, nor will they understand this until they have this special education.

Fathers and mothers need not be afraid to send their boys to this school, as it is a clean institution, and they will learn things that will make them better men and eliminate many of the dangers that men are subject to. Profane or vulgar language is not permitted among the students at any time.

The one drawback of this school is that some students who have attended are not anxious that their competitors do likewise. We do not know of one dissatisfied student and this from a territory which represents nearly every section of the United States and several foreign countries. At the end of each term all students have had opportunity to get their tuition refunded if not satisfied. This offer is still in effect. There are no restrictions to it. The student alone is his own judge, and there have been no takers. This is remarkable compared with the large army of men who have attended.

Any breeder anywhere can well afford to investigate this proposition offered to make himself an expert breeder; to learn to avoid dangers in the breeding business that cause so much loss to owners of good stock.

### REMEMBER THE DATE---December 7 to 12, Inclusive.

#### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse, and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Cap-sules, etc.

Remember the date and prepare to be here next term. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

#### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

TRANSFERRING REGISTERED  
STOCK.

Every registered animal should be  
transferred on the books of the reg-  
istry immediately after it is sold.  
Every one disposing of recorded stock  
should make it a part of his duty to  
inform the purchaser concerning the  
transfer. The animal does not change  
ownership on the records of the as-  
sociation until such transfer is made.  
In case the registration certificate  
should be lost it might be difficult to  
get a duplicate certificate, if the trans-  
fer had not been made. In after years  
should a question arise concerning  
the ownership, the records would  
probably have much to do with identi-  
fying the owner of the animal.

Most record associations require  
that the ancestors to be regularly re-  
corded before the progeny can be reg-  
istered. A registry certificate gives  
the name of the breeder and the pres-  
ent owner. Every one owning a reg-  
istered animal of any kind should look  
at the certificate and see that the  
right person is specified as the owner  
of such an animal. If the right name  
does not appear on the certificate the  
owner should write to the secretary  
and ask him how to proceed to have  
the animal transferred to his name.  
Some associations make a charge for  
this transfer; others do it for nothing  
when the animal is transferred within  
a limited time. Every record associa-  
tion should encourage the "transfer-  
ring" of animals which have changed  
hands. It serves to keep the records  
complete. Those who have not had

their transfers properly recorded  
should do so.

MEASURING HORSES AND JACKS.

There is only one way to measure  
the height of horses, mules or jacks,  
and that is standard measure. The  
animal while being measured should  
be induced to get his head down even  
with his body with a bucket of water  
or something to eat, then measure  
from the ground straight up even with  
the highest part of the withers. On  
some stock it is difficult to tell just  
where the measure should be unless  
the head is down. By following this  
plan there is very little chance for  
mistakes.

There have been numerous plans in-  
vented to increase the height of little  
jacks, which might be classified under  
the general name of "jack measure."  
Every one interested in this kind of  
stock should insist on the animal  
being measured by standard measure,  
four inches to the hand, while the  
head is down, then there will be very  
little chance for a misunderstanding  
as to height. There are regular meas-  
uring sticks which have a square and  
a level on them. By the use of an  
instrument of this kind accurate meas-  
urements may be had. The ordinary  
square and a level used by carpenters  
or a square and a plumb line, can also  
be used. Let us all forget that there  
is any other measurement in the  
equine world, except standard meas-  
ure.

IT'S THE BREEDERS' OPPOR-  
TUNITY.

The constantly recurring feature in  
live stock market news relates to the  
enormous demand for breeding ani-  
mals, and means, if it means anything,  
that this country is to see for the next  
ten years at least, a revival in the in-  
terest in live stock production and im-  
provement greater than we have  
known during the last quarter of a  
century.

For several years the best students  
of the horse situation have urged that  
farmers give more attention to the  
selection and development of good,  
heavy mares, suitable for producing  
the high priced drafters for the city  
markets. Enough attention has been  
paid to this point to keep country  
prices on good, heavy mares practical-  
ly always above market figures. Now  
comes the warning from the same  
horse market students against too  
close selling of the lighter mares of  
the sort being purchased for European  
army use. The mares being taken by  
the army buyers have got to be clean  
and sound, and it is pointed out that  
since our supply of clean sound, heavy  
mares is far too small to provide for  
the draft horse requirements of the  
future, enough of our better light  
weight mares should be kept on hand  
for grading-up purposes.

It has been proven that two strictly  
good draft crosses on 1,000-pound road-  
ster mares can produce a champion  
draft gelding. Likewise two crosses  
of saddle or standard bred stock on  
similar foundation can produce a valu-  
able animal in each of these respective  
classes. We have in our western na-  
tive stock much that is worth keeping  
in the way of quality in hoof, bone and  
stamina, and we are in danger of losing  
too much of it in the selling of our  
better mares to a trade that is exact-  
ing on these points, although all light  
weight geldings should be sold off the  
farms.

This is only one feature of the evi-  
dence that we must give attention to  
the sources of live stock production in  
this country. As another rather strik-  
ing sample of what is going on we note  
in one day's market news the purchase  
by one man of 1,200 breeding ewes to  
be transferred from Idaho range to a  
corn belt farm, and another single  
purchase of 1,000 grade Angus cows to  
be taken into Texas to re-stock a  
Panhandle ranch which had been  
stripped of its cattle. It cost the Texas  
man \$50,000 to put cows back on the  
land that needed them, while the Illi-  
nois man who bought the 1,200 ewes  
will put them to work raising lambs  
on a farm which represents a good  
sized fortune and from which a few  
years ago all of the live stock was ban-  
ished because the land was thought to

be too high in price to be used for  
pasture.

Everywhere in this country the land  
—arid, semi-arid and the most produc-  
tive—is crying out for live stock and  
the best agricultural future is in store  
for the men who are prepared to sup-  
ply this need with the types best adapt-  
ed to it and of a quality that will make  
good.

SELLING BRED FEMALES.

An Iowa reader asked our advice  
concerning the guarantee placed upon  
females sold as pregnant. There are  
two ways in which this can be done  
satisfactorily. The first plan is to  
make a sale on the basis that in case  
the female does not prove to be preg-  
nant, that the seller will refund a  
specified amount. There is this diffi-  
culty with this transaction. A par-  
ticular female may abort at such a  
time or place that the new owner may  
not know it, or the new owner may

SPECIAL

Subscription Offer to New  
Subscribers, for acceptance  
before November 1: 50 cents  
for the American Breeder un-  
til January 1, 1916.

have knowledge of it and yet deny the  
fact.

A better plan is to make a rectal  
examination for pregnancy, which can  
easily be done in mares or cows at 120  
days after fertilization has taken place.

If the seller will study these prob-  
lems he can prove to the purchaser  
these facts honestly if he cares to.  
The purchaser, however, should also  
know how to make this examination  
for his own safety. The refunding of  
a certain amount of cash will satisfy  
the legal statis of such a guarantee,  
but the purchaser, even though the  
guarantee is fulfilled in every way,  
will be the loser unless the guarantee  
stipulates a good sum of money. Every  
purchaser of pregnant females should  
be able to make his own examination.  
This can be done with a little special  
training and with practically no dan-  
ger whatever.

Buying a bred female without an  
examination is in many cases similar  
to "buying a pig in a poke." The time  
has come when breeders of live stock  
must lay aside many "old foggy" no-  
tions and get down to business.

WE EXTEND OUR THANKS.

Many inquiries have been received  
asking for the last issue, from read-  
ers who believed they had been skip-  
ped. A mistake in making cuts from  
state fair photographs caused the first  
delay. Then when one stops to think  
about the great growth of this paper,  
one might naturally expect the paper  
to be late, as it required four days  
on a large 16-page press to print the  
American Breeder's last issue, for  
which 39,000 copies were required.

This growth has not been brought  
about through the efforts of any one  
man, but it is the co-operation of thou-  
sands of men. Go where you may at  
any gathering of live stock men any-  
where in the United States and you  
can hear some one say, "the American  
Breeder is the best paper published." This  
creates an interest in the hearts  
of other men; they want to know  
something about the American Breed-  
er. Our loyal subscribers all over this  
great growing country are soliciting  
and taking subscriptions from their  
friends and neighbors without a cent  
of commission. Many of them have  
never seen or formed any acquaintance  
with any member of the American  
Breeder force. We have never found  
it necessary to employ a lot of graft-  
ing subscription agents to increase the  
circulation of this paper. A lot of  
men take enough interest to send the  
subscriptions in for their friends and  
neighbors. They believe it is a good  
thing and from an unselfish motive,  
boost it.

All we can say to these men is that  
we sincerely thank them and hope to  
increase the value of the paper, both

as an improver of live stock and a  
benefit to humanity.

MODERN IMPROVEMENTS.

October 21, 1879, was when Mr. Edi-  
son first invented electric lights.  
From that beginning light increased.  
Every intelligent person has some  
idea as to the value of Mr. Edison's  
remarkable discoveries. They have  
led to the safest light and fuel propo-  
sitions we have, yet during all the  
elapsing years there are a lot of citi-  
zens who have preferred to use can-  
dles and live in darkness. Many of  
these could just as well have electric  
lights and a current for other pur-  
poses in the house, yet they are using  
the old-fashioned candles because  
their ancestors used them 35 years  
ago.

Surgery within the last quarter of  
a century has made wonderful strides.  
Before that date an abdominal incision  
was considered a remarkable  
operation if the patient lived; now-  
days it is an exception if the patient  
dies. The greatest requirement in  
modern surgery is cleanliness. At  
any up-to-date surgical institution the  
water used is boiled continuously for  
several hours, and everything in and  
about the operating room is just as  
clean as it is possible to be—clean  
from the standpoint of surgeons who  
understand bacteriology. Before real  
cleanliness was understood patients  
were allowed to die because the bad  
results from lack of perfect clean-  
liness made surgeons afraid to operate.

For more than a quarter of a cen-  
tury G. L. Carlson used gelatine cap-  
sules in horse breeding. He develop-  
ed that method of breeding and gave  
it to the public, and his method has  
been improved during late years to  
meet the needs and convenience of  
commercial breeders. This year about  
10,000 breeders are using capsules in  
their breeding operations. An army  
of breeders are now equipped to pro-  
duce several colts from each service  
of the sire. This has enabled breed-  
ers to buy better stallions and jacks  
and stand them at a lower service  
fee, which in turn is a benefit to any  
community.

Anyone disbelieving these facts con-  
cerning capsule breeding should be  
his own investigator, and visit the  
men who are actually using this  
method. A lot of good men refuse to  
be up to date just the same with cap-  
sules as with electric lights. There  
always will be a lot of good citizens  
who do not believe in modern improve-  
ments, yet improvements will not stop,  
and the individual who does not study  
the problems and their solutions, as  
set forth, is not progressive.

SHELTERING LIVE STOCK.

Those who have not already pre-  
pared quarters for their live stock  
will find it very profitable to build  
soon a substantial shelter. Money  
cannot be spent to a better advantage  
in caring for live stock than in provid-  
ing some means of protection from  
the cold rains and north winds. These  
buildings need not be expensive, but  
should be gotten ready before the in-  
clement weather begins.

PROFANE LANGUAGE.

We are glad to note the great  
change in the present day vocabulary.  
A great many of our most successful  
men are omitting all profane or vul-  
gar language from their conversation.  
There are many good citizens who  
have never thought about the serious  
effect of bad language, even from a  
business standpoint.

A short time ago a clerk in a big  
retail store was heard to use profane  
language in the presence of customers.  
The proprietor immediately gave him  
his check and stated, in the presence  
of the other clerks, that he could not  
afford to lose his business in such a  
manner. There are many who do not  
wish to hear profane language. These  
men very frequently avoid places  
where profane language is used. The  
ones who most notice the use of such  
language very frequently are the ones  
who have recently omitted such words  
from their vocabulary.

The breeding of and dealing in live  
stock is requiring cleaner men in  
every respect. As a rule, the best citi-

zens in a country community are those who are striving to produce better animals. Some of these men have the rough side out and use much language that could better be dispensed with. Let us all get busy and keep in sight the fact that profane or vulgar language is going out of date.

#### "INTERNATIONAL" ENTRIES CLOSE SOON.

A letter from B. H. Heide, Secretary of the International Live Stock Exposition at Chicago, calls attention to the nearness of the entry closing date, which is November 1. All intending exhibitors should mail their entries to Mr. Heide at once. The address of the International is Union Stock Yards, Chicago. The dates of the show are November 28 to December 5, inclusive, but all entries must be in by November 1, four weeks before the show opens. This arrangement enables the International to properly allot its exhibit space, and put out the most accurate and complete catalog of exhibits of any of the regular stock shows.

#### SWINE SHOW AT THE AMERICAN ROYAL.

A strong swine show will be one of the features of this year's American Royal to be held at Kansas City November 16 to 21. N. H. Gentry of Sedalia, Mo., is the director in charge of the swine department, which will be under the superintendency of Prof. L. A. Weaver of Columbia, Mo. Classifications are provided for Berkshires, Poland Chinas, Duroc Jerseys and Chester Whites. The Standard Poland China Record Association, the National Duroc Jersey Record Association and the O. I. C. Chester White Association offer special prizes on their respective breeds, in addition to the prizes provided for in the regular classification. Swine entries must be made with T. J. Wornall, secretary, before November 10.

#### BLACKLEG BECOMING PREVALENT.

To the American Breeder:—We are receiving numerous letters concerning outbreaks of blackleg and many requests for blackleg vaccine. The disease appears to be more prevalent now than it has been for a number of years. It is therefore advisable, especially in communities where blackleg exists, that all young cattle be vaccinated.

The symptoms of blackleg are very easily recognized by anyone who has ever seen a case. As a rule, the disease appears in a lot of young cattle when on good feed or pasture and making rapid growth. As a rule, it affects the fattest calves in the lot. It runs a very rapid course, lasting as a rule, from twelve to twenty-four hours and almost invariably results in death. The calf first shows lameness. Within a few hours, a swelling appears on some part of the body and generally on one of the quarters. Rubbing the swelling causes a crackling sound beneath the skin. When the animal is skinned, the affected portion appears bruised as if it had been hit with a club. These symptoms are unmistakable.

The carcasses of blackleg calves should be thoroughly burned in order to destroy infection and prevent the spread of the disease. If these carcasses are not burned, the infection will remain on the premises for years and make cattle-growing unprofitable unless all young cattle are regularly vaccinated.

Whenever there is an outbreak of blackleg, all the young cattle in the community should be vaccinated. In the event that a case is lost in a herd and a little time would be required to secure the vaccine, it is advisable to reduce the feed so that they will shrink slightly. They are not so apt to develop blackleg while shrinking as while gaining in weight. Three days after the vaccine is administered, they may be put back on full feed or good pasture.—D. F. Luckey, Missouri State Veterinarian.

#### WHAT AILS MISSOURI'S FAIR?

What is Missouri getting from her big investment in the State Fair Grounds at Sedalia? That is a question being asked by more exhibitors from all the states and more taxpayers within Missouri, than at any time since Sedalia secured the fair.

Why are they asking?

Because here is one of the best equipped state fair plants in America, standing idle 51 weeks of the year, and then only partially used during three or four days of the fifty-second week. If you think we make it too strong when we say only partially used, refer to our table of state fair facts, printed in the issue of September 5. Illinois, for instance, shows a week's state fair attendance of 326,648. Sedalia's best week was 85,000. Nebraska, with 1,192,000 population against Missouri's 3,293,000 (1910 census) has twice as large an attendance. The Texas state fair had in ten days an attendance of 701,000 against Missouri's 85,000 total.

Where lies the fault?

Doubtless it is chiefly a matter of location and transportation. What right had a town, with only two main lines of steam railway, one branch and no electric lines, to be chosen as the home of a state fair in a state like Missouri? Look at the map of Missouri; see where the railway lines converge; see the river cutting it in two in the middle. Only two points, Kansas City and St. Louis, can be conveniently reached by exhibits and attendance from all parts of the state. There are no other points where the taxpayers of the state can afford to maintain such a plant as they now

state fair board, is a "Director in Charge," with direct authority over some one of the good and fully competent men Mr. Stinson has always secured for department superintendents, and who should be subordinate to no one but the head of the fair. Here is a fair with 16 heads, besides the president and secretary, each head with a vote in the election of president and secretary. Some of these directors doubtless have co-operated with the president and secretary, but all have the opportunity to play politics, get favors for friends—political, or otherwise—and encumber the operation of the fair, rather than facilitate it.

The American Breeder has no personal complaint whatever. We have never had other than good treatment at the hands of any "Director in Charge." We are simply pointing out some of the factors of location, transportation and organization which keep Missouri's fair from being what it ought to be.

#### "TRULY MASTER OF HORSEDOM."

To the American Breeder:—I am glad to see the American Breeder prosper and enlarge along the horse line. There are a lot of farm products that are "Jack of all trades, but master of none," but the American Breeder is truly master of horsemanship, to which none of the other papers can hold a candle. I think that our faithful servants, the horses and mules, are worthy of a publication entirely their own. The fair reports last fall in the American Breeder were excellent. The horse market report might be enlarged, the writeup of which is good, but could also be enlarged. Give us more horse and mule information along the lines

#### SOLITUDE WHERE THERE SHOULD BE CROWDS.

Partial view of the immense brick, steel and tile live stock pavilion on the Missouri State Fair grounds. Photo taken from in front of the cattle barns, middle of the afternoon, fourth day of the fair, while Angus and Galloway cattle were being shown. Sedalia had licensed a circus to operate in the city on that day.

have at Sedalia. Supposing the 250,000 attendance mark should be reached at the fair in a week—and Missouri should be satisfied with no less—where would they sleep at night? How would they get back and forth from the grounds? Missouri, like Kansas, is being hurt and held back by the inadequacy of her fair.

Missouri, with the right opportunity, can make a state fair showing which no other state can excel and few can match. She has the natural resources. Missouri's state schools and experiment stations have been especially active and efficient in helping the fair, playing a larger part in its good features than such institutions usually are able to.

Missouri has had a good fair secretary in John T. Stinson. Unless one realizes the unfitness of Sedalia, as a state fair location, and understands the handicap of petty politics, under which the Missouri secretary has to work, he cannot appreciate how good a man John Stinson is. Politics has something to do with most fairs, but with the Missouri fair it has everything to do. It does not stop at making the selection of the secretary a political matter (as sufficiently shown by putting Governor Major's brother in Mr. Stinson's place), but each one of the 16 "district members" of the

of pedigree, history of horses and breeders that have given much of value to us, both here and abroad. Give historical review of the different breeds, both of the present day favorites, as well as those of the past. Give us more diagrams of points of excellence, as well as faults; those of most importance as well as minors. It seems to me that if the big horsemen would talk through the American Breeder of their experience and travels they would talk to the men who have the horse truly at heart. It is a burden to breeders to advertise in half a dozen papers in order to reach their prospective customers, while specializing saves money.—George Larson, Shelby County, Iowa.

#### MISSOURI CORN CROP, 170,000,000 BUSHELS.

In the October report issued from the office of the Secretary of the Missouri State Board of Agriculture a corn crop of approximately 170,000,000 bushels is forecasted for Missouri. This preliminary estimate, based upon a very complete report covering each county in the state, is for an average yield of 23 bushels. An early estimate, subject to revision upon receipt of the final figures, shows 7,382,000 acres in corn.

## PROGRESS IN HORSE BREEDING

There is an army of breeders who forget about their breeding business each fall and winter until the following spring. They do not seem to understand that it is necessary to prepare themselves and their stock in advance. They lose track of the season's problems and lessons, which requires a new beginning at the opening of each breeding season. After it is too late they then remember their mistakes, but forget them again from season to season.

The time to prepare for the next breeding season is right now. Every breeder who can possibly do so should be on hand at the next term of the Graham Scientific Breeding School which begins Monday morning, December 7, and lasts one week, with day and night illustrated lectures and demonstrations.

The Breeding School follows immediately after the International Live Stock Show. This will give those an opportunity to attend both that Exposition and the School with but little added transportation expense. This is especially true of those in Canada and the extreme east and west. Those living in the south can stop off here on their road home from the show.

It is a common complaint of breeders to state that they cannot find an one who can properly care for their breeding stock while they are away from home. This is all imagination. There are plenty of men who can be instructed to give the stock plenty of hay and water and feed a half grain ration, and with stock thus handled there will be practically no opportunity for sickness. Digestive disturbances are usually the result of too much grain. A rest for the stomach is not bad occasionally, anyway.

One other objection frequently comes from the ladies of the house. If the average woman knew what her husband or son would learn at this school she would gladly recommend his attending. There are a lot of things that innocent women have never studied. Just as many things are not known to a majority of men. We do not believe that a wife or a mother has ever been sorry that her relative attended the School.

The last objection is that the breeder cannot find time to leave home. Every industrious man can be occupied the year around, day and night if he cares to be, but there are a lot of jobs that he could postpone to a good advantage in preference to missing the School. It is remarkable how many men will continue year in and year out to conduct their breeding operations absolutely in the dark. Those individuals never know how much money they have lost, because they do not know the other side of the game.

A Kansas breeder had decided to dispose of his breeding stock because it was not a financial success. His son got his consent to attend the Breeding School. The young man put the business on a paying basis the first year and has added not only the best sires in the country, but bought pure bred females as well, and has today one of the best and most successful breeding ranches in the west. We can show hundreds of cases that have turned losses into a financial gain. This School not only teaches the student how to make more money out of the breeding operations, but it actually makes better homes, better men and more happiness. After reading the hundreds of testimonial letters that have been printed in this paper no intelligent breeder should doubt the value of the School.

After August 1st, next year, the tuition fee will be doubled. A few months will slip by and a lot of breeders will overlook this opportunity. Remember the date and be on hand December 7.—Advertising.

# DIAGNOSING ILLS OF HORSES

Lesson IX. Diseases of the Respiratory Organs.

Diseases of the respiratory organs are on the whole not so frequent as affections of the digestive system, but in many ways are serious disorders. In the major portion of the diseases affecting the digestive organs the animal will evince sufficient distress so that the most ignorant owner will appreciate that the animal is sick.

Not so with the animal affected with some of the respiratory diseases. Many times an animal severely sick with some form of respiratory distress will not show evidence in the way of conspicuous symptoms that the average man would observe. The animal often consumes a fair ration and performs its work fairly well. This being true it is repeatedly discovered that such sick animals are continued in service, giving opportunity for exposure and fatigue to lower the recuperative powers so that such an animal may succumb to the primary disease or complications that are inclined to develop under such treatment. Too many times when animals have apparently recovered from some respiratory ailment they are required to go back into service before the recovery has fully taken place, thereby encouraging chronic ailments that often jeopardize the life of, and impair the usefulness of the animal in the future.

While it is a fact that animals or dinarily recover more rapidly from disease than does the human family, yet many owners regard an animal well when it shows a disposition to consume three good meals a day.

Exposure to cold probably acts as the most noticeable cause of diseases of the respiratory organs, especially if it occurs when the animal is heated and fatigued. This may be brought about by exposing the animal to cold draughts of air such as occur in illy constructed barns or sheds. An animal or person for that matter will not withstand the same degree of cold if is blown on the body in air currents. Buildings for all kinds of stock can often be made quite comfortable by making sure that they are perfectly tight on three sides.

Further exposure may be brought about by working the animal during cold rain or snow storms, particularly if heated and allowed to afterwards stand exposed to draughts of air.

While we recognize that diseases of this class often follow such exposures, yet no one is in position to prove absolutely that such is the only factor concerned in bringing on the attack. It has been shown that a great variety of germ life normally inhabits the body at all times, and many of these germs are capable of inducing disease when conditions are favorable. The exposure and depression of the animal appears to prepare the way for the activity of these organisms and they seize the opportunity to multiply and thrive at the animal's expense and thus establish disease.

It has been frequently noted that diseases of this class develop outbreaks in barns where the animals are given the best of care and where the sanitary conditions are ideal. A careful investigation discloses no fault in the general management and care of the animals, yet numerous ones become sick, indicating the infectiousness of the malady which is an admission of the presence of germ life capable of exciting disturbances in the respiratory organs. In some of these outbreaks it is possible to isolate and recognize the specific germs.

There are other causes of respiratory diseases that can be traced to the inhalation of substances like irritating gasses, heat, smoke, etc. Like-wise substances of a liquid character or solid particles such as might occur in giving a horse a drench, which might result in the animal permitting some of the material to pass down the wind pipe and enter the lungs which often causes serious trouble and many times death.

There are certain moulds that may be inhaled while an animal is feeding on mouldy forage that are capable of

giving rise to serious disorder in the lungs. During changeable weather horses frequently are affected with an acute catarrhal condition of the nasal passages, that we are accustomed to alluding to as "catching cold." The affection restricts itself to the upper air passage and ordinarily does not greatly inconvenience the animal to any marked degree so long as it remains so restricted. Continued exposure may cause inflammation to spread to neighboring parts where more serious conditions may develop or the disease may become chronic. In the latter case the sinuses of the head may become involved giving rise to a disturbance that often, on account of the nature of things, needs surgical treatment to relieve.

Catarrh of the head begins with marked dryness of the mucous membrane of the nose followed by a watery discharge which later becomes mixed with mucous and pus. As a rule the mucous membranes of the eyes participate in the affection and a discharge takes place from them also. The animal usually preserves its appetite for food and drink and also remains in good spirits while doing its work. Oc-

beyond the mucous rattling and does not wheeze or whistle as in laryngitis. If the deepest portion of the tubes are affected the animal is very much distressed in breathing for the reason that the air cells become filled with fluid, thus seriously interfering with the supply of oxygen and retarding the escape of carbonic acid gas.

Such cases are very serious and often terminate in death. Those cases wherein the lining of the bronchial tubes alone is affected are much more inclined to recover.

One of the annoying features of cases of this kind is the tendency of the animal to be left with a chronic cough. Affections of the bronchial tubes are few in number compared with diseases of the lungs proper.

Inflammation of the lungs or pneumonia is fairly prevalent among horses and is a dangerous disease if the animal is not carefully housed and nursed, or if improperly treated. A horse affected with pneumonia is robbed of his breathing space in proportion to the amount of lung involved. As a rule, the disease restricts itself to one lung but both lungs may become involved. Again, complications such as bronchitis or pleurisy may be easily established. Pneumonia within itself does not kill so often as the associated complications which are to be guarded against. So far as general appearance goes the symptoms of pneumonia do not vary sufficiently from other respir-

As the volume of water increase there is inclined to appear dropsical swellings underneath the chest. When it reaches this stage the animal becomes considerably distressed in breathing on account of the pressure on the lungs, and exercises a deep pumping action during his respiratory movements. Pleurisy is more fatal than pneumonia on account of the tendency for the fluid to collect in excessive amounts in the cavity. It requires a long time for the fluid to absorb, thus prolonging the disease and inhibiting recovery. An animal once having had a severe attack of pleurisy is inclined to be a victim for future attacks on account of the tardy and imperfect recovery. While the previously discussed diseases may terminate in recovery in from two to four weeks, many cases of pleurisy become protracted to two and three times that length of time.

## AMERICAN POTASH SUPPLY.

The United States Secretary of the Interior has announced that the first commercial potash in America is com-

asionally the upper part of the wind pipe (larynx) may be the chief seat of disease which may have been induced by exposure. The opening through this part of the respiratory tract is comparatively small and inasmuch as the inflammation affecting the part still further lessens the diameter of the opening one can see that difficulty in breathing will naturally follow disease of these parts.

Wheezing and whistling sounds are quite in evidence in laryngitis and the animal may reach a point in distress wherein it will fall from suffocation and succumb.

Oftentimes in inflammation of the throat that disease will extend to the larynx and give rise to the above strain of symptoms. Some discharge will take place from the nostrils, the animal will have some fever and the pulse rate will be increased somewhat in proportion to the distress the animal experiences. The distress in breathing will also be governed by the degree of diminished opening through the larynx occasioned by the inflammation.

When this condition approaches great suffering with threatened suffocation the animal will become restless; there will be an anxious look, a bulging eye, dilated nostrils and perspiration will break out over the body.

Should inflammation develop in the deeper parts of the respiratory tract involving the bronchial tubes there also will be a discharge from the nostrils, cough, labored breathing, dilated nostrils, fever and increased pulse rate. The animal makes but little noise in inflammation of these parts

atory diseases to enable the untrained individual to recognize them. There is usually depression, head is held low, disinclination to lie down, increased breathing with accelerated heart rate, high fever and some loss of appetite. The animal is easily fatigued if exercised.

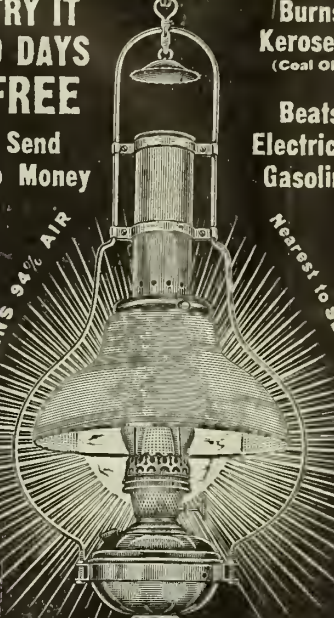

As the animal becomes worse all the above symptoms become aggravated until the animal reaches a point of restlessness on account of suffering for proper amount of air.

Pleurisy is a disease affecting the thin membrane lining, the lung cavity. It is a very painful disease, which pain is aggravated by moving the animal. A horse with pleurisy is much inclined to remain standing in one place and is not apt to lie down for movement and the recumbent position intensify the pain.

The trunk of the body presents a hard drawn appearance and the ribs, even in a fat horse, are quite clearly outlined. When the animal moves it moves with an apparent stiff gait but close observation will detect that the stiffness is in the trunk of the body rather than in the limbs. The movement attending breathing is largely in the flank region for the reason that movement of the ribs increases the pain. Horses affected with pleurisy have only a moderate fever at first and the pulse is not greatly increased. It is a disease wherein unless recovery occurs fairly prompt water will accumulate in the chest cavity where from pressure on the lungs it will seriously interfere with the inflation of those organs.

### Costs You Nothing

to try this wonderful new Aladdin kerosene (coal oil) mantle lamp 10 days right in your own home. You don't need to send us a cent in advance, and if you are not perfectly satisfied, you may return it at our expense.

### Twice the Light on Half the Oil

Recent tests by noted scientists at 14 leading Universities, prove the Aladdin gives more than twice the light and burns less than half as much oil as the best round wick open flame lamps on the market. Thus the Aladdin will pay for itself many times over in oil saved, to say nothing of the increased quantity and quality of pure white light it produces. A style for every need.

### Over Three Million

people now enjoy the light of the Aladdin and every mail brings hundreds of enthusiastic letters from satisfied users endorsing it as the most wonderful light they have ever seen. Such comments as "You have solved the problem of rural home lighting," "I could not think of parting with my Aladdin," "The grandest thing on earth," "You could not buy it back at any price," "Beats any light I have ever seen," "A blessing to any household," "It is the acme of perfection," "Better than I ever dreamed possible," "Makes my light look like a tallow dip," etc., etc., pour into our office every day. Good Housekeeping Institute, New York, tested and approved the Aladdin.

### We Will Give \$1000

to the person who shows us an oil lamp equal to the Aladdin (details of this Reward Offer given in our circular which will be sent you). Would we dare invite such comparison with all other lights if there were any doubt about the superiority of the Aladdin?

### Get One FREE

We want one user in each locality to advertise and recommend the Aladdin. To that person we have a special introductory offer under which one lamp is given free. Just drop us a postal and we will send you full particulars about our great 10 Day Free Trial Offer, and tell you how you can get one free.

**THE MANTLE LAMP COMPANY**  
391 Aladdin Building CHICAGO, ILL.  
Largest Manufacturers and Distributors of Kerosene Mantle Lamps in the World.

### Men With Rigs Make Big Money

delivering Aladdin lamps. No previous experience necessary. One farmer who had never sold anything in his life made over \$500.00 in six weeks. Another says: "I disposed of 34 lamps out of 31 calls."

### No Money Required

We furnish capital to reliable men to get started. Ask for our distributor's Easy-System-of-Delivery plan quick, before territory is taken.

ing from a plant at Searles, Calif. Within a few months its output is expected to be 120 tons a day. The important question to farmers is the cost of the potash. Probably neither this nor any other American deposit can furnish enough potash or at as low figures as the great mines of Germany. At current prices most farmers will simply have to do without potash, depending on vegetable matter in the soil and thorough cultivation of it to release enough for ordinary crops.

#### OLD, BUT UP-TO-DATE.

The Jefferson County, N. Y., Agricultural Society recently held its ninety-sixth annual fair, says an exchange. What is the oldest agricultural fair in the country? Probably some are older than this but we do not now think of any. Among the features this year are a few not in

the first fair—an exhibition of wireless telegraphy, a stock-judging contest for boys, grange, Sabbath school and farm bureau exhibits and a booth for suffragettes. Doubtless there were many other things at the 1914 fair that would have seemed strange a century ago, when even the hoss-trot was unknown.

#### TURKESTAN ALFALFA SEED FOUND INFERIOR.

A warning to alfalfa growers to avoid the use of commercial Turkestan seed is contained in Department Bulletin No. 138, of the United States Department of Agriculture, which is shortly to be issued under the title "Commercial Turkestan Alfalfa Seed."

Specialists of the Department have been investigating the comparative merits of different kinds of alfalfa

seeds and have reached the conclusion that there is nothing to recommend the Turkestan variety for general use in this country. The investigators, however, are careful to distinguish between commercial Turkestan alfalfa and special strains of hardy alfalfas that has been developed from certain introductions of seed from Turkestan. Valuable varieties of alfalfas unquestionably exist in Central Asia, but these are at present only fitted for use in experimental work in breeding.

#### WINNINGS OF A COLLEGE HERD.

Thirty-six firsts, fourteen seconds and five thirds, together with \$882 in prize money, were won by the dairy and animal husbandry herds of the Kansas State Agricultural College at the fairs in Hutchinson and Topeka.

#### For Sheep on the Farm.

Washington, D. C.—As the sheep breeding season is now opening, the United States Department of Agriculture urges the desirability of maintaining a small flock of sheep upon the farm. With proper care and attention, a flock of twenty-five or thirty ewes can be kept at very little expense, and they will prove of inestimable value in freeing the farm from weeds, and adding something to the farm income. In addition to providing a considerable supply of delicious wholesome food for the farm table, there will be a surplus for sale, and an additional item of revenue in the form of wool.

Many farmers make a practice of buying ewes in the fall, breeding them and selling the lambs the following summer. Such ewes can be carried through the winter on wheat and rye fields if not pastured too closely, or on clover hay with some roots and a little linseed meal. If the clover hay is not available, corn fodder may be used as roughage, in which case it should always be supplemented with bran or linseed meal. Lambs should come early and should be taught to eat as soon as they are old enough. Give lambs access to corn by providing a creep through which they can go without allowing the ewes to follow.

Ewes can be purchased at the present time at prices ranging from \$3.00 for common, inferior sorts to \$7.00 for good fairly well-bred ewes. For farm purposes the black-faced ewes are more popular than the others, although good results can frequently be obtained from the white-faced ones. In buying ewes, be sure that they stand well on their feet, have good straight backs and good mouths. Ewes that have broken teeth, or teeth that are badly worn down should not be bought. As a rule, a sheep has one pair of permanent incisor teeth when it is one year old; two pairs when it is two years old, and three pairs or a full mouth when it is three years old. A full mouthed ewe, if the teeth are in good condition, can be used for breeding with good results although she may be as much as five years old. Never buy a ewe that has a broken mouth, that is, with teeth that have been broken off or lost.

None but a pure bred ram should be used. It is not necessary to have a show animal, but a strong vigorous buck is essential. Shropshire, Oxford, Southdown and Hampshire rams sire excellent mutton lambs and these breeds are recommended for the farm states.

The two principal drawbacks to the sheep industry in the farm states are dogs and stomach worms. The dog nuisance can be obviated to a great extent by placing dog-proof fences around the pastures. The United States Forest Service has had excellent results in protecting sheep from coyotes and wolves by building fences constructed in the following manner: A barbed wire is first stapled to the posts right on the surface of the ground. Three inches above this is placed a panel of close woven wire. 36 inches high, and above this two strands of ordinary barbed wire. Care should be taken to see that there are no openings between the ground and the lowest barbed wire. An inclosure made in this manner, into which sheep may be turned at night, is inexpensive, and dogs will not get through it. Most of the damage by dogs is done at night.

The presence of stomach worms is a very serious drawback. The young lambs become infested with them by eating grass to which the worms have attached themselves, the eggs being deposited by the mature sheep. It is therefore desirable to keep the lambs on land on which the mature sheep have not run, and if possible in cases of bad infestations to keep the lambs away from the mature sheep as much as possible.

In the farm states, the farmers will find it to their best advantage to regard the wool from the sheep as a by-product, and direct their principal attention to the production of lambs, and mutton for the table.

# TRY SAL-VET NOW

REG. U. S. PAT. OFF.

SIDNEY R. FEIL,  
President  
The S. R. Feil  
Company

## Prove It—Feed It 60 Days at My Risk

I guarantee to stop your losses from worms or no pay. I take all the risk, furnish you enough Sal-Vet to last your stock 60 days, take your word for the benefits received. I have sold thousands of tons of Sal-Vet on these terms, and I want the privilege of convincing you that your animals will grow faster, thrive better, keep healthier, put on more flesh with no more feed and make you more profit—simply by ridding your stock of dangerous stomach and intestinal worms.

### No Trouble to Feed— No Drenching— No Dosing

#### Read These Letters:

"In this section of Georgia, our hogs are generally full of small worms. I have just killed 12 very fine hogs, all of which had free access to your SAL-VET (they are very fond of it). Not a single worm of any description was found in these hogs, and their livers are the most beautiful I have ever seen. I sell quite a lot to the local butchers, and they invariably comment on the uniformly healthful appearance of my hogs. I attribute this to SAL-VET. Since using your preparation I have not lost a hog or pig on my farm from sickness."—Dr. E. C. Smith, Bainbridge, Ga.

Sal-Vet is a wonderful medicated salt, beneficial to sheep, hogs, horses and cattle as a conditioner, and death to worms that multiply by thousands in the stomachs and intestines of all stock.

I have thousands of just such letters from farmers and stockmen in every state,

"SAL-VET is a wonder. I had 14 shoats that would not fatten. I fed them SAL-VET and was very much surprised to see come from them rolls of worms from 12 to 14 in. long. They began to mend and are doing fine."—J. E. Snell, Florida, Ind.

## Send No Money— Just the Coupon

I do not want you to pay me one cent until you have satisfied yourself that Sal-Vet will do all I claim. Just fill out the coupon and I will ship you enough Sal-Vet to last your stock 60 days. You simply pay the freight charges when it arrives and feed the Sal-Vet according to directions for 60 days. At the end of that time report results. If Sal-Vet has not done all I claim—if it fails to rid your stock of dangerous stomach and free intestinal worms I'll cancel the charge—you won't owe me one penny. Fill in the coupon and mail today—

## RANCHES

in small or large tracts, adapted for stock raising, alfalfa growing, general farming, etc., or for colonization purposes if desired—can be produced at reasonable prices and on good terms. Excellent opportunities for money making.

I will gladly send you complete and authentic information.

R. A. SMITH,

Colonization and Industrial Agent, Union Pacific R. R. Co., Room 373, Union Pacific Bldg., OMAHA, NEB.

## Wood and Water

The farmers of our great prairies will appreciate the value of a country with plenty of wood and water, along with good farm land. You can get all that on the KANSAS CITY SOUTHERN RAILWAY. Ask for particulars.

WM. NICHOLSON,

Immigration Agent,

Room 671, K. C. S. Bldg., Kansas City, Mo.

## Breeding Farm for Sale

Cass County, Missouri.

80 acres; 35 in corn, balance in grass, clover and alfalfa; orchard, etc.; 8-room house; 2-room summer house; wood house; 2 hen houses, 10x40; granary; corn crib and wagon shed; hog house, 18x26 and shed; 2 barns, one 64x36; 2 silos; breeding barn, 20x26, with large lot; 3 cisterns, one good well.

Two registered Percheron stallions; one jack. Stallions eight years old, black and four years old, dark gray; jack four years old. All good and sure breeders. A very good location and good paying neighborhood. Not over six colts not paid in eight years' business. Have been using capsule method four years. Stock and farm if taken soon, \$10,000. 55 miles south and east of Kansas City; 8 miles southeast of Harrisonville, Mo. For further information, call or write,

D. G. KAUFFMAN, Garden City, Mo.

### 160-ACRE FARM FOR SALE.

Creek bottom land; improved; 40 acres in alfalfa; fenced hog tight; black sandy soil; good water; good buildings. Priced for quick sale at \$10,000; will carry \$3,500 at five per cent.

H. H. BURNS,

Argonia, Sumner County, Kansas.

## Johnson County, Kas Stock Farm

for sale. 80 acres; 40 acres corn, 10 acres alfalfa, balance wheat stubble, orchard, etc.; 7-room house; 3 barns, 48x50, 32x36 and 20x65, including shed. Machine shed and double poultry house; 2 good wells and 1 good cistern; 18 miles from Kansas City. Price, \$10,000.

E. W. BRECKENRIDGE, Olathe, Kas.

## FOR SALE BY OWNER AT BARGAINS

Four choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

Wm. M. SPRINGER

621 Gas and Electric Bldg., Denver, Colo.

## Stock Farms For Sale

888-acre stock farm; 480-acre stock farm; 566-acre stock farm; 1,020 acres suitable for small ranch; 1,046-acre stock farm; several smaller tracts; 1,021 acres rich bayou farm. For particulars address,

J. A. WATKINS, WARREN, ARK.

## THIRTY REPLIES TO FARM AD.

To the American Breeder:—You may discontinue the farm ad, but run the horse ad as it is for a while and then I will make a little change. I will advise what and when to change. The farm ad did fine; I got nearly 30 answers; some good ones.—J. M. Nolan, Miami County, Kas.

## Live Stock, Hay and Grain Market Review

Mules have begun "going to war." This morning (Tuesday, the 20th) the horse market gave up the expected news. All Kansas City mule dealers are buying to supply on open order, the extent of which is not known. Presumably the same condition obtains at other mule buying centers.

England is buying, and the Missouri mule will get a taste of the European war. The demand is for mules fifteen hands to fifteen-three. This is about the average height taken for cotton mules, but it is too much to expect that war demand will entirely take the place of the still dormant Southern demand. The Boer war took 106,000 mules, which is considerably short of the annual Southern consumption. Inspectors of cavalry horses will resume work at Kansas City next Wednesday, and work on the accumulation of mules probably will start soon after.

Prior to the breaking of this news the horse and mule trade was full of swirls and eddies, with volume of business, except in certain classes, extremely small. Yet there was nothing discouraging in the general out-

ers is to increase quality, and when they begin to do that, those who now have the right class of breeding animals are bound to come out in good shape. Many mares are going into the army hopper, and that means a falling off in the production of mules.

Prices are almost entirely nominal, except for army horses, and contractors are paying \$60 to \$150. They are \$15 to \$25 higher than in August. Mule prices have not had time to reflect the new demand. Some heavy mules have sold to sugar plantations and lumber camps at \$200 to \$235 a head.

Feeders are inactive. Tight money and fear of a continued slack demand is keeping them out of the market. If the South should be able to get an outlet for its surplus cotton in the next 90 days, fat mules would be in smaller supply than for many years past, and far too small to meet requirements from the South.

Horses and mules in the past few years have been such a profitable adjunct on the farm that no one should become panicky now because

SPEED AND DRAFT MULES; ILLINOIS STATE FAIR.

1—One of the daily attractions was a running race in which these really fast mules were the contestants. 2—Over 6,800 pounds of mules, shown by Ira G. Sharp; the team on the left is champion pair; outside mule on left, four years old, 1,720 pounds, undefeated in five states; second pair, 3,400 pounds, second premium Illinois State Fair; horse mule in same team four years old, 1,710 pounds; undefeated in five states.

look from the producers standpoint. The East is hard hit by conditions in Europe, and the South's purchasing power is tied up in a cotton crop that is not moving. On top of this, orders for war horses remain, and are taking a class of animals that are usually sent South or permitted to accumulate on the farms. For one class it is a most opportune clearance, and for the best horses it is a period when holding off the market is justified. Curtailed business in this country is responsible for a narrow demand for heavy horses, but that period of depression is bound to be followed by an extension in trade lines later. The Central West, the largest producer of horses and mules, is especially prepared to go through this period of slack demand. It has liberal feed crops, and is seeing its plainest horses cleared at good prices. There is no indication that the war in Europe will be of short duration, and it may drag on through another year. The longer it lasts the more horses will be bought in this country. We can well afford to spare the class of animals Europe is taking now and they will have to be replaced. The general tendency of American farm-

there is a temporary let-up in general demand.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—  
Drafters, 1700-pound, extra quality. . . . . \$200@240  
Drafters, good to choice. . . . . 165@200  
Drafters, fair to good. . . . . 140@160  
Chunks, good. . . . . 125@155  
Chunks, fair. . . . . 90@120  
Southerners, good to choice. . . . . 100@150  
Southerners. . . . . 50@100

Mules—  
13½ to 14½ hands. . . . . \$ 80@100  
14½ to 15½ hands. . . . . 100@125  
15½ to 16 hands. . . . . 120@165  
16½ or better. . . . . 170@215

## Kansas City Business College

A school that has for its object the thorough training of young men and women for success in life. Book-keeping, shorthand, touch typewriting, penmanship and all English and commercial branches. Free employment bureau. Highest indorsements. One of the strongest shorthand faculties in the entire West, teaching nine standard systems of shorthand and stenotypy. Dement, Pitman, Graham, or Gregg shorthand. Penmen of national reputation. Graduates placed in positions and students aided in defraying expenses while taking the course. Elegant new quarters; finest in Kansas City, especially designed for this school in the new modern fire-proof Young Women's Christian Association Building. For catalogue, address

C. T. SMITH, Y. W. C. A. Building, 1026 McGee St., Kansas City, Mo.

### Big Cattle Runs Continue.

Crowded by a desire to reduce cattle loans, and hurried by heavy frosts in the high altitude pastures, cattle from the ranges are moving in large volume and prices have been lowered by the weight of numbers. Since the first of September the movement has been increasing but last week reached maximum proportions when more than 200,000 cattle arrived at the five Western markets. Monday of this week receipts were 93,000 at the five Western markets.

Texas at the present time is marketing more cattle than any other state. The thousands of cattle placed under contract for October delivery are moving through markets, and good

## Amazing Prices on STEEL Shingles

A lifetime bargain on Edwards Steel Shingles to a limited number—a sensational opportunity to those who write at once. You can buy the patented genuine Edwards Reo Steel Shingles—that won't rot, rust, crack, burn or leak—for the same price as good wood shingles.

### Wood Shingles Out of Date

Wood Shingles are no longer popular since Edwards Interlocking Steel Shingles have proven to be the best, in all kinds of tests. Over 135,000 successful farmers now use Edwards Steel Shingles.

### Easy to Lay—Saves Time

Come in big clusters ready to put on. A few nails, hammer and a little time—10 times faster and 10 times easier than putting on wood shingles, one at a time. Edwards Shingles are rust and leak proof.

### \$10,000 Guarantee Bond

Get a copy of our \$10,000 guarantee bond protecting all Edwards Reo Steel Shingle roofs against dangerous lightning. We believe in protecting our customers.

### How We Figure Prices

We sell our Steel Shingles at actual factory cost plus a small profit—our large business permits this. You get the jobber's profit, dealer's profit and salesman's profit, as we sell direct to you and we pay the freight.

### Write Before We Are Oversold

This unusual offer won't last long. So write for prices and Catalog 1076 today—give us dimensions of your roof if possible. We manufacture all kinds of steel roofs for buildings, steel garages, etc.

### The Edwards Manufacturing Company

1026-1076 Lock Street, Cincinnati, Ohio

## For Sale

Registered Delaine Rams.

I. W. GEORGE, New Comerstown, Ohio.

## ABERDEEN ANGUS

COWS AND HEIFERS

And a few bulls for sale. Also a good black imported Percheron stallion, 9 years old; weight 1,950; sound; broke to work and sure.

J. O. GRING, DALLAS CENTER, IA.

## Hotel Convention

12th and Broadway, Kansas City, Mo.

Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall.

## Be an Auctioneer

Travel over the country and make big money. No other profession can be learned so quickly, that will pay as big wages. Write today for big, free catalogue of Home Study Course, as well as the Actual Practice School.

MISSOURI AUCTION SCHOOL,

Largest in the World.

NEXT TERM STARTS JAN. 4.

W. B. Carpenter, Pres., Room 340, 818 Walnut St., Kansas City, Mo.

Philip Mayhall of New London drove into Hannibal recently in a road wagon that was made for his father, George E. Mayhall, by the Hannibal Carriage Company in 1835. The original tires are on the wheels, the same old body bed and even the seat of the wagon are in good shape. Mr. Mayhall selected the wood and had it thoroughly seasoned for the vehicle. The harness, on the horse which was attached to this road wagon, was made by Louis Benedict of New London, thirty years ago, and the harness is still good—it is silver mounted.—Missouri Stockman.

## A Department For Women

### A COMMUNITY CANNING FACTORY.

A canning factory in every community which will make pin money for the young people and lighten the work of the women folk, is one of the many schemes of Otis E. Hall, the new director of boys' and girls' club work at the Kansas State Agricultural College. Mr. Hall comes to Kansas directly from his successful work with the rural schools in Montgomery County, Ind., and will direct the work of the agricultural college and of the United States government among the boys' and girls' clubs.

A steam canning device controlled by the government and selling for \$15 has been used successfully by him to utilize vegetables and fruit that otherwise would have been wasted.

### SUGAR CURED HAMS AND BACON.

To the American Breeder:—When the meat is cooled, rub each piece with salt and allow it to drain over night. Then pack it in a barrel, with hams and shoulders in the bottom, using the strips of bacon to fill in between or to put on top. Weigh out, for each 100 pounds of meat, eight pounds of salt, two pounds of brown sugar, and two ounces of saltpeter. Dissolve all in four gallons of boiling water, and after cooling cover the meat with it. Bacon strips should remain in the brine four to six weeks; hams six to eight weeks. This is a standard recipe, and has given the best of satisfaction.—Andrew Boss, Agriculturist, University Farm, Minnesota.

### HOW TO MAKE HARD WATER SOFT FOR WASHING.

To the American Breeder:—It's carbonate of lime that makes water temporarily hard. Such water can be softened by boiling.

Permanent hardness is caused by sulphate of lime. The only remedy lies in the use of some chemical. Cheapest and best of these are alkalies, as washing soda, borax and ammonia.

Washing soda, the most effective softener for ordinary use, should be used in the following proportions unless the water is very hard: For each gallon of water use two tablespoons of a solution made by dissolving one pound of washing soda in a quart of boiling water.

Borax is more expensive than washing soda, but is especially good for colored goods and wool.

Iron in water is harder to treat. The only satisfactory method is to add washing soda to the water and let it settle five or six days before using.—Annabell Turner, Instructor in Home Economics, Extension Division, University of Wisconsin.

### PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Summer number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

1054. Ladies' Apron. Cut in three sizes: Small, medium and large. It requires  $4\frac{3}{4}$  yards of 36-inch material for a medium size. Price, 10c.
- 9856: Ladies' House or Home Dress. Cut in six sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires  $6\frac{1}{2}$  yards of 36-inch material for a 36-inch size. Price, 10c.
1055. Ladies' Envelope Drawers. Cut in five sizes: 22, 24, 26, 28 and 30 inches waist measure. It requires 2 yards of 36-inch material for a 24-inch size. Price, 10c.
1060. Child's Dress. Cut in four sizes: 6 mos., 1, 2 and 4 years. It requires  $2\frac{1}{2}$  yards of 36-inch material for a 4-year size. Price, 10c.

1079. Costume for Misses and Young Women. Cut in four sizes: 14, 16, 17 and 18 years. It requires  $5\frac{1}{2}$  yards of 44-inch material for a 16-year size. Price, 10c.

1059-1062. Ladies' Costume. Waist 1059 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1062 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires  $8\frac{3}{4}$  yards of 40-inch material for a medium size. The skirt measures  $1\frac{7}{8}$  yard at the lower edge. This illustration calls for TWO separate patterns, 10c FOR EACH.

1078. Girls' Dress. Cut in four sizes: 8, 10, 12 and 14 years. It requires  $4\frac{1}{4}$  yards of 36-inch material for a 10-year size. Price, 10c.

1063. Girls' Coat, with or without Cape Portions. Cut in five sizes: 6, 8, 10, 12 and 14 years. It requires  $3\frac{1}{2}$  yards of 44-inch material for a 10-year size. Price, 10c.

### FALL PLANTING FOR BULBS.

To the American Breeder:—The time to plant bulbs is in early fall. For outdoor culture buy "first" grade bulbs of the following varieties:

For Tulips: Keiserkroon, tall, red and yellow; Chrysolora, yellow, dwarf; Rembrandt, dark red, dwarf.

High grade bulbs are never sold in mixtures. Plant the Keiserkroon variety nine inches deep; the other seven inches deep.

For Hyacinths, plant: Electra, blue, large; Charles Dickens, single, pink, fine; La Grandesse, single white.

Double varieties are inferior to single varieties. Plant hyacinths nine inches deep.

For Narcissus, plant: "Emperor," "Paper White" and "Poeticus."

Plant out of doors deep in rich, sandy loam soil. Drain well. After blooming allow the foliage to die away. Do not cut it. Good foliage means fine bloom next year.

For indoor culture bulbs rank supreme. The secret of success here lies in securing heavy root growth before the leaves are allowed to appear. To obtain this root growth, place bulbs in pots or pans five inches deep in a rich, sandy loam soil, well drained. Set away in a dark, cold place for several weeks. Water occasionally. Frequently these pots, pans, flats, etc., are "plunged" out of doors, covered with several inches of soil and left until after the ground freezes slightly. Then "lift," bring into the warmth and sunshine, water thoroughly as needed, but do not drown. Success is then assured. When buying, secure firm, clean, large bulbs, free from fungus disease. Better buy from dealers who import direct from Europe and who guarantee the quality of their stock.

Our best bulbs mostly come from Holland.

For forcing, buy bulbs in September. Plant in October and successively for Christmas and Easter bloom. Most bulbs force to bloom in about eight weeks after being brought into the sunlight. The best varieties for indoor culture are "Moreno" and "Roman" Hyacinths Freezia, "Refracta Alba," Van Thol Tulips, Double Roman and Paper White Narcissi.

Chinese Lilies and Roman Hyacinths may be grown in water in a Bovril Bottle, or surrounded by stones in a deep glass bowl of water. Remember: Plan deep; rich soil; perfect drainage; plenty of good roots before forcing, means good flowers. Not all varieties force well; the one noted above will.—H. F. Major, Missouri Experiment Station.

### NO "BACKACHE" IN KIDNEYS.

"Shameful lying seems to be a necessity in all fake medical treatment," says Dr. H. W. Hill, executive secretary of the Minnesota Public Health Association. "For instance, backaches are common. They are, therefore, advertised as invariably indicating kidney trouble. Most people with backaches believe this, and, so, call for kidney treatment. The fact is, kidney trouble almost never produces pain in the back. Backaches are caused by almost anything except the kidneys."

## COLLIES

Pups two months old, sired by my imported dog, and registered bitches; extra individuals with the best of breeding and plenty of grit, and make the best of workers with little training. Priced to sell quick.  
EMPORIA KENNELS,  
W. H. RICHARDS. EMPORIA, KAS.

## A World-Wide Response Greet The Silent Seven

Again the OLIVER has scored another triumph. Again it has raised the standard of typewriting, lightened labor for thousands of typewriter users, given greater speed, easier, smoother action.

Since our announcement of the new OLIVER NUMBER 7, it has aroused a furore of enthusiasm the country over. Experts have pronounced it the greatest advance in typewriter mechanics for a decade. Typists proclaim it perfection in lightness of touch, quick response and delightful ease of operation. Yet this beautiful machine, complete, equipped with Printype if desired, with all its added cost and value, is being sold at the same price as previous Oliver Models.

We earnestly urge you to see the new OLIVER NUMBER 7. In no other way can you so quickly appreciate the marvels of this masterpiece—so clearly understand its mechanical excellence—so surely convince yourself that in the new OLIVER NUMBER 7 typewriter building has reached finality.

# The OLIVER 7 Typewriter No.

The Standard Visible Writer

Automatic Devices  
—Easy Action

Now on Exhibition at  
Oliver Agencies

Equipped with "cushioned keyboard," with "anchor keys" and with a score of improvements, refinements and automatic features that make this model supreme.

The result is less effort, less eye-strain, greater speed, and a 25 per cent greater value. And yet any typewriter user anywhere can buy this splendid Model 7, on the same terms as previous models, for our famous 17-cents-a-day plan still applies.

Go see the new OLIVER NUMBER 7 at any Oliver Branch or Agency in the United States. Mark the beautiful simplicity of its construction. Note the rapidity with which it writes; its smooth, silent movement, how the minimum of effort is needed. Inspect the automatic features. Then compare its work with that of any typewriter you know. Try it on many kinds of work no other typewriter will do.

The Oliver was first with visible writing, first with Printype and it is but fitting that it should be first with automatic methods of operation.

#### OLIVER BOOK DELUXE

We have just issued a richly illustrated catalog describing the Oliver No. 7. A copy will be mailed free with our compliments if you send your name. A postal will do.

The Oliver Typewriter Co.  
102 W. 9th St., Kansas City, Mo.

Of all the different things that go to make up our bodies, almost the last and the least to ache is the kidney. Kidney trouble sometimes produces headaches, but people do not know this and neglect the sign entirely, taking headache powders or something equally harmful. The only safe way to discover whether you have kidney disease or not is to go to an expert physician and have a thorough examination made.

#### USE LOTS OF LIME.

If farming people generally realized the great value of lime and the great variety of inexpensive ways in which it can be used, its farm use would double within a year. The plague of flies could be greatly reduced and fertilizing value conserved (increased, in fact) by covering all accumulations of manure and the like with a good sprinkling. In hot, fly-breeding weather, this matter should be attended to daily. Time thus spent is just as essentially profitable as if it was put in plowing or cultivating. Big farms, on which much live stock is kept might use a carload at a time of this commodity.

Lime is a beautifier and a cleaner, and it costs very little compared with other disinfectants that are not nearly so effective.

It has great merit as a soil improver and as a destroyer of vermin. It is one of the best of disinfectants, and is good for pretty nearly everything from eradicating a bad smell to curing a sore on a horse's back.

Here are a few of the things that lime will do for the farmer:

It will keep the poultry houses sweet and wholesome, and free of vermin; remove all foul odors from a duck yard, a cesspool or a pig pen; make the chickens lay hard-shelled eggs; keep away rats and mice; give an appearance as well as a condition of cleanliness to damp, soggy corners; sweeten sour soil; heal a sore on an animal, and keep it free from flies; make a muck heap richer, and remove the offensive odor of decaying humus; protect trees from scale and other insects; lighten the interior of a barn or hen house.

#### Whitewash That Sticks.

There are other uses for lime around the farm, but these are enough to justify the farmer in keeping a supply all the year around. I do not go in as strong for whitewashing as the United States government and some other authorities do, but where it is not feasible to paint, a few coats of whitewash are fine for a barn or a fence. The objection that it rubs off and washes off is met by the fact that properly prepared whitewash will stick almost as well as cheap paint.

For indoor use flour should be used instead of glue to give the desired sticking quality. Glue is better for outdoor use and when used there should be some powdered rice mixed with it, and plenty of wash blue to make the mixture a brilliant white.

Well slacked lime sprinkled on the floors, ceiling and walls of a poultry house, then swept into all the crevices, will be more effective than either spraying or whitewashing with a brush. The dry lime when fresh is volatile and will find a lodgment in crevices that a liquid preparation cannot reach. When swept into the earthen floor of a chicken house it makes a preparation that will kill more vermin in a day than a barrel of patent lice powders will in a week.

The easiest way to air slack lime is to place a pack of the raw lumps in an iron wheelbarrow and sprinkle it with a quart of water, then add more water at intervals until all the lumps are dissolved and stir until the entire mass is a fine powder.

A peck of raw lime will make nearly a bushel of the slacked powder. It is best to slack it in small quantities just as it is needed, for it loses some of its virtues after standing too long in the air. Of course, care must be used not to apply it until it is thoroughly slacked, but it is at its best when it is still warm enough to burn the throat if it is inhaled. If the lime is good the user will find himself sneezing vigorously, unless he manages in some way to do his breathing mostly in the open air.

## THE ARDENNESE HORSE

By Leon Van Meldert, Cedar Bayou, Texas

The Ardennese horse belongs to one of the oldest classes of horses in Europe. In fact, he is the real *Equus Belgicus*, the prototype of the Belgian horse.

The history of the breed can be traced farther than that of any other breed. In the beginning of the quaternary period horses of that breed were hunted by the primitive people of Europe. Bones of more than 100,000 of these horses were found at Solutry, (Soane and Lorie) France, and they are broken, showing that the people of that epoch were feeding on their marrow. This was some 40,000 years B. C.

The bones of the head of the Ardennese horse have some particularities that are not found in the other breeds and it is thus that the Professors Sanson and Pietrement in France and Leyder in Belgium, have been able to ascertain the relation between the old *Equus Belgicus* and the actual Ardennese horse. The country inhabited by those horses are the actual Ardennes, a hilly and mountainous country in the southern part of Belgium, in Luxembourg, Northeast France and around Crier in Germany.

The Ardennese horse is a light draft horse. He is very hardy and easy kept. He is the real artillery horse used in Belgium, Germany and France. The test of war can show the high qualities of this horse. He is the most enduring horse in creation. He is strong and swift, able to trot and gallop with a heavy load, jumping ditches with ease. He is the best all-purposed horse, stylish enough to be used as a coacher. The pedigree of the breed is the most an-

to Coulose, ridden by Renaud, pursuing the Saracen chief, Bourgons, who rode an Arabian steed, and overtook him.

In 1717, the Russian Czar, Peter the Great, went for his health to Spa. His military eyesight saw immediately the qualities of resistance and vigor that there was in the Ardennese horses and he bought 80 mares which he took within East Russia. Since that time every year Ardennese stallions are taken to Russia to improve the native breeds of horses.

Dr. Th. Ronner in his "Hippologie Remembrances of Russia," speaks very highly of those Russian Ardennese horses. After the war of 1812-13, says he, it was wonderful how those horses were in good condition, and able to draw the heaviest artillery.

The great Napoleon of France had just come back from Russia where he had been defeated. In his memories he says that during that campaign the Ardennese horses and the Cretons had been indefatigable and were the only artillery horses that escaped from privations and snow storms during his wars of 1812 against the Russians. In one night during that war of 1812, he lost 30,000 horses from cold weather and exposure.

Who could deny the high qualities of the Ardennese horses when Julius Caesar, Charlemagne, Marechal Courtenne, the Czar, Peter the Great, and the great Napoleon have given them diplomas of the highest grade?

Eugene Gayot, inspector of the French Breeding Stables, in 1836, classes the Ardennese horses among the noble breeds of Europe, with the

A NINE DAY OLD CAPSULE COLT.

P. B. Peterson, Sloan, Ia., Owns this Colt. A. M. Larson's Imported Percheron Stallion, Inedit (82728), Is Its Sire.

cient one. These horses were used by the Trevirians, one of the oldest Belgium tribes, a tribe of horsemen. Their name comes from Trebeca, daughter of Ninus, king of the Assyrians. They had already fought the Russians, been at war with Bavo, cousin to Priam, who after the battle of Tlium settled at Bavay in Hainault. They had also attacked the Romans under their third King, Tulus Hostilius, and Caesar himself had not been able to vanquish them.

Caesar, the Roman emperor, prized very highly the Ardennese horses. His best regiments of cavalry came from the Ardennes. Those regiments under the command of the generals, Vitellius, Valeno and Cecina, routed others in the plains of Bedriac near Cremone (Italy).

The Emperor Nero had in his stables four Ardennese mares that he was using in his chariot races. So great was the impression that the Ardennese horses had made in the olden times, that in all the ancient monuments of Rome and Greece, the horses represented belong to the Ardennese type, says Professor Sanson.

One of the best horses of the mighty Emperor Charlemagne was Bayard, an Ardennese. This horse was so strong that he could run ten leagues easily, carrying the four sons of the Duke Aymon. The same horse, says the legend, ran, in three hours, from Bordeaux

Thoroughbreds and the Anglo-Arabians.

In 1838 a great number of Ardennese colts were imported for stud purposes in Normandy by the Chevalier von Horick, general inspector of the French Stud Farms.

In 1861 an Ardennese horse ran 48 leagues against an English Thoroughbred in the neighborhood of Spa, in 16 hours. In 1900, Spiron, Ardennese stallion, born in Belgium, was champion draft stallion at the Paris Exposition, winning over the Percheron and other draft breeds of France.

There are a few Ardennese horses in the United States. They have been imported as Belgians. They are smaller than the average Belgian; in fact, they are a small Belgian. Most of them are under 15 hands. They are wonderfully good horses.

The war in Europe is killing great quantities of these valuable horses. It is a pity. Somebody here in America should start a ranch where such horses could be raised. This should be a grand thing for this country. This is something for Texas to do.

North America has two new things to be thankful for: that it has no "Triple Alliance" and no "Triple Entente"—whatever that is. Europe has 'em both, and the prescriptions by Dr. Carnegie, Dr. Bryan et al. seem to do no good.

#### TWO IMPORTED REGISTERED MARES.

For sale. Scaling over two tons. One black; 7 years; an International prize winner; other gray; 13 years; a Springfield championship winner. Both sound, clean, unblemished; good breeders and workers of outstanding class as their show records evidence, and again in foal to Jupiter 11. \$1,200 for pair.

W. T. WILKINSON,  
Eureka, St. Louis County, Mo.

## Special Price

On 11 Percheron mares, from yearling to aged mares; two young studs. All recorded in Percheron Society of America. Will sell one or all. Special price on the bunch. If you want a bunch of mares, get busy.

T. J. WYLAND, Kirkman, Iowa.

#### IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference any bank in Creston, Iowa.

A. LATIMER WILSON, Creston, Iowa.

#### IMPORTED and HOME BRED STALLIONS and MARES.

PERCHERONS, BELGIANS, SHIRES. The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

## Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.

C. G. ANDERSON Hector, Minn.

## 40 HEAD OF PERCHERON

Stallions and Mares Now on hand at Woodlawn Stock Farm. Prices right. Write us. SPOHR & SPOHR, Latham, Butler County, Kansas.

## Drouth Prices

On registered and high grade Percheron stallions, mares and colts. For particulars, address,

C. G. WELSH,  
Palmyra, Mo. Rte. 4

FOR SALE OR TRADE Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth Jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. BURNS,  
Argouin, Sumner County, Kansas.

#### Percheron, Belgian and Shire Stallions and Mares

from suckers up to six years old, including my herd stallion Adore, first premium and champion Belgian stallion at American Royal in 1912. All priced very cheap; good terms on bankable paper.

J. M. NOLAN Paola, Kas.

#### BELGIAN, SHIRE AND PERCHERON STALLIONS

and mares, also Standard bred stallions and mares, \$200 and up. E. P. Hamilton & Sons, Garden Grove, Ia. (Mention this paper). 23 miles S. W. of Chariton, Ia., 82 miles south of Des Moines, Ia., at Leroy.

#### PERCHERON STALLIONS.

I have for sale two black-grey Percheron stallions, registered in the Percheron Society of America; they are two year olds, weighing over 1,800 pounds each; will mature to better than ton horses; heavy boned and right every way. They are priced to sell. If you want the best at the right price, write me. M. E. LYONS, R. F. D. 4, Delaware, Ohio.

#### CLYDESDALE HORSES

Stallions and mares of all ages for sale. ALSO SHORTHORN CATTLE.

W. A. DeMerritt  
Route 2. Plainfield, Ill.

January 28—Spohr & Spohr, Latham, Kas.

#### Shorthorns.

December 16—C. F. Jones, Rippey, Ia.

J. A. Watkins, Warren, Ark., is advertising several stock farms for sale. Write him for particulars.

A. T. Milroy, Thedford, Neb., is compelled to sell his imported Belgian stallion on account of his fillies. This stallion is seven years old. Read the ad in this issue.

W. H. Richards, Emporia, Kas., has some fine Collie pups advertised in this issue, priced to sell. They are sired by an imported dog and registered bitches. Mr. Richards says these dogs have plenty of grit and make the best of workers with little training.

"To the Visio Remedy Ass'n., Chicago:—Enclosed find \$2.00 for one bottle of your medicine Visio. I used your Visio with success. It has cured my horse and I recommend it highly. This bottle is for another party.—Joel Morehead, Scottsville, Ky." The foregoing letter speaks for itself. See the Visio advertisement in this issue.

Manure spreaders, gasoline engines and cream separators are advertised in this issue by the Wm. Galloway Company, 1717 Galloway Station, Waterloo, Ia., but this company sells nearly everything in the way of farm equipment, no matter what you want. Do not fail to answer this advertisement and ask the Wm. Galloway Co. for its special catalogue.

W. S. Corsa, White Hall, Ill., will hold his annual public sale of high class Percherons in December.

As scarcity of good live stock becomes more apparent we recognize better the value of the opportunities for securing cheap land in the stock raising sections. For information on one of the best of these, address R. A. Smith, Colonization and Industrial Agent, Union Pacific, Room 373 U. P. Bldg., Omaha, Neb.

F. M. Lorimer, manager of the Miller Stock Farm, Olathe, Kas., has two new advertisements in this issue, describing jack and jennet stock and Standard-bred stallions for sale. Some bargains are offered and there is opportunity also to trade a good Percheron stallion or Hereford bull in one of the deals. Olathe can be reached any hour of the day from Kansas City, via two main lines of steam railroads and one electric line. No stock shown on Sunday.

The Briggs-Detroit, Detroit, Mich., one of the most successful of the present day well-nigh perfect makes of automobiles, is advertised on the back cover of this issue.

Some new roofing information is contained in the advertisement of the Edwards Mfg. Company, 1126 to 1176 Lock Street, Cincinnati, O. The Edwards Mfg. Company has advertised regularly in the American Breeder for the past three years, and we gladly recommend their products.

The Mantle Lamp Co., 391 Alladale Bldg., Chicago, Ill., is doing more to preserve the eyesight of people who cannot have cheap electric lights than possibly any other institution in this country. This, the Mantle Lamp Company, accomplish by selling at a moderate price a lamp which more than doubles the illumination of the ordinary lamp and reduces the consumption of oil. Address the Mantle Lamp Company for full information.

D. F. Bush, Minneapolis, Minn., wants to hear from men who have good farms for sale. Send cash price and description.

Nell Bros., Ogden, Iowa, want all our readers who are in the market for a high class jack to write them. They are pricing them right.

T. B. McClellan, Stratton, Nebr., Box 23, is advertising four jacks for sale or trade for Belgian or Shire stallion. Jacks guaranteed right in every way.

Spohr & Spohr, Latham, Kansas, have 40 head of Percheron stallions and mares for sale at the right kind of prices. Write them for particulars.

Carl E. Freeman, 801 Bales Court, Kansas City, Mo., is advertising an 800-acre ranch, all ready to occupy. This ranch is located in the central part of New Mexico. The ad is in this issue.

D. G. Kauffman, Garden City, Mo., is offering his 80-acre breeding farm for sale. Read the ad in this issue, it gives a good description.

T. J. Wyland, Kirkman, Iowa, is advertising 11 Percheron mares and two stud colts for sale at special price. He will sell one or all.

Breckenridge Bros., Olathe, Kansas, will sell one Belgian stallion and three jacks for the best offer, as they are closing out.

L. W. George, New Comerstowna,

# 440 ACRE STOCK FARM and 62 BREEDING ANIMALS

Stallions, Mares, Jacks and Jennets

ALL AT AUCTION

## LITCHFIELD, NEBRASKA, OCTOBER 28

9 Stallions: 5 Percherons, 3 Shires, 1 Belgian—1 to 7 years

17 Mares: 8 Percherons, 5 Shires, 4 Belgians—1 to 10 years

14 Jacks; all black and all registered—1 to 5 years old

21 Jennets; all but 3 registered—1 to 9 years old

Come the day before and get a good look at the farm

Terms on farm: \$1,000 cash; \$7,500 carried on the place; balance to be paid March 1, 1915.

Write at once for catalog; terms of sale, etc., and mention the American Breeder when writing

## HENRY BECK

Litchfield, Nebraska

Ohio, is advertising registered Delaine rams for sale in this issue.

The Big Miami Stock Farm, North Bend, Ohio, wants to exchange a Mitchell touring car for draft mares, fillies or mules. They will pay cash for two Clydesdale weanlings.

Spohr & Spohr, Latham, Kansas, proprietors of Woodland Stock Farm, start their ad of Percheron stallions and mares in this issue. They have now on hand 40 head and inform us they have been connected with breeding Percherons for over 20 years.

One of our best advertisers is Mr. Feil, president of the S. R. Feil Company, manufacturing chemists, Cleveland, Ohio, and his preparation—Sal-Vet—is fed by thousands of stockmen in every state where stock is raised. Read the Sal-Vet advertisement in this issue. The offer is certainly a fair one and readers may be assured that Mr. Feil will do as he agrees in every particular.

H. W. Bowman, Mt. Carroll, Ia., wants to trade his automobile for draft mares or cattle.

John T. Cameron, Odessa, Mo., has a Coach and Hambletonian stallion for sale, or trade; also a 7-year-old jack. Could use a good ton Percheron.

J. C. Crag, Dallas Center, Ia., has some Aberdeen Angus cows, heifers and bulls for sale; also a black Percheron stallion, 9 years old. Read the ad.

W. W. Shott, Lathrop, Mo., is offering his yearling jack colt for sale, also four other mammoth jacks. Read the measurements of this colt in this issue. He also has a registered Percheron stallion for sale, and will sell any or all of this stock cheap for cash or will trade for land within 100 miles of Kansas City.

H. A. Greenwell, Lakenau, Mo., starts his regular advertisement in this issue. Mr. Greenwell has registered saddlers, stallions, mares, fillies and geldings by Rex McDonald. Address him as above for information.

J. I. and A. W. Dennis, Maloy, Ia., make a public sale on October 27 of registered and grade jacks and jennets. The jacks range in age from suckers to 11 years old. They guarantee this stock to be as represented and will sell them at your own price. The advertisement is in this issue.

Douglas Points, White Clay, Neb., is offering 125 mules for sale. Look up the ad.

L. P. Vocum, Clarence, Ia., has three registered Percherons for sale, one stallion, one 7-year-old mare and one 5 months old filly.

Flstuh, in fact, nay blemish, detracts from the value and usefulness of a horse. Absorbine will reduce such enlargements without making it necessary to lay up the horse. Mr. William Ridenour of Bremen, O., reports the following: "You had a letter from me some time ago with regard to a fine horse I had which had Fls-

### R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

## A BRAND NEW IMPORTATION!

I was in France and Belgium all through May, making early, careful selections from the best stallions and mares to be found. These are now at my barns and ready for sale, along with some desirable American bred animals. It is a good time to buy.

LONZO McCLAIN & SONS, LIMA, OHIO

### WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

### Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

GEORGE EGGERT, Newton, Iowa.

## Paramount Stock Farm

Breeds and Imports

### Percherons, Belgians and Shires

Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. He is proving an excellent stock horse. Send your good mares to him and raise the best. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 pound horses.

WM. CROWNOVER,

Hudson, Iowa.

## THIRTY PERCHERONS AND BELGIANS

and one Shire. They range in age from 1 to 7 years; all sound and heavy boned; weighing from 1,800 to 2,200 pounds. There are 17 stallions and 13 mares. I will also sell my herd stallion, Jupiter 65723, coming 5 years old; weight, 2,200.

These stallions are all sold under a guarantee to be 60 per cent foal getters. I have four year olds that weigh 2,200; 2 coming 3 that weigh 1,800. Can sell a good ton stallion for \$750; sound and right in every way; some a little higher, and some lower. I will sell at a bargain to early buyers. I have

PETER J. EGGERS, DENISON, IOWA.

both imported and home bred Stallions and mares of all ages for sale.

## WANTED

Draft mares, fillies or mules in exchange for auto, Mitchell touring car; five passenger; fully equipped.

Will pay cash for two Clydesdale weanlings, pure bred or high grades. State what you have in first letter.

BIG MIAMI STOCK FARM, North Bend, Ohio.

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT, Cedar Bayou, Harris County, Texas.

## IMPORTED BELGIAN STALLION

For sale.—Seven years old; bright bay; weight 1,850 pounds. This horse crosses equally as well with pony mares as large ones. His fillies are in his way, so must dispose of him. If interested, write for particulars.

A. T. MILROY, Thedford, Thomas County, Neb. Box 32.

## FIFTY STALLIONS AND MARES.

\$250 to \$1,000 Each. Write for my illustrated Circular telling why I can save you money on the purchase of Percheron or Belgian stallion or mare.

A. W. GREEN, Middlefield, Ohio. R. R. Sta., E. Orwell, on Penna. Ry., between Ash-tabula and Warren.

## PERCHERONS

For sale. Three registered Percherons; one 3-year-old black stallion; one of the big drafty kind.

One 7-year-old black imported mare with 5 months old filly by her side, and in foal again. These horses have size and quality and are sound.

L. P. YOCUM, CLARENCE, IA.

## FOR SALE AT A LET LIVE PRICE.

A 3-year-old black-gray registered Percheron stallion; recorded in the P. S. of A. Has size and quality. Can show dam and sire and a few colts by him. For particulars, write

A. H. TAYLOR, Sedgwick, Harvey Co., Kas., R. 4, Box 85

tula. I wish to say that I used your medicine according to your directions and it opened on the 8th day and was healed up in 28 days and never lost a day's work while treating him. After the core was removed you could place an ordinary cup in the opening. You will know that it was a bad one. I use Absorbine for all galls and bruises and find it to be a permanent cure. Have recommended it to plenty of others who are using it now." Use Absorbine for any blemish or bunch which may disfigure your horse and thus decrease his selling value. Horse book giving special directions sent free on request. Absorbine \$2.00 a bottle at druggists or delivered. W. F. Young, P. D. F., 388 Temple Street, Springfield, Mass.

W. P. Schney, Marion, Ill., is advertising several jacks for sale, ranging in age from yearlings to 10 years old.

William M. Wegman, Bladen, Neb., is offering his standard bred stallion for sale. Write him for particulars.

A. H. Taylor, Sedgwick, Kas., has a 3-year-old registered Percheron stallion for sale at the right price. Write him for full information.

Albert Carr, Maryville, Mo., is offering eight jennets, three Percheron stallions and four jacks for sale or trade. Read his ad in this issue, and then write him.

## CANADIAN HORSE IMPROVEMENT.

A Canadian consular report says that at the seventh annual Vancouver Horse Show, held last summer, horses from Eastern Canada and from New York, California, Oregon and Washington were entered in the various classes, and the liberal prizes offered by the association were competed for by some of the best horses on the American continent. Many prizes went to animals from the United States.

An interesting feature of the annual

event is the increasing number of British Columbia horses exhibited, and the improvement in the standard shown, especially in the heavy draft, carriage and light harness classes. The horses shown this year from the provincial breeding farms evidence the fact that British Columbia is making rapid progress in improving certain breeds, under the auspices of the local government, which is doing much for the animal industry.

## SUGGESTS GOOD SUBJECT FOR DISCUSSION.

To the American Breeder:—I want to compliment your Question and Answer department. There is so much ignorance and cruelty in the amateur doctoring of poor animals that it is appalling. Here are two or three instances of ignorant, barbarous treatment:

For big jaw, tie a horse down, put a board on the swelling and hit the board hard with a sledge hammer. Pour a quart of coal oil down a horse's nostrils for colic. Cut the toes off of goats into the quick to keep them from straying. Run a hot iron through the swelling of a fistula. This might cure.

You ask for a suggestion for some

## CAPSULE COLTS A FREQUENT FEATURE IN COLT SHOWS.

Five Capsule Colts Shown in a Ring of Thirteen, at the Holton, Kas., Fair. The Two on the Left, Held by Bruce Saunders, Won First and Second Prizes.

additional department in the Breeder. I would like to see your paper take up the question of the common axle in use. It is out of date; a horse killer; dirty and wasteful of time, money and horse flesh. I would also like the wide tire question ventilated. In my opinion, and in this part of the country, and I have no doubt in many others, the counties are spending thousands of dollars for grading roads and taking no steps to maintain them. If part of this outlay was spent to encourage the use of wide tires the roads would not be destroyed as soon as made.—Stanley Turner, Tom Green County, Texas.

## QUARANTINE RAISED ON MEXIAN BEEF CATTLE.

Hereafter, cattle from quarantined districts in Mexico which are intended for immediate slaughter in the United States can be shipped direct to slaughtering centers in this country without the sixty-day detention on the border to which they have hitherto been subjected.

An amendment to the regulations governing the shipment of cattle from tick-infested regions, providing for this, has been signed by the Secretaries of Agriculture and the Treasury, and goes into effect immediately. This amendment is known as Amendment No. 1 to Bureau of Animal Industry Order No. 209.

Under the former regulations, cattle shipped from tick-infested areas in Mexico were kept within the quarantined area of Texas for sixty days as

## FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

a precautionary measure against the spread of the pest in the rest of the United States.

## HOW IMPORTANT IS COLOR?

To the American Breeder:—I would like to ask the readers of your paper what color horse they would choose as their first choice. What I want to know is this, what color should a horse be to stand the most extreme heat and the most extreme cold and the most wear and the longest lived? What color can be seen the farthest in day time, also at night? —L. D. Carter, Canyon County, Idaho.

## USE HUMANE COLLAR WITH SPLENDID RESULTS.

To the American Breeder:—In a late issue you asked for information regarding the humane collar. We are working this collar on our Percheron stallion with splendid results. He does all sorts of work from pulling a light delivery wagon to heavy plowing and has never showed sore shoulders or any trouble whatsoever. We have worked it with equal success on an 800-pound pony. This stallion is very heavy in the neck and his former owner, after exhausting the patience of his local dealers, sent to not less than half a dozen out-of-town firms to try to get a collar which would fit him,

## ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone, or similar trouble and gets horse going sound. Does not blister or remove the hair and horse can be worked. Page 17 in pamphlet with each bottle tells how. \$2.00 a bottle delivered.

Horse Book 9 K free.

ABSORBINE, JR., antiseptic liniment for mankind. Reduces Painful Swellings, Enlarged Glands, Goitre, Wens, Bruises, Varicose Veins, Varicosities, heals Old Sores. Allays Pain. Will tell you more if you write. \$1 and \$2 a bottle at dealers or delivered. Book "Evidence" free. Manufactured only by W. F. YOUNG, P. D. F., 388 Temple St., Springfield, Mass.

## Don't Have a Blind One

## "VISIO"

A Remedy for Moon Blindness

(Ophthalmia), Cataract and Conjunctivitis. Shying horses all suffer from diseased eyes.

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE. \$2.00 per bottle, postpaid on receipt of price. VISIO Remedy Ass'n, 2475 Calumet Ave., Chicago, Ill.

## HUMANE STALLION COLLARS

These collars are the only kind suitable for working on a stallion. We make them to fit any size and kind of trace. In ordering describe style of hames you use. If single trace hames be sure to state width of trace and length of hame tug from hame to buckle. you use chain or Moeller hook traces, so state.

Sizes 15 to 25 inches, \$7.50 each; larger than 25 inches, 50 cents extra. We prepay shipping charges.

## WHEAT PEST THAT WILL BEAR WATCHING.

The little insect that causes an annual loss in this country of thousands of bushels of wheat and known as the "oat aphid," can scarcely be controlled when once it has gained headway. By proper precautions, however, serious outbreaks can be prevented. This insect often escapes notice but it is probably the most widely distributed of the important plant-lice which attack wheat and oats, and its depredations are only excelled by the so-called "green bug." How the oat aphid may be combated by a destruction of its breeding places, by cultural methods and by spraying, is outlined in a bulletin (No. 112) shortly to be issued by the United States Department of Agriculture,

## COLORADO IS MORE THAN WELCOME.

To the American Breeder:—We appreciate your kind letter of September 18th and the authorization to give us the use of the material published in your paper for our News Notes articles, providing, of course, due credit

**FOR SALE AT HALF THEIR VALUE.**

One 2,200-pound blue roan Belgian stallion 6 years old; one of the biggest draft horses in Iowa. One black Percheron; 4 years old; 1,900 pounds. One chestnut sorrel Belgian; 7 years; 1,800 pounds. One very dark bay Clydesdale; 1,700 pounds. One big black jack 15½ hands; big bone and a fine looker; sure and well broke to mares. This stuff will be sold cheap as I am making a change in my business.

This is not old trading stuff. We can prove their value here at home where they have been successfully used and never overdone.

We breed the big, smooth Poland China hogs and ship them on approval east or west; no money until you see them. Will refer you to any bank in our city.

**M. P. LYDON,**

Cresco, Howard County, Iowa., R. F. D. No. 1.

**ONE HORSE---THREE JACKS**

For sale. Imported Belgian horse; 10 years old. This horse is an extra good individual; color bay, with star; weight 1900 pounds. Price \$800. Three extra good jacks. As we are closing out, this stock will be sold for the best offer.

**BRECKENRIDGE BROS.,**  
R. F. D. No. 5. Olathe, Kans.

**For Sale or Trade**

Eight jennets, 3 black Percheron stallions, from 2 to 7; 4 good jacks, sucklings to 7 years. Would accept a ton Belgian or Percheron stallion or pair of mares of either breed. Would consider a sorrel or black saddle stallion on jennets.

**ALBERT CARR, MARYVILLE, MO.**

**WANT TO TRADE**

My Stever automobile for draft mares or cattle. Describe in first letter what you have. This car retailed at \$1,850; in good running condition; five passenger; 40 horsepower. Address

**H. W. BOWMAN, MT. CARROLL, ILL.**

**125—MULES—125**

For sale. Suckers to 3-year-olds; 20 geldings, 55 mares. This ad appears but once.

**DOTGLAS POINTS, White Clay, Neb.**

is given. We often feel that material in the American Breeder should be placed directly before the farmers of the state through our News Notes service, but we have not made full use of this material in the past.—Chas. A. Lowry, Pres. State Agricultural College, Fort Collins, Colo.

**STUDENTS GETTING VETERINARY PRACTICE.**

At the present rate, the senior students in veterinary medicine at the Kansas Agricultural College, Manhattan, Kas., will have 1,200 patients to treat this year, says R. R. Dykstra, professor of surgery. All kinds of animals are presented for treatment, and the work is representative of what an actual veterinarian will have to do. All the work is performed by the students under the direct supervision of the clinician in charge. Treatment is free except where the expense of the medicine is heavy or where the animal is taken care of for any length of time. In these cases, 50 cents a day for old horses and 25 cents a day for colts is charged.

**SOME FAMILY, HOWEVER, DESPITE BAD LUCK.**

The recent forced destruction of Belsire 2:18 because of a broken leg, caused by a kick received while breeding a mare, recalls what an unlucky family of sons Beautiful Bells produced. Her first son, St. Bel 2:24½, died suddenly of peritonitis at nine years. Her second son, Chimes, escaped the curse and lived to be 26 years old. He died from exhaustion while being driven from the home of his old owner to that of a new one. Bell Boy 2:19¼, the third son, was burned to death at the age of five. Bow Bells 2:19¼ died at 15 years from a ruptured blood vessel. Electric Bell died suddenly at the age of fourteen. Belsire 2:18 had to be destroyed at the age of 23, as previously explained. Day Bell died of pneumonia at six years. Adbell 2:23 had to be destroyed at nine years because of a broken leg. Monbells 2:23¼, the last foal of his dam, was found dead in his paddock at a comparatively early age. Beautiful Bells

herself lived to be 32 years old, but her sire, The Moor, died when only eight years old.—The Horseman.

**WHAT TIME DID UHLAN MAKE?**

To the American Breeder:—Your records will show I am a subscriber to the American Breeder. I think it one of the best breeding papers we ever got hold of. Am young in the breeding business and find your paper very helpful; would not be without it. For profit I think the draft horse (and I might say the Percheron is as good as any) is far in the lead. But I love a good race horse and now own the fastest harness horse in White County, Ind., a pacer. I see in the American Breeder of August 20 where Uhlán trotted a mile in 1:54½, beating all records. Now several here doubt this, but I don't. We got a little bet up that Uhlán did really trot a mile in 1:54½. Will you please send me C. K. G. Billings' address, and also state whether or not it is a misprint in August 20 "Breeder."

We had one of the worst droughts this year ever known in Indiana. Everything is high, hay especially, selling readily for \$20 a ton. Horses and mules have rallied quite a bit since several orders have been received from Europe. Most any average light horse from 1,000 to 1,200 pounds will bring \$130 to \$160, and the better class of draft horses being around \$200 or better, and from all appearances brood mares will soon be at a premium as there are so many mules being raised. My fall breeding to the stallions has been the heaviest that I ever remember.—Will G. Collins, White County, Ind.

Editor's Note—You can address Wm. H. Knight, 137 South Ashland Blvd., Chicago, Secretary of the American Trotting Register, for confirmation of this report.

**BREAKING A PACING RECORD.**

The world's record for the one mile team race for pacers to four-wheeled vehicles on a half-mile track was broken at the Iowa State Fair this fall. Franklin Pierce and Buck

Muscovite, entered by W. S. Pike of Mena, Ark., took two straight heats, and in the second heat lowered the mark to 2:10¼. The former record was 2:13½.

There was only one other entry in the event. Billy Murray and Bertha Creighton, who drew the pole, set a fast clip in the first heat, but the record beaters forged to the front with a flourish on the home stretch. With the inside track for the second heat, the star pacers kept in the lead all the way, our illustration showing them in that position.

**PARASITIC DISEASES.**

To the American Breeder: Parasitic diseases have caused serious losses among our domestic animals, and are often diagnosed as some other malady showing similar symptoms. Heavy rainfall serves to convey eggs and young worms from place to place. Animals pastured on low ground or on infested ground are quite liable to parasitic diseases.

Medicine is often of little value in dealing with parasites. As soon as a dangerous parasite appears on a farm the healthy animals should be removed to high ground and allowed only pure water to drink. Pastures and yards where infested animals

**Did you see the American Breeder's Photographs, last issue, of the Field He had to Beat?**

We have for sale 15 of his weanlings and a few of his young stallions—two and three years old.

**JAS. A. HOUCHIN, Jefferson City, Mo.**

have been kept should be planted with cultivated crops for several years. Infested animals should have dry feed at frequent intervals and access to salt at all times.

Carcasses of diseased animals must be burned or deeply buried.—W. L. Boyd, Assistant Veterinarian, University of Minnesota.

**SUCCESSFUL SALE FOR MONSEES & SONS.**

Nearly \$35,000 worth of jacks and jennets were sold at auction on the 20th and 21st by L. M. Monsees & Sons. As usual the big sale was held on the Limestone Valley Farm, near Smithton, and breeders of jack stock from all over the country were present.

The heaviest buyer, however, was A. M. Duff, of Kansas City, who bought to head the stud he is establishing, the yearling, Belle Boy of the Grand Champions, paying the record price of \$1,700 for a jack of that age. The top price of the sale was \$1,825, paid for Limestone Big Boy, by J. T. Moore, of Davis and Moore, Lewisburg, Tenn. W. F. Schade, of Jackson, Mo., bought the grand champion jennet, Belle of the Grand Champions 2d, paying \$1,300. The jacks averaged \$713.51, and the jennets \$229.92.

**"ONE GOOD TURN DESERVES ANOTHER."**

To the American Breeder:—Having had good success advertising in the American Breeder, in the past, I am mailing another ad of my Percheron stallion which I have for sale. Let me know cost of this ad and I will send same at once.—C. A. Folts, York County, Neb.

**CRIMSON CLOVER A SUCCESS ON SOUTHERN SOILS.**

Crimson clover is a demonstrated success on practically every soil type in the South where the drainage is good. Its ability to succeed on nearly every kind of land in the cotton belt, from waxy clays to light sandy loams, makes it one of the best winter cover crops and soil builders for cultivated fields in this region, is the conclusion reached by the U. S. Department of Agriculture after exhaustive experiments with this crop.

Crimson clover is just as valuable as a soil-improving crop as cowpeas, and the cotton fields of the South should be covered during the winter with this valuable clover to furnish abundant winter grazing for all classes of live stock; to prevent soil erosion, and to enrich the land with nitrogen.

Crimson clover does best on a well prepared, well drained, well settled and a fairly fertile seed bed. The middles of a clean cultivated cotton field make an almost ideal seed bed for sowing crimson clover. The time of seeding is determined by the latitude. When sown too early the young plants are liable to be killed by hot, dry weather. In the northern third of the cotton belt probably the best results are obtained by sowing between September 1st and October 10th; in the central third of the cotton belt from September 10th to October 20th, and in the southern third of the cotton belt from September 20th to November 1st. Successful growers of crimson clover, appreciating that the hot sun and the dry condition of the soil affect germination, usually endeavor to sow just after a rain or when there is prospect of rain.

**SADDLE STALLION, PERCHERONS AND 10 JACKS.**

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

**W. L. Graham,**  
Mackville, Washington County, Ky.

**REGISTERED SADDLERS**

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Fos McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

**H. A. GREENWELL, LAKENAN, MO.**

**RIDING AND DRIVING MARE WANTED**

Need not be registered, fancy or five gaited, but must be serviceably sound, perfectly safe for lady to drive, have an easy canter and be in a healthy condition for breeding. Will pay only a moderate price. Please give full description and price in first letter.

**AMOS BURHANS, Waterloo, Iowa**

**MILLER STOCK FARM**

**Bargains in Standard Bred Stallions.**

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade on the above.

**F. M. LORIMER, Mgr., OLATHE, KAS.**

**STANDARD BRED TROTTING STALLION**

For sale. For particulars, address **WM. M. WEGMANN, BLADEN, NEB.**

**STANDARD BRED STALLION BARGAIN.**

King Romeo 59453 A. T. R., mahogany bay; 16½ hands; 1,300 pounds; 5 years old; strictly sound; an unusually fine individual and highly bred. Will sell right, or trade on Percheron stallion or team of mares, as I do not wish to keep a horse for public service. **J. C. DUNN, DALTON, NEB.**

**REGISTERED MORGANS FOR SALE.**

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring. **RICHARD SELLMAN, Rochelle, Texas.**

**COACH AND HAMBLETONIAN STALLION**

For sale or trade; 8 years old; 16½ hands high; 1,600 pounds; good breeder and a show horse. Colts to show. Also my 7-year-old jack; 59 inches high; 30-inch ear; 64-inch girth; 8½-inch bone. He is well broken and a good breeder. Black, with white points. Could use a good ton Percheron. Also my 105-acre farm, 40 miles east of Kansas City; 6 miles from Odessa, Mo. **JOHN T. CAMERON, Odessa, Mo.**

**Shetland Ponies**

I have 19 head of full blood Shetland ponies for sale. A stallion, brood mares, 2-year-olds and yearlings. Variety of sizes and colors. **O. M. JOHNSON, ERIE, KAS.**

**EXCELSIOR SHETLAND PONY FARM.**

Registered and High Grade Ponies for sale. **W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.**

## Register Jack Stock Now

During the past year more than 4,000 jacks and jennets have been registered in the Standard Jack & Jennet Registry of America. This one year's registration alone is greater than the total number of living animals in all other jack registry associations combined, excepting the Standard Registry. The marvelous growth of this association is evidence that practically all of the breeders of jacks and jennets in this country have united in recording with this association. The old plan of waiting until an animal was sold before registering is going out of date. Breeders are now realizing that if they ever expect to have a standing as breeders of registered animals they must record their breeding stock now.

On June 1st of this year new rules went into effect; 15 days' grace were granted for those who thought the change was a bluff, that they might get their stock in. On the first of next June new changes will take place which will make the requirements very stringent. All those who have jacks and jennets not yet recorded should read the rules below and attend to this important proposition at this time. Now, when the stock is coming in from the pasture they will carry more flesh, as a rule, than later on, which will make it possible for many an animal to be registered that would fail after becoming thin. It will be necessary also to get new application blanks, when the requirements change.

Those having jacks and jennets to sell have realized that the buyers are demanding registered stock. This demand is growing. It will only be a question of a few years until unregistered stock will not command good prices. The Standard Association stands for progress. The rules will soon be so stringent that only the offspring of registered sires and dams can be recorded.

We have received many complaints from breeders concerning the changes which went into effect last June. Many of our readers who were cautioned about putting it off now have animals that can never be recorded in a good, strong association—the only one that should be patronized. We do not feel that we are to blame for these complaints. We printed numerous notices stating that the rules would change and advised every one to get their stock registered. We believe every jack and jennet owner or breeder will do their friends and neighbors a good turn by notifying them of the proposed changes in the rules on June 1, 1915. It is the intention of this association to continue to tighten these requirements. Within another year this record association will have more animals registered in it than the average standard live stock record association that has been in existence for a quarter of a century. This growth is marvelous.

There are a lot of good animals that should be recorded soon. Our advice to every owner of jacks and jennets is to register the entire herd, and do it now.

Write to Wm. E. Morton, 920 Scarritt Bldg., Kansas City, Mo., for blanks and further information. The present rules, which will be in effect until next June, are as follows:

1. Each application must give animal's name, color, sex, date of foaling, and name and address of owner. Also give breeder's name and address if possible.
2. Jacks must measure 14½ hands, standard, in height; at least 62 inches around the heart girth in average condition, and at least 7 inches around the front leg at the smallest place between the ankle and the knee, the leg to be normal size.
3. Jennets must measure 14 hands, standard, in height; at least 60 inches around the heart girth, and at least 6½ inches around the front leg at the smallest place between the ankle and the knee, the leg to be normal size.
4. Any color admitted, upon compliance with the requirements of rules 1 and 2, 1 and 3, or 1, 5 and 6.
5. Young undeveloped jacks and jennets may be registered when their sires and dams are registered in this Registry, provided the sire fills the above measurements.

6. Each application for the registry of an animal under rule 5 must give the measurements of the sire (see rule 2), unless the sire was registered as foundation stock under rule 2.

7. Each application must be sworn to before a Notary Public or Justice of the Peace.

8. In registering foundation stock give the names (barn name) of sires and dams as far as possible.

9. This Registry will not recognize any other Jack Registry unless the animal meets the requirements of this Registry.

10. The transfer of a jennet must be recorded before the new owner can record her offspring.

11. The fees in the Standard Jack and Jennet Registry of America are:

(a) For registering jacks and jennets, one dollar to members and two dollars to non-members, for each animal registered.

(b) For duplicate of lost or destroyed Certificate of Registry, fifty cents to members and one dollar to non-members for each duplicate.

(c) For certified copy of pedigree, one dollar. (An uncertified copy of a pedigree will be furnished free of charge to the breeder or owner.)

(d) Membership fee is ten dollars.

(e) Transfers will be made free of charge in all cases where the application for same, and the certificate of registry for the animal to be transferred, is received at the Registry office within 60 days from the date of the sale. Otherwise, a fee of fifty cents to members and one dollar to non-members will be required.

(f) The fee, in all cases, must accompany the application.

**NOTE**—We are now registering Jacks and Jennets that fill certain requirements as foundation stock, and it is not necessary to have the sire and dam registered or their ancestry traced, provided the animal fills the requirements of this Registry, as given in the Rules of Entry.

A REMARKABLE COLT FROM CAPSULE SERVICE.

Capsule jack colt at 16 months, belonging to T. E. Collins. Height 59 inches; heart, 62; flank, 66; bone below knee, 8¼; below hock, 9¼; ears, tip to tip, 33½; weight, 800 pounds.

### TWO YEARS' EXPERIENCE WITH HINNIES.

To the American Breeder:—I have had two years' experience in hinnie breeding. I bought 20 head and bred by the capsule method, to a ton Percheron horse. I sold two colts at \$100 each when they were yearlings, and the balance for less money. They are not hard to get in foal if you watch them closely, and they are a wonderful animal to have in a pasture that has weeds or brush in it.

I am planning to leave this place and go to a city to practice medicine and will dispose of my stock. Will buy enough good ones to complete a car, and will sell them at \$20 per head,

in foal. Four of them are bred to a thousand-pound Missouri jack. I was planning to increase the size of my stock. At present I have three large black ones that look like Missouri jennets. The stock was bought from Mexicans that were using them for farming, and they are gentle and have plenty of bone. You can make no mistake by going into hinnie breeding, if you get good stock that is sure to breed.—N. A. Schwald, Colfax County, N. M.

## FOR SALE

One car choice jennet burros, bred to horse. Write, N. A. SCHWALD, Maxwell, N. M.

## Public Sale of Registered and Grade Jacks and Jennets

**TUESDAY, OCTOBER 27**

At farm, 4½ miles north of Blockton, Ia.; 3 miles west and a half mile north of Maloy on Chicago Great Western R. R., and 8 miles south of Clearfield on Burlington R. R.

### 24 Head--11 Jacks and 13 Jennets

Jacks ranging in age from suckers to 11 years old, including our herd jack, Stainbrook 7321. Some good young stock in this sale that are bound to make the buyer money. Stock not fat and will not sell very high. Here is your chance to buy a Northern grown jack, one that will stand the climate, at your own price.

In this sale we will offer our 4-year-old Percheron stallion, Jumbo 54128. This is an extra good young horse; weight over a ton; right in every particular. All stock guaranteed as represented.

**J. I. & A. W. DENNIS, Maloy, Iowa**

Auctioneers: Cols. R. L. Harriman, M. A. Griffith.

Lunch on Grounds.

## What Breeders Say About Jacksorine

(A DIFFERENT LETTER IN EACH ADVERTISEMENT)

"I have used two cans of your Jacksorine and I regard it as being as good for jack sores as anything I have ever used. Have been in the jack business for over 30 years.—J. W. McCanse, Mt. Vernon, Mo."

Jacksorine undoubtedly is the best remedy for jack sores ever put out. It is put up in large self-sealing containers from a scientific prescription and was long used with absolute success by the president of this company on his own stock. Remember, the price is \$3.50 per can, postpaid. Remit by P. O. order or bank draft to

**O. P. WILSON & CO.**

Lock Box 489,

Kansas City, Mo.

### MILLER STOCK FARM

Jack and Jennet Bargains.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull.

F. M. LORIMER, Mgr., OLATHE, KAS.

## ANOTHER GOOD ONE

Jack colt foaled October 3, 1913; measurement October 3, 1914. Height, 55 inches; girth, 52 inches; length, 69 inches; head, 25 inches; muzzle, 21 inches; ears, 31 inches; hock flat way, 7 inches; bone, 7 inches. I own the sire and dam of this colt, also four other large size mammoth jacks ranging in age from 3 to 6 years old. Two extra good 2-year-old jacks and a herd of extra heavy bone mammoth jennets, and a registered Percheron stallion 3 years old; black in color; will make a ton horse in another year.

I will sell any part or all of this stock cheap for cash, or will exchange for land within 100 miles of Kansas City. Address

OWL HOLLOW STOCK FARM, W. W. SHOTT, LATHROP, MO.

### FAIRLAND JACK & JENNET FARM.

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.

### JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kan.

## --JACKS--

For sale. Two yearlings; 2, 3 and 4; one 10-year-old. Anyone needing jacks would do well to correspond with me. W. P. SCHNEY, MARION, ILL.

### GOOD JACK WANTED.

I have a few young jacks and 17 jennets and must sell the bunch at once or make some trade to get a jack not akin and good enough to breed the jennets to. They are big, black, mealy nosed and good.

JOHN A. EDWARDS, Eaglewood, Kan.

CONCRETE FEEDING FLOORS AND HOG WALLOWS.

The saving principle of feeding floors has long been recognized by successful breeders and feeders of live stock. The trouble, heretofore, has been to obtain an entirely satisfactory material for floor construction. Wooden floors kept the feed out of the mud and dust and not only saved every particle of grain, but also prevented wheezing coughs and otherwise temporarily improved the health of the animal. However, in a short time, the best wooden floors rotted out and became infected with disease germs. Often floors had to be burned to free the farm of hog cholera.

In concrete the farmer and breeder have found an ideal floor material. Such floors not only effect a saving in feed, a shortening in time of fattening and a decrease in labor, but also afford perfect protection to the health of the animal. Concrete floors do not soak up water and therefore cannot become infected with disease germs. Their surfaces can be easily cleaned and thoroughly disinfected with oils and dips. Rats cannot nest under them. Careful tests have shown that concrete floors, through the saving of grain and manure alone, pay for themselves in the short period of one year.

How to Build Feeding Floors.

Feeding floors are merely several sidewalks laid side by side, and the same general rules of construction apply to them. Choose a site in the lot where the ground is slightly sloping, well drained and wind-protected, and convenient to feed and water.

Excavate to a depth of 12 inches for the drainage foundation, and around the outside edges of the entire floor dig a trench 12 inches wide and 18 inches deep. (This trench, filled with concrete, prevents hog wallows from undermining the floor and keeps the rats from nesting under it.) Fill all of this space (except the trench) to the natural ground level with well tamped coarse gravel, crushed rock, tile culls or brickbats. This fill forms the drainage foundation as for sidewalks.

The floor must be graded or sloped so that water will not collect on it in the winter and so that the manure washings may be caught by the gutters and run to the water-tight concrete manure pit. (To shape the gutter, make a mold or templet by rounding the corners on the flat side of a 6-foot length of 4 by 6 inch timber.) A gentle slope, toward the low corner, of 1/8 to 1/4 of an inch for each foot of length or width is sufficient. This is secured by the use of a heavy grade stake at each corner of the floor, a straight-edge or a grade line, and a spirit level.

It is an advantage to have a feeding floor its full thickness above ground. Make light floors 4 inches and floors subject to heavy loads 6 inches thick. For the forms use 2-inch lumber of a width equal to the floor thickness. Begin on a low side of the floor. Mark the grade height of each corner stake and set the forms to a grade cord stretched from stake to stake. Use only good materials and mix the concrete 1 part Portland cement to 2 1/2 parts sand to 5 parts screened gravel or crushed rock, or 1 part Portland cement to 5 parts bank-run gravel. Measure the materials exactly; count 1 sack of cement equal to 1 cubic foot.

Placing the Concrete.

Always begin placing the concrete on the low side of the floor, so that the rain from sudden showers will not run from the hard onto the newly placed concrete. Fill the trench and the slab section of the forms with concrete. Bring the surface to grade by drawing over it a straight edge with its ends on the opposite forms or with one end on the form and the other on the finished concrete. Four inches in from the edge, on each of the low sides, temporarily embed the

rounded 4 by 6 inch gutter mold and tamp it down until its square top is even with the surface of the slab section of the floor. Remove the mold and finish the surface with a wooden float. The day after the concrete in each section is placed, carefully throw on a covering of hay or straw, and keep it thoroughly wet for a week. Connect the gutters with the manure pit (if you have one, or plan one) by means of a trough, another gutter, or by large drain tile laid underground. If concrete feeding troughs and racks are to be built at some future time, make the necessary mortises by temporarily embedding beveled blocks or wooden frames in the soft concrete.

Below is given an itemized bill of materials necessary for a 6-inch floor 24 by 36 feet, amply large to accommodate 50 hogs.

Materials Required.

Crushed rock or screened gravel,	
20 cubic yards at \$1.10.....	\$ 22.00
Sand, 10 cubic yards at \$1.00....	10.00
Portland cement, 28 barrels at	
\$2.50.....	70.00
	\$102.00

Mixing the concrete by hand, 5 men can usually finish this floor in two days. Prices of materials vary greatly in different localities. The figures given above are safe; but, before deciding as to what your own floor will cost you, consult local dealers. Depending upon price of labor and materials and the thickness of the concrete, the floor will cost 6 to 12 cents for each square foot of surface.

Hog Wallow in Connection.

If the feeding floor is conveniently located for a "hog wallow," this can be built adjoining, and at the same time. Between the two, however, there should be a ridge or cone, so that nothing from the feeding floor can wash into the "wallow." One bad feature of mud "wallows" is that they are always in low places where but little air is stirring and usually are exposed to the sun. The hog goes into the wallow to get cool, and finds itself (unless there is water enough to prevent) in the hottest place on the farm. A concrete wallow can be put where it is high enough to get some breeze and where it can be shaded. Provision should be made for draining it and it should be so located and protected that mud cannot wash in from any direction. Considerable dirt will be carried in by the hogs anyhow, and for this reason the drain should be large, and the closed portion have a good fall. The size of the wallow depends on the number and size of hogs to be accommodated. Following are directions for making one 8 by 12 feet:

Dig out the hole with straight sides to the depth of 2 feet 2 inches. Lay a drainage foundation 10 inches thick. Set a 10-inch board around the outside of the hole and keep dirt from crumbling in on the concrete. Mix the concrete 1:2:4 and place a 6-inch floor in the hole. As the concrete is laid, embed woven wire in it 1 inch from the bottom. Have the concrete for the side walls fairly dry and tamp it to the shape and dimensions—4 inches thick at the top and 10 inches at the floor line. The sloping side make cleaning easy. Keep all animals away from the wallow for two weeks. Three men built this wallow easily in one day.

Materials Required.

Screened gravel or crushed rock,	
2 1/2 cubic yards at \$1.10.....	\$ 2.75
Sand, 1 1/4 cubic yards at \$1.00....	1.25
Portland cement, 4 1/2 barrels at	
\$2.50.....	11.25
	\$15.25

SHOWING MANNER OF BUILDING CONCRETE FEEDING FLOOR.

QUESTIONS AND ANSWERS DEPARTMENT

1288—WOUND—I have a registered filly, one year old in May, which got cut across the front of the right hind leg about half way between hock and ankle, cutting the cord entirely off. Had a veterinarian dress it but all he did was to disinfect and bandage. Said I should remove bandage in three days, which I did. The upper part of cord now lays out in plain sight, but lower part is not in sight. I told him that I thought the two ends of cord should be sewed together, but he said nature would take care of that. What would you advise?—Iowa Subscriber.

REPLY—It would be useless to undertake to suture the two ends of the tendon together, especially at this time. The exposed end should be shortened, however, and proper antiseptic treatment continued until the wound is closed.

1289—FEEDING RYE—Would it be dangerous to feed a mare in foal rye chaff, or let her run on rye pasture?—Kansas Subscriber.

REPLY—We do not think much of rye chaff as a food for horses, but can see no reason why you should not make a part of her ration green rye pasture.

1290—PUNCTURED WOUND—Kindly let me know what treatment you would recommend for a horse which had been hurt right over the spine, over the hips just in the center of the back, with some sharp point, either from a nail or something else which pierced a hole into him and which now is mattering. This happened several months ago. We have been using peroxide first to clean it out and we are now using injection of iodine only. I have a veterinarian who is prescribing this remedy, and I should like to get your opinion on the same.—Wisconsin Subscriber.

REPLY—Inasmuch as the wound is so located that is difficult to secure proper drainage, it is quite likely it will be tardy in healing. Continue the iodine under the direction of your veterinarian. We hardly favor the peroxide in such cases.

1291—LAMINITIS—Can a mare that has been colt foundered ever be bred again? I have a recorded mare that had her first mare last spring. She had her colt without any trouble, but one day after it was born she got stiff and could not walk, and had fever. The colt lived two and a half days and died. The doctor here called it colt founder. What caused this? Can I breed her again? This mare is well now and is not lame at all.—Iowa Subscriber.

REPLY—If your mare had laminitis, as we infer from your inquiry, and has recovered, she may be bred again without great danger of a renewal of the attack.

1292—CONTRACTED TENDONS—I have a colt, four months old. It seems as though it wants to walk on its toes. I took it to a veterinarian and he said its cords would have to be cut. The trouble seems to be in the front feet; its hoofs seem to be rather near at the heel. Please advise me the best you can of anything that will help this colt out.—Minnesota Subscriber.

REPLY—The advice given by your veterinarian is all right, for the reason that the colt has now reached an age where it should settle down into its normal position. This, it appears, it has failed to do, so an operation will afford the quickest relief.

1293—PARALYSIS OF THE PENIS—I have a big three year old horse that I had castrated last June. His penis was extended the second day after the operation and he has never been able to draw it up since that time. His wound was never swollen, but very little at any time, but his penis swelled and got sunburned and was very sore.

FOUR JACKS

For sale or trade. All blacks, white points; from 14 1/2 to 16 hands high; from 3 to 6 years old. Priced right for cash. Mules to show. Can use registered Belgian or Shire stallion. Jacks guaranteed right every way or your money back.

T. B. McCLELLAN,

Box 23, Stratton, Nebr.

FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14 1/2 to 16 1/2 hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP, Eolia, Pike County, Mo.

BIG MAMMOTH JACKS AND JENNETS.

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles North of Monett on Frisco R. R., and six miles Southwest of Hoberg on Mo. Pac. R. R. Write for prices to

Henry Obermann & Son, Freistatt, Mo.

MAMMOTH JACKS

For sale—Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

JACK---DUROC HOGS

For sale. A black jack; light points; six years old; 15 1/2 hands high. Also Duroc hogs.

LOUIS KOENIG, Solomon, Kans.

TWO JACKS

For sale. One weighs 1,150 pounds; stand 15.2 standard; age 9. Other one sired by him; think will be as large; 4 years old. Both registered and licensed sound; good performers; guaranteed all sound and right.

A. CALENDER, New Lyme Station, O.

11Worth County Jack Farm

Twenty-five head of jacks and jennets for sale.

CORSON BROS., Potter, Kans.

MAMMOTH JACKS

For sale. Registered; well boned; one to six years old. If you need a high class jack, we have them. Prices right.

NEILD BROS., Ogden, Boone County, Ia.

A large pus bag formed about half way up and we used plenty of disinfectant and it got healed up, but it hangs out all the time. What will I do with him?—Iowa Subscriber.

REPLY—There is nothing that will give any relief to a case of this kind except amputation of the organ, which can be successfully performed by a graduate veterinarian.

1294—ABNORMAL FEET—I have a yearling colt that has something wrong with its hind feet. There seems to be deep creases at the sides of his frogs and seems to be a little sore, but is not lame. Please tell me what to do.—Kansas Subscriber.

REPLY—From your description we are inclined to think there is nothing wrong with your colt. The deep creases complained of are normal, especially on the hind feet. Keep the colt's feet properly trimmed and allow it to run in fields and pastures where Mother Earth can have an opportunity to promote a healthy growth.

1295—SORE MOUTH IN COW—I have a cow that got stiff and sore in her feet and has a sore mouth. She cannot eat only what we put down in her mouth, and seems to have some fever.—Kansas Subscriber.

REPLY—It is quite likely that your cow has suffered from some irritant that has been taken in with the forage. Give her a good physic of Epsom salts, about one and one-half pounds, dissolved in warm water. Wash her mouth out with the following solution, using a syringe: Borax, two ounces; creolin, one ounce; water to make a quart. Throw one or two ounces into the mouth with a syringe two or three times a day.

# Detroit

## The First European Streamline Brought Out In This Country

"A car in which the streamline suggestion is carried out from the front to the back—a distinct and pleasing novelty. The effect is to impart a unity to the design that many other makers would do well to study."—Automobile Topics, August 8, 1914.

# \$1050

With Westinghouse Starting and Lighting System.

Other models, without starters, \$850 to \$925

The new 1915 Detroit is the first American example of that pure grace and beauty of design which Europeans call "streamline." You have seen hints of it in other cars. See now the actuality in the Detroit. Visit our salesrooms. Examine the car at your leisure. Try it on the road. This is absolutely the first real European streamline in America; first high-speed, long stroke, ball-bearing motor; lightest car of its class; biggest car for the money.

Tremendous power at all speeds distinguishes the ball-bearing Detroit motor. French motors of this type won all first four prizes at the Indianapolis races this year; and German motors of the same type, on July fourth, carried off the three first honors in the great French classic, the Grand Prix, at Lyons.

The Detroit is the only car made in America with this type of motor—a model of what The Automobile calls "epitome of the best that Europe can provide in design and construction."

More than that, as Motor Magazine states, "the economy of the foreign car is much greater than that of the American product. The American people are demanding economical operation."

The Detroit is the answer to this demand. Over roads of every description this handsome car carries five passengers from twenty to twenty-five miles on every gallon of fuel.

Thirty-five very noteworthy features also mark the new Detroit. We invite every person interested in the coming type of American motor car to visit our salesrooms. It is worth while—for the new Detroit is distinctly a revelation.

### Some of the 35 Special Features

112-inch wheelbase.  
32 horsepower.  
Worm-driven silent starting motor.  
Full-floating rear axle.  
3-point platform rear spring suspension.  
Actual one-man top.  
Four 24-inch doors.  
Non-skid rear tires.  
20-operation body finish. Luxurious upholstery.  
Fuel tank in cowl.  
Ventilating, rain-vision windshield.  
Ball-bearings throughout.  
Multiple disc clutch in oil.  
Duplex tire carrier in rear.  
Rounded radiator with radiator mud shield.  
Tulite searchlights.  
Emergency search lamp.  
Electric cigar lighter.  
Aluminum encased instrument board. All recording instruments combined in one unit.  
Electric-flash oil gauge.  
Carburetor above frame.  
Both automatic and manual spark advance.  
Horn button in center of steering wheel.

The cuts for printing this cover page were made from actual photographs of prize-winning animals, representing popular types of the respective breeds. As it was impossible to make the cuts show, in all cases, the correct relative sizes of the animals, we have printed under each cut the average weight, at maturity for an animal of the breed, type and sex shown.

In about half the breeds (those marked with a star) the color and markings are always or nearly always uniform. The other breeds all vary more or less. Percheron horses, for instance, may be black, gray, brown, chestnut, bay, and even roan or white. Shorthorn cattle vary through all shades of "red" (as we call it) from a dun to a plum color, and vary in the amount of white, from a few hairs, to all white.

# THE HORSE BREEDING SCHOOL

## December 7 to 12, Inclusive

The Week Following the International Live Stock Show

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

The School lasts one week, beginning every morning at 7:30 and lasting until 10:30 at night. To give the best possible results in the shortest length of time, proper changes in the instruction are made so as not to tire the students. The work is a recreation and the students enjoy it. Lasting acquaintances are made as the students are together the entire time. They also learn much from each other. Many sales and trades of breeding stock are made.

This is the only recognized school (excepting veterinary colleges), that teaches the anatomy and physiology of the generative organs of domestic animals. No breeder can fully understand scientific breeding without this knowledge. This school gives a lot of new and useful information that is not taught by any other school in the world. This is the only breeding school. The principles taught have stood the investigation of the best posted graduate veterinarians on these subjects. All of the instructors but two are post graduate veterinarians who are doing work recognized by the United States Government.

Mares are dissected and mares, both dead and alive, are examined for the different diseases and abnormal conditions. Every student is required to take part in this work, under the instructions of experts. Students are impressed with facts about diseases of females in a way they will remember. Representative animals for this work are especially selected. Everything is made plain by demonstration and language that the average breeder can understand. All technical work that can be eliminated. The object is to give a course that the average breeder can master in a short time.

This is not a veterinary college, but it does teach how to prevent diseases. Prevention is better than a cure. A large number of animals are used for each class. The most interesting work for the average breeder is that of making examinations on a string of dead mares, supported in natural position. The average breeder has very little conception as to what he will find on the inside of a mare or cow; neither do they understand the why or wherefore, nor will they understand this until they have this special education.

Fathers and mothers need not be afraid to send their boys to this school, as it is a clean institution, and they will learn things that will make them better men and eliminate many of the dangers that men are subject to. Profane or vulgar language is not permitted among the students at any time.

The one drawback of this school is that some students who have attended are not anxious that their competitors do likewise. We do not know of one dissatisfied student and this from a territory which represents nearly every section of the United States and several foreign countries. At the end of each term all students have had opportunity to get their tuition refunded if not satisfied. This offer is still in effect. There are no restrictions to it. The student alone is his own judge, and there have been no takers. This is remarkable compared with the large army of men who have attended.

Any breeder anywhere can well afford to investigate this proposition offered to make himself an expert breeder; to learn to avoid dangers in the breeding business that cause so much loss to owners of good stock.

**REMEMBER THE DATE---December 7 to 12, Inclusive.**

### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse, and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Cap-sules, etc.

Remember the date and prepare to be here next term. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

**The GRAHAM SCIENTIFIC BREEDING SCHOOL**  
**225 West Twelfth St., Kansas City, Mo.**

THE AMERICAN BREEDER

With which is combined  
CARLSON'S RURAL REVIEW.

NOVEMBER 5, 1914.  
Volume VIII. Number 5.

FRANK B. GRAHAM and T. W. MORSE,  
Editors.

Published semi-monthly (on the 5th and  
20th of each month) by the  
GRAHAM PUBLISHING COMPANY,  
INCORPORATED,  
225 WEST TWELFTH STREET,  
Kansas City, Mo.  
BELL TELEPHONE, 4297 GRAND.

All communications for this paper  
should be addressed to the American  
Breeder, or the Graham Publishing  
Company, and not to individuals.

Subscription Rates within the United  
States: \$1 for 3 years; 50 cents for  
one year. All other countries, \$2 for  
3 years; \$1 for one year.

When sending subscriptions, please  
state whether they are renewals or  
new ones. Always renew under the  
same name and initials as previously  
used, and at least two weeks before  
your present subscription expires, so  
that you will not miss any number.  
When changing your postoffice ad-  
dress, state the old address as well as  
the new one.

If you miss your paper please notify  
us at once and all lost copies will be  
replaced.

Entered as second class matter No-  
vember 28, 1911, at the postoffice at  
Kansas City, Mo., under the Act of  
March 3, 1879.

DOUBTING HORSE BREEDERS.

A challenge was put in this paper  
last spring to horse breeders in gen-  
eral. Frank B. Graham, the editor,  
offered to visit any section of the  
United States where a breeder or a  
number of men would furnish three  
young, healthy mares with colts by  
their side, to be used in the test. He  
offered to find a diseased mare with-  
in 15 miles of that particular place,  
obtain some of the material from the  
uterus of this diseased mare and place  
it in the genital tract of these three  
young, healthy mares. Those furnish-  
ing the healthy mares may breed them  
in any way, shape or form for four  
months. If one of them fertilizes  
during that length of time, Graham is  
to pay all the expenses; if none of  
the mares are fertilized within four  
months of the time, those furnishing  
the mares are to pay the expenses.  
This proposition has been presented  
to more than 100,000 horse men. It  
has not yet been accepted.

There seems to be a few men who  
do not believe that the disease called  
"barrenness in mares" can be trans-  
mitted from one mare to another  
through the act of service. Mr. Gra-  
ham wishes to state that he still con-  
tinues to make this challenge.

A lot of breeders have talked to pro-  
fessional men who are supposed to  
know very much about horse breed-  
ing. They perhaps did not realize  
that this is a matter in which ideas  
have been revolutionized by new dis-  
coveries. The germ causing this dis-  
ease was discovered in 1910. It was  
thoroughly tested at that time on live  
animals. The condition revealed is  
worse in some communities than  
others. Not all barren or shy breed-  
ing mares are infected with this dis-  
ease. It is difficult to learn to under-  
stand this condition unless it can be  
demonstrated with live animals show-  
ing this particular diseased condition.  
Such diseased mares are frequently  
young mares, fat and sleek. This dis-  
ease usually shows very little, if any,  
discharge. A great many breeders  
depend on the discharge from the  
genital tract for detecting disease.  
This conditions is getting worse and  
has much to do with decreasing the  
per cent of foals in this country. A  
capable instructor can teach the

symptoms successfully by having a  
mare having this disease and a  
healthy one for comparison.

During the years to come when good  
horses will be high and scarce, breed-  
ers can afford less than ever to make  
services on a diseased mare of this  
kind, and transmit it to clean, healthy  
ones, thus scattering this infection  
and lowering the per cent of foals.

If there are any who doubt the  
above statements they might try to  
furnish the three clean, healthy, young  
mares with colts by their side, for  
a test case, under the terms of Mr.  
Graham's challenge.

STATE FAIRS SHOULD BE BIG.

The American Breeder has no use  
for the cheap plan that (probably from  
selfish reasons) has been suggested,  
of dividing state fair support among

several fairs instead of having one  
strong, well located main fair. Ten  
men will make the necessary effort to  
attend a big show and get the infor-  
mation which is there to be had, where  
one will go to a minor exhibition, even  
when more conveniently located. An  
attempt to split up a fair like the big  
one held at Des Moines, for instance,  
among several of the good towns of  
that state, which might think they had  
sufficient claims, would change the  
loyal support which the Iowa state  
fair now enjoys, into a scramble for  
"pork" and politics, which has been  
fairly well eliminated from some  
fairs, would be back in the saddle  
stronger than ever.

A state fair is far more than a place  
to decide between the relative merits  
of this and that sample of the state's  
products. It is as different from that  
and as much bigger, as a great store's  
show windows are different and bigger

A GREATER AMERICAN BREEDER

A thousand times the wish has been expressed by friends of the  
American Breeder that the circulation of this paper might soon reach  
50,000, but every one of our friends to whom we have been able to put  
the question, has answered that he did not want to see our list increased  
at the expense of quality; he did not want to see the American Breeder  
adopt the use of premiums and all the other cheapening schemes to  
which so many agricultural papers have had to resort.

Building, as we have, by getting subscriptions absolutely on the  
merits of the paper alone, and from absolutely no one excepting those  
directly interested in our work for better live stock on the farms, we  
have not expected to make any mushroom rate of growth, and have been  
satisfied to grow steadily, our list improving in character as it improved  
in size. But the fact remained that the greater our list of readers the  
greater our influence, and we welcomed the opportunity which recently  
came to make a stride in this direction, that in our opinion, is second  
in importance only to the founding of this paper. For this opportunity  
we have to thank the broad mindedness of one of the first men to co-  
operate with Mr. Graham in the development of the American Breeder  
and the Graham Scientific Breeding School, Mr. George L. Carlson.

On his own magazine, Carlson's Rural Review, Mr. Carlson built  
up one of the most strictly high class lists of agricultural readers in the  
United States; the only agricultural list, in fact, (outside that of the  
American Breeder) which we know to be built absolutely on the merits  
of the paper alone. Mr. Carlson, who is one of Nebraska's "self-made"  
wealthy and successful breeders and farmers, writes from the knowledge  
and experience of a trained agriculturist, a world traveler and a student  
of every social and economic problem which concerns the farmers of  
this country and has held and increased his list of readers, wholly  
through the strength and interest of his own writing. His magazine  
has made him money, although that was a minor consideration in its  
conduct, and all it represented small, in a financial way, compared with  
his agricultural and other business interests.

But the character of a man who has few equals as a true and under-  
standing friend of American agriculture, had been made a part of Carl-  
son's Rural Review, and when, therefore, Mr. Carlson's desire to be  
more free to travel, study and rest, led him to favor consolidation with  
the American Breeder to insure the perpetuation of his work, we wel-  
comed the opportunity for an expansion which would satisfy the thou-  
sands of friendly wishes for a more rapidly broadening influence.

The next issue of the American Breeder (with which Carlson's Rural  
Review is now combined) will go out to a list of subscribers approaching  
very closely to the 50,000 figure and will mark the beginning of a new  
era of growth and improvement which we trust will more than meet  
the expectations of all. And in expressing this wish we are using almost  
the words of Mr. Carlson's expressed belief, given to his readers in the  
last issue of Carlson's Rural Review, as follows:

*"The American Breeder, by reason of its merits and the value of its  
service to those interested in the best rural life of America, has grown  
from a very modest beginning, until it is now recognized as the ablest  
and foremost magazine of its kind in this country. No man in America  
has felt a keener interest in its growth and success than myself, an inter-  
est which was awakened by its first number, and which has grown and  
widened as the magazine has grown, and it is my hope and belief that the  
consolidation of the two magazines will help the American Breeder in  
growth, and its service to the readers of rural America, quite as much as  
it will relieve me from the thought that something might happen which  
would make necessary the final suspension of my own."*

*"With this announcement of the reason for consolidating the two  
magazines, the friends and readers of Carlson's Rural Review are assured  
that in this arrangement the gain will be their gain, and their continued  
loyalty is solicited for the consolidated publication."*

*"Beginning with this number, all business correspondence should be  
addressed, and all remittances made payable to the Graham Publishing  
Company, Kansas City, Mo."*

*"With cordial appreciation of the loyal support given me in my  
work in the past, and a kindly wish for the future happiness and success  
of all, I remain, most sincerely, G. L. Carlson."*

and more interesting than the sample  
case of one of its traveling men. A  
state fair is not merely a catalogue; it  
is an advertisement of the state, a  
symbol of its greatness and an illus-  
trated lecture on the variety of its re-  
sources and the quality of its enter-  
prise. Nothing short of a great state  
fair, to which the best from all small-  
er fairs can be attracted, can give a  
state this service. Smaller fairs, when  
dignified by the name of "State" only  
do their state an injustice.

Take the case of any good state;  
not one in a thousand of those who  
will visit the right kind of a state  
fair would ever learn through travel,  
or the study of printed information,  
the real greatness and possibilities of  
the state they live in. A state fair  
that is adequate can teach them as  
nothing else will, or can. It adver-  
tises the state to the world at large,  
as the great commonwealth it really  
is. It makes every one of its citizens  
who attends, a good advertiser, for it  
makes him both capable and proud to  
tell the helpful truth. More than that,  
it safeguards against dissatisfaction,  
for it shows its people the greatness  
of the possibilities at home and better  
equips them for realizing on these pos-  
sibilities.

It is along such lines as these that  
the good state fairs most fully justify  
the heavy investments they represent.  
While a few things deserving of help-  
ful criticism may be pointed out and  
a few suggestions for changes be  
made, the American Breeder is strong  
for the big, well conducted state fairs  
which adequately represent their re-  
spective states, and we are in the har-  
ness every day, as our readers well  
know, to help get better state fairs  
for the few great states which are  
now so inadequately represented.

County fairs are important, and  
everywhere should be supported and  
improved, but a splitting up of state  
fairs would be the worst sort of folly.

PREACHERS AND POLITICS.

One of the many spurious coins of  
cheap conversation is denominated  
"Preachers Should Keep Out of Poli-  
tics." If politics, as evidenced by our  
annual political activity, ending in the  
election to office of, and the admin-  
istration of public affairs by, the for-  
tunate politicians, has no bearing upon  
the welfare of the preacher's congre-  
gation, friends and neighbors, then no  
doubt the preacher should keep out of  
politics. It is the preacher's duty, no  
doubt, to look after, in the broadest  
sense, the welfare of his people.

But if it takes political activity to  
stop the use of profanity in public  
places; to get the greatest possible  
benefits from the taxes paid for road  
improvement; to keep "ringsters"  
from getting on the school board and  
hampering the free growth of schools;  
to put real competent public servants  
instead of "machine riveters" into of-  
fices which carry with them the power  
of appointment; to elect honest and  
competent lawyers to the offices of  
county attorney; then it seems to us  
that any preacher sufficiently familiar  
with conditions to work effectively,  
can get into politics in a way to ren-  
der a great service to his people.  
That a great many preachers are do-  
ing this; fighting a winning fight  
against corruption, indifference and  
prejudice and the political results of  
such conditions, is all the justification  
we want for our position, and is to the  
everlasting credit of that class of red  
blooded workers to which all such  
preachers belong.

BURGESS AND McMILLAN.

Burgess, of Wenona, Ill., and Mc-  
Millan, of Rock Rapids, Ia., have had  
sufficient publicity on the corrupt  
methods employed in their Percheron  
dealings to have put them out of busi-  
ness, if they were not receiving pro-  
tection. These firms have been deal-  
ing in irregular pedigrees. They are  
a detriment to the best interests of  
the draft horse industry.

How long would a small breeder  
last if he attempted to do any of the  
things these men have been guilty of?  
Is it right to permit these men to con-  
tinue to buy, breed, sell and exhibit  
under the auspices of institutions

which are largely supported by the public? They have had unlimited money for protecting themselves, yet these firms have been receiving outside protection. Private letters have been sent out in their defense. Will it be necessary for the American Breeder to follow under-ground wires that have been, and are being pulled, and show up the connections of the crooks who are giving this protection? Some very interesting things can be brought out if necessary.

We had hoped that this matter had been aired sufficiently, but we find that an effort is being made to tide these men over and help them maintain their business so that when the people (as it is hoped) forget their crooked records, they may again proceed to skin the public as they had been doing. The published records and court records alone should be sufficient evidence for any honest man to stand against the men we have named for all time to come. They have been losing money, but hope to hold their business together by changing firm names, or some other plan, and hang on till they can make it back in the old way. Breeders should not be confused. Will the changing of the name change the men, blood or methods? Has the changing of pedigrees changed the blood? This matter has gone about far enough and had just as well be settled now in a way that will make it stick.

Every man interested in better live stock, honest methods, clean pedigrees and clean principles should appoint himself a committee of one to tell all his friends and neighbors about the existing conditions. Use the telephone; attend public gatherings; request others to be careful about buying animals with papers bearing the names of any of these men as breeders or importers. Every draft horse registry certificate gives the name of the breeder or importer. Watch carefully for these names. Make inquiry to know if these men have had anything to do with any animal you are considering, and tell people why you are on your guard. Never forget this precaution, for other buyers of draft horses will watch these certificates for many years. Who

would care to own one of these animals and have a prospective buyer say: "I do not want that horse, because some of the certificates put out by that man or firm have been fraudulent; this may be one of them."

If everyone interested in live stock will keep track of the men in his community who are liable to buy breeding stock, and keep them posted, crooked men or firms will find it mighty hard to continue in the game. A constant, careful watch must be made, as these men are very smooth. A few head may be sent to, and sold through a small breeder, where the purchaser would not suspect anything.

#### WAR HORSES.

There has been much said, verbally and in print, concerning the purchase of horses for the armies of Europe. The real condition surrounding the purchase of these animals has been kept from the public to a considerable extent. Many of the shipments have been made under the cover of darkness. The writer has visited various points to find out what was being done. A large number of small horses have been purchased. They are usually of a class for which we have very little market in this country, and for which, in all probability, we never will have a good demand. These little horses have in the past found a good market in the cotton states, but the present difficulty with the cotton market has made a great hole in the market demand of the South, and in the course of time many of those who have purchased small geldings and mules will begin to purchase mares weighting 1,100 pounds or more, with a view of raising colts.

It is fortunate for those having the small, plain horses that there is an outlet for them. We would advise selling off all of the plain, small geldings. Care should be taken by the breeders not to dispose of too many sound, clean mares, as these can be graded up by the use of better sires. Within the last few days numerous orders have been let for mules, also, usually of the smaller kind. This will prove a great benefit to the present mule

market. Both armies are buying stock in this country, but the "Allies" are taking most of the purchases.

At one market 15,000 horses have been shipped with the expectation of buying 35,000 more at one station. This may give some idea as to the extent of these purchases. In looking over these horses one would not suppose that there was such a great number of small, plain horses without a job in this country. There is practically no market demand for them except for army purposes. The requirements of the European buyers are not nearly so strict as those of our own government. They are taking horses and mules which are serviceably sound up to ten years of age. After a good number of these little horses have left this country there will be many vacant places to be supplied with better individuals.

Breeders in general can learn a great lesson from the present situation. There have been too many little, plain horses produced in this country. Normal demand for that special class during the last dozen years has been curtailed. Those breeding small horses in the future must produce a better quality if they expect a profit. It is by accident that the Boer war and the great European conflict have caused the taking of this surplus.

There never was a better prospect for those producing good horses and mules, according to the best expert authorities in this country. Not only will these little horses and mules need to be replaced with better animals, but breeders must consider that half of the civilized world is at war, and a war unusually destructive to horses of all kinds. There should soon be, in Europe, a steady market at good prices for all this country can produce. In supplying European countries, not only are we replacing horses destroyed in warfare and by lack of attention, but we are supplying some loss from food consumption. In a time of peace the city of Paris eats 50,000 horses annually. Owing to the difficulty in getting meat shipments across the ocean they may now be compelled to eat many more horses. All of the countries now engaged in warfare, except England, eat horse flesh.

Those who have good horses and jacks kept for breeding purposes need not have any fear of the future so far as we can ascertain at this time. This is especially true of pure bred stock. Importation of horses from Europe will not again soon be a contending factor in supplying the American demands. The pure bred studs of Europe in most cases are in a very bad condition at the present time. Every stallion or jack owner should busy himself at the present time to keep good mares from leaving his section. They will be needed badly in the near future.

#### WHAT STATES LEAD IN JACK BUSINESS?

In live stock as in machinery, clothing and everything else, the only styles that endure are those which meet practical requirements; and the countries, or sections, men or companies which stay longest and most profitably in the business of supplying such live stock or commodities are the ones willing to study and meet the requirements (and changes in requirements, if need be) of the consumers.

The history of the jack business of this country affords a good illustration of this point, and of the mistake a producer in any line makes when he fails to realize that changing conditions mean changing standards of excellence.

Not so many years ago Kentucky and Tennessee led the rest of the United States in the production of jack stock and no one in any other state expected to be considered much in the business unless he first went to one of the two states named and bought foundation stock, or at least a jack to head his stud and one or two jennets to give tone to his collection. Nashville, Tenn., Bowling Green, Ky., and other towns of that section were jack stock centers.

The other day the firm of Davis & Moore attended a big jack sale 100 miles from Kansas City and bought a jack to head their stud of jennets in Tennessee. In conversation during the sale Mr. Davis said that not only he, but others, had found it necessary to go outside his state, and west of the Mississippi in search of breeding stock to help them produce the kind of jacks that modern conditions demanded.

This incident is only one of many which have called our attention to the fact that the jack and mule business has made a remarkable western movement, and that as a commercial center for this business Kansas City is, or very soon will be, in the lead. Already the greatest mule show ever held has been held here at Kansas City in connection with the regular American Royal stock show, and the greatest sales of jack stock occur in a territory of which Kansas City is the immediate commercial center. And the stuff which wins and sells the best in this territory is coming to be the kind which meets the modern requirement based on the fact that the mule is a draft animal, and that weight, bone, heart girth and drafty conformation "buy more" from those who have "the say so" and the money to back it up, than do height, slick hair, fine bone and a fancy color.

Some mighty good breeders of jack stock are still in business in Kentucky and Tennessee and are producing the right kind of stock, but scores and scores of them went out of business because they were encouraged by a former would-be authority to ignore the practical demands of the mule business and their weedy product became a drug on the market. Missouri became the acknowledged leader of the states in the jack business, because the influence of the Missouri mule kept the state's jack breeders closer to a practical standard. As the mule business spreads westward the jack breeder follows and those who develop enough business to become known are the ones who recognize and cater to the practical requirements. Texas has become an enormous producer as well as user of mules (the 1912 census gave Texas 703,000 mules; double the next largest state).

Texas' growth in the jack business has been equally striking, though not generally realized by those outside the business for the reason that domestic demand takes nearly all the surplus and Texas breeders do less general advertising than is necessary in other states. In a general way, however the number of advertising breeders in a state gives a pretty fair idea of the state's relative importance in the line, and consideration of this point has, among other things, frequently called attention of late to the westward movement of the jack business already commented upon. The American Breeder advertising department keeps pretty complete lists of the men and firms in all lines, and the list of jack advertisers, among others, contains some surprises for those who have not thought much on this subject. Missouri, of course, will be expected to be in the lead. Missouri breeders make up over 38 per cent of the list. Kansas breeders come next with 15½ per cent of the list. The other important states rank as follows: Oklahoma, 8 per cent; Kentucky, 7½ per cent; Illinois, 6 per cent; Indiana, 6 per cent; Texas, 5½ per cent; Iowa, 3 per cent and Tennessee, 3 per cent.

#### "SPLENDID RECORD OF WONDERFUL EVENT."

To the American Breeder:—I wish you would send me 15 or 20 copies of the American Breeder, issue of October 5. Your two pages showing the photographs of the Saddle Horse Stake at the Missouri State Fair is the best proposition of its kind that I have ever seen in any paper. It is a splendid record of this wonderful event.—John T. Stinson, Secretary Missouri State Fair.

## IF YOU HAVE STOCK TO SELL

### You Can Save 25 Per Cent on Your Advertising by Ordering Now.

As all patrons of our live stock advertising columns know, the American Breeder has long been the best paying and lowest priced good advertising medium in the field. A number of our advertisers have secured as much business through the American Breeder at a season's cost of \$50 to \$250 as they secured through another publication to which they paid from \$110 to \$1,250. Anyone with an acquaintance among live stock advertisers can verify these figures for himself.

#### OUR CIRCULATION IS FIFTY PER CENT LARGER

than it was a year ago. It will be more than 50 per cent larger when the next issue goes into the mails, and our list will be of the highest quality it has ever been. Consequently the

#### VALUE of OUR ADVERTISING IS PROPORTIONATELY GREATER

and the price must be increased. The rates below, therefore, are good only for immediate acceptance, and will be advanced before the next issue. To make sure of saving money and securing the most economical advertising rate ever offered, intending advertisers should send their orders at once and make them for as long a period as they are likely to have stock to sell. When space is thus ordered we will change the wording of the advertisement any time without additional charge. Ten per cent discount is allowed for cash in advance on a six months' order.

#### HERE ARE THE LIVE STOCK ADVERTISING RATES

now in effect. No orders accepted at these rates after November 20, when new rates will be announced. Read every word of the above.

Space.	1 Issue.	1 Month.	2 Months.	3 Months.	6 Months.
½ inch.....	\$2.00	\$2.80	\$5.00	\$ 7.25	\$13.50
¾ inch.....	2.40	4.00	7.25	11.00	20.25
1 inch.....	2.80	5.00	9.50	13.50	27.00

Space in amounts larger than shown above will be charged at the rate of \$4.50 per inch, per month.

(Above rates void after November 20, 1914.)

**American Breeder, Kansas City, Mo.**

# ECONOMIC NEEDS OF THE BREEDER

By G. L. CARLSON

The breeders of this country who have been reading the American Breeder for several years are the best informed men of all who are interested in this great basic industry, so far as the breeding of live stock is concerned. In technical knowledge of breeding science, as well as in the most modern methods and practices of their profession, there are none who are their superiors. The American Breeder as a journal published in the interest of breeders, has been easily and securely in advance of all other publications devoted to the interests of breeders of live stock. In the breeding of horses and mules this is even more true than in the breeding of other live stock. Breeders of these animals around the world have now for several years turned to this paper for a solution of their many problems, and the help desired has always been found.

But we are learning more and more all the time that to be permanently successful as breeders there are other things to know than the best methods of producing superior animals. There are many economic problems to solve, the proper solution of which is quite as important as a knowledge of breeding practices, or of heredity and breed types. To be a breeder of livestock on any considerable scale makes it necessary to own, or have access to land. To own land on which to breed animals brings up questions of titles, taxation and tenantry. The breeder of market cattle seldom finishes these cattle for the market. His cattle are generally sold to men who make a specialty of finishing cattle for the market. This brings up the question of finance and banking, since most feeders must borrow money with which to buy the cattle of the breeder. Cattle are seldom finished near the place of production, and this brings the breeder up against the problem of transportation. To be either a good breeder or a good feeder requires a high order of intelligence and a trained mind, without which both are doomed to failure. This calls for a school system that will fit the youth of the country for this work, and one that will develop and broaden the mind so that all these problems may be seen in their proper perspective. Much of the success of the breeder will depend upon the laws that are enacted by legislatures and Congress, to the end that the breeder and farmer may not be discriminated against, and be given just and equal opportunities in the distribution of the wealth which is directly the result of his industry and intelligence. No person is so directly affected by vicious legislation and the vicious practices of a people as the breeder and farmer. He should not only know this, but he should know how best to use his influence in giving to his state and the country as a whole, good, sound and wholesome legislation. Unless he knows and does this, there can be no great or permanent success for him.

## Land Transfers and Taxation.

In the ownership and use of land, the American farmer has been very careless and most prodigal. Our country is yet so new, that few men have given serious thought to their responsibilities as land owners. Our system of land transfers is both vicious and expensive; vicious in making necessary the paying of money to a parasitic class for an abstract; expensive in that this money in no way gives a better title, and is therefore unnecessary. The Torrens system of land transfers will correct this.

Our system of taxation is even worse. We have been trying to collect taxes from certain classes for years, but without success. We have yet to learn that when we tax money, clothing or the products of labor, that it is always the consumer who pays the tax. In this way our farmers are paying hundreds of indirect taxes on their machinery and furniture, the manufactured food which they buy,

the money they borrow and many other things.

Only a few decades ago the best lands in this country were a prairie waste. These lands were so fertile and productive that those who first cultivated them did not believe it possible to exhaust them of their fertility. This belief still possesses the minds of many of our farmers. This is seen in abandoned fields and low crop yields in many sections of the country. It is seen resulting from our bad system of leasing land from year to year; a system that offers no encouragement to the tenant to conserve the fertility of the land he cultivates. In many countries of Europe any fertility or plant food added to the land by the tenant is his property, and if any such remain at the expiration of his lease he must be paid full value for it. This encourages the tenant to use the land as well as though he owned it. Under such a system long-time leases are encouraged, such leases being better for landlord, tenant and the soil. In this country tenantry is increasing at an alarming rate. This in itself is not a good

riars. If not interested directly as common carriers, they will be in a position to demand special favors of some kind of the railroads that handle their products. We have seen much of this in the business of the packers, some of the large fruit companies, coal, lumber and many other industries. When distributors receive a larger portion of the selling price of commodities than do the producers of them, there is small chance of any profit remaining with the producer.

## Education.

Of more importance to the future farmers of this country than all other things is the one of education. Thus far we have not been educating our youth for the country and the farm. In our rural school work the needs of the breeder and farmer have never been taken into account. We are only just beginning to understand that a study of the farm must begin with a study of the farmer and his needs. Instead of knowing anything about this need, we have been training the farm youth away from rather than for farm work. We have been employing

effit or privilege. In the long run this will not prove good, either for themselves or the country as a whole. If there is nothing to gain by organization except some selfish end, it is better not to organize. But with farmers it is quite different. It is not necessary, nor do they desire, to organize from selfish motives. Although the largest single class in this country, and producing the larger part of the wealth of the country, they have never had a voice in the direct making of laws, and as a result they have been so discriminated against that mighty little is left for them after all others have taken their toll. In banking, transportation and distribution, we see everybody all along the line sure of his profit, while the farmer who produced all the wealth takes the little, if any, that may be left. The laws which are responsible for this condition were enacted by lawyers, bankers and other city business men. The remedy is more farmers in our legislatures and Congress. Farmers do not want or demand any advantage over others. All they want is justice, and they have a right to demand this.

## Dissipation and Efficiency.

Another economic need of the breeder and farmer is more wholesome living. We have been leaving to the churches and church workers all questions of correct living. We have been regarding drunkenness and the use of liquor as a moral question, when it is at most only indirectly a moral question. It is an economic question, and the most important one of all, since it strikes at, and takes toll from, every industry of man.

We hear much said about efficiency, and how an inefficient people are always at a disadvantage when compared with an efficient people. The result of all scientific and economic investigation has convinced the best intelligence of the world that the use of alcohol results in impaired energies and loss of efficiency. We are just beginning to understand that loss of efficiency in making a suit of clothes means a higher cost of that suit. That want of efficiency in making binders, mowers, wagons, plows or any other implements or machinery means a higher cost of those things. That want of efficiency in operating and managing railroads means higher freight and passenger tariffs. That want of efficiency in any activity of man means lower quality and a smaller output. These things together mean that lost efficiency caused by the use of alcohol increases the cost of living, and lessens the profit of the farmer, besides lowering the standards of all progress and all ideals. It is such things that have forced upon us a knowledge of the fact that no community, and no progress can be built upon any other foundation than the one of clean and temperate living.

Those who read this understandingly will at once see that to be a good and successful breeder, one must possess a clear understanding of the economic needs of the breeder, which are many. It will be the purpose of this department to try and keep the readers of the American Breeder in close touch with the best economic thought of the day.

## A LEADER WILL HAVE FOLLOWERS.

To the American Breeder:—I want to congratulate you upon your manner of giving to your readers the absolute scenes at the stock exhibits on the state fair grounds, and also illustrations which I have no recollection of ever having seen in any other paper. I think this is an excellent idea and the WHOLE BUNCH will be furnishing their readers, in another year, facts and scenes as well. Of course I will speak well of your paper, for it deserves commendation.—J. K. Dickirson, Secretary Illinois State Fair.

## Renew Subscriptions Now!

For a limited time you can subscribe or renew subscriptions for the **AMERICAN BREEDER** (with which is now combined **CARLSON'S RURAL REVIEW**) at the old price of 50c for one year, or three years for \$1.00. The subscription rate will have to be advanced soon.

thing. The best farming, the greatest prosperity and the highest citizenship will always be found in those countries where the people own the land they live upon. Few men will ever develop a very great love for land owned by others. For the best good of generations yet unborn, it should be made possible for those who must use land to own it.

## Finance and Banking.

There has never been a banking law enacted in this country in the interest of those who produce our wealth. These laws have always been enacted by and for bankers. The new currency law, which is supposed to become effective November 16, is in many particulars the best law on this subject ever enacted in this country. Its best provision is the one which will make a money shortage impossible, but this act contains no provision for relieving producers by making it possible for them to borrow money at a rate which they can afford to pay. Rather it will raise the interest rate instead of lowering it. There will now be two banks to claim a profit on each loan, where formerly there was but one. Instead of bringing the borrower nearer to the source of money, it forces him farther from it. This is and has been the tendency of all legislation in this country; it is always something that will make room for another non-producer to exact tribute of the producer.

## Transportation and Distribution.

Both transportation and distribution have everything to do with the success of the breeder and farmer, and the two are so inter-twined and interlocked that it is difficult to separate them, or to tell where the one ends and the other begins. Transportation can be easily recognized, since it is anything that assists in carrying products from producer to consumer. But when it comes to distribution it is quite different, as many distributors are also interested as common car-

teachers from the towns and cities whose stories of the life in the city has completed the work begun by a want of a proper course of study, in taking our youth away from the farms.

We have been devoting too much time in teaching our youth how to make money without work. We have even gone so far in some cases as to tell our children that we wished to give them an education so they would not have to work as hard as their parents have had to, as if work was degrading. It would have been so much better had we told them that the only purpose of education was to train us how to do things efficiently, so as to dignify labor.

In those countries where the school work is based upon instructing youth for the necessary activities of man, we note the greatest progress. In some of these countries the school course is made to include all kinds of work in the civil service of the country, such as carrying mail, railroad work, street car work and management, working in mines and factories; and pupils in rural schools must show so many credits for farm work actually performed. In such countries under such a school course and work, there will be no question about the progress of the country.

## Legislation.

Every industry in this country, and every profession, is organized for the purpose of securing legislation favorable to their business. The one exception is the farmer. He is just beginning to wake up so as to see the necessity of organizing, but it will be many years before he is efficiently organized in all sections of the country. Although the farmers constitute the largest single class in this country, they are seldom seen in our legislatures or in Congress.

There is a great deal of selfishness in human nature. Many industries and professions have organized for the one purpose of securing some ben-

## FOR BETTER BREEDING STOCK SHIPPING CONDITIONS.

To the American Breeder:—The case of the National Society of Record Associations before the Interstate Commerce Commission has been set for hearing on November 20th at Chicago. In this case the breeders of pure bred live stock of the United States, through their national organization, are attacking the present requirements of railroads relative to less than carload live stock shipments.

The breeders will attempt to secure relief from the present excessive rates imposed on shipments of live stock under declared values in excess of the limited liability. They ask that instead of the present rule providing for an increase of from ten per cent to fifty per cent of the rate for each increase of one hundred per cent of the value, there be substituted a provision for two per cent increase of the rate for each one hundred per cent increase of value. The breeders also ask to have the minimum weights reduced in official classification territory where stallions are now shipped at the weight of 7,000 pounds and horses and cattle at 5,000 pounds. The present limitation of liability in case of loss is claimed to be unreasonably low, and the Commission is asked to order an increase of this liability to a figure more nearly representing the actual value of the stock. Modification of the rules and requirements relative to attendants with such shipments are also asked.

The hearing will be held before Examiner Kelley. Evidence substantiating the claims of the breeders will be produced and testimony presenting the claims of the railroads will be taken. Cassoday, Butler, Lamb & Foster of Chicago will present the breeders' side of the case. After the November hearing the testimony taken will be referred to the Interstate Commerce Commission and further hearing and argument will be had before that body at Washington, D. C. Thereafter the decision of the Commission will be rendered.

The breeders and shippers of pure bred live stock all over the United States will be affected by the decision of the Commission. The requirements and provisions relative to less than carload live stock shipments on every railroad will be considered at this hearing. The assistance and co-operation of all breeders is necessary to place before the Commission fully the facts showing the present situation in each part of the country. Shippers able to furnish information relative to actual shipments, the rates and weights charged and additional expenses caused by requirements for attendants are requested to send the same to me.—Wayne Dinsmore, Secretary-Treasurer of the National Society of Record Associations, at the Union Stock Yards, Chicago.

## TWO BIG STOCK SHOWS CALLED OFF.

Prominent among the precautions taken to prevent further spread of foot and mouth disease, is the cancellation of America's greatest two cattle shows. These shows, the heaviest features of the American Royal at Kansas City, and the International at Chicago, were set for the weeks beginning respectively, November 16 and November 30.

The International might hold its great draft horse show with perfect safety to the animals exhibited, but it is possible that the chance of transporting germs in straw may cause its abandonment also. The infection got so near the barns of the National Dairy Show (in progress in Chicago at the time of the outbreak) that all animals on exhibit are being detained.

## MISSOURI SHORT COURSE OPENED NOVEMBER 2.

The first term of the Two-Year Winter Course in Agriculture given to farmers, their wives and daughters by the College of Agriculture of the University of Missouri began November 2 of this year. For men, this is a course in good farming; for women, it is a course in better housekeeping. Anybody more than 16 years old may attend. The first term of the course ends December 18.

# MODERN HORSE BREEDING

Of all important subjects concerning live stock, horse breeding has been given the least attention. The greatest live stock leak in agriculture is caused by mares not producing foals. No other one item is as expensive to the farmers. Hog cholera, which has caused the farmers so much loss, has not cost the American farmers as much as mares failing to produce live foals. Now that good horses are going to be in great demand this loss deserves all the more attention.

It is illuminating to hear untrained breeders tell how much they know about horse breeding, and to suggest the amount of misinformation being spread over the country. Is it any wonder that breeders are not familiar with this subject when a very few of them ever have had the opportunity to see the inside of a mare, much less having this subject thoroughly explained to them by competent instructors. The average breeder is not enough familiar with technical names

to get this by reading alone. Text books on this subject have little value. Scientific horse breeding is not taught to any great extent in the colleges. The old method of teasing and serving all mares that come is still quite the rule, regardless of the condition of the animal. The average breeder who makes a practice of opening mares after the old plan does more damage than good. The average breeder when asked to make an examination of a mare believes that the opening of the womb is all that is necessary.

A breeder recently was asked what per cent of live foals were produced from his sires. He promptly made the remark that over 80 per cent, but after a careful examination of his books only 36 per cent could be accounted for.

But those who have given close attention to the Graham Scientific Breeding School are really producing 80 per cent of live foals. They are

## THAT STALLION LIEN LAW

Belgium has made greater progress in developing draft horses the last dozen years than any other section of the world. This has been brought about largely by the government encouraging the use of better sires. Certain of the best stallions have been pensioned. The government has spent a lot of money encouraging the best class of stallions to remain there for a period of five years each.

Other sections in Europe have other methods of encouraging the use of better sires. If any breed of live stock is to improve, some plan should be followed to encourage using the best sires. The public spirited men of this country have not had any government encouragement. Generally speaking, we might say that in order to improve the sires of this country we must first make it profitable. In fact, in many cases the law makers have discouraged the men who have been trying to improve our live stock.

The present method of collecting service fees is very bad. In many communities one-fourth of the service fees is never paid. This works a hardship on the other three-fourths of the mare owners who patronize such a sire. The honest man pays all the expenses, while the dishonest man gets his colts for nothing. This is a bad state of affairs. Every mare owner who expects to pay his honest debts ought to be in favor of a stallion lien law which would force every other one to pay this obligation. Thousands of mare owners have invested in shares of "stallion stock" in companies buying stallions at long prices, just in order that a suitable sire might be near them. This is evidence that they are interested in better sires. We do not believe that any responsible individual will object to a good, suitable lien law which will encourage better sires in a community, if the subject is once thoroughly understood.

The thing for everyone to do who is interested in this subject is to get a petition signed by a good number of men interested in horse breeding, whether they own stallions or mares. The bigger the list the better. Then give it to your members of the legislature. We want everyone interested in this subject to begin immediately. The legislatures will meet in nearly every state in the Union within the next few months. This work should be started now so as to have plenty of petitions. Every breeder should use the telephone, and encourage other men interested in the same work to do likewise. If every representative in your state would receive a good number of these petitions it would result in a better condition for horse breeders generally.

The following is the text of a law which has stood the test of the courts and we believe will be satisfactory in any state. Breeders can clip out the following and paste it at the top of a large sheet of paper and use it as a petition:

### THE PROPOSED STALLION LAW

"The owner of any stallion or jack which is kept for the propagation of his species, shall have a lien upon any female animal and her offspring to which such male is let for the sum contracted therefor, which lien shall attach at the time of service of such male, and shall not be lost by reason of any sale, exchange or removal from the country, or other disposition without consent of the person holding the lien, the same may be immediately enforced. Provided, also upon the sale, exchange, removal or disposition of such female animal without consent of person holding the lien or with intent to defraud him, the owner of such female animal shall be guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not less than twenty-five dollars (\$25), nor more than fifty dollars (\$50).

"At any time within twenty months after his right of action accrues, the owner of such male animal may file with any justice of the peace in the county, a written statement, duly verified, setting forth amount of his claim, his cause of action, and a description of the animal upon which he has a lien, and the justice shall thereupon issue summons as in other cases and embody therein a description of the animal and an order to the constable to take the animal and her offspring, if there be an offspring, and hold her (or them) subject to the order of the court,

"If upon trial, judgment be rendered for the plaintiff, the court shall order a sale of the animal or animals, as on execution sales, to pay the judgment on the bond against the sureties for the amount of the plaintiff's debt and cost.

"We, the owners of horses, being interested in the improvement of live stock, request the legislature of this state to enact the above text into a law in this state."

NAMES ..... ADDRESSES .....

not scattering disease. They know when the sire is fertile. They know when a complete service is made. They are taught what to do with breeding stock. Many of them have produced 200 colts during one season from one sire, and with only one service a day.

Long ago this School passed the experimental stage. It has stood the test. Nothing succeeds like success. An army of breeders has promised and is now planning to attend this School. They have talked to others who have been here. Scientific breeding is a profession. Everything pertaining to horse breeding and judging is given in plain language; demonstrations, practical work and lantern slides are used.

Those interested should read carefully the advertisement in this issue. For further information address the Graham Scientific Breeding School, 225 West Twelfth Street, Kansas City, Mo.

Read the following statements from students:

I think the Scientific Breeding School is a great place for any man to attend, whether he stands a stallion or jack, or just keeps any kind of breeding stock. He needs the education of protecting himself and stock from diseases, and he sure gets it there.—J. C. Moore, Rushville, Ill.

I feel that it would be little less than a calamity to the stock interests for this School to suspend.—William Barnes, Mitchell, Neb.

I consider it essential to every stock man, whether a stallion or jack owner or not, to attend at least one term of the School.—John Blake, Carlisle Iowa.

Having attended one term of the Graham Scientific Breeding School, I find it the only school to bring out better breeding in our states. Every stallion or jack owner should attend this school. If they couldn't attend themselves, send their boys.—W. S. Hatten, Harkweather, N. D.

Having attended a term of Graham Scientific Breeding School, I thought I could learn more by attending again. I am well satisfied with their method and don't think anyone in the breeding business can afford not to attend. Hence my second term.—F. C. Griffin, Gardner, Kas.

I consider this a good place for an man or boy to attend, as it is a good clean School and a credit to the world.—J. H. Milligan, Clay Center, Kas.

I heartily indorse the Graham Scientific Breeding School and conscientiously request every breeder and stock owner to attend, as you will certainly be glad you did so.—D. W. Strong, R. F. D. No. 2, Lamoni, Iowa.

I have attended your School two terms and I wish to say I can cheerfully recommend the School as being a good, moral, clean institution and in regard to the subjects taught it is impossible for me to estimate the value of the two terms. Wishing you much success.—W. E. Crow, Wyandotte, Okla.

Breeder brothers, I have spent the best week of my life in this School for me, my family and neighbors. Everybody should attend. You do not need to be afraid to go or send your boys.—W. H. Miller, Clay City, Ind.

The Graham Scientific Breeding School is an institution of high merit and meets a long felt need on the part of all breeders of live stock. The instructors are all men of highest authority on the several subjects which they handle. No man who makes a pretense of breeding live stock of any kind can afford not to take a course of instruction in this school.—Baylis Griffin, Sylvania, Ohio.

I find more information in attending this school than anything I have ever read. The lectures are something great and the manner in which it is carried on. The school is safe to send any boy and a great place to send them.—J. F. Porter, Lenox, Iowa.

I have attended two terms of the Scientific Breeding School. I think every stockman should attend.—N. Buckler, Ingersoll, Okla.

I attended the Graham Scientific Breeding School and think it is one of the greatest schools known for stallion and jack men and mare owners.—Wade Couch, Mathews, Ind.

## 30-Day Bargains On 13 Edwards Metal Products Edwards STEEL Shingles

### Special Low Price Offers

For 30 days prices on 13 Edwards Metal products have been chiseled down to bed rock. Never before could you buy these famous metal goods at such low prices. This is the one big money-saving chance you have waited for. You can now buy steel shingles that won't rot, rust, crack, burn or leak for the cost of old out-of-date wood shingles. Edwards STEEL Shingles are in successful use on over 135,000 homes.

"Reo" STEEL Shingles

Edwards Griplock Roofing

Edwards Spanish Tile

Edwards "Steelcote" Fireproof Garage, \$49.50

### Outlast Any Building!

Come in big clusters ready to put on. A few nails, hammer and the hired man's arm lay 100 at a clip. Ten times faster and ten times easier than putting on wood shingles. Absolutely rust and leak proof. Guaranteed against lightning damage under \$10,000 bond. Ask us about this.

### We Sell Direct, Freight Paid

with no middleman's "rake-offs." We under-sell and out-sell everyone on high quality steel roofing, steel garages and other steel building products. Check off from the 13 special low price products listed below those that you are interested in, mail the coupon and we'll send our startling low prices.

THE EDWARDS MFG. COMPANY  
1126-1176 Lock Street Cincinnati, Ohio

## Questions and Answers

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1296—MARE FAILS TO CONCEIVE—**I have a Hambletonian mare that had a colt three years ago and the same fall after having the colt she had a touch of what they call mountain fever, but was not bad. Since that time I have been unable to get her in foal. She is in good flesh; eats well and has good life. Can you tell me what to do for her to get her in foal?—Washington Subscriber.

**REPLY—**We are not familiar with the disease peculiar to your locality and would suggest that you take up the matter with some of the veterinarians of your state. Perhaps some of those connected with educational work at Pullman could be of help to you.

**1297—ANNOYANCE FROM FLIES—**I have a two year old jack that the flies are working on badly. Would like to know what to do to keep them off. I spray him once a day with sheep dip and keep him in a dark stall in the day time and let him in the lot at night. Can I do anything more that will keep them off? I never saw the flies so bad here.—Illinois Subscriber.

**REPLY—**Keep your jack in a stall during the day time that is screened from flies and turn him in his lot during the night for exercise. This time of year he should be sheltered from storms and cold weather and if the door of his stall is left open during the night it must be closed early in the morning. Fly poison or sticky fly paper may be placed out of reach of the jack to catch what few flies gain access to the stall. You must protect this jack against the annoyance of these pests or later on you will pay for it in having an animal ruined with so-called jack sores. There are numerous sprays on the market that are quite effective in keeping flies from annoying animals.

**1298—HERMAPHRODITE—**What is the meaning of Hermaphrodite as applied to mares? Do they possess both male and female organs or is this appendage only an enlargement of the clitoris?—Iowa Subscriber.

**REPLY—**An animal that is a hermaphrodite is one in which the sex is not clearly defined. In other words, it may be an animal partaking of the nature of both sexes with the organs of the two sexes partly developed. Sometimes the digression from one sex is only slight, as in the instance of an enlarged clitoris. Again the animal is developed so that it is very difficult to determine which sex predominates.

**1299—LAME COLT—**I have a colt that will be one year old in April. He is very lame in front leg; sometimes he is worse than others; puts the foot forward to rest it. The colt was foaled lame or was lame when I first saw it. It seems worse in cold, wet weather like it might be rheumatism. He is a very valuable colt, not registered. Can anything be done for him?—North Dakota Subscriber.

**REPLY—**Obscure lameness is very difficult to diagnose without a complete and explicit recital of the symptoms. Properly you should take your colt to some good veterinarian who can have an opportunity to give it a careful clinical examination. This colt may have been injured before you saw it or may have become infected with the germs responsible for navel ill and the lameness yet present be due to such infection. Have your colt examined by a competent man.

**1300—HYDRATED LIME—**I see an article in the last issue giving the uses to which lime can be put to on the farm, and what I want to know is if "hydrated lime" can be used the same as barrel lime.—Oklahoma Subscriber.

**REPLY—**Lime slacked with water is "hydrated lime."

**1301—INJURED FETLOCK—**I have a mare which has a large ankle on left hind foot and she stands on edge of hoof and pitches the swollen angle forward. She is about 12 or 14 years old. Can you give me a cure for this?—Arkansas Subscriber.

**REPLY—**Your description indicates that the back tendons of this animal are contracted and it is rather questionable if satisfying relief can be given without an operation. We would advise that you refer the matter to some competent veterinarian in your locality, as a personal examination is necessary before proper advice can be given.

**1302—FEEDING OIL MEAL, ALFALFA, ETC.—**I am feeding oil meal and a little alfalfa hay to my horses every night and I have been told it is not the right thing to do. I have been told by an old breeder to feed them a cupful of cracked wheat at each feed; that it is good for stallions during the breeding season.—Kansas Subscriber.

**REPLY—**Any of the feeds mentioned are good provided that they are fed in moderation and the only harm such feeds generally do to stock is that they do not have an opportunity to get them.

**1303—DEAD HAIRS IN TAIL—**What is the cause and cure of dead hairs in the tail of horses, also the preventive?—Colorado Subscriber.

**REPLY—**Occasionally the follicle containing the root of the hair becomes diseased, causing death of the hair. First wash the tail with tar soap and warm water and when dry carefully rub into the skin of the tail a little high grade kerosene that has been permitted to stand in an open vessel for two days. Repeat this twice a week for a few applications.

**1304—QUESTIONABLE DISEASE—**I saw a mare last fall that I diagnosed as dourine and later on she died. The flesh all came off of her legs and finally one foot came off and they killed her. The veterinarian that was called after I was, called it blood poison or purpura. Which was right. I expect to breed a mare for this man and advised him to disinfect his barns, but the veterinarian said it was not necessary to do it. What is your opinion?—Ohio Subscriber.

**REPLY—**The symptoms you describe are not those of dourine and it is quite likely it was purpura and that disease often causes sloughing as you describe.

**1305—LICE ON JACK—**What would you use to kill lice on a jack when the weather is cold?—Missouri Subscriber.

**REPLY—**You presume you are not prepared to properly care for this jack after applying liquids on a cold day, which is objected to. Liquid applications are most effective but a combination of snuff and sulphur, equal parts, may be blown into the hair occasionally and if persisted in will rid the animal of lice. The application may be made with a small bellows or powder gun.

**1306—LOSES YOUNG COLTS—**What causes colts to die? They come all right but die from 12 to 48 hours. It seems that their kidneys and bowels don't act right. I have lost four this way.—Texas Subscriber.

**REPLY—**Many new born colts die from impaction of the bowel on account of lack of proper rations for the dam previous to foaling. Too many times pregnant mares are kept upon food altogether too dry and constipating. Again, colts may die at this early (Continued on page 13).

### Volume—Quality

**VOLUME** is our watchword—QUALITY our motto. Quality—Galloway engine quality—has made our tremendous volume possible. Skilled workmanship, best materials bought in large quantities, simplicity and perfection in design, and supremacy in power are why I call this new 6 h.p. (horse power) Galloway's MASTERPIECE.

### Get My New 1915 Proposition

It's new and different. Listen! Don't buy an engine of any make, kind or at any price until you first get my new 1915 proposition and sliding scale, price reducing schedule. It's an eye opener—a profit sharing surprise to everybody. The more we sell, starting in September 1st, 1914 and ending September 1st, 1915, the more we still reduce our price from this already low figure and you get the benefit.

**Ask For My Free Engine Book**  
Send a postal now for our new 1915 proposition and valuable engine book that is full of engine information, pictures and letters from satisfied customers that tell the absolute truth about Galloway engines. It's yours for the asking.  
Wm. Galloway, Pres., The Wm. Galloway Co.  
1115 Galloway Station Waterloo, Iowa

## \$18.30 PER HORSEPOWER

Can you buy a horse for \$18.30? No! Yet you can get a six horsepower

### DETROIT FARM ENGINE

for \$18.30 per horsepower. Runs on Kerosene, Gasoline, Alcohol or Distillate. Saws wood, grinds feed, pumps, etc., does any job around the farm. Only 3 moving parts. No cams, gears, sprockets or valves. Positive satisfaction ten year guarantee. 30 day money back trial. We want farmer agents everywhere. Write for particulars.  
Det. Engine Works  
203 Bellevue Ave.,  
Det. Mich.

**Wanted—**To hear from owner of good farm for sale. Send cash price and description. D. F. Bush, Minneapolis, Minn.

## Hotel Convention

12th and Broadway, Kansas City, Mo.

Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall.

## Be an Auctioneer

Travel over the country and make big money. No other profession can be learned so quickly, that will pay as big wages. Write today for big, free catalogue of Home Study Course, as well as the Actual Practice School.

**MISSOURI AUCTION SCHOOL.**

NEXT TERM STARTS JAN. 4.  
W. B. Carpenter, Pres., Room 340,  
818 Walnut St., Kansas City, Mo.

## Kansas City Business College

A school that has for its object the thorough training of young men and women for success in life. Book-keeping, shorthand, touch typewriting, penmanship and all English and commercial branches. Free employment bureau. Highest indorsements. One of the strongest shorthand faculties in the entire West, teaching nine standard systems of shorthand and stenotypy. Dement, Pitman, Graham, or Gregg shorthand. Penmen of national reputation. Graduates placed in positions and students aided in defraying expenses while taking the course. Elegant new quarters; finest in Kansas City, especially designed for this school in the new modern fire-proof Young Women's Christian Association Building. For catalogue, address

C. T. SMITH, Y. W. C. A. Building, 1026 McGee St., Kansas City, Mo.

I have attended a term of the Graham Scientific Breeding School and think it a great benefit to stallion and jack owners and I would advise all who can to attend it.—R. M. Dunn, Plains, Kas.

In my opinion a man could not make a wiser move than to attend the Breeding School, or, in other words, it is one of the most economical purchases he ever made. It is also very necessary to those wishing to take up the matter of artificial breeding.—F. A. Greenough, Harlem, Mont.

I can conscientiously say that I was more than pleased in every respect while attending the Graham School. Never in my life have I learned so much in such a short time. The influence I received is worth a great deal to me and their teachings covers a great field. I can recommend it as one of the best places to send young men, even if you never expect to be in the breeding business, and wish I could have attended younger in my life.—Oscar Wilkens, Lorraine, Kas.

The last was my first term at the Graham Breeding School. It appeals very favorably to me because of the morality and cleanliness of the School, and because of the cream of the subject they teach here is what every stock owner should know.—Avery T. Hoover, Detroit, Kas.

I was always puzzled why more men and especially young men do not attend this school. It is because they haven't a faint idea of the excellent information given here.—E. E. Hall, Kincaid, Kas.

I have taken a course in this School and say that it would be a benefit to any stock raiser as well as breeder, as it helps him to make better selections for his foundation stock. This will help also to clean up all infectious disease.—J. F. Moery, R. R. No. 3, Hennessey, Okla.—Advertisement.

## Live Stock, Hay and Grain Market Review

Volume of trade in horses was increased by an English order for mules, and now with both arms of the equine market finding similar outlet general business has picked up materially. Buying seems to be at several points and will continue up to the close of the war, and on the present basis of purchases, another three months will have made total purchases for foreign countries well up to 200,000. This number is small taken in comparison with the total number of horses and mules in this country, but when considered that this supply was drawn to channels out of the ordinary and had to be recruited from surplus animals it will have a material effect on the numbers offered in the future. Demand from Europe will not stop with the war, and unless all precedent is completely upset Europe will have to recruit its pastoral supply from the United States. Then the call will come more to the breeders than to the average grower of horses.

Farmers should be more careful in making sales and as far as possible reserve the mares. Buyers, however, make no sex discrimination, and a large number of mares are going to Europe. With them their line of production ends as far as this country is concerned. By no means are the British getting our best class of horses, but each week finds the supply suitable for that outlet dwindling, and unless specifications are modified

to lesser quality demand will have to be satisfied from better animals.

While war outlet is the big thing now the south is slowly rounding into a position to begin buying. Some cotton is selling and finances are being shaped so that a further movement and storage of surplus cotton can be provided on a loan basis. As soon as the south finds that it is provided for its activities will begin. Cotton states have bought practically no mules since late in June, and the four months' delay has placed them in a position of large need. The east is an uncertain buyer of heavy horses. A few car loads have been shipped east from Kansas City, St. Louis and Chicago, but dealers to whom they were consigned say they are doing only a peddling business.

Dealers quote prices for cavalry horses, wagon, riding and large pack mules stronger. They say there is no change in other classes. One feature in connection with the offerings is that few big mules or horses are being offered. They are being held for an improved demand and higher prices, both of which dealers expect.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—	
Drafters, 1700-pound extra quality.....	\$200@240
Drafters, good to choice.....	165@200
Drafters, fair to good.....	140@160
Chunks, good.....	125@155

Chunks, fair.....	90@120
Southerners, good to choice.....	100@150
Southerners.....	50@100
Mules—	
13½ to 14½ hands.....	\$ 80@100
14½ to 15½ hands.....	100@125
15½ to 16 hands.....	120@165
16½ or better.....	170@215

### Diminishing Receipts of Cattle.

The movement of range cattle which started in July continued with increased volume up to the third week in October, when the total at the five western markets reached 219,000, the largest supply this year. In the last week in the month only 157,000 arrived, and while Monday the run was still fairly liberal, the biggest part of the range cattle are either marketed or have been placed where they can be fed or held through the winter. The range season this year was unusually successful. Grass was good, cattle made good gains and the market, though some lower than had been expected, showed no extreme fluctuations. All through September and October there was urgent call for matur-

ing cattle paper to be taken up, and that pressure resulted in larger supplies coming to market than otherwise would have moved. However, this liquidation relieved the financial pressure and the readiness with which maturing obligations were met reassured loan sources that cattle paper is a sound loan avenue.

Saturday the United States government placed the Chicago stock yards under quarantine for the foot and mouth disease and have tightened up

Near the Geographical Center of Kansas City and Her Adjoining Sister Municipalities Stands This, the Railroads' Greatest Gateway Between the East and West.

In three days of parades, ceremonies and festivities, formal and informal, Kansas City celebrated the opening of its new Union station, which went into service at 12:01 a. m. November 1. Kansas City has never before been the scene of quite such a universal jollification, for the old station was a 17-year humiliation, from which all home people and visitors were delighted to be freed, and every man and industry, from the cab driver to the Commercial Club, and all it represents, made it a matter of business to join in the manifestations of delight.

The great structure, or rather this great assemblage of structures, which

our illustration shows, represents only a part of the expenditures which the railways made in building at Kansas City the second greatest terminal west of New York City. Over four years ago the work began, and since that time fifty million dollars has been put into the project, to make it what it is.

In some ways the depot is the greatest ever built, and railway presidents, who have had a hand in its building, have predicted that its equal will not again be built in North America.

But impressive as the great terminal is in every material way, this country is even more strongly impressed with its significance as an indorsement by the railway builders of this continent,

of every claim and prophecy which has been made for Kansas City. Money talks, and when the farthest seeing class of financiers in the world put fifty million dollars into one city, at a time when money is more than merely "close," there is nothing left to be said.

The frontage shown in our picture, beginning with the corner in the foreground, and ending at the viaduct in the distance, is four city blocks—from Main Street, the viaduct in the foreground, to Broadway, the viaduct in the distance. The distance over all the train sheds, express offices, baggage, etc., is really about five blocks. The area provided for the handling of baggage is said to be the greatest of

any station in the world. Nothing short of several hours' inspection can give an idea of its immensity. The grand central lobby, for instance, is so large that Kansas City's biggest hotel could be set down in it. Around this lobby, and below the street level shown in the picture, are stores, offices, restaurants, barber shops, etc., enough to fill the ground floor of an ordinary city block.

Our readers will want to know the location of the American Breeder office with reference to the new depot. We are just about ten blocks due north from the center of the area covered by the depot and train sheds, and car service will be better than heretofore.

## Just Tell Me How Many Head of Stock You Have and I'll Feed Them 60 Days Before You Pay

I want to prove to you right on your own farm before you pay what I have already proved to thousands of other farmers. I want you to see with your own eyes how your stock will gain faster

on no more feed, thrive better, keep healthier, and make you more money if you will only let them run to SAL-VET, my great worm destroyer and live stock conditioner. To convince you of the superior merit of this great preparation, I am willing to risk a whole two months' supply—enough to feed every animal on your farm for 60 days with the understanding that it will not cost you a penny if it fails to do what I claim. Hundreds of thousands of farmers already feed SAL-VET—no doubt many in your own neighborhood. Now I want YOU to try it too, at my risk. Read these letters:

"My experience is that SAL-VET is the best and greatest conditioner ever fed to sheep and hogs."—Charley Higgins, Route No. 1, Roachdale, Ind.

"Hog cholera has been prevalent here this fall. My hogs have so far escaped and I am crediting this fact to SAL-VET."—W. B. Ellsworth, Brookwood Farm, Ottawa, Ill.

"I am well pleased with the results of feeding SAL-VET. Our hogs have had no cholera, while our neighbors all around us, have lost all of theirs."—J. B. Jolliffe, Rolfe, Iowa.

# SAL-VET

TRADE MARK

REG. U.S. PAT. OFF.

The Great  
WORM Destroyer

The Great  
LIVE STOCK Conditioner

SAL-VET is the greatest boon to stock raisers ever discovered. Jas. Leet, the well-known breeder of International Prize Winners, says: "It is the salvation of the sheep business in America." Hon. A. J. Lovejoy, Ex. Pres. of the International Live Stock Exposition, and famous expert on Hog Raising, says: "It is the best preparation we have ever used." Prof. E. J. Iddings, Animal Husbandman of the University of Idaho Agricultural Experiment Station, says: "Since using SAL-VET we had no further trouble with worms." In fact, it is recognized everywhere by leading live stock authorities as the foremost preparation for the destruction of worms in farm animals. SAL-VET is a medicated salt—therefore, easy to feed—stock like it. It requires no dosing, no drenching, no starving. You simply place it where all your farm animals can run to it freely and—

### They Doctor Themselves

SAL-VET contains no antimony, but just those medicines your stock need to rid them of worms and to keep them in the pink of condition. It will improve the digestion, sharpen the appetite, tone up the system, help them get the utmost good from their food—give them smoother, glossier coats, and make them thrive and grow into profits faster.

I want to prove these things to you right on your own farm. I want you to find out from actual experience what SAL-VET will do for your stock, and all I ask is that you

### Feed It—Prove It—Before You Pay

You can't afford to turn down this liberal offer. You can't afford to be skeptical—you can't afford to delay. I don't ask you to send me one penny or to take anybody's word for what SAL-VET will do for your stock. I simply say try it now—at my risk—be convinced. All I ask is the privilege of shipping you enough to last all your stock 60 days. You simply pay the freight charges when it arrives, feed it as directed and at the end of 60 days report results. If it fails to do what I claim—if it fails to rid your stock of the deadly, blood-sucking, disease breeding stomach and free intestinal worms, there will be no charge—you won't owe me a penny. I have arranged a large coupon at the top of this advertisement to make it easy for you to send in for your trial order. Fill it out and mail it today.

500 lbs.....	21.12

Special discounts for large quantities. No order filled for less than 40 lbs. on 60 day offer. Never sold in bulk; only in Trade-Marked "Sal-Vet" Packages. 60 day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle as near as we can come without breaking regular plant packages.

### SAL-VET Does the Work

"I had 75 head of hogs and lost 70 from worms. I cut open some of those that died and found in each from 20 to 45 big worms knotted in the small intestines. I fed tobacco, salt and ashes, besides two or three proprietary preparations and in fact everything else I ever heard of, but none did any good, but your SAL-VET certainly knocked the worms. I am still feeding it and they are still coming. SAL-VET surely is doing the work; the hogs look better, eat better and are doing better."—ROBT. YAGER, Gentry, Mo.

### Good Advice for All Sheepmen

"About the first of September our lambs commenced to die, and we lost about 20 head. Finally we went to an old sheepman and asked him what to do. He said, 'I guess your lambs have stomach worms and you better feed them SAL-VET.' So we ordered one hundred pounds and started feeding it in bran and oats, and in a few days we were convinced that our friend had advised us right, as we found piles of dead worms where the lambs had been at night. We saved 74 head of lambs and could have saved all of them had we only fed SAL-VET sooner. Our lambs gained flesh very fast after they got rid of the worms and we sold 24 bucks at an average of 75 pounds each. SAL-VET is a wonderful remedy as a worm destroyer and tonic and we take pleasure in recommending it to all stock raisers."—CUTLER & HAYES, Salem, Ill.

### Great for All Stock

"I fed SAL-VET to all of my stock, and can say that I never saw anything do stock so much good as SAL-VET. My sheep began to fatten at once and I have the finest bunch of lambs of anyone around. Am glad I accepted your SAL-VET offer."—DAVE NICHOLS, Dyer, Ky.

restrictions until today (the 5th) they are absolutely closed. The trouble seems to have had its origin in an outbreak of the foot and mouth disease in Michigan and Indiana, and some cattle infected passed through the Chicago yards. Only a small per cent of the cattle sent to Chicago are bought as stockers and feeders, so it was hoped that extreme measures would not be necessary. The virulence and infectiousness of the disease, however, call for every precaution.

The third week in October cattle prices, except for prime gain fat steers, were at the lowest level of the season, but in the past ten days about 35 to 50 cents of the loss was regained. Grain fat steers have been in such small supply that values were not fairly tested. Chicago quotes prime grades up to \$11 and in Kansas City some not strictly prime sold as high as \$10.50, but short fed grades sold at \$8.50 to \$9.65. Following the closing of the Chicago yards cattle prices at Kansas City increased 25c to 50c per hundred above the tables given herewith.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers.....	\$9.75@10.75
Good to choice steers.....	8.75@ 9.70
Fair to good steers.....	8.00@ 8.70
Common to fair steers.....	6.50@ 8.00
Meal fed, choice.....	8.50@ 9.40
Meal fed, common to fair.....	7.75@ 8.40
Quarantine steers, fed.....	7.50@ 8.25
Quarantine steers, grass fat.....	4.85@ 7.45

Cow Values Declined, but Are Mending.

On October 23, salesmen found cows and heifers almost unsalable at 65 to 75 cents lower prices than the middle of the month. Both the let-up in demand and lower prices proved only temporary and the market is now on the upgrade again, having regained 35 to 50 cents of the loss last week. The call for beef is so broad that butchers cattle are expected to sell

well all winter. No important change occurred in prices of veal calves.

The following quotations are for the various grades of butcher cattle:

<b>Cows—</b>	
Choice.....	\$6.25@7.25
Good to choice.....	5.75@6.20
Fair to good.....	5.25@5.70
Common to fair.....	4.75@5.20
Canners.....	4.00@4.75
<b>Heifers—</b>	
Choice.....	\$8.50@ 9.50
Good to choice.....	7.75@ 8.45
Plain to fair.....	7.00@ 7.70
Common.....	5.75@ 6.90
Veal calves.....	7.00@10.50
Bulls.....	4.25@ 6.75

### Big Trade in Stockers.

Demand for stockers continues liberal, and while prices have fluctuated 35 to 50 cents, most of the time ruling lower, they are as high now as any time this season. The biggest runs from the west are over and while some range cattle will be offered up to the middle of December native feeders will be in larger supply. Demand now, as through the entire season, is for the better quality. Feeders are selling at \$6.50 to \$8.50, and stockers \$5.75 to \$8.25.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders.....	\$ 7.75@ 8.50
Good to choice feeders.....	7.00@ 7.70
Fair to good feeders.....	6.35@ 7.00
Plain to fair feeders.....	6.00@ 6.35
Selected stockers.....	7.75@ 8.25
Good to choice stockers.....	7.25@ 7.75
Plain to fair stockers.....	5.75@ 6.20
Stock calves.....	6.50@ 8.25
Stock cows.....	5.25@ 6.25
Stock heifers.....	5.75@ 7.50
Milch cows.....	60.00@110.00

### Hog Prices Above Seven Cents.

Hog prices in the past two weeks have fluctuated 15 to 25 cents, but in the main have held above 7 cents. Some plain light weight and rough heavy hogs have sold under that level, but the good hogs in all weights are selling at \$7 to \$7.35. Packers apparently have lost out on their threat to take the price below seven cents for the opening of the packing

season, and now that winter packing also has begun the market appears on a firmer basis than during the middle of October. Heavy hogs are increasing in favor and now are selling at a slight premium over the medium and light weight grades. New government regulations respecting the inspection of hogs went into effect Monday. Under this rule where inspectors stationed at the scale discover one hog sick, that animal is tested as to temperature and if it proves above 106 the whole load is kept separate and killed subject to post mortem inspection. Formerly only suspect hogs were killed to be paid for on the post mortem test.

The range in prices of hogs in Kansas City in the past two weeks:

	Preceding Week
Monday.....	\$7.00@7.37½ \$7.00@7.45
Tuesday.....	7.05@7.45 7.00@7.35
Wednesday.....	7.10@7.55 6.90@7.30
Thursday.....	7.00@7.50 7.15@7.55
Friday.....	6.90@7.40 7.10@7.50
Saturday.....	6.90@7.35 7.00@7.45
Monday, Nov. 2.....	6.85@7.35

The following quotations are for hogs:

Choice, 250@300 lbs.....	\$7.10@7.35
Medium, 200@250 lbs.....	7.00@7.35
Mixed, 190@215 lbs.....	6.90@7.30
Light weight.....	6.65@7.30
Light lights.....	5.25@6.85
Stags.....	4.25@7.00
Boars.....	4.00@5.75
Bulk of sales.....	6.90@7.30

### Higher Prices for Sheep.

The market is entering a period of tighter receipts of sheep, and as the supply decreases prices advance. Compared with two weeks ago prices now are 35 to 50 cents higher. October receipts of sheep this year were 20 per cent short of a year ago, and the movement of feeders from the principal markets to the country is 25 per cent short. This forecasts light receipts for the winter season. Fat lambs are quoted at \$7.25 to \$7.85, yearlings \$6.50 to \$7, wethers \$5.25 to \$5.65, ewes \$5 to \$5.50, and feeding lambs \$6.50 to \$7.

### Grain Prices Advancing Again.

Wheat and oats prices are on the upgrade again but corn is feeling the pressure of the new crop and is lower. Wheat prices are being maintained on export demand and with present indications that the European war will continue some months even higher prices are expected. Growers are selling slowly. Bran, shorts, barley and rye are higher, also.

<b>Wheat—</b>

No. 2 mixed.....	.46½ @ .47
Rye.....	.86½
Chop.....	1.34
Bran.....	.91
Barley.....	.55½ @ .56
Shorts.....	1.10 @1.18

### Prairie Hay Lower.

Prices for prairie hay were quoted off 50 cents to \$1 a ton and alfalfa in some cases was up 50 cents. Other hay was steady. Clover and timothy hay are scarce.

Quotations are as follows: Alfalfa, choice, \$14.50@15; No. 1, \$13.50@14; standard, \$12@13; No. 2, \$10@11; No. 3, \$8.50@9.50; prairie choice, \$11.50@12; No. 1, \$9.50@11; No. 2, \$7@9; No. 3, \$4.50@6.50; timothy, choice, \$15; No. 1, \$13.50@14.50; No. 2, \$10@13; No. 3, \$6@9.50; clover mixed, choice, \$14; No. 1, \$12@13; colver, choice, \$12@12.50; No. 1, \$10.50@11.50; straw, \$5.50@6.

### October Live Stock Receipts.

In October the five western markets received 849,000 cattle, 1,196,500 hogs, 1,554,000 sheep. Compared with the same month last year this was a decrease of 28,000 cattle, 95,000 hogs and 388,000 sheep. Chicago was the principal loser in hogs, and Omaha in sheep. Receipts of cattle at all markets were nearer normal than in any previous month this year. In the ten months receipts were 5,694,000 cattle, 12,140,000 hogs, and 10,470,000 sheep, a decrease of 758,000 cattle, 1,620,000 hogs and 329,000 sheep, compared with the ten months in 1913.

### "BEST POSSIBLE RESULTS."

To the American Breeder:—Your paper has given the best possible results, and I thank you. Inclosed find check for the bill.—J. M. Nolan, Miami County, Kas.

## New KEROSINE Light

Beats Electric or Gasoline  
10 Days Free Trial  
Send No Money

## Costs You Nothing

to try this wonderful new Aladdin kerosene (coal oil) mantle lamp 10 days right in your own home. You don't need to send us a cent in advance, and if you are not perfectly satisfied, you may return it at our expense.

## Twice the Light on Half the Oil

Recent tests by noted scientists at 14 leading Universities, prove the Aladdin gives more than twice the light and burns less than half as much oil as the best round wick open flame lamps on the market. Thus the Aladdin will pay for itself many times over in oil saved, to say nothing of the increased quantity and quality of pure white light it produces. A style for every need.

## Over Three Million

people now enjoy the light of the Aladdin and every mail brings hundreds of enthusiastic letters from satisfied users endorsing it as the most wonderful light they have ever seen. Such comments as "You have solved the problem of rural home lighting", "I could not think of parting with my Aladdin", "The grandest thing on earth", "You could not buy it back at any price", "Beats any light I have ever seen", "A blessing to any household", "It is the acme of perfection", "Better than I ever dreamed possible", "Makes my light look like a tallow dip", etc., etc., pour into our office every day. Good Housekeeping Institute, New York, tested and approved the Aladdin.

## We Will Give \$1000

to the person who shows us an oil lamp equal to the Aladdin (details of this Reward Offer given in our circular which will be sent you). Would we dare invite such comparison with all other lights if there were any doubt about the superiority of the Aladdin?

## Get One FREE

We want one user in each locality to advertise and recommend the Aladdin. To that person we have a special introductory offer under which one lamp is given free. Just drop us a postal and we will send you full particulars about our great 10 Day Free Trial Offer, and tell you how you can get one free.

**THE MANTLE LAMP COMPANY**  
392 Aladdin Building CHICAGO, ILL.  
Largest Kerosene (Coal Oil) Mantle Lamp House in the World.

## Men With Rigs Make Big Money

delivering Aladdin lamps. No previous experience necessary. One farmer who had never sold anything in his life made over \$500.00 in six weeks. Another says: "I disposed of 84 lamps out of 81 calls."

**No Money Required** We furnish capital to get started. Ask for our distributor's Easy-System of Delivery plan quick, before territory is taken.

## Sunshine Lamp 300 Candle Power FREE!

### To Try In Your Own Home

Turns night into day. Gives better light than gas, electricity or 18 ordinary lamps at one-tenth the cost. For Homes, Stores, Halls, Churches. A child can carry it. Makes its light from common gasoline. No wick. No chimney. Absolutely SAFE.

### COSTS 1 CENT A NIGHT

We want one person in each locality to whom we can refer new customers. Take advantage of our SPECIAL FREE TRIAL OFFER. Write today. AGENTS WANTED. **SUNSHINE SAFETY LAMP CO.** 204 Factory Bldg., Kansas City, Mo.

## A BELGIAN BREEDER'S INDORSEMENT.

To the American Breeder:—I am very much disappointed that I could not attend the Breeding School last week, but expect to be there in December. Just received a letter from a man at Sacred Heart for whom I did some breeding and he reports his mare safe in foal after having mislaid for two years. This mare cost me \$900 three years ago. She was thin in foal. My week at School last year helped me wonderfully, as did also Mr. Cudd's visit last June. With best wishes for the best and only breeder's paper, I remain, W. F. Duseil, Clippewa County, Minn.

CARNOT (66666) 66666

# CORSA! CARNOT!

Do you know two names that count for more in the best history now being written, of the Percheron breed in America? Are there two names you would rather have on your own certificates and pedigrees?

## WELL, CORSA SELLS CARNOT PERCHERONS

White Hall, Ill., Dec. 8

Write W. S. CORSA, White Hall, Ill., for  
a catalog and mention the American  
Breeder

## FOOT AND MOUTH DISEASE

Seven States Under Quarantine Now.

Foot and mouth disease, one of the most destructive of live stock diseases, has again made its appearance in the United States, 32 herds having been found infected in Indiana and 132 herds in Michigan, beside sufficient disease or suspicion of disease at other points to result in the strict quarantining of the Chicago stock yards and the placing of Pennsylvania, Michigan, Ohio, Indiana, Illinois, Maryland and New York under quarantine regulations. Infected herds are being destroyed, the regulations requiring that no chances be taken. In the Chicago yards alone 1,200 cattle were condemned.

In the quarantining of the stock yards at Chicago several hundred employes and stockmen, who it was thought might carry the infection, were detained. No live stock, excepting horses, is allowed to leave the yards at Chicago. A big force of

United States and state veterinarians are "on the job."

This disease made its appearance in the United States in 1870, 1880, 1884, 1902 and 1908. Each of these outbreaks were successfully eradicated, but at enormous expenditure to our government and serious losses to the cattle industry in which the disease prevailed.

Foot and mouth disease is a specific, infective and contagious disease, principally affecting cattle, although sheep, hogs and even man, himself, are susceptible. The disease is evidenced by slobbering and the animals eat with difficulty. There is a high temperature, the animals diminish in flesh rapidly. The muzzle is at first dry and parched, but soon becomes red and swollen, and the flow of saliva increased. Blisters or vesicles appear upon the mucous membranes of the lips, cheeks and the dental pad, top and margin of the tongue and even the muzzle and nose may show similar diseased conditions. These blisters vary in size from a mustard seed to a mass one inch in diameter. The blisters soon rupture, leaving a raw, reddened surface which is very painful and prevents the animal from masticating food. This causes them to make a peculiar smacking sound. Similar lesions are also found at the junction of the hair with the hoof, but is usually more marked on the heels. The blisters may be found on the cleft of the foot; the front feet are usually more affected than the hind ones. Blisters may also appear on the teats of milk cows, although in the milder cases the foot and teat lesions may not be present.

The period of incubation varies from one to four or five days.

This disease is very destructive, not that it destroys the life of the animal, but because of diminished flow of milk and rapid emaciation of the affected animals.

Up to the 28th of October, 164 affected herds had been identified by the officials, of which sixty-six herds had been slaughtered, thus it will be noted that the expense is serious. The government has a provision whereby they pay 50 per cent of the value of the animals and fortunately in most of the two states affected, officers have made similar arrangements, so that cattle owners in at least two states are now receiving practically full valuation of their cattle, but should the disease become wide spread,

HEAD OF COW WITH FOOT AND MOUTH DISEASE. (From Bureau of Animal Industry, 25th Report.)

such an arrangement would not be possible because of the expense. The outbreak in 1908 cost the United States government approximately \$300,000, and a like amount was expended by the states in which that outbreak occurred.

The readers of the American Breeder should use caution in the purchase of animals in the section of the country in which disease is suspected. Introduction of an infected animal into a community where the disease does not exist would mean rapid spread and extensive destruction of animals in that community.

### HORSES FOR SALE.

**Clydesdales**—1 stallion, Baron Montague 16842; foaled May 14, 1912; weight 1,700 pounds. 1 mare, Bonnie Bell 11720; foaled May 12, 1904. 1 yearling filly, Scottish Bell 17769; foaled April 7, 1913. 1 filly foal, Scottish Bell 2nd.

**Percherons**—1 black stallion, King 88156; foaled April 28, 1912; weight 1,900 pounds.

**Belgians**—1 bay stallion, Robert 7002; foaled May 8, 1912; weight 1,750 pounds.

For prices and particulars address,  
**ANIMAL HUSBANDRY DEPT.,  
STATE AGRICULTURAL COLLEGE,  
Manhattan, Kas.**

### TWO IMPORTED REGISTERED MARES

For Sale. Scalling over two tons. One black; 7 years; an International prize winner; other gray; 13 years; a Springfield championship winner. Both sound, clean, unblemished; good breeders and workers of outstanding class as their show records evidence, and again in foal to Jupiter 11. \$1,200 for pair.

W. T. WILKINSON,  
Eureka, St. Louis County, Mo.

### Percheron, Belgian and Shiro Stallions and Mares

from suckers up to six years old, including my herd stallion Adore, first premium and champion Belgian stallion at American Royal in 1912. All priced very cheap; good terms on bankable paper.

J. M. NOLAN,

Paola, Kas.

### 40 HEAD OF PERCHERON

Stallions and Mares

Now on hand at Woodlawn Stock Farm. Prices right. Write us.

SPOHR & SPOHR,

Latham, Butler County, Kansas.

### IMPORTED BELGIAN STALLION

For sale. On account of quitting business I will sell my imported Belgian stallion. He is standard bred and registered; 8 years old; color, bay; has good, flat bone and is a good individual and weighs about 1,900 pounds; sound and all right in every way. He is a No. 1 breeder and a sure foal getter. Is easy to handle and of the best disposition. Will sell cheap if sold soon. This ad will appear but once. For further particulars inquire of

C. KLEINHENZ,

Barnesville, O.

LESIONS OF FOOT AND MOUTH DISEASE ON FEET OF COW. (From Bureau of Animal Industry, 25th Report.)

## WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.  
The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.  
Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

## A BRAND NEW IMPORTATION!

I was in France and Belgium all through May, making early, careful selections from the best stallions and mares to be found. These are now at my barns and ready for sale, along with some desirable American bred animals. It is a good time to buy.

**LONZO McCLAIN & SONS, LIMA, OHIO**

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

**GEORGE EGGERT, Newton, Iowa.**

## Imported Percheron and Belgian

**Stallions and Mares.**

Not so many, but the right kind at the right price.

**J. R. JUSTICE, GALESBURG, ILL.**

## PARAMOUNT STOCK FARM

**Breeds and Imports**

Percherons, Belgians and Shires.  
Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 lb. horses.  
**WM. CROWNOVER, HUDSON, IOWA.**

## PERCHERON STALLIONS.

I have for sale two black-gray Percheron stallions, registered in the Percheron Society of America; they are two year olds, weighing over 1,800 pounds each; will mature to better than ton horses; heavy boned and right every way. They are priced to sell. If you want the best at the right price, write me. **M. E. LYONS, R. F. D. 4, Delaware, Ohio.**

## PERCHERONS

For sale. Three registered Percherons; one 3-year-old black stallion; one of the big drafty kind.

One 7-year-old black imported mare with 5 months old filly by her side, and in foal again. These horses have size and quality and are sound.

**L. P. YOCUM, CLARENCE, IA.**

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

**LEON VAN MELDERT, Cedar Bayou, Harris County, Texas.**

## IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

**A. LATIMER WILSON, Creston, Iowa.**

## FOR SALE CHEAP.

One pair of registered Belgian mares; 2 years old; bays; well matched; weight 3,920. Prize winners at Indiana State Fair. Broke to work.

One pair of imported Belgian mares; 7 years old; good workers and a first class pair of brood mares; weight 3,800; color, bay; match well; must sell; short of feed and money. All horses sound.

**F. J. HERNIGLE, Medaryville, Ind.**

## IMPORTED AND HOME BRED STALLIONS AND MARES.

PERCHERONS, BELGIANS, SHIRES.  
The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Percheron this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

## FOR SALE AT A LET LIVE PRICE.

A 3-year-old black-gray registered Percheron stallion; recorded in the P. S. of A. Has size and quality. Can show dam and sire and a few colts by him. For particulars, write **A. H. TAYLOR, Sedgewick, Harvey Co., Kan., R. 4, Box 85**

## SIX PERCHERON STALLIONS

For sale, including our imported herd stallion, Siroco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.

**A. M. DULL & SONS, Washington, Kas.**

## TO ALL KANSAS STALLION OWNERS.

To the American Breeder:—The time is near for stallion owners to renew their stallion licenses for the year 1915. Will you kindly print the following:

## Notice to Stallion Owners—Read Carefully.

1. All stallion licenses must be renewed for the year 1915.

2. All stallions that have not been licensed must have new licenses for the year 1915.

3. The law prohibits the use of a stallion until the owner receives his state license.

4. Application blanks have been sent to stallion owners and these should be filled out at once and forwarded, together with the fee required by law, to the State Live Stock Registry Board. As soon as this application and fee are received, a license will be issued for the year 1915.

5. Do not wait until near the opening of the breeding season, as it will probably mean a delay of from two to three weeks. **DO IT NOW.** After March 1, the fee for renewals becomes \$2.00 instead of \$1.00. Send fees by draft, post-office order, or certified check.

6. The law does not require an examination for soundness unless you wish to state in your stallion advertisement that your stallion is a sound horse. If you wish to have your stallion examined for soundness, an inspector will be sent from this office who will call at your barn and examine your stallion for the sum of \$2.00, provided you notify the State Live Stock Registry Board before November 15, 1914, that you wish to have your stallion examined for soundness, and give the location of your place of business. Remember, the board must be notified before November 15, 1914. Local veterinarians will not examine stallions for soundness in the future.

7. Be sure to attend the horse breeders' meeting at Manhattan, December 30-31, 1914. Many important matters will come before this meeting.

**STATE LIVE STOCK REGISTRY BOARD, Manhattan, Kas.**

## A SOLIDLY BUILT HORSE SHOW.

The famous Bushnell Horse Show, now known as widely among horsemen as are most of the state fairs, was as successful this season as usual, bringing out great crowds of appreciative people, as well as a great exhibit in all classes of horse stock. Built up in the heart of a horse growing, horse using section of Illinois, aided by the influence of the great importing barns of the Trumans; the Bushnell Horse Show stands on as solid a foundation as any show in the country. The high quality of the exhibits is sufficiently shown, by the fact that state fair prize winners, both imported and home bred stock, have more than once been squarely beaten by entries owned by animals owned or reared on some of McDonough county's rich farms.

The officers of the Bushnell Horse Show are as follows: President, John M. Brant; vice-president, J. H. Spiker,

# Closing Out Sale

**THURSDAY, DEC. 10, 1914**

## 35 PERCHERONS

**10-STALLIONS-10**

**25-MARES-25**

Not an unsound one in the bunch. Absolutely the greatest band of Percheron mares ever sold at auction.

## GEORGIANA--AND HER FAMILY

This great mare in her day weighed 2,040 pounds. Won the blue at the Iowa State Fair and other noted shows. Has produced 19 living colts and is again in foal. Three colts have won the blue at State Fairs; all of them better than ton horses at maturity. Her daughters and granddaughters are keeping up her wonderful record as show mares, work mares and brood mares. The greatest breeding family in the history of the breed. Get a stallion or a pair of mares from this family. They are a sure family of breeders, handsome, large, sound, useful mares.

Come to this, **THE GREATEST SALE** in the history of the breed.

## Also Ten Registered Shetland Ponies

## Woodlawn Farm, Sterling, Ill

**—Mention the American Breeder—**

## WHAT ABOUT IMPORTED PERCHERONS?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few if any will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ton horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.

**PERCHERON IMPORTING CO. Chas. B. Kirk, Pres. ST. JOSEPH, MO.**  
All street cars going south from Union Depot pass our stables.

J. E. Harris; secretary, Lute J. Barber; treasurer, Albert C. Roach; general manager, J. G. Truman; chief marshals, William Hornbuckle, R. H. Sperry; official veterinary surgeon, Dr. E. H. Kinett.

## CO-OPERATIVE BREEDING PROGRESS.

As examples of co-operative breeding operations encouraged by farm management departments and county farm demonstrators, George O. Unruh, Kimball County, Neb., writes us:

"The past week a pure bred Holstein bull was bought by three farmers living close together. These men have some Holstein cows and by buying the bull in partnership can get a very good animal and raise much better stock than they would be able to do by each man owning a cheap, poor bull. Another pure bred Holstein bull was purchased here recently by one of our farmers. This animal will be used considerably in the neighborhood. "The enthusiasm for the dairy cow is growing, out here, I am very glad to say, for I feel that she is one of the stand-bys for the farmer of Western Nebraska. I thank you for the American Breeder, which I thoroughly enjoy reading."

**MORE THAN ANY PAPER I EVER USED.**

To the American Breeder:—The advertisement has brought me lots of mail, more than any other paper I ever used for horses and jacks.—M. P. Lydon, Howard County, Iowa.

## Build Everlasting Watering Tanks

Concrete watering tanks never rot, rust nor leak. Can be built any size or shape to fit any space. Easily cleaned—sanitary. Never require repairs. To get best results, to have the best concrete, use the best cement. That is use

## Ash Grove Cement

**Saves You 20%**

Ash Grove Cement is finer than Standard ground cements, and will make the concrete more dense to hold water—stronger to resist the pressure, and give a better all around job.

Wm. Galloway Co., 1715 Galloway Station, Waterloo, Ia., has been the leader in the building of gasoline engines for farm use and has done one of the biggest businesses in the history of gasoline engine manufacture. It stands to reason, therefore, that this company builds good engines and sells them at prices which are always right. We ask every reader who writes the Wm. Galloway Company about engines or any other of the hundreds of articles used on farms, to mention the American Breeder. Be sure to get this company's catalogue.

The H. & M. Harness Company, Box G, Stock Yards, St. Joseph, Mo., is the leading company of the West doing a business in harness and similar supplies direct with the stock men and farmers who use these goods. This company has been a regular advertising patron of the American Breeder and we ask that our readers who write for the H. & M. Harness Company catalogue, always mention this paper.

Prof. Jesse Beery, Dept. 13, Pleasant Hill, O., starts with this issue his season's advertising in the American Breeder. Every man who handles horses is interested and can well afford to answer the advertisement and learn just what Prof. Beery has to offer.

Detroit Engine Works, 203 Bellevue Avenue, Detroit, Mich., is one of the oldest and most successful designers and manufacturers of gasoline engines. The engines made by this company have had to stand the test of all kinds of work for the Detroit engines are probably employed in more different ways than any other make. The American Breeder wishes to be mentioned by every reader who sends to this company for catalogue and prices.

If you ever had any doubt about the superiority of Astral King, how is it now, since you have seen in the American Breeder the actual photographs of this great horse in action? Be sure to read the ad. this issue.

G. B. Chandler, Buffalo, Kas., has a 19 months old registered Percheron stallion and a registered Percheron filly for sale. See the ad.

Van Scyoc & Ryan, Wauneta, Nebr., have an imported Percheron mare and an imported French draft mare and two Belgian mares for sale or trade for other stock.

W. S. Corsa's great annual public sale of Percherons will be held at Gregory Farm, White Hall, Ill., on December 8. The offering is of the high character to be expected from a man of Mr. Corsa's ideals and enterprise, supported by the use of one of the world's greatest Percheron sires, on one of America's best and most practical breeding farms. For four years Carnot (for which Mr. Corsa paid \$10,000) has, through his colts, doubly justified the prestige with which he started, as a prize winner and a record price bringer. Send at once to Mr. Corsa, White Hall, Ill., for catalogue, and realize (as well as you can until you go to the sale) all this means. Mention the American Breeder when sending for catalogue.

Woodlawn Farm's Percheron dispensation sale at Sterling, Ill., on December 10, will give mare buyers a chance at producing quality such as is rarely ever offered, excepting in dispersions. And such an opportunity! Read the brief sketch of the Woodlawn Farm's Georgianna family in the advertisement of this sale, and think what such blood as this is worth in building up a herd. Mention the American Breeder in writing Woodlawn Farm, Sterling, Ill., for catalogue.

W. K. Shaw, Garnett, Kas., is advertising 280 acres of good, smooth land with fine improvements, in Eastern Kansas, to exchange for improved ranch in Southwest Kansas, also 505 acres only 80 miles from Kansas City for sale at \$75 per acre. Will assume incumbence.

Frank Lieser, Jefferson, Ohio, is advertising his imported Belgian stallion for sale.

F. J. Hernigle, Medaryville, Ind., has two pair of registered, imported Belgian mares for sale cheap. One pair is two years old and the other pair seven. Reason for selling, short of feed.

S. S. Mouse, La Cygne, Kas., is advertising stallions, jacks and jennets for sale and will consider good work horses or a light automobile in good condition on a trade.

John Gross, Elizabethtown, Ill., has some Red Polled calves for sale.

J. R. Justice, Galesburg, Ill., starts his regular ad in this issue. He has Percheron and Belgian stallions and mares for sale at the right kind of prices.

"Fravel Remedy Company, Centerville, Mo.—We can truthfully say that we have used your Influenza and Distemper Immunizing Remedy and have found it to be and do just as you claim. We hope that more stock men

# Hats Off!

## To Astral King!

### The Greatest of Them All

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind of buyers.

**JAMES HOUCHIN,**

JEFFERSON CITY, MO.

will use it as they will find it is the one medicine they won't do without. —Wood Brothers, Wichita, Kas." See advertisement of the Fravel Company and write for booklet.

Al. E. Smith, Lawrence, Kas., starts his regular advertisement in this issue. He has Mammoth jacks for sale at reasonable prices.

Cook Farms, Lexington, Ky., are advertising Mammoth jacks and saddle stallions, mares and geldings for sale, also home cured blue grass seed and cedar fence posts.

C. Kleinhenz, Barnesville, Ohio, is advertising his imported Belgian stallion for sale, as he is quitting business. He will sell this stallion cheap if taken soon.

G. B. Loper & Sons, Chesterfield, Ill., have 20 Percheron and French draft stallions and mares for sale from \$200 up.

Albert Beauchamp, Falls of Rough, Ky., has five jacks and three jennets for sale from three months to seven years old.

**Questions and Answers**

(Continued from page 7.)

age from infection through the navel, which is best handled by early disinfection of the cord.

**1307—ALOPECIA**—A mare belonging to a neighbor has had all of her hair to come off. It started coming off on the head and now she is almost bare, although it shows signs of coming back on the head. The mare is fat and shows to be heavy with foal and has suckled a colt all year. She runs on the range and gets nothing but grass to eat. The skin shows no sign of eruption of any kind.—Texas Subscriber.

**REPLY**—Temporary baldness occurs in animals especially from some febrile disease that is inclined to localize in the skin. It is merely a symptom of some disease and inasmuch as the mare is apparently recovering, no treatment will likely be needed.

**1308—STRANGLES**—We have had several cases of what is known here as loin distemper. The animal affected having large swellings somewhere on the body; some of them on the breast, some on the flank and under the belly and one over the loin. This swelling would eventually break and run a large amount of pus and immediately heal and the condition of the animal showed no signs of being affected except in the case of two colts which looked drawn for a few days. Our horses are all fat on grass and depend on deep well water to drink, which appears to be as pure as rain water, the most of the year. I think they need a blood tonic, and if that is your opinion, could you recommend something that mixed with salt, would help them and not endanger mares in foal?—Texas Subscriber.

**REPLY**—Your stock is affected with an irregular form of strangles and you should arrange with your veterinarian to treat them with bacterins with a view of preventing the disease. This disease can be quite effectively controlled in this way and is altogether the most satisfactory way to handle the situation.

**1309—WATER SEED**—I have a two year old mule that has a water seed. Can you tell me how to cut it out?—Texas Subscriber.

**REPLY**—An operation requiring the surgical skill necessary for success in such a case as you have should be done by a graduate veterinarian. You should call in such a man to do this work for you.

**1310—QUARTER CRACK**—What is the best treatment for a quarter crack in a horse's foot; cracked from bottom of foot to coronet, but not through it?—Washington Subscriber.

**REPLY**—Such a case should be treated by a competent veterinarian

**MILLER STOCK FARM****Bargains in Standard Bred Stallions.**

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade on the above. No stock shown on Sunday.

**F. M. LORIMER, Mgr., OLATHE, KAS.****STANDARD BRED STALLION BARGAIN.**

King Romeo 59453 A. T. R., mahogany bay; 16½ hands; 1,300 pounds; 5 years old; strictly sound; an unusually fine individual and highly bred. Will sell right, or trade on Percheron stallion or team of mares, as I do not wish to keep a horse for public service.

**J. C. DUNN, DALTON, NEB.****STANDARD BRED TROTTER STALLION**

For sale. For particulars, address **WM. M. WEGMANN, BLADEN, NEB.**

**SADDLE STALLION, PERCHERONS AND 10 JACKS**

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

**W. L. GRAHAM, Mackville, Washington County, Ky.****REGISTERED SADDLERS**

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Fos McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

**H. A. GREENWELL, LAKENAN, MO.****REGISTERED MORGANS FOR SALE.**

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

**RICHARD SELLMAN, Rochelle, Texas.****EXCELSIOR SHETLAND PONY FARM.**

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

**COACH AND HAMBLETONIAN STALLION**

For sale or trade; 8 years old; 16½ hands high; 1,600 pounds; good breeder and a show horse. Colts to show.

Also my 7-year-old jack; 59 inches high; 30-inch ear; 64-inch girth; 8½-inch bone. He is well broken and a good breeder. Black, with white points. Could use a good ton Percheron.

Also my 105-acre farm, 40 miles east of Kansas City; 6 miles from Odessa, Mo. **JOHN T. CAMERON, Odessa, Mo.**

to insure good results. The parts may be held quite firmly in position by having your shoer inject some nails across the crack, but the crack will not grow out until properly treated at the hair line and the right kind of a shoe applied. This your veterinarian should know how to do.

**1311—ORCHITIS**—One year ago I bought a pure bred Percheron stallion three years old. It had never done any breeding before I got him and this season I made 50 services with him. By the end of the season one of his

**MILLER STOCK FARM**

Jack and Jennet Bargains.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year old jack, \$1,000; four yearling jacks by Ilighball, world's record priced 2-year-old.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull. No stock shown on Sunday.

F. M. LORIMER, Mgr., OLATHE, KAS.

**MAMMOTH JACKS.**

You will find at my barns the largest number and the largest and best quality, registered, big boned, black jacks; 15 to over 16 hands standard, to be found in the United States. Reference, Banks of Lawrence. Prices reasonable.

AL. E. SMITH, LAWRENCE, KAS.  
(40 miles west of Kansas City on the U. P. and Santa Fe R. R.)

**JACKS AND JENNETS**

For sale. Five jacks from 3 months to 7 years old and three jennets. Stock O. K. in every respect.

Albert Beauchamp, Falls of Rough, Ky.

**JACKS.**

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

AMERICAN BREEDER

JACK STOCK AT TEXAS STATE FAIR, DALLAS.

1—S. L. Green's first prize weanling jack (9 months). 2—S. L. Green's first prize yearling jack. 3—Tom W. Hines' first prize aged jack. 4—A. B. Womack's first prize jennet colt (9 months).

**A LESSON IN JACK TYPE**

Jack No. 1—4 years; Height, 64 inches; Heart, 67 inches; Bone 9 1/2 inches.

There seems to be a great variety of opinion as to the proper conformation of a jack. Any breed of live stock having such great value should be better understood. An early demand was created for tall, slim jacks, 16 hands or higher. There are still some who believe this is the proper conformation.

A general discussion as to the most serviceable type of American jack should benefit our readers. We intend to run a series of photographs of jacks and all our readers are expected to take part in this discussion. This should be especially beneficial to those sections of the country where jacks are now being introduced for the first time. There are thousands of breeders throughout the country who own good stallions; they could just as well handle a jack in connection, and they will welcome this information.

Jack No. 1, shown above, will be used as the first illustration. His height from the highest central part of the withers to the ground is given, with his girth and bone (front leg, below knee) measurements. We want our readers to tell us where this jack is deficient. All objections should be plainly stated. All communications concerning this animal should be sent in immediately, so as to appear in the next issue. We want every one to feel perfectly free to express his opinion on this animal.

testicles began to swell and now it is as big as a man's head. I have tried different remedies, but still it continues to swell. I also have had three veterinarians and they can't tell what is the trouble. I also had the state veterinarian who took a sample of his blood and sent it to Washington as a test for dourine. Now I have news back that he is free from that disease. I may say he never got kicked or injured in any way to my knowledge. He eats well and feels good and is putting on flesh all the time. His testicle don't seem to have any fever in it and it don't seem to hurt him when I press it hard. I would appreciate any information that would put him back to his natural condition. — Montana Subscriber.

REPLY—The trouble is evidently plain. Your horse, according to your description, is affected with orchitis or inflammation of the testicle. As to what caused it may be a puzzling problem. It may have been induced by local injury which need not be of such violence as attends being kicked by a vicious mare. Often horses are exercised or roaded without proper support of the scrotum with a suspensory and the testicles become inflamed as a result. There are some forms of infection that may traverse the genital tract until the testicle is reached and inflammation produced in the gland from such sources. From your description we would judge you had an incurable case and the early removal of the affected organ is to be advised. So far as the gland is concerned it is of no value in the production of spermatozoa and it is only a menace as it is. Your horse will be better off as a breeder without it. Look about for a well qualified man in your state to do the work.

1312—STRANGLES—I have a yearling colt that had the distemper and broke out in several places. All the places seemed to heal up but one which is near the hip bone, and this place is still running matter. Colt is in good condition. Now what shall I do for it? Wyoming Subscriber.

REPLY—You might try injecting a little tincture of iodine into this wound every other day for a few times and if it does not heal you had better call in a qualified veterinarian who may

find it necessary to open the wound lower down so as to secure better drainage, or possibly the bone is diseased at that point.

1313—TICKS ON CALVES—Tell me the best remedy to use to get rid of ticks on calves.—Arkansas Subscriber.

REPLY—You do not state what kind of ticks are annoying your calves—whether they are the kind responsible for Texas fever or the common sort. It has been found that in order to rid cattle of ticks the animals must be wet all over with some liquid that will destroy the parasites. If many animals are to be treated it is most effectively done by driving them through a dip. Beaumont oil was first used for this purpose, and is very effective but hard on the stock. More recently a solution of arsenic, sal soda, pine tar in water has been used and it has been found destructive to the ticks and not nearly so hard on the cattle. We would advise you to take up the matter with the sanitary officers of your state so that the work may be carried out in the proper manner.

1314—MARES DO NOT SWEAT—I have two mares that pant terribly; don't sweat. I work them a half day; they won't eat any dinner, but will drink water. I feed eight quarts of oats for a meal. Please advise what to do for them and what will make them sweat.—Florida Subscriber.

REPLY—Your mares have evidently been overdone with hot weather and it is doubtful if you can ever get them into a condition when they will be useful again. Such animals should not be fed very much strong heating grain during the hot season, but should be given a run on grass during a part of the day. Perhaps at night would be the most convenient. If you are to continue such a team in service you will no doubt be compelled to do your work chiefly during the early morning hours and discontinue work during the heat of the day. There is grave danger of such animals succumbing to heat exhaustion.

1315—WEANING COLTS—When is

**Jack Sale****December 8****20 Jacks and 25 Jennets at Auction Dec. 8**

Write at once for Catalog and Information

**A. C. Finn & Son**  
Cartter, Marion County, Ill.**BIG MAMMOTH JACKS AND JENNETS**

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles north of Monett on Frisco R. R., and six miles southwest of Hoberg on Mo. Pac. R. R. Write for prices to

Henry Obermann &amp; Son, Freistatt, Mo.

**For Sale or Trade**

Eight jennets, 3 black Percheron stallions, from 2 to 7; 4 good jacks, sucklings to 7 years. Would accept a ton Belgian or Percheron stallion or pair of mares of either breed. Would consider a sorrel or black saddle stallion on jennets.

ALBERT CARR, MARYVILLE, MO.

**MAMMOTH JACKS**

For sale. Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

he best time to wean colts foaled in August, and what is best to dry mare up?—Oklahoma Subscriber.

REPLY—If colts are early taught to eat a little grain they can be weaned at six months of age safely and no special care is needed in drying up the mare, excepting to milk her out as needed and keep her on short grain rations during the period of drying up.

1316—BLIND COLT—In the spring of 1912 there was a mare brought to my horse to be bred. This mare was about nine years old and had raised three or four colts, but had not got with foal the year before. I reached in the mare and told the owner that I thought this mare had whites and there was no use in breeding her. He took her to a veterinarian and the veterinarian told him that she had the start of whites and that he would not advise breeding her again. He told him that she could be cured so she would be all right for work. The veterinarian prescribed a powder to feed her and said that he would treat her womb in about three weeks. After the powder had been fed for three weeks the mare was taken to the veterinarian, at which time he examined her again and said that she seemed all right. He then flushed her out with some disinfectant and said as her womb was open she had no pus in it. About two months after this I bred the mare and she got in foal and due time she had a well developed colt except the colt was blind and is still blind. When it was born one eye was sunken and both eyes had a skum over them which is still there. The

colt is doing well but is clear blind. The mare carried the colt 11 months and 15 days. I never saw either the sire or dam's ancestors, but both of them have the best of eyes. The sire is a registered Percheron and the mare is a high grade. The other colts that this mare raised all have good eyes, but they are bred from different stallions. The question is, what caused the colt to be blind, and if the mare is bred again is there danger of the colt being blind?—Pennsylvania Subscriber.

REPLY—Animals are sometimes born defective and this is one of the instances. No one can say why this colt was not developed in vision no more than could be explained why some people are born deaf and dumb. The mare might not produce another colt like this one from the same sire but on the whole it might eliminate a possibility by changing sires, which we would advise doing.

1317—POWDERED MILK MACHINERY—Can you give me the address of the firms who manufacture the machinery for making powdered milk? Several of us are interested in a Farmers' Co-operative Creamery here and are anxious to see what expense it would make to put in a plant of this kind.—Washington Subscriber.

REPLY—The Merrill-Soule Co., Syracuse N. Y. is the leading concern engaged in this business. There are other companies which the Merrill-Soule Company claims are infringing upon its patents and against some of whom it has suits pending. Among the other companies are the Milk Flour Company, Hearst Bldg., Chicago; Dry Products Company, 32 West Washington St., Chicago, and the California Central Creamery Co., San Francisco, Calif. Machinery for making milk powder is said to be very expensive.

1318—INJURED FOOT—I have a mule that stepped on heel of right foot in May last and it has never gotten well. I have tried most everything. It is hard and bleeds freely when it gets hurt. Please give me a remedy, if possible.—Oklahoma Subscriber.

REPLY—You need the services of a good veterinarian who can give this case personal attention for a few times.

1319 — QUESTION CONCERNING STALLION—I will try and tell you what I know of a Percheron stallion owned by a neighbor of mine and see if you can tell me if it is a credit to the horse's success. This horse had sores on him for two years; a large one on his hips; sometimes it is almost well. This is from a small sore to from 10 inches one way and from one hip to the other the other way. Around his sheath, nose and eyes his skin has turned white. (He is a black horse.) This horse used to have fits before this man got him four years ago. He is about nine years old. The majority of his colts look good while suckling, but do not seem to have a thrifty look after that. The owner of the horse has a good many mares of his own and breeds a good many for others. Now as far as I am concerned it makes no difference to me individually, only as I buy a young mare once in a while I am interested in using good, clean horses and think it my duty to attend to it if he would transmit this. Let me know what you think about it.—Nebraska Subscriber.

REPLY—This is a question you should take up with your state veterinarian who may be reached by addressing him at Lincoln.

1320—ADVERTISING RINGBONE MEDICINE—I want to ask you about advertising ringbone medicine. I am not a man with a lot of money, but I have a good formula. It works every time. One man near Milwaukee used it and his brother-in-law wrote for some. I thought of selling it at half price for a limited time. Now how would you help a poor man out? I never earned very much, having only one good hand. I have to do something along this line.—Minnesota Subscriber.

REPLY—I suspect that the only way you can make a success of your ringbone medicine is to get some honest druggist or chemist interested with you, giving him a share in the business in return for his services in preparing the medicine and helping you put it on the market in a business-like way. Sometimes business methods and business experience are just as essential in the success of a thing like this as is the merit of the remedy itself. First of all, however, you must be absolutely sure, not from one trial but from many, that you have got something that will do the work.

1321—SERVING SMALL MARES—I own two Percheron stallions and one jack. I bred a mare to my gray horse March 6, 1914, and when he made the cover he did not discharge. I let him rest a short time, when I let him make

## FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

## R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

another cover, and again no results. This mare was brought back in about 36 hours and the same horse made a good cover; everything went good. The same thing happened twice last season. This horse has a very large penis. Was it the horse's fault, or was it the mare's fault? The mare was in good heat.—Oklahoma Subscriber.

REPLY—It is sometimes difficult for a large stallion with a very large penis to make a complete service on a very small mare with a short vagina. You will have better results by breeding such mares with a capsule. It saps the vitality of your horse in making these difficult services.

For worms or other parasites living free in the stomach or intestines, apparently careful experimental work has shown good results by the use of low grade tobacco leaves, sometimes called "tobacco trash." This should be chopped up fine; mixed with an equal amount of salt and kept constantly before the sheep.—Dr. H. M. Reynolds.

**WE SELL IT  
FOR LESS**

We are located at Kansas City, "The Heart of America," the logical shipping point from which freight rates are low in every direction—which means a big saving to you. We are one of the largest commercial institutions in the West and control the product of several factories, Plumbing Goods, Wire Fence, Paint, Pumps and Tanks, Prepared Roofing, Mill Work, and Building Material.

If you have any doubt as to our reliability we refer you to any bank or business house in Kansas City and to thousands of satisfied customers, some of whom possibly are neighbors of yours. We also refer you to the Commonwealth National Bank of Kansas City.

We sell direct to the user—large or small—you simply can't afford to buy elsewhere until you get our prices.

We ship promptly and guarantee safe delivery.

Understand, we don't sell anything for less than it costs us. We simply act as your purchasing agent in all the big bankrupt and receivers' sales and failures over the entire United States and retain only a small profit for ourselves giving you the advantage of buying Lumber, Doors, Windows, Paint, Hardware, Plumbing, Roofing, Plaster Board (in many instances) Half What Others charge for the same material.

That's why I say to you—man to man—that you must send for my big free catalog. You owe it to yourself to take advantage of the bargains that our immense buying power makes us capable to offer you.

Read my guarantee below and then sit down and write for our big free catalog and send a complete bill for us to figure.

**W. EUGENE KING,**  
President.

### KING'S GUARANTEE

If you buy your goods of us—  
And you do not think they'll do  
If the fault is ours at all  
Back the money goes to you.

**FILL OUT AND MAIL COUPON BELOW**

**DON'T BUY ANY BUILDING MATERIAL FROM ANYONE, ANYWHERE UNTIL YOU GET THIS BIG ILLUSTRATED CATALOG. IF YOU ARE GOING TO BUILD, REPAIR OR IMPROVE YOU SIMPLY MUST READ THIS PRICE WRECKING CATALOG OF LUMBER, PAINT, ROOFING, HARDWARE, ETC.**

### NEW AND USED LUMBER AT TRUST-BUSTING PRICES

We manufacture all our new lumber and millwork ourselves, in a factory equipped with the most modern machinery. In our wrecking department skilled men save every piece in a building and prepare it, free from nails, ready for use. Every foot of this is sold at a big bargain to you, and we make extremely low prices on car lots. A little horse-sense figuring will show you how KING saves you money on first-class lumber. Using the cost of millwork for a job at \$100, adding 25% for Mr. Big Jobber, 25% more for Mr. Little Jobber, and an average of 35% more for Mr. Retail Lumberman, and the \$100-at-factory-cost finally costs you \$210.92, and you pay the bill. By eliminating all handling expense as much as possible, and by selling direct from the factory to you, KING can save you on any bill 25% to 50%. Send us your specifications, and let us quote you a price. Compare it with your local lumber yard's figures, and you will send us the order.

### DUCK'S BACK ROOFING LOW PRICES—HIGH QUALITY

King's famous Duck's Back Prepared Roofing is a strictly high grade roofing fabric, made from long fibre, selected wool felt, saturated with asphaltum and mineral rubber compounds, coated on both sides with patent composition, making it closely resemble rubber. Contains no tar, and is absolutely weather proof—neither wind, rain, sun, snow or cold has any deteriorating effect upon it. Suitable for flat or steep roofs; requires no special tools; can be laid by any workman. Requires no extra coating except cement at laps. Will not tarnish or discolor rain-water, and is free from odor. Tough and pliable, not affected by smoke, gases, vapors, or climate; will not dry out, shrink, warp, stretch, or crack. Width 32 inches. Made in three weights, all same quality, the difference being only in thickness.

**MEDIUM WEIGHT**—Guaranteed 8 years, 108 square feet to roll, nails and cement in each package, per square . . . **\$1.25**  
**HEAVY WEIGHT**—Guaranteed 10 years, 108 square feet to roll, nails and cement in each package, per square . . . **\$1.50**  
**EXTRA HEAVY WEIGHT**—Guaranteed 15 years, 108 square feet to roll, nails and cement in each package, per square . . . **\$1.75**

### DOORS

Look through our catalog for the great selection of high grade doors ever offered at prices beneath all competition. We have one splendid lot of California Redwood doors, made from selected stock, of first class workmanship throughout, bought from an Al factory which was shut down owing to lack of funds. We bought the entire lot at a tremendous sacrifice, and offer you the saving. Remember, Redwood does not rot. Lot 20012BB, Redwood doors, 2 ft. 2 in. x 6 ft. 10 in. 1 3/4 in. thick. Regular price anywhere else \$2.50; our price . . . **95c**

### CROWN FLEXIBLE PAINT READY-MIXED FOR INTERIORS

The reason we can sell perfect ready-mixed paint at prices far below your regular paint-store is very simple. In buying Crown Flexible Paint, you are not only getting the best paint it is possible to produce, but you escape all the useless profits of middleman and jobber, all of which add greatly to the cost of your paint, but add nothing to its value or quality. This explains why your dealer has to charge \$2 a gallon for paint that is usually inferior to Crown Flexible Paint at \$1.25 a gallon. Crown Flexible Paint is composed of guaranteed pure oil, lead and zinc, with silica—the same formula that has stood the most exacting tests of the U. S. Government test fences at Atlantic City. All the combination paints tested there stood the test better than pure lead-and-oil hand-mixed paint. Crown Iron-Clad Barn Paint is a specially prepared Barn Paint which will not peel, crack, or blister, and will not turn white when rained on, like cheap rosin oil paints do. In barrels, per gallon, . . . **50c**

### WIRE FENCE AND WIRE

Don't buy fencing or wire of any kind before you get King's prices. Get our catalog, tell us exactly the style and quantity you want, and we will quote you prices that will make the long-profit prices of your local dealer look like robbery. We carry all the best brands of fence including United States Standard Wire Fence, Victor Poultry and Rabbit Fence, Staple Loop Fence; One special lot of U. S. Standard Wire Fence guaranteed full weight, No. 9 top and bottom wires, No. 11 intermediate wires, and No. 12 stay wires, heavy full weight fencing, we ship promptly, 100 rods for only **\$17.15**

### CAST IRON SINKS

Save on plumbing expense by buying from King. Cast Iron Sinks, first quality, one piece, finished painted or enameled, most sanitary and usable sinks on the market. Furnished complete, as shown in illustration, or without attachments. King's cut-rate prices on sinks range upward from **\$1.40**

### BATH TUBS

Best enameled steel bath tubs on the market, heavy galvanized inside, nicely painted and finished outside. Has 8-inch wood rim, nicely finished; brass nickel-plated waste and overflow, plug and chain. Shipping weight 90 lbs. Price **\$6.40**

### BIG GATE BARGAIN

Best single drive gates, square mesh, 34-inch frame, 8 foot opening, with 7 1/2-inch full weight steel piping, sag-proof rod for brace; fittings malleable castings and forged steel; fabric heavily galvanized; and woven in to fit frame, so that each wire braces the entire construction; the biggest gate bargain ever offered at **\$1.27**

### LATH—SHINGLES

Special bargain in 32-inch white pine lath; all 3/8 inch thick and 1 3/8 inch wide; this extraordinary offer good for 30 days only, during which time all our Clear White Pine Lath, 32-inch long will be shipped at, per thousand **\$2.50** Get your order in before it is too late.

King's "Common Stars" Shingles are extra good value; will last 10 years; well milled and shipped in good width; packed 250 to bunch, full 16 inch shingles, guarantee to give you the most exacting tests of the U. S. Government test fences at Atlantic City. All the combination paints tested there stood the test better than pure lead-and-oil hand-mixed paint. Crown Iron-Clad Barn Paint is a specially prepared Barn Paint which will not peel, crack, or blister, and will not turn white when rained on, like cheap rosin oil paints do. In barrels, per gallon, . . . **\$2.25**

Seattle Clear Shingles, 5 to 2 inches, 2 good heavy shingle, if laid 4 or 4 1/2 inches to the weather you have a roof that will last 25 years; per 1000 **\$3.00**

### ROYAL BATHROOM OUTFIT

Here is a strictly high grade, practical up-to-date outfit for the finest bathrooms, at price within the reach of all. Compare it with those offered by others and you will agree it's the best that can be obtained. Bath-tub 5 feet long, roll rim, white porcelain enamel, graceful and roomy; Lavatory porcelain enameled, 18x21 inches with 8-inch back and 4-inch roll rim; closet most sanitary on market, siphon wash-down, seat and tank gold oak, tank copper-lined; considering workmanship and fine quality, this set cannot be duplicated anywhere at the price **\$39.50**

### Builder's Hardware

Everything in Builder's Hardware direct to you at wholesale—hinges, locks, door sets, window sets, etc.

### Windows and Glass

Check Rail windows \$1.10 up. Plain rail, glazed, 40c up. Transoms, 40c each. Safe Delivery Guaranteed. You will appreciate saving over usual prices.

### GET OUR FREE-PLAN OFFER "COST-LESS" HOMES

King's Catalog shows many designs of houses and bungalows which can be put up at very low cost for lumber and building supplies. This "Glenwood" Home is quaint and distinctive, has group triple window in living room not shown in illustration; ceiling 9 feet; choice of patent plaster board or lath and plaster; front and rear steps; all hardware, locks, hinges, knobs, nails, paint for two coats inside and out ready made frames and all lumber for this house furnished complete for only **\$380.00**

### BARGAIN SPECIALS

We always have in stock thousands of items, mostly brand new. We give here a partial list to give you an idea of what we have in this line. But whatever you want—no matter what it is—WRITE US BEFORE YOU BUY. Gas Heaters—3000 Odd Transoms and sash, 2 Maho any Bar Tops—500 Doors for Stores and Offices, Pumps, Boilers, Tanks, Tools, Bolts, Saws, Vaults, etc.

### 30 Lbs WIRE NAILS

ASSORTED SIZES **53c**

## BUY FROM KING'S AT KANSAS CITY THE LOGICAL SHIPPING POINT

Remember, we quote you prices at Kansas City, or delivered to your station. Other dealers may quote prices very low, but you will have to pay the Freight from Louisiana or Texas. **BE MISLED!** Insist on getting "Delivered Prices," or prices at your nearest distributing point, which Kansas City, with its low freight rates. WE WILL NOT BE UNDERSOLD! Send us your estimates for any building material you need—we will quote you figures that will MAKE you take notice.

### CROWN GAS OR GASOLINE ENGINES

The Crown is the kind of engine that you are always looking for but seldom finding—it does good work all the time and never seems to wear out. The Crown Engine satisfies every requirement you can make—strong, always in running order, cheaper than any other engine in first cost, and less expensive than other engines to keep up. The Crown is a Kansas City engine, made here by experts, some of whom have been making and perfecting gas and gasoline engines for 26 years. The Crown is the pick of all engines; it gives power independent of speed, runs steadily and smoothly without tinkering, uses very little fuel, and if sensibly run it COSTS NOTHING WHATEVER FOR REPAIRS. Air-cooled cylinder head—no water to freeze in winter; change speed device, permitting change of speed instantly without stopping engine. Made in all sizes and horse-power. We especially recommend the 8-horsepower size, equal in power to other engines rated at 8-horsepower, for only \$57.50; and our 2-horsepower size, offered at the bargain price of **\$32.50**

### CROWN FURNACES

Crown furnaces are guaranteed steel-drum furnaces, with grates, ashpits, etc., exactly equal to those found in furnaces at twice the price. These furnaces have an unusually large amount of effective radiating surface, the most important feature of any furnace. Not only a good heater, but it saves coal, heats quickly, and, if properly cared for, will last a lifetime. No. 018, without casing priced at **\$29.35**

### WALL AND PLASTER BOARD

Wallboard and Plaster board are the great modern substitutes for lath and plaster. King's wall or plaster board is buckle-proof, warp-proof, fire-proof; will not hair-crack; cannot freeze as new plaster does. Beats plaster, Costs less. Fine for finishing up rooms, partitions, attics, etc. Comes in sheets, goes on dry, lasts as long as the building itself, costs 50% less to lay; cold-proof, vermin-proof, handsome, durable. Write for samples and prices.

# THE AMERICAN BREEDER

WITH WHICH IS COMBINED CARLSON'S RURAL REVIEW

A Farmers' and Breeders' Paper Devoted to the Breeding and Care of Live Stock and the Welfare of Farm Families and Homes

Published Twice a Month. Subscription Price, One Year 50c, Three Years \$1.00

Volume VIII

Kansas City, Missouri, November 20, 1914

Number 6

THE RESULT OF TWO DRAFT TOP CROSSES AND PLENTY OF FEED AND CARE.

A few years ago a clean, sound roadster bred mare, weighing 1,050 pounds, was bred to a Percheron stallion in Edgar County, Illinois. A filly resulting from that service was well grown out and bred to a Shire stallion. The colt from that service was developed into the model of horse power and energy pictured above—Woodrow Wilson, champion draft gelding at the Illinois state fair, weighing 2,250 pounds at five years old. This horse was purchased by Trumans' Pioneer Stud Farm on the St. Louis horse market for \$625.00. Thus is strikingly shown the possibility of increasing weight by the use of good draft stallions and plenty of feed. A lot of breeding disappointments have been caused by young stock not being properly cared for. The American farmer must understand that feeding is just as necessary as breeding. Both are required in the improvement of farm animals. Our markets are full of undersized, undeveloped horses largely as a result of not being properly fed.

(Copyright, 1914, Graham Publishing Co., 225 West 12th St., Kansas City, Mo.)

CARNOT (66666) 66666.

# A New Era Has Begun

**In American Draft Horse Production.  
Are You Prepared to Do Your Part  
and Reap Your Share in the Benefits?**

## Blood That Will Breed On

to meet the world's demand for power is being destroyed by wars in Europe at a rate never known before. By spring this situation will be widely realized and better business everywhere will cause the demand upon all reliable American sources to push prices to a high level. Now you can "buy right" and I am firmly convinced that my

# PUBLIC SALE Of Percherons, Dec. 8

Will Be the Scene of the Most Profitable Purchases on the part of my customers, it has ever been my good fortune to encourage. Future trade in drafters, both for work and breeding, is going to be more discriminating than ever in this country. Knowing that a discriminating demand always pays the highest prices and biggest profits, my constant effort has been to produce the kind which will enable my customers to meet that demand.

### For That I Paid \$10,000 for Carnot

And Have Shown His Get Successfully In Our Biggest Shows During the Past Three Years

Prices in my past successful sales, in which the get of Carnot were featured, have perhaps not been as high as might be expected where a record priced grand champion, and a sire of winners is concerned, but they have always been profitable to me, and particularly satisfactory, because of the profits my customers also made. And although again, prices very likely will be moderate, I am glad to say---

### My Coming Sale

**Will Afford the Most Uniformly High Quality In Mares and Stallions I Have Yet Offered**

We have dipped heavier than ever before into the blood of Carnot. We have also included daughters of Radziwill, and granddaughters of his, sired by Carnot. Sons of grand champion Carnot, old enough for service, including the young show stallion, Carmerica. Only two mares with age, and they are tried and proven brood mares. We believe every mare listed in this catalogue as bred, to be safe in foal. A number of imported mares are also included. All have been in this country some time, and are thoroughly acclimated. None over five years old; all are in foal, and some have raised colts. The very best may easily sell within your figures.

We look forward with much personal pleasure to your critical inspection of this sale offering, and your visit to Gregory Farm, where the sale will be held. Come a day or two before if possible. See our entire breeding plant, as well as our laboratory where Gregory Farm Safe Serum for hog cholera is made.

**Carmerica 94311**—A striking counterpart of his noted sire, showing the massiveness into which his colts develop. Good feet and a clean set of legs support a wonderfully wide and deep body. He is full of finish and quality, yet his plenty of size, weighing upwards of 1,900 lbs. at twenty-seven months old. While always handicapped by being so late a foal CARMERICA has been one of our show string and, while too young to win highest honors from stallions six months older, was always in the running. Out of a ton mare imported by Dunhams. A long price (in four figures) was offered and refused for him as a yearling for export. He was good then, has always been good and grows better every day. An example of the high-quality stallion of the best lineage.

**Your Early Request for a Catalog Will be a Favor. Please Mention the American Breeder**

A NEW DISEASE IN SWINE.

A disease is becoming quite preva-  
lent in various sections of Nebraska  
and Iowa that is causing considerable  
alarm to swine owners in that sec-  
tion. The disease has generally been  
diagnosed as hog cholera, but when  
the disease failed to cease after the  
use of anti-hog cholera serum, the vet-  
erinarians began to suspect a new  
disease. On careful examination it  
has been found that this disease is  
caused by a germ called Bacillus  
Necrophorus.

This disease is not a new one, as it  
has existed in this country more or  
less continuously for many years. The  
organism producing this disease is  
universally distributed and it occurs  
in the discharges of practically all  
animals, and particularly the hog.  
This germ was responsible for lip  
and leg ulceration in 1908 and is the  
cause of foot rot in sheep, as well  
as other disease conditions. The  
germ is usually obtained by the ani-  
mal from soil, yards, pens and floors  
and it is introduced into the animal  
body on contaminated food stuff or  
water, or it may be carried into the  
body by splinters.

The disease that is now existing in  
Nebraska and Iowa is manifested by  
inflammation of the intestines. The  
lesion has somewhat the appearance  
of hog cholera but the disease is dis-  
tinctly different from hog cholera, if  
one makes a careful post-mortem ex-  
amination. The new disease is char-  
acterized by local lesions which are  
sharply circumscribed and these cen-  
ters usually contain a dry, mealy, or  
cheesy substance from which a pung-  
ent odor eliminates. The adjoining  
tissue shows a severe reaction evi-  
denced by redness and swelling. The  
germ produces a product which has  
a similar action upon the hogs' body

that the diphtheria product has upon  
the human body.

The symptoms in these hogs are dis-  
gestive derangement associated with  
diarrhea, the animals gradually be-  
come thinner and finally become so  
weak that they die of exhaustion. The  
lesions mentioned are found in the  
large and sometimes in the small in-  
testines. Thus far no biologic prod-  
uct has been discovered that is valu-  
able in the control of this disease, and  
the best line of treatment is cleanli-  
ness of yards, isolation of the sick  
animals and the administration of in-  
testinal antiseptics. In fact the treat-  
ment of this disease has not been  
very successful and the better plan  
is to prevent the introduction of the  
disease. From the history of the out-  
break and the knowledge of that sec-  
tion of the country in which it has  
appeared, it is rather evident that this  
condition is a sequel of the necrotic  
inflammation of the lips and mouths  
of suckling pigs, the disease sub-  
siding for a time into infection being  
carried on the food stuff from the  
mouth to the intestines wherein it  
manifested itself in the product in the  
above described lesions.

From this hog owners should take  
the hint that all cases of necrotic  
stomatitis or sore mouths in pigs  
should be properly treated in order  
to prevent this trouble.

WHO CAUSED HER DOWNFALL?

A conversation was overheard in a  
hospital a short time ago between a  
young woman, who was gradually  
wasting away from an incurable dis-  
ease, and her nurse. The young lady  
said she had been raised in a good  
home and under good influence; but  
that her parents had failed to explain  
any of the dangers which might befall  
a girl reaching womanhood. She told  
how happy she was in that home. She  
finally became acquainted with a  
young man, and in due time disgrace  
was brought upon this couple. Friends  
and neighbors looked down upon them  
both. The young man began to use  
liquor to excess, and lost all friends,  
and took up the life of a hobo. He  
has never been located since that  
time.

The young woman explained that  
she could not stand the disgrace, so  
she left her home and went to a large  
city to make a living among strangers.

With tears in her eyes she wound up  
her statement by saying: "If mother  
had only told me the dangers of the  
young woman, all of this sin, disgrace  
and misery could have been avoided,  
and if I ever regain my strength and  
have an opportunity, I shall spend the  
rest of my life asking mothers to pre-  
vent these terrible tragedies." Just  
then she fell back on her pillow and  
never regained consciousness.

FUTURE HORSE MARKET.

Knowledge of the vast numbers of  
horses leaving this country for Eu-  
rope, to be destroyed in warfare, and  
of the great additional number of ani-  
mals which will be needed for indus-  
tries in that country when the war is  
over, should stimulate every horse  
breeder in America. Everyone remem-  
bers what the Boer war did for the  
horse and mule industry in this coun-  
try. Only a small number of animals  
were sold for war purposes at that  
time, compared with the great num-  
ber which already have been disposed  
of for the present war.

During the beginning of the present  
war the money market was greatly  
disturbed by the fear that the gold  
would leave this country to a great  
extent. The bankers generally cur-  
tailed their loans, causing a general  
depression of business. Since then in-  
crease of exports to Europe is helping  
to restore the movement of gold to  
normal, and new export trade that has  
been developed, which promises to  
take our products at good prices and  
in large quantities. Commercial con-  
ditions are improving locally, also, in  
every section of the country. The  
south, which was injured more than  
any other, owing to their cotton mar-  
ket in Europe having been destroyed,  
is now on a better basis, due to recent  
large domestic investments in cotton,  
and will soon be able to purchase con-  
siderable quantities of horses and  
mules.

The tightening of money throughout  
the country has caused an excess of  
live stock to be sold for cash. Those  
interested in purchasing such stock  
some times have hesitated (owing to  
the money conditions), although they  
well knew that bargains were offered.  
Thus stock has been sold below its  
real value. Those who have been able  
to purchase breeding animals under

these conditions have bought good  
stock. When the spring demand  
comes for farm horses, then will the  
buyer find that there is a shortage  
of good stock. As far as we can ascer-  
tain at this time, there is a wonderful  
future in the production of better  
horses and mules. Business generally  
has not been good. The city buyers  
have not seen fit to increase their sup-  
plies of draft horses, but there will  
come a time in the very near future  
when, in our opinion, good, big draft  
horses will sell higher than they have  
ever sold before.

HOW IS YOUR EYESIGHT?

A little girl was born with defective  
eyesight. Her ideas of surrounding  
conditions were not very definite, as  
she could see only a very short dis-  
tance. When she was about 14 years  
of age, she was taken to an oculist  
and fitted with glasses which made it  
possible for her to see perfectly a  
great distance. For the first time in  
her life she was able to see the beau-  
tiful landscapes and to appreciate  
something of the great beauties of na-  
ture. She at once made it plain that  
she now had a new interest in life and  
would enjoy it accordingly. There is  
a great lesson to be learned from this  
little girl.

Many breeders have gotten into the  
work of breeding live stock through  
accident. By some chance a breeder  
may have acquired an animal, which  
is the usual way for breeders to be-  
gin. If a breeder allows himself to  
get into a rut and have knowledge  
of only a few miles square around  
him what would be the result? There  
are too many breeders doing this. We  
should like to see every breeder take  
a trip occasionally; see what other  
breeders are doing; go where the best  
of live stock are to be found; attend  
public sales; see what other breeders  
have, and how they sell it; make a  
study of the proposition and be class-  
ed as a progressive breeder; send for  
other breeders' catalogs; notice their  
printed matter, letterheads and adver-  
tising. The point we wish to em-  
phasize is this: a breeder will not  
stand still; he will go backward or  
forward.

We should like to ask the breeders  
throughout the country which way  
they are going. Has their vision been  
impaired? The individual who has  
never studied any other live stock ex-  
cept one, or a few of a particular  
breed, has missed much. There are  
a great many advantages to be gain-  
ed from different kinds of live stock.  
The breeder who believes that he has  
learned all there is to be learned about  
breeding is dangerous to his commu-  
nity and himself. The power to repeat-  
edly develop outstanding individuals  
does not come by chance. The man  
who has been able, through his own  
ideas, to produce an animal which  
suits his fancy, has reached a higher  
plane and is of greater use in study  
and work than ever before. It is in  
the power of everyone of our readers  
to be in this class, and go higher in  
this class. Discussions through our  
columns help—and are invited. The  
breeder of active mind is the one who  
goes ahead.

THAT STALLION LIEN LAW  
PETITION.

In the last issue we printed a suit-  
able heading for petitions to be used  
in getting signers. We wish to call  
attention to the importance of im-  
mediate action. A lot of breeders  
have made considerable noise about  
the necessity of such a law. We are  
wondering now if these men in many  
states who have clamored for this op-  
portunity will take advantage of it,  
or will they sit quietly back and let  
some other breeder do the work. We  
expect to follow this up and see just  
who are the substantial men.

This work is not for the other fel-  
low; it is for you, and every other  
man interested in the improvement  
of breeding stock. If there are  
enough of these petitions sent to state  
senators and representatives, results  
will follow. It is an easy matter to  
get signers for this proposition, by  
anyone willing to work. If this law is  
not adopted where needed the breed-

Mare Owner Editions Again.

A lot of breeders failed to take advantage of our recent  
offer for sending the mare owner editions to their customers.  
These breeders are now asking that we give them another  
opportunity. This we have decided to do. We will send the  
mare owner editions in clubs of ten or more for ten cents  
each; that is, each subscription will cost ten cents. Each one  
of the names sent in will receive two papers in January, two  
in February and one in March, five papers in all. Special  
material will appear in those issues for the benefit of mare  
owners.

All names and addresses for the mare owner editions  
should be sent in as soon as possible, so they may be placed  
on our subscription list properly. Orders on this offer will  
not be accepted after January first. Breeders have found  
that they can get the needed information to their mare owners  
in this manner better than in any other. The American  
farmers are an intelligent class of men, and are glad to have  
this information. They appreciate the efforts of stallion and  
jack owners who send in their subscriptions. A very large  
number of statements from mare owners on this subject were  
printed in the AMERICAN BREEDER during the last breed-  
ing season. We write to each party, notifying him his sub-  
scription has been paid, and giving the name and address of  
the breeder who has paid his subscription. This creates a  
better feeling between the breeder and his customer, which  
is necessary for the best success.

We believe that the owner of every good stallion and  
jack should take advantage of this proposition, and send in  
subscriptions for at least ten of his best mare owners. Those  
who wish to increase their business can well afford to send in  
100 names. This education will be permanent. Every breeder  
who wishes to increase his influence and business and help his  
community, will do well to consider this offer seriously.

ers can blame themselves only. Practically every county in the union will have these petitions signed and presented. We hope that everyone interested will do all he possibly can at this particular time. Do not delay, as this is the important time. Present this signed petition to the proper law-makers in your state. Deliver them in person if possible and do not hesitate to assert your right to the time and attention of your law maker. The law will take nothing away from any honest man, but will help all.

#### TRIED SIRES.

In a certain dairy herd a bull that was used one season was then replaced by what was thought to be a better one. Since heifers by the first bull have come into use in this dairy, they have proven uniformly high testers. A search has been made for their size without success. It was probably butchered before its real value was discovered. It takes more time to thoroughly demonstrate the value of a dairy bull than some other classes of sires, as it is necessary to wait until his heifers can be tested and nothing else will determine their value. There is a difference in sires, even though the blood lines be exactly the same. There is a difference in engines, even though they are apparently just alike; being manufactured in every particular from the same patterns and materials.

The average breeder has not yet realized the great importance of tried and successful sires. This is not noticed so much among stallions which are kept for public service for the reasons that their colts are scattered over many farms and patrons are not usually expert judges of conformation. A particular sire may be able to produce a more uniform colt with a little more finish and fewer weak spots. This cannot be noticed as readily as if they were all in one herd, because many and all kinds of mares have been bred to him. Practically every breeder knows of some sire through the use of which the horse interests in its community have been wonderfully improved. He has heard remarks of the farmers in that section commenting on this particular animal.

Sires are kept for their ability to reproduce. The very best evidence of their value is in their ability to sire uniform by outstanding offspring. Very frequently the owner of such a sire does not realize its value, but more often the owner of a sire which does not transmit these good qualities uniformly is mistaken. More enlightenment on this subject should be had not only by the owner of the sire, but those who patronize him as well.

About every 4 years it is necessary to change a stallion on account of his fillies. These breeders perhaps never realized that there are a lot of other men who must buy other sires and dispose of their stallions. Many of these individuals would not buy a stallion if he could not see his produce. It is an advantage for a reputable breeder to be able to tell his patrons that the new sire is actually an outstanding producer. He can state that he has seen the colts.

If the owner of such a sire would advertise it giving a good description of the animal and stating in the advertisement "an excellent lot of uniform colts to show" he would find how easily it is to sell such horse for cash and then hunt another one that some other breeder was through with. This can be done for a very small amount of money. A one inch advertisement in this paper reaches nearly 50,000 breeders of live stock. Nearly every one of whom might be interested in this particular sire. If the owner of this sire would have him photographed and make a cut so that a circular could be printed giving a correct description of the animal, with the price, many of these animals could be placed in communities where their value would be appreciated. A one inch advertisement in this paper for one time costs \$3.50; a cut will cost about \$2.00, printing the circular would cost about \$1.50. This is the way to dispose of the tried sires. Prospective buyers will insist on finding colts and this will be a consideration in the transfer.

#### SOUTH NEEDS COMPULSORY EDUCATION.

Cotton, the principal crop in the South, has been the means of keeping children out of school. Practically every community in the cotton sections have whole families, which can not read or write. This is found among both the white and the colored. Schools begin at the usual time in the fall. Cotton picking lasts until the middle of winter. Children are not permitted to start at the proper time; consequently they are far behind in their classes. They are easily discouraged, and thus remain behind in their classes. At an early age children quit school and find employment of some kind, and never attend school again. This is a deplorable condition. Some arrangement should be made, so those who are compelled to pick cotton could get an even start with other pupils when school begins. Children large enough to walk nicely are started to picking cotton. It is a job for the whole family. No other section of the world has greater opportunity than many parts of the South. Diversified farming is an important need. A compulsory school law in every state is a necessity. No section can prosper without the brain development of children.

One may travel where he likes, but he always finds that the states and nations that have compulsory school laws are always in the lead. The development of children in the South should begin at the right age and there is no better place than in the school room for such development.

#### WHICH WILL YOU HAVE?

There are two things about the horse situation in Oklahoma (or in many other states, for that matter) which the accompanying picture aptly illustrates. One is, too many horses like the "pelter" on the right, and the other is, too few like the drafter on the left.

Do we hear someone say he would like to own some of the big kind if he could afford it?

That is the question exactly: Which kind can a farmer best afford to keep? It took the dun horse and two more like it to pull a 14-inch plow,

WHICH KIND CAN FARMERS BEST AFFORD TO OWN.

and it worked them down to do it. The black horse (belonging to R. E. Mahoney of Oklahoma) is a three-year-old. All last summer it worked on the farm and made a light stand beside. When on the plow it pulled a half more than the buckskin, and did it easier. Every minute it has been a source of pride and satisfaction, and a good advertisement for its owner.

But even all this is the least of the argument. A man who keeps and breeds this kind, or a neighborhood which encourages and supports this kind, will increase the value of its grade mares and their offspring by leaps and bounds. At the Illinois State Fair the other day the grand championship for draft geldings went to a grandson of a 1,050-pound Standardbred mare. But the champion gelding was no longer a Standardbred. He was a 2,200-pound drafter of the best type, with a high class English Shire for a sire and a high class Percheron for a grandsire.

The recipe for breeding and growing good big profitable drafters from a foundation of clean, sound, light and medium weight mares, is plain and simple, but the ingredients must be of good quality, and you have to make a start.

#### STATE FAIRS IN SMALL TOWNS.

Criticism has been offered by several agricultural papers concerning the location of the Missouri State Fair. The fair has been well managed by Mr. Stinson, the secretary, whom the politicians have seen fit to remove. The attendance at the Missouri State Fair is larger than that of any other in the union, held in a town not larger than Sedalia. It is practically impossible to accommodate a large number of visitors in such a small city, and more especially where the hotel accommodations are not any better than those found at Sedalia.

Those who have ever attended the State Fair at Sedalia, understand how difficult it is to get a bed, when there are a few extra people in the city.

A short time ago a jack sale was held six miles from there; it so filled the hotels that it was necessary to hire a cab to drive from one hotel to the other in order to find a bed. Politicians who locate State Fairs at these small towns are to blame for the failure of such institutions. It is not every farmer who likes to pay from \$2.00 to \$5.00 for a room in which to sleep, and men who are willing to pay do not always approve of the kind of bed they get when attending such places. Those who expect state fairs to be largely attended must have them located in a city having plenty of hotel accommodations and railroad facilities. We might say in conclusion that any attacks made on the Missouri Fair might better be made on those who squandered the state's money by locating in such a small place, with such inadequate railway facilities.

#### LIVE STOCK FOR COTTON.

A movement has just been started by Hereford cattle breeders of some of the Southern states to help the cotton growers in their distress by taking cot-

#### MAKING SIRES PROFITABLE.

In the average semen discharge of a stallion there are countless numbers of spermatozoa, only one of which is required in fertilization. A large number of mares can properly be bred at one service of the stallion or jack. In a recent issue of this paper, the names and addresses were given of 70 breeders who had produced from 5 to 9 colts at a single service. These men offered to show the colts, the mares and their owners to all those who might doubt their statements. Not all of the mares get in foal from the first capsule service; but when the work is properly done the per cent is greater. When only the natural service is employed, it requires about 3½ services to get one mare in foal, so it can be seen that mares are not always in a condition to fertilize.

Capsule breeding is now on a permanent basis. There are thousands of localities where the mare owner would just as soon have the mares bred with capsules, as with natural service. In some communities men have made failures by not following instructions; others have failed by breeding only diseased or otherwise barren mares with capsules. Some men are not likely to be successful capsule breeders until they have learned at least a few things. There are some men who do not intend to do this.

Just to show the difference in breeders, over in Indiana there are two firms, one of which has never been able to make the breeding business a success, either with or without capsule. In the same community is another man who decided to master scientific breeding. In every way his business has advanced; his percent of foals has increased. He purchased a first prize winner at the International live stock show. During the past season more than 600 mares have been bred to this one stallion. We might name a lot of breeders who have bred from 300 to 500 mares to a single sire. These breeders are getting an excellent percent of colts. We are wondering how long it will take a lot of breeders to wake up and find out how much money they are losing by not becoming familiar with modern methods.

If there are enough mares in a community, the highest priced stallion in America profitably can be stood for \$10.00. Many breeders and others are opposed to the modern methods. Some of them do not have good sires; others do not have time to learn; still others are afraid they can not sell stallions, but regardless of these complaints the capsule breeding gained a foothold and has continued to increase, and those who linger will lose money. There are some who are afraid they will have difficulty in establishing this system; such difficulty can be easily overcome by placing the AMERICAN BREEDER in the hands of the intelligent mare owners, who wish to get a greater percent of good colts. The breeder who states that his mare owners are opposed to modern methods should first study his own condition. All any mare owner wants is a good foal. These men are learning that they are getting their colts cheaper and with less bother by patronizing those who own good sires and know how to handle them.

#### DEPTH OF SUCTION FOR A PUMP.

To the American Breeder:—Theoretically, a perfect pump will draw water from a height of 33.95 feet above the level of the water, or to a height corresponding to a perfect vacuum, but since a perfect vacuum cannot be maintained on account of valve-leakage, air contained in the water, and the vapor of the water itself, the actual height is generally less than 30 feet.

When the water is hot the height to which it can be lifted by suction decreases, on account of the increased pressure of the vapor. In pumping hot water, therefore, the water must flow into the pump by gravity.—J. W. Lawrence, Colorado Agricultural College.

Renew now (for 50 cents a year, or three years for \$1), as the price will have to be advanced.

QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

1322—CROOKED JACK COLTS—What is the best feed for young jacks to get quick growth and to keep them from becoming crooked?—Oklahoma Subscriber.

REPLY—The first thing necessary in a case of this kind is to have the right kind of ancestors, then the colt should not be crooked. Too many jack breeders have been producing the long-legged, narrow-chested stock without any constitution. If the sire and dam of a colt are both well proportioned, you need have no fear as to the feed making it crooked. All jennets with spindling bodies should be bred to jacks having full conformation. Occasionally a very growthy colt which has to reach down to suck, may go over on his knees or ankles. If this is noticed the colt should be weaned and given cow's milk with plenty of oats and plenty of room for exercise. If it is a jack colt, place it with a filly. Great care should always be given to the feed, and see that colts are properly developed. In this kind of stock oats and alfalfa hay in abundance, with plenty of water and lots of room for exercise, will usually get good results.

1323—DIAGNOSING PREGNANCY—Please tell me the best way to tell when a mare is in foal.—Arkansas Subscriber.

REPLY—Mares bred early in the spring should measure around the flank a little more at this time than around the heart girth. This cannot be depended upon in every case, owing to the difference of conformation in mares. As pregnancy advances, the hips will sink in slightly and the abdomen will increase in size. Pregnant mares are usually cross. When the mare takes a drink of cold water, the colt may be seen to move, if watched closely. After conception has taken place, 120 days, a rectal examination can be made, by an experienced breeder, provided he has had some special training. This is safe only for those who have had special instruction.

1324—TOO MUCH SERVICE—Just one year ago my jack went off of his feet all at once. I went out in the morning to feed him and found him down in the stable and couldn't get up. I called two veterinarians at once and they pronounced it kidney trouble. They treated him the first week. He lay in the stable about four months before he could bear to be swung. Then I put a swing under him and kept him in the swing about five months before he could stand without it. For nearly three months now he has been able to walk around over the lot, but has never been able to get up when he lies down. He walks very tottery and has to be very careful in stepping over anything. The main trouble seems to be in his back and hips. He can get up on his fore feet when down and turn around, but can't raise his hips off of the ground. His appetite is good and he is getting fat. This jack is eight years old and is a big, fine fellow, and registered. He is one of the best in Southwest Missouri. Can you give me a cure for him? Do you think he will ever be able for service any more? Was this trouble brought on by overwork while he was young? I bought him two years ago.—Missouri Subscriber.

REPLY—This is a common complaint with big jacks when they are allowed to serve too many mares. This condition rarely, if ever, happens with the undersized jack, because he does not get too much service. The writer first discovered this condition in the Poitou district of France, where many of the best jacks go down in the back; some of them recovering after a year or two. A jack will not stand as much service as a stallion. They are handled under different conditions usually. Be careful with him and keep him out of rain or currents of cold air. If he should contract rheumatism or pneumonia he will not last long. Arrange

to have him out in the sunshine and good weather when possible.

1325—JACK SORES—I have a jack four years old July last. He is a registered jack in medium flesh. I have owned him since last December. He has sores on his hind legs; had them when I bought him; have been keeping them cleansed with a solution of carbolic acid with castile soap. Once in a while I think they are going to get well; then they will swell up and run. I feed him on oats, wheat, bran and hay; has not eaten a bushel of corn since I have worked him. He runs out on a good grass lot in day time. Can you give me a remedy that will cure him? Will the Jacksore I see advertised in your paper cure him?—Tennessee Subscriber.

REPLY—There is no one remedy that will absolutely cure all jack sores. Breeders have had excellent results as near as we can find out, from the use of Jacksore. We would advise giving this treatment a thorough trial. If this fails we might suggest some other remedies that might help this animal.

1326—RAISING HINNES—I noticed an article in your issue of July 5, from an Arizona man, in regard to breeding a German Coach horse to burros. The information I would like is: Wouldn't a horse like this crossed on a jennet make a better animal? Are they as easy to foal as a burro? How do you get your horse to serve them? I tried my horse to them, but could not get him to cover them.—Texas Subscriber.

REPLY—It is not always easy to tell the difference between a burro and a jennet. The larger the jennet, the better the offspring is expected to be. Burros which have plenty of freedom will perhaps fertilize better than jennets which have been closely confined. Occasionally a stallion will serve a burro or a jennet without any difficulty. Usually it is necessary to train them for such a service. A young stallion which has never served a mare can be brought up with jenn-

nets and be made a prompt server on these females. Some stallions can be easily induced to serve a mare mule. If this practice is acquired the stallion may then be induced to serve a jennet. Some stallions can be taught to serve burros, by running loose with them. Perhaps the best method for you to employ, would be to make services on mares, then breed the burros with capsules.

1327—SERVING YOUR SIRES—How young can a stallion be bred to grown mares? Is 20 months too young? Would it hurt him to breed six mares the same season or had I better wait until he is two years old? If he runs in the same pasture with the mares will it hurt him if he gets them with foal?—Oregon Subscriber.

REPLY—Your stallion should not make a service until he is at least two years of age and thirty months would be better. There is a difference in range stallions and those kept closely confined. It might not injure your colt to let him run with a band of mares, as he would probably be grown under natural conditions. You (Continued on page 15.)

To all men owning horses, who answer this advertisement immediately, I will positively send my introductory course in Horse Training and Colt Breaking **ABSOLUTELY FREE.**

**World's Greatest System of Horsemanship**

Twenty-five thousand FARMERS and horse-owners have taken my regular course and found that *it does the work.* Even if you have only *one horse*, it will pay you to master my wonderful system. The Beery Course is the result of a lifetime's work as a tamer and trainer of horses. As one of my students has said, "The horse has never been foaled that Prof. Beery cannot handle." My record proves it.

**Master Any Horse**

The Beery Course gives you the priceless secrets of a lifetime—enables you to master any horse—to tell the disposition of any horse at sight—to add many dollars to the value of every horse you handle—and my students are all good traders.

BEFORE TRAINING

**My Graduates Are Doing Wonders**

A. L. Dickinson, of Friendship, N. Y., says: "I am working a pair of horses that cleaned out several men. I got them for \$110, gave them a few lessons, and have been offered \$400 for the pair." Fred Bowden, R. R. No. 2, Keokuk, Iowa writes: "It's worth many times its cost." I have many similar letters from graduates all over the world.

**Break a Colt in Double-Quick Time!**

You can do it by my simple, practical, humane system. There is a lot of money in colt training.

**Make \$1,200 to \$3,000 a Year**

Many of my graduates are making big money as professional horse trainers at home or

**Renew Subscriptions Now!**

For a limited time you can subscribe or renew subscriptions for the **AMERICAN BREEDER** (with which is now combined **CARLSON'S RURAL REVIEW**) at the old price of 50c for one year, or three years for \$1.00. The subscription rate will have to be advanced soon.

**THAT'S THE IDEA; PICTURES THAT EDUCATE.**

To the American Breeder:—We have received a double sheet of pictures of saddle horses recently sent by you. You have rather the best method of showing saddle horse cuts I have yet seen. I like the idea very much of seeing the same horse in a variety of positions. By that means we can judge better what his real action would be. Thanking you for the cut.—W. E. Carroll, Animal Husbandry Department, Utah Agricultural College.

The large swelling that occasionally appears in front of the knees of cattle, particularly old cows, is properly known as hygroma. It is usually filled with a watery or straw-colored fluid. Opening or other surgical operation is not advisable except by a competent veterinarian. These swellings usually do no harm and most of the cases are most wisely left alone.—Dr. H. M. Reynolds.

**SHOW DATES AT SAN FRANCISCO.**

The dates assigned to the different classes of animals for their exhibition and judging in the Department of Live Stock of the Panama-Pacific International Exposition are as follows:

Horses, Mules and Asses—September 30th to October 13th.

Cattle (Beef and Dairy)—October 18th to November 1st.

Sheep and Swine—November 3rd to November 16th.

Poultry and Pigeons—November 18th to November 28th.

Dogs, Cats, Pet Stock and Children's Pets will all be shown on November 28th to December 3rd.

These dates are not only of interest to exhibitors, but to those who will attend the numerous live stock, dairy and poultry conventions which will be held in the Congress Hall on the grounds of the Department of Live Stock.

**THE NATIONAL STOCK SHOW.**

Plans for the tenth National Western Stock Show are well under way, and the indications are that the show will be of more interest and be larger and better in every way than ever before. The show will open in Denver on January 18. The railroads are promising low rates from all sections, and there is more interest throughout the West than ever before. Last January approximately 37,000 people came into Denver during stock show week. If the weather conditions are favorable this number will be greatly increased during the coming show. The premium list is out and has been materially strengthened all along the line, both in the amount of premiums and the number of classes.

## Up-To-Date Breeder's Wanted

The average breeder is breeding in the dark. He has never seen the inside of a female of the species he is working with. Only a small per cent of the breeders have ever made any examinations, except to open the cervix—and that sometimes at the wrong time. They do not know what to look for, as these subjects have never been discussed to any great extent, excepting in technical terms and in technical publications.

Practically every student who attends any school, must build up a business afterwards. Most professions require from 2 to 5 years of difficult study in addition to a large expenditure.

Breeders of live stock usually have their business established. They are in a position to be benefited quickly by additional information. With a very small amount of money and a few days' time, the breeder who owns good sires, can learn to double his income. The Graham Scientific Breeding School offers a course of one week, where breeders get practical instruction in a plain manner, that has proven of great benefit to those who have attended. This school is of more benefit to those who must depend upon using their sires with natural service than to capsule breeders. The average breeder loses more services than those which are effective, because he is not able to properly inspect females presented for breeding. Not only is there danger of carrying disease from one female to the other through the act of copulation, but a great many females are not in a proper condition to be bred. Those who must depend upon natural service during the busy season, must make every service count.

Greater interest is manifested in this school than in perhaps any other. Most of the students have had some practical work. They can associate instances related in lectures, or demonstrations with special cases they have had, which helps their memory. They see applications for every lesson.

This school has formerly been an exclusive horse breeding school, but we have found by practical experience that cattle breeding can be included without any conflict with the study of horse breeding. This fact gives stallion and jack owners an opportunity to encourage their friends who are cattle breeders to attend. Increased education is a benefit to every advancing breeder. This school has long ago passed the experimental stage. Those who have attended, have made satisfactory business gains. The next term may be the last, until February or March. Those who can come should be on hand at the next date, December 7 to 12. A few statements from students follow:

I want to express thanks for the term of Breeding School which I have attended. I would like to see every man that is a stock raiser or breeder take at least one term, for I know it will do him good.—F. Reese, Macks-ville, Kas.

Brother breeders, I attended the Graham Scientific Breeding School. It is a wonderful school and I am well pleased with the methods of teaching. I don't think a breeder is fit to keep stable stock unless he has an inside sight to different diseases. There is great responsibility on the horse owner to keep from breeding diseased mares and scattering the different diseases.—L. A. Shaw, Oswego, Kas.

I have attended the Graham Scientific Breeding School and am sure I have not been disappointed in any way, as I think every stallion and mare owner should know better what he is doing and how easy it is through ignorance to ruin a herd of mares or cows

by spreading abortion and other dangerous diseases. Do not be afraid to send your boy as soon as he is old enough to comprehend the teachings of any subject of live stock, as the teaching he will receive here will be very beneficial to him in any occupation. May this School prosper.—B. F. Read, New Virginia, Iowa.

Your School is grand. I expect to attend as often as possible for me to do so and boost the School all I can. I wish every man, woman and child could hear the lectures.—J. B. Yetton, Selma, Kas.

I certainly do think that the Graham Scientific Breeding School is not excelled, as far as the teaching of breeding science is concerned. It was an eye opener to me. I think every breeder of horses ought to take a course here; the stallioner cannot succeed without it. It is safe for any one to go there. It is a good, safe place for parents to send their boys, because the management will look after the students so they will not go astray. The instructors use language which everyone can understand. I do boast for this school.—Adolph Heine, R. R. No. 4, Lucas, Kas.

The Scientific Breeding School is the best and only school in the world that takes up specially the work of breeding live stock. It is the best, and I can recommend it to all.—E. G. Copley, R. R. No. 3, Hinton, Okla.—Adv.

### STARTING FARM BOYS RIGHT.

To the American Breeder:—I am inclosing a picture of my horse judging class taken in July. I started a free horse judging class the last Saturday in March and gave the boys a half day of my time the last Saturday of each month until September. There were 17 boys in my class and never a one absent except through necessity. I think if other breeders would adopt this plan it would be a great help in raising our standard of horse flesh

HOW BRUCE SAUNDERS HELPS THE BOYS MAKE BETTER USE OF THEIR SATURDAY AFTERNOONS.

and save our boys a lot of valuable time and money which are always spent in learning these little things by experience. Hoping the next term of the Graham Scientific Breeding School will bring out a record breaking number of new students, I am, Bruce Saunders, Jackson County, Kas.

EDITOR'S NOTE—Mr. Saunders is a graduate of the Graham Scientific Breeding School and one of the enterprising young breeders of Kansas. Prof. R. C. Obrecht is the instructor in the breeding school, from whom Mr. Saunders took instruction in judging types, breeds and soundness in horses, mules and jacks. Prof. Obrecht is not only a national authority on these subjects, but a very careful instructor. One of his illustrated lectures, emphasized by the very large number of animals pictured and described, alone forms a good foundation for judging live stock.

### WINNERS IN DAIRY SHOW JUDGING.

The dairy judging team from the College of Agriculture of the University of Missouri won fourth place at the National Dairy Show in Chicago, October 22-31. Sixteen other schools competed. The university also had an exhibit showing the progress of the dairy department along experimental lines. The team from Ohio won first place in the judging, Kansas second, Maine third, Iowa fifth.

## Feeding Questions

Under this head will be answered all inquiries from subscribers on the questions of feeds, feeding methods, etc. We are glad to get the questions, and will gladly answer them through the paper. Call for any information you want, give the circumstances fully and sign your name and address.

**FULL FEEDING**—I have 25 steers just taken off of grass; weight 900 pounds, which I intend to prepare for April market. Feeds available are alfalfa hay and corn silage, made from corn yielding about 20 bushels per acre. What other feeds should I buy? Corn, 75c per bushel; oats, 50c per bushel; kafir, 60c per bushel; bran, \$1.10 per hundred. What gain should they make?—Kansas Subscriber.

**REPLY**—If your cattle are fleshy they should be fed about 20 pounds silage and 10 pounds hay per head daily; gradually add cotton-seed meal to the ration until they are receiving three pounds per head daily by the end of the first week, then add ear corn six pounds per head and increase at the rate of one pound per week until they are consuming 15 pounds per head, which will insure a rapid and economical gain throughout the feeding season. If they are quite thin when they come off the grass feed all the silage and alfalfa they will eat without any grain or meal for the first 30 days, then begin to feed meal and corn as indicated above. Under average conditions they will gain from 2¼ to 2¾ pounds per head daily for six months, dependent upon the amount of fill secured at the beginning and close of period and the amount of flesh they carry when put on feed.

### THE ALCHEMY OF THE SILO.

Colonel R. L. Harriman, who is widely known as typical of the best

### ASH GROVE CEMENT

## Indestructible Feeding Troughs

Concrete improvements are permanent and increase the value of your farm. They are always sanitary. Concrete Feeding Troughs are easily built by following the instructions in our 112-page book of plans. The book also tells you about

## Ash Grove Cement

### Saves You 20%

You cannot afford to overlook the 20% saving made possible by using Ash Grove Superfine. With special machinery we grind our cement much finer than Standard. This extra fineness means 20% more efficiency in concrete.

### The Book is Free

We want you to have a copy of "Permanent Farm Improvements." It is fully illustrated. Contains building plans for more than 75 concrete farm improvements. A postal brings it.

**ASH GROVE LIME & PORTLAND CEMENT CO.**  
722 Grand Avenue Temple,  
Dept. N. Kansas City, Mo.

grass and sold in the feed lot, nine months after the date of their purchase, at an average of \$95 per head. The last month or so of the feeding period the blue grass had been destroyed by army worms, and Colonel Harriman stated that if they had had ensilage to take the place of the damaged blue grass pasture during that month, a substantial increase could have been made in the selling price of the steers, because of both better weight and better finish.

As a result of a very similar experience, Mr. Houston, president of a bank at Malta Bend, Mo., now has four big, reinforced concrete silos, and he also asserts that silage properly put up, and fed along with suitable additional rations means, a doubling of the feeding value of corn.

Colonel Harriman, who has been an apostle of better live stock and better farming methods for a third of a century is, in addition to being a live stock auctioneer of national reputation, an officer of his home bank and a partner in the farming and breeding operations of a son-in-law and a nephew.

### CAR GOES 28.7 MILES ON GALLON OF GASOLINE.

Surprising results were obtained recently in Chicago, when in a distance test on the boulevards, a 1915 big six went 28.7 miles on a gallon of Red Crown gasoline. The test was made to demonstrate the fuel economy of high test gasoline, by the technical committee of the Chicago Automobile Club.

Red Crown gasoline, 58 test, was decided upon by the judges and drivers as the best gasoline to be used. All through the trip the clutch was not slipped, except when traffic congestion made it necessary. The dash adjustment on the carburetor was disconnected, and in order that the test be a fair one, the fan was in operation throughout the run.

Next came the acceleration test. With the carburetor adjustment the same as during the economy run, the car was driven from standing start to thirty miles an hour in 12.45 seconds. The flexibility test saw the car run at four miles an hour, then speeded up to forty-four.

This test proves that the six is not an excessive fuel consumer, where the best gasoline is used.

agricultural citizenship of this state, described in a recent conversation with the writer, the important part which silos are playing in the business of farming and stock growing. In the immediate neighborhood of Buncheon, Mo., where Colonel Harriman lives, he says there have been constructed 20 reinforced concrete silos running about 52 feet in height and 250 tons in capacity each. The proper filling of these silos, he says, means the doubling of the feeding value of every acre of corn which goes into them, and he made this statement in connection with his observations concerning the now popular agitation for increased crop production.

As a practical illustration of what these silos are doing, Colonel Harriman mentioned a case of his son-in-law, who a year ago purchased 100 Panhandle steers so that they cost him \$30 a head laid down at Buncheon. Last year's corn crop in Cooper county was light, so that excepting in the form of silage its feeding value would have been considered almost inconsequential, excepting as roughness. These 100 steers, however, were wintered on silage; the silage supply becoming exhausted about the time the blue grass was good in the spring. The steers were then full fed on blue

## FOOT AND MOUTH DISEASE LESSON.

Costly experiences frequently leave behind a recollection of certain valuable lessons. Farmers and breeders have been prone to pay too little attention to infectious diseases. Many men interested in live stock really know but little about infection, and many of them seem to care less. Take, for instance, hog cholera, which we have been preaching about. When a herd is attacked with the disease, the stock are driven or hauled to town and then loaded into stock cars, where they are promptly sent to market. The one disposing of this stock does not seem to realize the fact that he is scattering this disease. Even if his neighbors do not contract the disease, the stock cars which he has used will carry this infection for months; perhaps longer.

With this or any other epidemic, the first thing necessary is to force the careless neighbor to keep the disease strictly quarantined, according to law, and to burn all dead animals. Another thing is to have all stock cars disinfected before being used. If these precautions are strictly adhered to, disease would not be spread so rapidly. Another lesson, learned by the inspectors of the foot and mouth disease outbreak, is the necessity of having a good stiff spinal column. If more immediate and drastic action had been taken at the beginning the disease might not have been so rapidly or widely spread.

Another thing, there seems to be a disposition to bring into this country, free of duty, products of other countries, in order to cheapen the price here. With this imported material will continue to come diseases which are not any part of our best agriculture. The foot and mouth disease which is just now subsiding, probably will raise the price of meat and butter far more than it has been lowered, by the removal of any duties.

Although the disease is probably under control, there is still much uneasiness, and rumors of new infection centers are likely to be started, only to find that the suspected trouble has some points of similarity with the foot and mouth disease, but as a rule, will prove to be nothing serious.

Much credit, and more co-operation, is due those who have worked to control this infection. In some cases, no doubt, the federal workers have been hampered by state interference and political pulls, but all are coming to see that this is no matter for politics or temporizing. So readily is the infection spread and so rapidly does it incubate that the utmost precaution is necessary. Some of our most dreaded animal disease germs are ten days to two weeks incubating. The germ of foot and mouth disease (which, by the way, has never yet been isolated or described, unless during this present outbreak), incubates in one to four days. The disease has been carried around the world in hides, from sources not known to be infected. Straw used in packing porcelain and earthenware importations has been suspected of carrying the infection. One previous outbreak in this country was traced to blackleg serum imported from Japan. It is suspected that some of the spread of the present outbreak has been by way of hog cholera serum, made from the blood of hogs which, unknown to the serum companies, had contracted foot and mouth disease infection. Several hog cholera serum plants have been closed because of this suspicion. Facts like these should make plain the necessity for destroying not only diseased herds, but all their surroundings not adapted to complete disinfection. The wisdom of isolation and treatment of infected herds is very seriously doubted by some of the most experienced and best posted. A mouse, going from the feed box of a sick animal, may infect the hay and ground feed supply of a well herd. Rats, birds, pitchfork prongs, shoe soles, the wind—and doubtless many other things not suspected—are possible and ever present carriers of the germ.

# Review of the Markets

Country Offerings for War Horses Growing Less and Prices Stiffening. Better Prospect for Trade in Cotton States. Live Stock for Immediate Slaughter Again Going to Markets That Were Quarantined. Beeves, Muttons and Porkers at Kansas City All Higher in Spite of Surplus Handling. Mild Weather Has Shaded Feed Prices.

Conditions in the horse and mule market remain abnormal. The only demand of any importance is from British and French buyers who are replacing supplies killed on the battle line and providing reserve forces for new armies being organized. Horses are moving out of the country at a rapid rate and are liable to continue to go on foreign orders until the war is over. Country buyers last week stated that the effect of the big exportations is a raise in prices, and a falling off in the numbers offered for sale. They say only about one-third as many horses are offered in the country now as six weeks to two months ago, and that the supply is rapidly diminishing. Country prices range from \$70 to \$165 a head. No one seems to have a well defined idea as to what foreign governments are paying those who are operating on the contract. General evidence is that they are paying a high figure, because large numbers have been rejected and sold to outsiders at low prices. There is regular demand for these rejects at low prices.

Eastern demand for good drafters was some better, but is still below normal for this season of the year. Dealers say it will be some time yet before that outlet broadens.

The cotton states are slowly emerging from their protracted period of inactivity. A pool of 150 million dollars has been agreed upon by Northern bankers, and European countries are increasing their demand. Considerable spot cotton is selling at 6½ to 7½¢ a pound, and the period of congestion is over. The New Orleans cotton exchange is opened and the New York cotton exchange resumed trade today after a suspension of seventy-eight days. As the South is a large user of horses and mules and raise few, this opening of the various lines of the cotton trade is soon to be felt in Northern horse markets. If demand for horses and mules for use in the United States were normal, there would not be enough to go around.

The note of warning sounded in the present large movement abroad is that this country is selling too many mares and has no care for future production. The indiscriminate selling of any commodity that reduce or limits future production is the main thing that causes periods of uncertain supplies.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

<b>Horses—</b>	
Drafters, 1700-pound extra quality.....	\$215@250
Drafters, good to choice.....	175@210
Drafters, fair to good.....	150@170
Chunks, good.....	140@165
Chunks, fair.....	100@135
Southerners, good to choice.....	115@160
Southerners.....	60@110
<b>Mules—</b>	
13½ to 14½ hands.....	\$ 90@110
14½ to 15½ hands.....	110@135
15½ to 16 hands.....	130@175
16½ or better.....	175@235

### Unsettled Trade in Cattle.

The cattle market in the past two weeks entered a period never before experienced and as abnormal as conditions were to that extent that market showed irregularities. About the first of November the foot and mouth disease was discovered in Michigan. It later appeared in Chicago and thence spread to fourteen different states, all of them, except Iowa, east of the Mississippi river. The United States Bureau of Animal Industry, in a move to get the disease checked, quarantined all fourteen states, closed Chicago, the largest live stock market in the world, and nine other markets of various sizes. This threw the movement of all classes of live stock

from normal channels and diverted demand from its usual places. Omaha, St. Joseph, Denver, Fort Worth and Kansas City were the only markets of any importance that remained open, and butchers east of the Allegheny mountains had to fill their orders at Missouri river markets. Receipts at these markets increased also.

Friday, St. Louis and Indianapolis had cleaned and disinfected their yards and began receiving cattle and hogs destined for immediate slaughter. Chicago was opened Sunday night. In the opinion of both cattlemen and government authorities the spread of the disease has not only been checked, but will soon be entirely eradicated from all sections. It will take some time, however, for the market to return to entirely normal bearings.

In anticipation of the large area of the country being placed under quarantine prices for fat cattle rose 50 to 75 cents in the first week in November, and last week with only extreme Western points opened, part of that advance was lost. Last week Kansas City received more than 50 per cent of the cattle offered in the West. Receipts November 9th were 34,000. Yarding capacity had been curtailed to some extent by a fire that destroyed sixteen acres of pens but the large volume of business was handled without much difficulty. Today the run was nearer normal.

Last week some prime 959-pound Missouri yearling steers sold at \$11, the highest price ever paid for that class. Some 1,935-pound steers sold at \$10.75, or \$208.04 a head, the highest amount a steer ever brought in Kansas City. The bulk of the steers, however sold at \$7.25 to \$9.50 on the native side and \$6 to \$7 on the quarantine side. Only cattle intended for immediate slaughter can be received at Eastern markets, so that the West is still having to furnish the bulk of the killing steers for the large Eastern centers.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers.....	\$10.00@11.00
Good to choice steers.....	9.00@9.95
Fair to good steers.....	8.25@9.00
Common to fair steers.....	6.50@8.15
Meal fed, choice.....	8.65@9.65
Meal fed, common to fair.....	8.00@8.60
Quarantine steers, fed.....	7.60@8.35
Quarantine steers, grass fat.....	5.00@7.55

### Fluctuating Cow Prices.

Cow prices have fluctuated 25 to 35 cents in the past two weeks and today were slightly net higher than late in October. Demand has been large and both local killers and order buyers are filling orders with female cattle as far as possible. Quality is improving and in the next few weeks offerings will show considerable dry feed. Cows are selling at \$4.25 to \$7.50, and heifers \$6 to \$9.25. Veal calves are selling up to \$10.75.

The following quotations are for the various grades of butcher cattle:

<b>Cows—</b>	
Choice.....	\$6.50@7.50
Good to choice.....	5.85@6.45
Fair to good.....	5.25@5.80
Common to fair.....	5.00@5.20
Canners.....	4.25@4.95
<b>Heifers—</b>	
Choice.....	\$8.50@9.50
Good to choice.....	7.75@8.45
Plain to fair.....	7.00@7.70
Common.....	5.75@6.90
Veal calves.....	7.25@10.75
Bulls.....	4.25@6.75

### Feeder Trade Temporarily Paralyzed.

Quarantine for the foot and mouth disease caused a suspension in the trade in thin cattle in the first three days last week. The few sales reported were at greatly reduced prices. Later, however, demand revived and a complete clearance was made with prices at the close nearly as high as in the preceding week. Today few were offered and demand was urgent and prices ruled as high as any time. The movement now is much smaller than a month ago, and few will be offered now until spring.

### Volume --- Quality

**VOLUME** is our watchword—QUALITY our motto. Quality—Galloway engine quality—has made our tremendous volume possible. Skilled workmanship, best materials bought in large quantities, simplicity and perfection in design, and supremacy in power are why I call this new 6 h. p. (horse power) Galloway's MASTERPIECE.

### Get My New 1915 Proposition

It's new and different. Listen! Don't buy an engine of any make, kind or at any price until you first get my new 1915 proposition and sliding scale, price reducing schedule. It's an eye opener—a profit sharing surprise to everybody. The more we sell, starting in September 1st, 1914 and ending September 1st, 1915, the more we still reduce our price from this already low figure and you get the benefit.

### Ask For My Free Engine Book

Send a postal now for our new 1915 proposition and valuable engine book that is full of engine information, pictures and letters from satisfied customers that tell the absolute truth about Galloway engines. It's yours for the asking. Wm. Galloway, Pres., The Wm. Galloway Co. 1715 Galloway Station Waterloo, Iowa

## \$18.30 PER HORSEPOWER

Can you buy a horse for \$18.30? No! Yet you can get a six horsepower

## DETROIT FARM ENGINE

for \$18.30 per horsepower. Runs on Kerosene, Gasoline, Alcohol or Distillate. Saws wood, grinds feed, pumps, etc., does any job around the farm. Only 8 moving parts. No cams, gears, sprockets or valves. Positive satisfaction ten year guarantee. 30 day money back trial. We want farmer agents everywhere. Write for particulars. Detroit Engine Works 203 Bellevue Ave., Detroit, Mich.

### NOTICE

I have several full stock Red Polled calves for sale. Address, JOHN GROSS, Elizabethtown, Ill., R. 3.

## ABERDEEN ANGUS

### COWS AND HEIFERS

And a few bulls for sale. Also a good black imported Percheron stallion, 9 years old, weight 1,950; sound; broke to work and sure.

J. O. GRING, DALLAS CENTER, IA.

Quotations for thin cattle are as follows:

Selected feeders.....	\$7.75@8.35
Good to choice feeders.....	7.25@7.70
Fair to good feeders.....	6.50@7.20
Common to fair feeders.....	5.85@6.40
Selected stockers.....	7.85@8.50
Good to choice stockers.....	7.35@7.80
Fair to good stockers.....	6.75@7.30
Common to fair stockers.....	5.75@6.50
Stock cows.....	5.25@6.50
Stock heifers.....	5.50@7.25

### New November Lamb Record.

Prime lambs are selling at \$9 to \$9.25, or nearly \$1.25 higher than the top price paid in any preceding November. Light supplies and urgent demand caused the higher prices. The market now is fully \$1 higher than two weeks ago. The movement of grass fat sheep is ended and feed grades are beginning to come. Both commission men and buyers say that owing to the fact that fewer lambs went into feed lots this fall than in preceding seasons, fat lambs will be comparatively scarce this winter.

(Continued on page 9.)

# HORSE AND CATTLE BREEDING SCHOOL

## December 7 to 12, Inclusive

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate, representing the different diseases. Students are impressed with facts about diseases of females in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be is eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Profane or vulgar language is prohibited among the students. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. No man can attend this school without being a better man in every respect. Its moral influence will never be forgotten. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

**REMEMBER THE DATE---December 7 to 12, Inclusive.**

### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Delivery—Scientific Mating—Horse, and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Female's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Stock Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a female is pregnant or not—Getting the Semen—Inserting Capsules, etc.

Remember the date and prepare to be here next term. All trains now enter the New Union Station. Take any street car north and transfer west on Twelfth Street. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

**The GRAHAM SCIENTIFIC BREEDING SCHOOL**

MISSOURI AUCTION SCHOOL,  
Largest in the World.  
NEXT TERM STARTS JAN. 4.  
W. B. Carpenter, Pres., Room 340,  
515 Walnut St., Kansas City, Mo.

Hotel Convention

12th and Broadway, Kansas City, Mo.

Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall.

Review of the Markets

(Continued from page 7.)

Fat lambs are quoted at \$8.50 to \$9.25, yearlings \$6.75 to \$7.50, wethers \$6 to \$6.75, ewes \$5.50 to \$6.

**Substantial Advance in Hogs.**

Largely as the result of a big Eastern demand hog prices in the past two weeks reached the 8-cent level again. Shippers have forced the demand at all angles and while packers played a game of watchful waiting they were forced to pay higher prices. In Kansas City last week receipts were 110,000 hogs, the largest supply yarded in any week since 1908. Of this number more than 60,000 were purchased and shipped elsewhere for slaughter. Receipts were liberal again today but stronger prices prevailed. Other markets are not in a position to handle outgoing shipments and until that movement is established the river markets will be called on to supply the larger Eastern cities with live hogs for slaughter. Prices now are much higher than was thought probable a month ago, and when normal conditions prevail again the price level will drop.

The following quotations are for hogs:

Choice, 250@300 lbs.	\$7.90@8.10
Medium, 200@250 lbs.	7.85@8.10
Mixed, 190@215 lbs.	7.75@8.05
Light weight.	7.50@8.00
Light lights	6.00@7.45
Stags.	4.50@7.25
Boars.	4.25@6.00
Bulk of sales.	7.80@8.05

The range in prices of hogs in Kansas City in the past two weeks:

	Preceding Week
Monday.	\$7.40@7.90 7.00@7.40
Tuesday.	7.45@7.95 7.00@7.45
Wednesday.	7.45@7.95 7.00@7.45
Thursday.	7.35@7.85 7.25@7.80
Friday.	7.50@7.97½ 7.20@7.80
Saturday.	7.60@8.05 7.30@7.80
Monday, Nov. 16.	7.50@8.10

**Corn Prices Lower.**

New corn is beginning to move freely and quotations on this year's crop now control the market. The yield is about 2,700 million bushels, or about the same as the five-year average. Quality is excellent. Prices are lower and demand at primary markets is comparatively small. Wheat prices are off about 2 cents a bushel, though export demand continues large. Chop, bran and rye are about the same in price.

**Wheat—**

No. 2 hard.	\$1.06½ @ 1.07
No. 3 hard.	1.05 @ 1.06½
No. 2 red.	1.06½ @ 1.07
No. 3 red.	1.04 @ 1.06

**Corn—**

No. 2 white.	.63 @ .64
No. 3 white.	.62 @ .63
No. 2 mixed.	.63 @ .64
No. 3 mixed.	.61 @ .62

**Oats—**

No. 2 white.	.46 @ .47
No. 2 mixed.	.42 @ .45
Rye.	.96 @ .97
Chop.	1.20
Bran.	.96
Barley.	.58½
Shorts.	1.14 @ 1.20

**Hay Prices Irregular.**

Prices for alfalfa were quoted off 50 cents to \$1, prairie up \$1 a ton and other hay unchanged. Demand is not large for this season of the year.

Quotations are as follows: Alfalfa, choice, \$13.50@14; No. 1, \$12.50@13; standard, \$11@12; No. 2, \$9@10.50; No. 3, \$7.50@8.50; prairie choice, \$12.50@13.50; No. 1, \$11@12; No. 2, \$7.50@10.50; No. 3, \$4.50@7; timothy, choice, \$15; No. 1, \$13.50@14.50; No. 2, \$10@13; No. 3, \$8@9.50; clover mixed, choice, \$14; No. 1, \$12@13; clover, choice, \$12@12.50; No. 1, \$10.50@11.50; straw, \$5.

A Department For Women

WHERE THEY TEACH "HOW TO DO."

How to set up the frame of a building, how to mix concrete, how to judge live stock and corn, how to make good butter, how to treat stock diseases, and the "how to" of a hundred other farm jobs is taking the time of the short course students in the College of Agriculture of the University of Missouri as well as in other colleges giving similar practical training. That the courses are valued by the men taking them is shown by the fact that of the 199 students enrolled in the first term at Missouri, 63 have been there before.

There is also a short course for women. Around a big U-shaped table you may see them studying the proper methods of food preparation. On individual stoves they experiment in the cooking of foods. In other classes they learn how to plan and serve meals. There are classes in canning and preserving, dressmaking, butter-making and poultry raising.

TYPHOID FEVER.

To the American Breeder:—Typhoid fever is a preventable disease, and is often spoken of as a filth disease, because in the main it is contracted from food or water contaminated with human excrement. The following is a succinct statement, taken from the Journal of the American Medical Association, bearing on this subject:

- For the individual:
1. Keep away from all known or suspected cases of typhoid fever.
  2. Wash hands thoroughly before meals. Do not use "roller towels."
  3. Use drinking water only from sources known to be pure, or, if this is not possible, use water that has been purified by municipal filtration.
  4. Avoid bathing in polluted water.
  5. Use pasteurized or boiled, instead of raw milk.
  6. Select and clean vegetables and berries, that are to be eaten raw, with the greatest care.
  7. Avoid eating "fat" raw oysters and, in general, oysters and other shellfish whose origin is not known.
  8. Be vaccinated against typhoid in all cases in which any special exposure is known or feared.

For the community:

1. Insist on the hearty co-operation of all persons with an efficient health officer.
2. Require notification and a reasonable degree of isolation of every known or suspected typhoid case.
3. Exercise strict control over the disinfection of known typhoid excreta.
4. Insist on pure or purified water-supplies.
5. Require pasteurization of milk-supplies.
6. Regard all human excreta as possibly dangerous, and control their disposition in such a way as to prevent contamination of food or drink. H. E. E. Kingman, Colorado Agricultural College.

**PATTERNS FOR WOMEN AND CHILDREN.**

**SPECIAL ANNOUNCEMENT—**We will forward, on receipt of 5c, the winter number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for misses, women and children, and containing two pages of hints on Home Dressmaking.

1057. Boys' Suit with Trousers. Cut in four sizes: 3, 4, 5 and 6 years. It requires 2¾ yards of 44-inch material for a 4-year size. Price; 10c.

1053. Girls' Dress. Cut in four sizes: 6, 8, 10 and 12 years. It requires 3¾ yards of 44-inch material for a 10-year size. Price, 10c.

BOYS AND GIRLS CLUBS INCREASE RAPIDLY.

There are now 2153 Missouri boys and girls in clubs studying corn raising and judging, tomato raising and canning, stock judging, sewing and poultry raising. Since September 1 83 new clubs have been organized with a membership of 956. The membership of these new clubs is distributed as follows: poultry raising, 59; stock judging, 348; sewing, 512. The Boys and Girls were started by Prof. R. H. Emberson of the College of Agriculture of the University of Missouri last March.

HOW TO SELL COLLIES.

To the American Breeder:—Will stop the Collie ad now for awhile, as from the amount of letters we have coming in, that we will sell these three litters, and as soon as we have another lot on hand I will have a good photograph of my dog and have a cut made to use then.—W. H. Richards, Lyon County, Kas.

## PERCHERONS AND PONIES

### THURSDAY, DEC. 10, 1914

# 35 PERCHERONS

10-STALLIONS-10      25-MARES-25

Not an unsound one in the bunch. Absolutely the greatest band of Percheron mares ever sold at auction.

### GEORGIANA--AND HER FAMILY

This great mare in her day weighed 2,040 pounds. Won the blue at the Iowa State Fair and other noted shows. Has produced 19 living colts and is again in foal. Three colts have won the blue at State Fairs; all of them better than ten horses at maturity. Her daughters and granddaughters are keeping up her wonderful record as show mares, work mares and brood mares. The greatest breeding family in the history of the breed. Get a stallion or a pair of mares from this family. They are a sure family of breeders, handsome, large, sound, useful mares.

Come to this, THE GREATEST SALE in the history of the breed.

# Dispersion Sale

## Thursday, Dec. 17th

### 35 Perchons - 9 Stallions - 26 Females

The stallions include Helix 70340 (75752), grand champion Percheron stallion of America 1910. The females include 26 home-bred and imported mares and fillies. Practically all either sired by or in foal to Helix. Our offering includes our entire show herd of 1914 as follows:

### Winners at Interstate Fair, St. Joseph, Mo.

First and champion aged mare; first and champion mare under three years; first and champion stallion under three years. Best three mares owned by exhibitor; first and third produce of dam; second get of sire; second and fourth stallion foal.

### Winners at Iowa State Fair

First on mare with foal at side; third yearling stallion, open class; third in futurity; fourth in Iowa class; fourth, sixth and ninth in Percheron filly futurity; last five get of Helix; second on get of sire on get of Helix 70340; fourth on produce of dam, all by Helix.

Our aged mares are big, rugged, good workers and safe in foal to the champion Helix. Our young things are of the prize winning variety.

Write at once for catalog, mentioning the American Breeder.

# BURRESS - BILLITER

W. H. BILLITER & BURRESS BROTHERS, OF CARROLL, NEB.

## Annual Breeders Auction of High Class Registered Drafters Carroll, Neb., Dec. 22

This joint offering from our own breeding herds, representing the best product of state fair prize winners and importation tops, consists of

## 25 PERCHERONS & BELGIANS

Nearly half this offering are massive, heavy, strong, clean-boned grays, the type that has been the mainstay of the Percheron breed. Nine or ten are by Billiter's magnificent gray imported stallion, Galetas, famous as a sire and prize winner. From the Burress stud a similarly great Belgian sire will be sold. This is Brise Tout 3135, used seven years by Burress Bros., and for sale now only because of his mares and fillies, of which some grand specimens are in this sale.

If you want scale, powerful conformation and perfect thrift in such grays and roans as will always uphold the Percheron and Belgian standards, this is your sale. Some superior animals of darker colors included, but most of the mares not akin, are in foal to the gray Percheron, Galetas, or the gray Belgian, Brise Tout—two stallions that have done wonders for this state.

Kindly write at once for our catalogue, mentioning the American Breeder and addressing

**W. H. BILLITER, Carroll, Neb.**

It is liberally illustrated with true-to-life photographs, showing the kind offered in

## Jones' Percheron Sale Rippey, Iowa, Dec. 16

Look up the 2-year-old stallion, Marvin, that will weigh right at a ton, sale day. Here is a herd header of the best type. Look up the yearlings, Baron Chinda and Rinaldo, yearlings weighing 1,600 and 1,450. Look up Imperial, a 1,000-pound foal. The mares are of the same high class, including Gardine, winner of 12 firsts and championships. The Percherons do the work at this ranch, so you know they are practical.

Do not fail to write me at once for this catalog, and any particulars you want, being sure to mention the American Breeder. I want the pleasure of showing you how we grow them out and how well they pay their way.

**C. F. JONES**  
Rippey, Iowa

### HOW DO YOU DEVELOP DRAFT COLTS?

To the American Breeder.—In your article on "Draft Horse Development," I see that you advise feeding draft colts heavily. Do you not think that it is rather risky to shove young stock? I know that heavily fed stock look a lot better than lighter fed ones up to a certain age, say two years, and then the lighter fed ones seem to draw away and nearly always make larger animals with a lot more quality in their legs, owing to their bodies never being too heavy for their legs.

The extra well fed colts seem to mature at 30 months, at least do not grow as well as they should considering their size and weight at the time they are two past. I believe that it is a fact that a lot of colts are spoiled in order to win at fairs, because judges, like other people, are inclined to favor fat, well-finished animals.

Why is it that prize yearlings and two-year-olds often do not otherwise, as a rule, win later in mature classes? There are of course exceptions, but they are generally turned down owing to lack of size (although big as two-year-olds they had stopped growing), or coarseness of legs, through being top heavy as colts, while their bones were soft.

Now I do not mean that a colt should be half starved, but when you get him in fair condition, feed him light so as to keep him growing without being too fat, unless you intend to sell him to someone who asks, "What does he weight?" while he is still a colt. People seem to mix up baby beef with draft colts. The result is, they are disappointed when their higher priced two-year-old stallion which weighed perhaps 1,700 pounds when they bought him, weighs, at say five years old, 1,800 or 1,900 when very fat, instead of making a 2,200-pound horse in good condition. I hope others will write on the subject.—Canadian Subscriber.

### RESULTS WERE TWENTY TO ONE.

To the American Breeder:—Inclosed please find remittance for ad in your paper. I inserted the same ad in a popular Kansas farm paper at the same time. Received one inquiry from it and twenty some odd from the American Breeder. They came from eight different states.—Phil Simmons, Chase County, Kas.

### WHEN MARES FAIL TO SWEAT.

To the American Breeder:—On page 14, November 5th issue, please inform your Florida subscriber who has mares who do not sweat, to feed them all the penny royal they want to eat, and if they do not eat a bunch as large as a quart measure then make a tea and pour on the oats. I believe the mares will do better on six quarts each than on eight quarts. In hot weather, at such times, soak a cloth folded eight or ten thicknesses, in cold water; put under head stall of bridle and let it come forward

nearly to the eyes; wet it again every hour.—N. A. May, Mahoning County, Ohio.

### DRAFT HORSES IN THE SOUTH.

J. C. Robison of Towanda, Kas., exhibited this fall the best string of draft horses ever shown by one firm in the South, forty head of excellent Percherons. It would have been worth much to the South if they could have been exhibited in all the Southern states. At the Fort Worth show, these horses were placed in cramped quarters. It was Mr. Robison's intention to exhibit them at the Dallas State Fair, and possibly other fairs in the South, but the management of the Texas State Fair refused to prepare suitable feed boxes for these big horses. As a result of this refusal, Mr. Robison shipped his horses home.

Small farmers in the South are rapidly seeing the advantage of greater size in their work stock. A little more encouragement from the agricultural leaders would help this movement greatly. It has been claimed that draft horses cannot stand the warm climate. At the Texas Agricultural College and the experiment station in Tennessee, registered draft mares have been working for years with success. Some breeders and dealers have tried to increase their weight too rapidly in the South. The undersized, pure-bred draft stallion weighing from 1,400 to 1,600 pounds, but having abundance of quality and action will get excellent results from the first cross and pave the way for more weight in the next cross. A stallion of this kind will get more business where people are not accustomed to real draft horses, than the larger ones.

The present cotton conditions are causing farmers in the south to think about raising other crops, in addition to cotton. A very large portion of our southern states are of a level lying land which will admit the handling of larger implements. This necessitates stronger animals.

When the cotton conditions are improved, which will probably be in the near future, we believe there will be, in the southern states, opportunity to dispose of many undersized draft stallions at fair prices. Too many big, rough and poorly formed draft stallions have been sold in the South. The small compact stallions we have spoken of, are not needed in the North, and can be purchased cheaply. Southern bankers and planters can be interested in this proposition.

### "AN EDUCATIONAL SERIES."

To the American Breeder:—Accept my most sincere appreciation of the wonderful photographs of the various poses of the horses in action in the Missouri State Fair \$2,500 stake. This, I believe, is the most remarkable series of photographs of saddle horses I have ever seen and I want to con-

**Trumans' Pioneer Stud Farm, Box A, Bushnell, Ill.**

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

GEORGE EGGERT, Newton, Iowa.

## What About Imported Percherons?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few if any will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ton horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.

PERCHERON IMPORTING CO. Chas. R. Kirk, Pres. St. JOSEPH, MO.  
All street cars going south from Union Depot pass our stables.

gratulate you upon your enterprise in thinking of such a scheme. They constitute really an educational series.—E. A. Trowbridge, Professor of Animal Husbandry, University of Missouri.

### ANNUAL RECORD ASSOCIATION MEETINGS IN CHICAGO.

As the annual meetings of many of the live stock records are fixed by the association's rules for dates to coincide with the dates of the International Live Stock Show, a majority of these meetings will be held as usual, regardless of the fact that the International has been called off. Doubtless some changes will be made as to the halls or hotels at which the meetings are held, but such changes have already been announced by letter to the stockholders and officers of the associations concerned. It is just as a matter of general information that we state that the cancellation of the stock show does not necessarily mean the calling off of record association meetings.

**HORSES FOR SALE.**  
Clydesdales—1 stallion, Baron Montague 16842; foaled May 14, 1912; weight 1,700 pounds. 1 mare, Bonnie Bell 11720; foaled May 12, 1904. 1 yearling filly, Scottish Bell 17769; foaled April 7, 1913. 1 filly foal, Scottish Bell 2nd.

December 15—Geo. S. Johnson, Pleasant Hill, Mo.

December 16—C. F. Jones, Rippey, Ia.

December 17—J. C. Robison, Towanda, Kas.

December 17—Brown & Walker, Clarinda, Ia.

December 22—W. H. Billiter, Carroll, Neb.

January 28—Spohr & Spohr, Latham, Kas.

#### Shorthorns.

December 16—C. F. Jones, Rippey, Ia.

#### Jack Stock.

December 8—A. C. Finn & Sons, Cartter, Ill.

Horns Bros., Norris, Ill., are offering jack stock, stallions and other property for sale. They have two ads in this issue.

George Hirschman, Pierson, Ia., starts his regular advertisement in this issue. At this time he is offering some bargains in Percheron mares. Mr. Hirschman is preparing to quit the farm and is offering his entire stock for sale. Read the advertisement.

Julius Schmidt, Box 64, Wild Rose, Wis., is advertising his 4-year-old Percheron stallion for sale. Write him for particulars.

John E. Wallace, Weldon, Ia., is offering his registered Percheron stallion for sale, or will trade for Percheron stallion. He must change on account of his fillies.

H. T. Hineman & Sons, Dighton, Kas., start their regular advertisement in this issue. They have 25 registered jacks from weanlings to 7 years old, and guarantee everything as represented. Get their prices.

W. C. Baughman, Pulaski, Ia., asks our readers to write him for prices on his imported and home grown Percheron stallions, mares and fillies.

W. T. Wilkinson, Eureka, Mo., is offering his great ton show stallion, Kodoma, for sale; price \$1,000. He guarantees this horse to get 60 per cent foals.

A. U. Dunbar, Galesburg, Ill., is advertising Percheron stallions and mares for sale, weighing from 1,900 to 2,100 pounds. Will pay expenses if the stock is not as represented.

Sanford Hutsell, Hampton, Neb., is going to quit the farm and will sell at a bargain all his jennets, two jacks, some Percheron mares and stallions.

J. E. Bradley, Carthage, Mo., is advertising his 240-acre farm and all his stock for sale, as he is going out of the business on account of failing health. This stock will be priced to sell. See the ad.

J. L. Buchanan, Sherodsville, O., has a lot of Morgan and Percheron stallions for sale. Anyone in the market for stock of this kind should not fail to write him for prices, etc.

T. L. Ogier, Buffalo, Kas., is offering a stallion for sale and is in the market for one. See his ad.

A. M. Dull & Sons, Washington, Kas., are offering six head of choice Percheron stallions for sale. Their imported herd stallion is included, as his fillies are in the way.

S. J. Molby, Agricola, Kas., has some registered fillies from weanlings to 2-year-olds for sale, also yearling stallion, mares and a jack.

Charles Irvine, Ankeny, Ia., a widely known importer and breeder of Belgian draft horses (who also handles a good class of Percherons), is probably in as good shape as any importer in America to show his customers fresh, high class stock. Mr. Irvine landed in this country last August with one of the largest and best importations of Belgian horses to leave the coast of Europe, and very few importers were able to get away with anything at a later date. The winnings of Mr. Irvine's drafters at the Iowa State Fair (most of them shown in thin condition), is ample proof of the superior quality which he handles. Mr. Irvine's advertisement appears regularly in the American Breeder, and we will appreciate being mentioned by everyone who writes him concerning anything in the draft horse line. Mr. Irvine also breeds Polled Durham and Shorthorn cattle.

Astral King, owned by James Houchin, Jefferson City, Mo., the famous stallion that has been the subject of a series of advertisements in the American Breeder, not only was the winner of the \$2,500 Missouri saddle horse stake, the greatest event of its kind in history, but has a record of having won against every stallion he has ever met in the show ring. There are, in fact, Mr. Houchin informs us, but two saddle horses living which have beaten Astral King in the show ring—these are the mare, Hazel Dawn, and the gelding, Jack Barrymore.

Concerning Absorbine, advertised regularly in this paper and made by W. F. Young, P. D. F., 338 Temple Street, Springfield, Mass., Mr. Lewis Paulkner of Venedocia, O., reports as follows: "I have used Absorbine on my road horse. She was lame and there was a swelling on the tendons of the left leg. I bought a can of Absorbine and used it according to directions. She is O. K. now. Absorbine is the best liniment I have ever used."

## IRVINEDALE BELGIANS

We import 'em good and breed 'em likewise

One of the Few Establishments in America Offering Recently Imported Animals.

### OUR AUGUST IMPORTATION

Was one of the best we have ever had, and about the last to leave a European port. We have

40 Stallions, 20 Mares

A few good Percherons among them. Will refund the expenses of any visitor who thinks we have deceived him concerning what we have to offer. Ankeny is ten miles north of Des Moines on the Northwestern Ry. and Ft. Dodge Interurban. Always mention the American Breeder.

CHAS. IRVINE

C. 9. Ankeny, Iowa

### Bargains in Percheron Mares

I am preparing to quit the farm and My Entire Herd of 50 Percherons—Mostly High Class Mares and Fillies—is for Sale.

I have a few good stallions, of course, and will make close prices on them, but any man who will take all, or a large part, of my mares and fillies, will get a bargain he cannot find anywhere else. Good registered draft mares will be the money makers for years to come.

GEORGE HIRSCHMAN,

PIERSON, IOWA.

### WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had direct from the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

### No greater Percheron family, so far

as we have any record, has ever been the feature of a public sale offering than "The Georgiana Family" in the dispersion of the Woodlawn Farm Percherons to be held at Sterling, Ill., December 10. The foundation of the Woodlawn herd of Percherons is that grand old mare, Georgiana, good enough in her day to win the blue at the great Iowa State Fair. This grand old mare has a record seldom if ever equaled. She has produced nineteen living colts, and shows evidence of being again in foal. In show condition she weighed over a ton, produced three colts that have been state fair winners, worked hard until she was 17 years of age, in fact, foaled three times in harness. Her daughters and grand-daughters are keeping up her wonderful record as show mares, brood mares and work mares. The stallion, Bacarat, is a worthy consort for such an exceptional band of mares. In ordinary condition he weighs over 2,200 pounds—an extremely impressive horse with a splendid head and neck, good middle, large flat bone, good feet, and with more style and action than many so-called coach horses; very active, can trot a four-minute gait; in fact, an exceptional high class stallion from every standpoint. Do not fail to send at once for catalog, as per advertisement, in this issue.

Geo. S. Johnson, Pleasant Hill, Mo., is advertising a closing out sale December 15th, in which he will sell 15 Percherons and jacks and nine mares; mares all in foal. The Percherons are all registered in the Percheron Society of America and all broke to work but two. Look up the advertisement in this issue and when writing Mr. Johnson for particulars be sure and mention the American Breeder.

Spohn Medical Company, Goshen, Ind., start their regular season's advertising in this issue. Their remedy comes at 50 cents and \$1.00 a bottle, and is sold by druggists, harness dealers or sent direct.

Witte Iron Works Co., 1550 Oakland Ave., Kansas City, Mo., will send to any of our readers who write for it, one of their "Engine Books" which tells all about the Witte Engines. They give a five-year guarantee with every engine sold. Cut out the coupon in the advertisement in this issue and mail to them, mentioning the American Breeder.

Percheron Importing Company, Chas. R. Kirk, President, St. Joseph, Mo., are advertising 15-ton stallions that they imported last fall, which they will sell at lower prices than ever before, as they want to close them out. These stallions are all broken and acclimated. Mention the American Breeder when writing for prices, etc.

A. C. Finn & Son, Cartter, Ill., have a public sale December 8th, in which they will sell 45 jacks and Jennets ranging in age from two to six years. Free transportation to and from the station to farm. Sale will be held at the farm near Kell, Ill., about 80 miles from St. Louis, Mo. For full particulars address them at Cartter, Ill.

R. A. Smith, Colonization and Industrial Agent, Union Pacific Railway, room 3738 Union Pacific Bldg., Omaha, Neb., will gladly send any of our readers complete and authentic information regarding the excellent opportunities for money making to be found in land which lies along their road. Always mention the American Breeder when writing.

M. H. Landis, Robinson, Kas., is advertising a stallion, jack and registered Thoroughbred mare for sale, and offering them well worth the money.

S. S. Langford, Craig, Neb., has three Percheron stallions for sale, or will trade one of them for another equally as good.

(Continued on page 14.)

## 40 HEAD OF PERCHERON

Stallions and Mares

Now on hand at Woodlawn Stock Farm. Prices right. Write us.

SPOHR & SPOHR,

Latham, Butler County, Kansas.

### FOR SALE OR TRADE.

Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth Jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. BURNS,

Argonia, Sumner County, Kansas.

### Percheron, Belgian and Shire Stallions and Mares

from suckers up to six years old, including my herd stallion Adore, first premium and champion Belgian stallion at American Royal in 1912. All priced very cheap; good terms on bankable paper.

J. M. NOLAN, Paola, Kas.

### SIX PERCHERON STALLIONS

For sale, including our imported herd stallion, Siroco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.

A. M. DULL & SONS, Washington, Kas.

### PERCHERONS

For sale. Registered Percheron stallion; black; 19 months old; weight 1,470 pounds. Registered Percheron filly; black; 3 years old; weight 1,860 pounds. The above animals are extra good, from large, heavy boned stock. Sire and dam of each weighed a ton and better. Come and see them. No trades.

G. B. CHANDLER, Rte. 1, Buffalo, Kas.

### ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT,

Cedar Bayou, Harris County, Texas.

### Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.

C. G. ANDERSON, Hector, Minn.

### PERCHERON STALLION

For sale. Corbon 51151; 9 years old; dappled gray; 16½ hands high; weighs 1,900 pounds; sound. Colts to show. Fillies in his way. Will sell so he will pay out the first season.

R. N. MONTGOMERY, Rich Hill, Mo.

# CLOSING OUT SALE December 15 15 Percherons and Jacks 15

Percherons all registered in the P. S. A. All broke to work but two and all O. K.  
Stallions—One 8-year-old; coal black; a ton horse. One 4-year-old; brown; in the harness every day, but would weigh a ton if fat. One 3-year-old, 1500 pounds, and one colt.  
9 Mares—2 to 16 years old, all in foal, 1600 to 1800 pounds.  
2 Jacks—15½ and 14½ hands; 4 and 5 years old; both broke to mares.  
Write for particulars.

**George S. Johnson**

PLEASANT HILL, MO., Route 2.  
Sale on farm 2½ miles east of town. Free conveyance.

**R. L. HARRIMAN, Bunceton, Mo.**

*The Fine Horse and Jack Auctioneer  
of the West*

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

I wish to close out my entire Bunch of Percheron Stallions, Jacks and Jennets.

I have six stallions, three gray and three black. Five of these horses are imported and one American bred. All first class stuff and all registered in Percheron Society of America.

I also have two jacks and three jennets. Will sell this stock worth the money, as I want to close them out. This stock is the result of 17 years' careful selection and they are all breeders.

JOHN W. SCHENCK,

FERRIS, ILL., R. R. No. 1.

## FOUR PERCHERON STALLIONS

for sale, including my imported herd stallion, Marquis, a grandson of Besique. Marquis has the famous blood lines on both sire and dam's side; sound and sure. Also two black three-year-olds and one black two-year-old. Will mature to better than ton horses; sound, with size and quality; registered in P. S. of A. They are priced to sell. Come and see them.

I. C. EVANS, TROY, IOWA.

## PERCHERON AND STANDARD BRED STALLION AND JACK STOCK.

For sale: Imported Percheron stallion, Berry (45406) 24500; coal black; foaled 1896; actually sold for \$3,000; weighed over a ton; sure breeder; colts to show.

The standard bred is Capperton 39032, sire of Checkers 2:15. Fine style and form.

Also jacks, jennets, horses, mules, thresher and clover huller.

BRONS BROTHERS, NORRIS, ILL.

## MORGAN AND PERCHERON HORSES.

A lot of fine, large Morgan stallions, from weanlings up; 1,200 pounds; bays and sorrels. Eight-year-old brown family mare, in foal; 1,150 pounds; 15½ hands; Morgan. A lot of fine, large Morgan fillies. A gray yearling Percheron stallion. A black weanling Percheron stud; good one. All recorded.

J. L. BUCHANAN, Sherodsville, O.

# WANTED

Draft mares, fillies or mules in exchange for auto, Mitchell touring car; five passenger; fully equipped.

Will pay cash for two Clydesdale weanlings, pure bred or high grades. State what you have in first letter.

BIG MIAMI STOCK FARM, North Bend, Ohio.

## POSITION WANTED.

Experienced breeder and developer; versed in feeding, care taking and exhibition, wants salaried position with progressive stock man, whose stables are represented by registered sires. Have used several thousand capsules with evident success. Know how to increase public patronage, eliminate prejudice and competition. References furnished. Graduate Graham School.

LOCK BOX 68, YSLETA, TEXAS.

## STALLION AND JACK

For sale: King Toral 35475; record 2:25; handsome bay stallion with star; two white hind feet. Can be handled by any one and is sure.

Seven year old Mammoth jack; black with white points; stands 15½ hands; is large; sure; prompt and a good breeder.

Also, Miss Buckler, a registered Thoroughbred mare. This stock is well worth my price. If interested come and see me, or write.

M. B. LANDIS, ROBINSON, KAS.

## JACK STOCK, STALLIONS AND OTHER PROPERTY.

For sale—Black Joe, Missouri bred; would weigh 1,200 if fat; sure breeder of big mules. 1 Spanish Jack, extra heavy bone and a good teaser. Both jacks will serve either mares or jennets. Two big jennets, in foal.

Also Percheron and standard bred stallions, horses and mules; thresher and clover huller.

BRONS BROTHERS, NORRIS, ILL.

Astrak King 2805.

# Did You See

THE AMERICAN BREEDER PHOTOGRAPHS

## Showing Astral King

At Everyone of the Saddle Horse Galts—  
In All of Which He Excels.

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind of buyers.

JAMES HOUCHIN,

JEFFERSON CITY, MO.

time to get a horse in condition to the races next year. It takes a long be a consistent winner.

The United States leads the world in Standard Bred horses. Why not in other breeds?

J. M. Burger purchased the great race mare, the Spartan Queen, at Des Moines sale. She has a record of 2:11¼ and is the dam of Isaac R. T., 2:10.

The show yard campaign made west of the Mississippi this fall by the famous saddle stallion, Kentucky's Best, makes interesting every item of news about the get of this stallion. One of the season's highest prices is said to have been paid by E. M. Caffrey of Kentucky, for a Kentucky's Best weanling, but the price is not made public.

Racing at Jaurez, Mexico, will begin on Thanksgiving Day and continue 100 days, practically all winter. Plenty of racing, cock fighting and a bit of war now and then makes a heaven on earth for the Greaser spirit of the West.

## LOTS OF INQUIRIES FOR MORGANS.

To the American Breeder:—Inclosed find check for \$10 to cover bill rendered. The Breeder is bringing in lots of inquiries for Morgans. The demand for army horses puts them to thinking about Morgans, as they are conceded to be the greatest horse in existence for that purpose. I am getting lots of inquiries for weanlings and yearling colts to be delivered by express, crated, as they can be shipped to almost any state for \$50. Grown horses cannot be shipped in that way and the rate on a single animal is almost prohibitive when its destination is beyond the bounds of the state, as it is necessary that a man accompany it.—Richard Sellman, McCulloch County, Texas.

A meeting announced for November 20, in our last issue, has for its purpose the correction of shipping charges and conditions, among which is the one Mr. Sellman complains of. The meeting is in Chicago, between the Interstate Commerce Commission and the live stock records.—Editor.

## HORSE PROSPECTS AND STALLION LAWS.

To the American Breeder: I have been reading your valuable paper for a number of years and feel that you are doing a great work in the interest of the farmer and breeder, and being a veterinarian and a breeder, and deeply interested, would like to give you my idea of a stallion registration law, especially of Kansas. First; will say that I think that Kansas has about the poorest excuse for a law that could well be framed. The first law enacted was a better law than the present one, but neither accomplish the purpose for which they were intended. There is simply nothing to the law as it now stands except that a horse must be true to pedigree, but it does not eliminate anything. The intention of a stallion law is to improve the breed by improving the sires and this by eliminating the grade horse and scrub. But today under our present law there are as many grade and scrub licenses as pure bred. If the law stated that

## REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

RICHARD SELLMAN, Rochelle, Texas.

## MILLER STOCK FARM

### Bargains in Standard Bred Stallions.

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$260 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade on the above. No stock shown on Sunday.

F. M. LORIMER, Mgr., OLATHE, KAN.

## STANDARD BRED TROTTER STALLION

For sale. Ralph Forest 56816; 3 years old; 16½ hands high; weighs 1,400 pounds. Is a good individual. Priced to sell. No trades.

R. N. MONTGOMERY, Rich Hill, Mo.

## REGISTERED SADDLERS

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2524 and Fos McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

H. A. GREENWELL, LAKENAN, MO.

## SADDLE STALLION, PERCHERONS AND 10 JACKS

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

W. L. GRAHAM, Mackville, Washington County, Ky.

## Shetland Ponies

### 100 HEAD IN HERD.

Solid colors and spots. Special values for Holiday buyers.

Nothing will give children the pleasure and service in proportion to first cost and care. Buy the good kind and they are always ready sale.

W. J. THOMPSON, Dorchester, Neb.

## EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

## PARTNER WANTED

Want to sell to reliable party half interest in best breeding and sale barns in Texas; 12 acres land; 7-room house; 3 barns; fine business. Party to run the business on salary and be secretary and treasurer.

DR. H. T. CONSTANT, Willis Point, Tex.

## Partner Wanted

A good scientific man to go in as partner on two good stallions, one Percheron and one road stallion. Owner is not able to take care of two stallions. For further information and references, write

LOCK BOX 412, TRAER, IOWA.

hereafter no grade stallion not already licensed could be granted a license and that after a given date no grade license should be issued, they would all soon be eliminated.

**FAIRLAND JACK and JENNET FARM.**

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.

300 HEAD of Colorado raised Jacks, Jennets, Mules and Brood Mares. All guaranteed. Prices right. Lewis Swink & Son, Rocky Ford, Otero County, Colorado.

**MAMMOTH JACKS**

For sale. Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

**JACKS TO SELL OR TRADE**

FOR OTHER LIVE STOCK.

One extra good herd jack; one two-year-old jack and two suckling jacks. All extra good individuals. Can use good jennet or pair of good registered mares or fillies.

J. M. TRACY, LA CYGNE, KAS.

**--JACKS--**

For sale. Two yearlings; 2, 3 and 4; one 10-year-old. Anyone needing jacks would do well to correspond with me. W. P. SCHUEY, MARION, ILL.

**STALLIONS, JACKS, JENNETS**

For Sale or Trade: 1 registered Percheron stallion ton horse. The best herd jack in Kansas. 8 or 10 good young jacks and jennets. Must move stock at once. Work horses or a light automobile considered.

S. S. MOUSE, LA CYGNE, KAS.

**TWO JACKS**

For sale. One weighs 1,150 pounds; stand 15.2 standard; age 9. Other one sired by him; think will be as large; 4 years old. Both registered and licensed sound; good performers; guaranteed all sound and right.

A. CALENDER, New Lyme Station, O.

**JACK FOR SALE**

Or exchange for one as good. Fairview Wonder 3705; black, white points; 15½ hands; 34½ inch ear; 9 inch bone; weighs 1,050 pounds. Quick server, either mares or jennets; 8 years; sound. Reason for selling, young jennets in his way.

R. N. MONTGOMERY, Rich Hill, Mo.

**JACKS—CLYDESDALE STALLION.**

FOR SALE—Three jacks, 4 to 6 years old; good flat bone; registered stock. Price \$300 and up. Also two-year-old Clydesdale stallion from imported sire and dam; weight 1,450. Write or come and see me.

S. A. FARNSWORTH, Blalirstown, Mo.

**TO QUIT FARMING.**

Will sell at a bargain, all my jennets; black, white points; registered; some weighing over 900; all of breeding age, bred to big 1,100-pound jack, Peter the Great. Also jacks, Percheron mares and stallions.

SANFORD HUTSELL, Hampton, Nebr.

**JACKS AND JENNETS**

For sale. Five jacks from 3 months to 7 years old and three jennets. Stock O. K. in every respect.

Albert Beauchamp, Falls of Rough, Ky.

**MAMMOTH JACKS**

For sale. Registered; well boned; one to six years old. If you need a high class jack, we have them. Prices right.

NEILD BROS., Ogden, Boone County, Ia.

**11Worth County Jack Farm**

Twenty-five head of jacks and jennets for sale.

CORSON BROS., Potter, Kans.

Kentucky Mammoth Jacks, colts to 6 years. Style, bone, weight. Saddle stallions, mares, geldings, etc. Home cured bluegrass seed and cedar fence posts. Cook Farms, Lexington, Ky.

Furthermore, all mares presented for service should have a clean bill of health before they could be bred, which would lessen the chance of in-

fecting the stallion, and finally other mares served by stallion.

It seems to me we are on the eve of a prosperous future for the horse interests, with foreign interests buying the nondescript class of horses for army purposes, and the further fact that when peace is restored many breeding herds of Europe will be almost entirely destroyed. They will have to look to the United States for their breeding stock as well as for their farm horses. Then why not be prepared for a condition which is sure to come. Breed to nothing but pure bred sires, and sound ones at that, and we will realize the best prices for horses in the future that this country has ever seen.—Ed. C. Barr, V. S., Coffey County, Kas.

**"FARMING OUT" JENNETS.**

I remember of having seen a statement in a former number of the American Breeder that jennets were often farmed out on shares. Have one to farm out and would appreciate all the information you can give me in regard to this matter, through the columns of the American Breeder.—Mike Murray, Daviess County, Mo.

Editor's Note.—We will be glad to print any suggestions as to a good plan for handling jack stock on the shares.

**JACKS AND JENNETS.**

Only a few men have ever stopped to consider the importance of the jack and mule industry of this country. About one-fourth of the mares in the United States are bred to jacks. In view of the great importance of this industry and its apparent future, every man interested in this stock should encourage a better development of the young jack stock. The present war is sure to create a more intelligent demand for better horses and mules. The inferior kind has never been profitable and once this kind is cleaned up, people will not go back to it.

While it is necessary to thoroughly develop the young jacks, it is just as important that we thoroughly develop the jennets. The size of this stock can not be increased unless the jennets are thoroughly developed. A serious mistake that is being made in too many cases, is the using of inferior sires. A jennet should not be bred to anything except a tried and successful jack. Jacks do not breed true like other breeds of live stock, because their records have not been kept as they should have been, and there cannot be the certainty as to what the ancestry contained.

There is sure to be a brisk demand for good sires. The owners of stallions are beginning to realize that they can stand a jack with very little additional expense. A stallion can do the teasing. It is not often necessary to change a jack, on account of his daughters, as in the case with other sires.

One of our readers asks where to buy a good jack. Several hundred such questions come to this office often each season. We naturally request such inquirers to search the jack advertisements in this paper. We are proud of the fact that this publication carries the advertisements of more jack and jennet breeders than do all other publications combined. We believe that if anyone should ask one of our readers where to buy a jack, he could not do anything better than to have the inquirer write us for a sample copy of the American Breeder. He should be able to find practically any kind of an animal he wants by writing our advertisers, with less difficulty than by any other method.

More men interested in jack stock read our columns than can be found among the readers of any other paper and as a class they are coming to be well posted concerning what is good and bad in jack stock. They are learning that the supply of good big jacks is limited and the most experienced are getting to buy early. Reputable breeders like to deal with buyers of this class and are learning that they can always be found through the columns of the American Breeder.

**45 JACKS AND JENNETS****at Public Sale, Dec. 8**

This jack stock is of popular Kentucky and Missouri breeding, the jacks ranging in age from 2 to 6 years—nothing too old or too young. They are from 15 to 15½ hands high, big boned and of quality that will appeal to you.

Sale at our farm northeast of Kell, Ill. Kell is located in Marion County, Ill., about mid way between Salem and Mt. Vernon on the C. & E. I. R. R., about 80 miles from St. Louis. Good connections from St. Louis via Salem or Mt. Vernon. Train from both directions arrive at Kell about 7:00 a. m. Free transportation to and from the station to farm. Sale will be held regardless of weather.

For any other particulars address us

**A. C. Finn & Son**

Cartter, Illinois

**MAMMOTH BLACK JACK**

With White Points; 2d Prize Winner at Kansas State Fair, Topeka. Foaled August, 1911; 15½ hands; 1,000 pounds; in rather thin flesh. This is a very heavy boned jack, a sure colt getter, and a prompt server on mares. Its sire, Admiral Carter, is 16½ hands, weight 1,250; its dam, a big roomy jennet. This jack sells for \$800. Come or write—

**J. F. TRUE, Jr., Perry, Kansas**

**FAIRVIEW STOCK FARM.**

Registered Jacks Bred to Meet the Modern Requirements For Bone Substance and Stamina.

25 head, from weanlings to seven years old, and up to 1,200 pounds in weight. We won championship on both jacks and jennets at the Kansas State Fair, both 1913 and 1914.

Also for sale—one two-year-old Percheron and two yearling stallions. See our stock and get prices. We can save you money. Everything guaranteed as represented when sold.

H. T. HINEMAN & SONS,

DIGHTON, KANS.

**ADVERTISING BRIEFS**

(Continued from page 12.)

W. J. Thompson, Dorchester, Neb., is advertising Shetland ponies for sale in this issue. He has a herd of 100 head and is offering special prices for holiday buyers.

J. F. True, Jr., Perry, Kas., is offering his prize winning jack for sale at \$800. Look up the ad.

R. N. Montgomery, Rich Hill, Mo., is advertising a Percheron stallion, Standard bred trotting stallion, and a jack for sale in this issue. He will exchange the jack for one equally as good. Look up his three advertisements in this issue.

Lewis Swink & Son, Rocky Ford, Colo., start their regular advertisement in this issue. They are offering 300 head of Colorado raised jacks, jennets, mules and brood mares at the right prices.

John W. Schenck, Ferris, Ill., is offering his entire stock of Percheron stallions, jacks and jennets for sale, as he wishes to close them out. Anyone in the market for stock of this kind would do well to write to Mr. Schenck and get his prices before purchasing elsewhere.

S. A. Farnsworth, Blalirstown, Mo., has three jacks and a Clydesdale stallion for sale. The jacks range in price from \$300 and up.

J. M. Tracy, La Cygne, Kas., has four jacks for sale or will take a good jennet or pair of registered mares or fillies on trade.

I. C. Evans, Troy, Ia., is advertising in this issue four Percheron stallions for sale, including his herd stallion, Marquis. He is pricing this stock for quick sale. See the ad.

Lock Box 412, Traer, Ia., wants a partner in the breeding business. For full information address as above.

Dr. H. T. Constant, Willis Point, Texas, wants to sell a half interest in his breeding and sale barn business. Party to be on a salary and act as secretary-treasurer.

The annual Percheron sales of W. S. Corsa enjoy especially the patronage of those breeders who understand the important place which honor and square dealing plays in the breeding business. Not even the most expert of buyers can always determine from the catalog and inspection of the animals, all the things he wishes to know about a sale offering. All buyers wish to know the man—and when they can buy of a man like W. S. Corsa, who, in addition to being of the highest integrity, is a man of thorough and extensive experience in his line, they are fortunate. Mr. Corsa's annual sales at Gregory Farm are largely of his own breeding and as far as possible carry the blood of his \$10,000 grand champion stallion, Carnot 66666 (66666). Naturally, therefore, a man of his ideals and practicability, insists that every animal in the sale come up

**MILLER STOCK FARM**

Jack and Jennet Bargains.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull. No stock shown on Sunday.

F. M. LORIMER, Mgr., OLATHE, KAS.

**JACKS.**

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

**BIG MAMMOTH JACKS AND JENNETS**

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles north of Monett on Frisco R. R., and six miles southwest of Hoberg on Mo. Pac. R. R. Write for prices to

Henry Obermann & Son, Freistatt, Mo.

**MAMMOTH JACKS.**

You will find at my barns the largest number and the largest and best quality, registered, big boned, black jacks; 15 to over 16 hands standard. to be found in the United States. Reference, Banks of Lawrence. Prices reasonable.

AL. E. SMITH, LAWRENCE, KAS. (40 miles west of Kansas City on the U. P. and Santa Fe R. R.)

**FAIRVIEW JACK AND JENNET FARM**

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high. Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP, Eolia, Pike County, Mo.

**JACK---DUROC HOGS**

For sale. A black jack; light points; six years old; 15½ hands high. Also Duroc hogs.

LOUIS KOENIG,

Solomon, Kas.

## BIGGEST BARGAINS IN BEST HARNESS

YOU cannot afford to buy anything in the Harness Line until you

### Get Our Big Free Catalog

o such a standard of breeding conformation, health and usefulness, as will meet the needs of the class of breeders ways attracted by such a sale. It to the credit of the breeding business that a majority of our registered stock sales are well conducted, but in Mr. Corsa's sales Square Deal and Genuine Merit have always been the sole managers. We urge every reader to answer Mr. Corsa's advertisement on page 2, sending for his catalog.

Again a dispersion of Percheron horses offers the especial values which go with events of this class. We refer to the sale of Brown & Walker, Clarinda, Ia., December 17, in which the blood of the champion stallion Helix is the feature. Helix, whose undoubted merit made him one of the popular championship winners at the International, has since proven himself a breeder of exceptional rank. As we recall it, only two showings has been made of his colts—at the Iowa State Fair and the Inter-State Fair in Missouri last fall. In both the Helix colts did remarkably well. Colts by Helix and mares in foal to Helix make up the bulk of the sale offering which, of course, includes Helix and all these prize winners. Since offerings like this are never made excepting in dispersion sales, there is great interest and everyone will want a catalog. Mention the American Breeder when writing.

## RANCHES

in small or large tracts, adapted for stock raising, alfalfa growing, general farming, etc., or for colonization purposes if desired—can be produced at reasonable prices and on good terms. Excellent opportunities for money making.

I will gladly send you complete and authentic information.

**R. A. SMITH,**  
Colonization and Industrial  
Agent, Union Pacific R. R. Co.,  
Room 3738, Union Pacific Bld  
OMAHA, NEB.

## 240-Acre Stock Farm and Stock

For sale on account of failing health. My stock consists of registered saddle stallions and mares, jacks and jennets. Would trade saddle stallion for jennet jack. Priced to sell.

**E. BRADLEY,** CARTHAGE, MO.  
R. F. D. No. 7.

## LAND FOR SALE AND EXCHANGE

Eastern Kansas. Exchange 280 acres lease to town; fine improvements; 150 acres bottom alfalfa; land all smooth; clear, price, \$80. Owner wants improved ranch in Southwest Kansas; 505 acres 80 miles from Kansas City; all smooth, fine tillable land; fine improvements; close to town. Price \$75; acumbrance \$10,000; will assume.

**V. K. SHAW,** GARNETT, KAS.

## FOR SALE BY OWNER AT BARGAINS

Our choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

**Wm. M. SPRINGER**  
21 Gas and Electric Bldg., Denver, Colo.

## Stock Farms For Sale

888-acre stock farm; 480-acre stock farm; 566-acre stock farm; 1,020 acres suitable for small ranch; 1,046-acre stock farm; several smaller tracts; 1-24 acres rich bayou farm. For particulars address,

**A. WATKINS,** WARREN, ARK.

## 160-ACRE FARM FOR SALE.

Creek bottom land; improved; 40 acres in alfalfa; fenced hog tight; black sandy soil; good water; good buildings. Priced for quick sale at \$10,000; will carry \$2,500 at five per cent.

**H. H. BURNS,**  
Argonia, Sumner County, Kansas.

The biggest consignment of stallions to be made in any sale this season, is catalogued for the big sale of J. C. Robison at Towanda, Kas., December 17, and will be a great drawing card. As the offering includes Mr. Robison's champion stallion, Injureux, pictured in his advertisement, as well as a number of others from the triumphant show herd Mr. Robison had out the past season, the men who want the good kind are being attracted. In this great sale 25 mares are also included. This is a strong offering and the many who need mares should not let it pass without an effort to buy. The upturn in prices will be in evidence before the sale (stallions are already notably higher than a year ago), and will rapidly become more marked—in all probability. Early buying is advisable. Do not fail to get Mr. Robison's catalog, mentioning the American Breeder, when you write.

Permanent farm improvements are acknowledged by everyone to be the most economical, as well as by far the more satisfactory, and many who plan to build them with the best Portland cement are delayed only by lack of complete specifications and directions to meet this need. The Ash Grove Lime & Portland Cement Company, 722 Grand Avenue Temple, Kansas City, Mo., has perhaps one of the most instructive books on cement construction ever put out. If you will write this firm, mentioning the American Breeder, the book will be sent to you free of charge. See advertisement of concrete feeding trough in this issue.

The biggest engine advertisement ever carried by this paper is that of the Witte Iron Works, 2559 Oakland avenue, Kansas City, Mo., which occupies the back page. We take particular pride in publishing this advertisement from one of the oldest and most reliable manufacturers of kerosene, gas and gasoline engines in America. The Witte Iron Works have long been known for the high development of power on the basis of their horse power rating, and when, in addition to this attractive feature, the Witte people are able to offer prices like those published in the advertisement, no one who can use an engine should hesitate about getting in touch with this company. We ask that all who write them mention the American Breeder.

The greatest need for Percherons is on the farms of the best states in this Union. Producers of high class draft stock go with productive land, up-to-date machinery and advanced methods generally. It is worth something to buyers of Percheron stallions and mares to be able to buy from a farmer who is at the same time a practical and successful breeder, and who directs his breeding operations with a full knowledge of the requirements of the farm. Just such an opportunity is offered in the Percheron sale of C. F. Jones, Rippey, Iowa, to be held on his farm December 16. We ask every one of our readers who is interested to write Mr. Jones for his catalog, and mention the American Breeder.

## Questions and Answers

(Continued from page 5.)

can not expect him to grow and make a big horse, while handled in that manner, unless he is separated and fed three times a day. A young horse needs feed often in order to insure sufficient growth.

**1328—IN HEAT TWICE A YEAR—** We have a mare that comes in heat only about twice a year, but will not breed. She is eight years old. What can we do to get her with foal?—New York Subscriber.

**REPLY—**You should give a better description of the case. This mare may fertilize and lose her colt, or she may be one of those individuals that usually have a very short period. We would suggest that you have a complete examination made of this mare, so as to ascertain just what the difficulty is. After a thorough examination is made by a qualified breeder, and if the mare proves to be perfectly healthy, she may be bred with capsule, whether she is in season or not.

**1329—BROOD MARE INJURIES—** Will it hurt a mare to circle-pull on a horse power if pulled easily? Their colts swing around with their tail end.

## THE RIGHT WAY

IN ALL CASES OF DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC., of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

## SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it.

50 cents and \$1.00; \$5.00 and \$10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.

**SPOHN MEDICAL CO.,**

Chemists and Bacteriologists.

Box 834.

Goshen, Ind., U. S. A.

## FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in **FRAVEL'S DISTEMPER CURE.**

Made and sold by **A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.**

Was this caused from pulling on the power a few weeks before foaling?—Kansas Subscriber.

**REPLY—**Some mares can stand an enormous amount of abuse and still deliver a good strong, healthy colt. There is much in mares being accustomed to labor. If they are kept steadily at work without any change from the beginning of pregnancy, there is less danger of causing an abortion. Mares which are worked hard without any chance to recuperate before fertilization takes place, are often hard to settle. Extreme labor was never intended for brood mares. A straight steady pull without too much exertion is not usually injurious to pregnancy. Circle pulling has a tendency to cause an abortion. It is not wise to work mares on a circle lever, neither is it advisable to work pregnant mares with a short single tree. It is just as serious to back heavy loads. Ordinary farm work with plenty of feed, in the hands of a good driver should produce good strong foals without any difficulty.

**1330—DECREASING BREEDING CAPACITY—**Will the offspring from two good animals that have not been taken care of, and have not been pushed, when used as a breeder, breed as good as if it had been well taken care of and pushed?—Texas Subscriber.

**REPLY—**The best breeding quality can be expected only from ancestors which have been properly developed. The best of individuality and blood lines can easily be weakened by lack of sufficient nourishment. Development is just as necessary as good breeding.

**1331—MARE DISOWNS COLT—**I have a mare that foaled a mule colt two weeks ago, but she won't let it suck. She kicks it and bites it every time she gets near it. It is a good colt and I would like to save it. Is there anything I can do for her to make her let it suck?—Illinois Subscriber.

**REPLY—**You probably made the mistake of wiping the colt dry. This removes the scent which is necessary for mares to distinguish their own colts. You may be able to strap up one front foot and hold her head until she gets familiar with this colt. She may adopt the colt a little later on. In case you have any difficulty of this kind again, take a wet sack and rub the mare's body until it accumulates enough of the smell from the mare's body, then rub it over the colt. This should remove the difficulty. This might be done yet in this case.

**1332—HANDLING A STALLION—**I have a Percheron stallion coming three years old. I haven't had any experience with handling stallions and would like some information in regard to handling them. He seems to be rather ill-natured; he lays his ears back and looks very cross when I go in where he is, although he has never offered to kick or bite so far. Have always treated him kind and have never struck him a lick in his life. Some advise using a whip.—Oklahoma Subscriber.

**REPLY—**It is not advisable to have a stallion that shows signs of ill tem-

## Don't Have a Blind One

### "VISIO"

A Remedy for **Moon Blindness**

(Ophthalmia), Cataract and Conjunctivitis. Shying horses all suffer from diseased eyes.

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. ## ABSORBINE

TRADE MARK REG. U.S. PAT. OFF.

Will reduce Inflamed, Strained, Swollen Tendons, Ligaments, Muscles or Bruises. Stops the lameness and pain from a Splint, Side Bone or Bone Spavin. No blister, no hair gone. Horse can be used. \$2 a bottle delivered. Describe your case for special instructions and Book 2 K Free.

**ABSORBINE, JR.,** the antiseptic liniment for mankind. Reduces Strained, Torn Ligaments, Enlarged Glands, Veins or Muscles, Heals Cuts, Sores, Ulcers. Allays pain. Price \$1.00 a bottle at dealers or delivered. Book "Evidence" free. **W. F. YOUNG, P. O. F., 388 Temple St., Springfield, Mass.**

per. Get a severe bridle so that the stallion may be handled with ease. Get a raw hide whip. When this colt shows signs of a bad temper give him a real good whipping around the front legs and below the knees. Make him understand that at all times you are the boss and he must do exactly what you want done. Never take any chances on a stallion or any other sire. Something may happen causing them to be out of humor at any time. A lot of men have been injured through carelessness. After you have conquered the horse and he knows that you are the proprietor then treat him kindly. Do not whip, slap and scold all the time. Only whip when it is necessary to give a good whipping, and then be sure he gets one that he will remember.

**1333—SILAGE FOR A BULL—**Will feeding silage to a bull make him an unsure breeder?—Illinois Subscriber.

**REPLY—**A reasonable amount of silage with other feeds should not interfere with the bull as a breeder. Silage exclusively might not be good for any breeding animal. If your bull has given previous satisfactory results, we would advise testing his semen with a microscope. If the spermatazoa shows good action it might be well to closely examine the cows.

When writing advertisers, mention the American Breeder.

# Dependable Power For Every Purpose At Lowest Cost

**WITTE Kerosene Engine**  
—Stationary  
all above sizes.  
Kerosene, Distillate, Solar Oil and all fuels of like grades. Also Gasoline, Naphtha and Gas. Portable Kerosene Engines in all sizes given.

**WITTE Gasoline & Naphtha Engine**

**16 & 22 H.P. Portables**  
Mounted on all-steel truck of special heavy design. Engine rests on heavy steel "I" beams, doubly braced to both axles. (Swivel type front axle; bridge type rear axle.) Either kerosene or gasoline engines furnished.

The price you pay for an engine is an important consideration. But the amount of steady power the engine will develop on a given quantity of fuel is a consideration of still greater importance. Considering the amount of fuel used in any size of WITTE Engines to give their full rated horse power, you could afford, were it necessary, to pay more than my present low prices for my engines.

However, it is not necessary. My printed prices show that the first cost of a WITTE Engine is considerably less than any other strictly high grade engine of the same horse power rating. When it comes to durability and ease of operation, no engine, regardless of price, can show a better record.

A comparison of my prices with those of other strictly high grade engines will show the big saving I make possible to every engine buyer. A study of how and under what conditions WITTE Engines are made will show their advantages over other engines.

## WITTE ENGINES

Kerosene, Gasoline, Distillate and Gas

Portable, Stationary, Skidded and Saw-rig Styles

SOLD ONLY DIRECT FROM MY FACTORY TO USERS

For the past 27 years I have done nothing but design and build engines. I now have one of the largest, best equipped and most economically operated engine factories in the country. I have a natural gas well which furnishes us free power, heat and light—a big saving in manufacturing cost. My one aim has been to produce an engine which would develop the greatest possible amount of steady power from the lowest possible consumption of fuel. A WITTE Engine at work will show you how well I have succeeded. But a study of the illustrations on this page will help to make clear to you why the WITTE is such a giant in power in any given size. Notice the length and thickness of the base which gives plenty of foundation grip and insures steady running without destructive vibration. It also permits fullest use of force of each fuel charge—one of the important factors that has made WITTE Engines famous for small fuel consumption. The WITTE is perfectly balanced and proportioned in all its parts so there is no excess friction to overcome—the highest possible percentage of fuel is converted into directly transmittable power. All WITTE Engines have detachable cylinders, 4-ring pistons instead of the usual 3-rings, automobile style vertical valves, automobile ignition, spark shift for easy starting, double weight, extra sensitive, positive governors and other merits without which no engine can now be really high grade.

### My Free Book Makes The Whole Engine Question Plain

You should send for a copy of this book before you decide upon any make or size of engine. Tells you how to pick out the engine that is best suited for your work; how to judge any engine and all about my Direct-from-Factory Selling Plan. You can have any WITTE Engine you like on easy, reasonable terms if you wish—and every WITTE is sold with a positive 5 Year Guarantee. Just mail coupon today for the whole interesting WITTE Engine story

Every Witte Engine Sold  
Direct From My Factory  
To the Users' Hands.

I am the only man in the U. S. making his own engines in his own factory, from his own designs, using his own patterns and special machinery, and selling his entire output direct from his factory doors to the users' hands. I have nothing to sell but engines.

I claim that "you can't buy any better engines for any price, and none as good as the WITTE for my price." And if you could ask all of my many thousands of old customers what they think about that claim, I know they would tell you, as they have repeatedly written to me, that I don't claim anything more than actual fact.

I want your order for a WITTE because I know it is more for your money than anybody else is offering.

ED. H. WITTE.

The cuts for printing this cover page were made from actual photographs of prize-winning animals, representing popular types of the respective breeds. As it was impossible to make the cuts show, in all cases, the correct relative sizes of the animals, we have printed under each cut the average weight, at maturity for an animal of the breed, type and sex shown.

In about half the breeds (those marked with a star) the color and markings are always or nearly always uniform. The other breeds all vary more or less. Percheron horses, for instance, may be black, gray, brown, chestnut, bay, and even roan or white. Shorthorn cattle vary through all shades of "red" (as we call it) from a dun to a plum color, and vary in the amount of white, from a few hairs, to all white.

# HORSE AND CATTLE BREEDING SCHOOL

## January 4 to 9, Inclusive

### Double Your Income Without Increasing Your Investment

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate the different diseases and abnormal conditions. Students are impressed with facts in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be is eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

The sooner you get this knowledge the longer you can use it. Get a substantial foundation to work on. Get a Diploma. Make your business a pleasure. Breed intelligently.

**REMEMBER THE DATE---January 4 to 9, Inclusive.**

#### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Delivery—Scientific Mating—Horse, and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Female's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Stock Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a female is pregnant or not—Getting the Semen—Inserting Capsules, etc.

Remember the date and prepare to be here next term. All trains now enter the New Union Station. Take any street car north and transfer west on Twelfth Street. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

#### EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

**The GRAHAM SCIENTIFIC BREEDING SCHOOL**  
**225 West Twelfth St., Kansas City, Mo.**

# Percheron Society Affairs

At the annual stockholders' meeting of the Percheron Society of America, held in Chicago November 30, Archie Robison of Pekin, Ill., was declared elected to take the place of Jas. B. McLaughlin, who was a candidate for re-election to the board of directors. This was the only change made in the officers.

## The Man Who Was Defeated.

Jas. B. McLaughlin has been closely associated with the Percheron interests for about a quarter of a century. About a dozen years ago he became dissatisfied with the crooked methods then employed by a few men registering Percheron horses, and was largely responsible for the organization of the Percheron Registry Company, which maintained the cleanest set of Percheron stud books ever published in this country. The Percheron Registry Company was recognized by the United States Bureau of Animal Industry. We are informed that that association was investigated by the Bureau of Animal Industry and not a single error in its records was found.

At that time the Percheron Society of America did not make a satisfactory showing upon investigation. The influence connected with the crooked methods was exerted to prevent the Percheron Society of America being singled out as an offender, and finally the Bureau of Animal Industry withdrew its recognition, not only from the Percheron Society of America, but from all other American associations, its counselors advising that there was no federal law for punishing the irregularities which had been found. This withdrawal of recognition occurred January 1, 1911. About this time certain representations were made that if the Percheron Registry Company would consolidate with the Percheron Society of America, the officers of the Percheron Society would endeavor to clean up their records. Sincere friends of the Percheron breed encouraged this consolidation and the two organizations were united.

## His Work for Clean Pedigrees.

Jas. B. McLaughlin was made a short term director in the reorganization of the Percheron Society of America. A little later Jas. B. McLaughlin reported certain conditions concerning Robert Burgess & Son of Wenona, Ill., and thus incurred the enmity of Robert Burgess. A little later, Maasdam & Wheeler and H. G. McMillan were restricted in some of their operations. This created more hard feelings between Jas. B. McLaughlin and the crooked element. At the regular election, December, 1911, Mr. McLaughlin was chosen to succeed himself for a full term of three years.

The Percheron Society "house cleaning" started by this publication March 1, 1911, resulted in H. G. McMillan, president and director, and E. G. Wheeler, a director, being eliminated from the list of officers. During all this time, Mr. McLaughlin has stood for clean pedigrees and honorable principles. He has been largely responsible for genuine investigations which have done much to reinstate the Percheron Record in public esteem. But his clean, honorable methods of doing business increased the ill will of the crooked element in the Percheron Society of America toward him. He was not their kind, and throughout all his activity in Percheron business we have never heard a single individual cast the least suspicion upon any pedigree that he has ever had anything to do with. Lately Mr. McLaughlin has been instrumental in arranging for a trial of Robert Burgess of Wenona, Ill., by the Board of Directors, which was set for next month. This meant, of course, that Burgess would use all of his strength to arrange for the defeat of Mr. McLaughlin when he came up for re-election. At this election several well known crooks were in attendance: H. G. McMillan of Rock Rapids, Iowa; E. G. Wheeler of the firm of Maasdam & Wheeler, Fairfield, Iowa, and a very large number of their follow-

ing, among which was Lieut. C. B. Augstin of Pontiac, Ill.

## Does This Please the Members?

It is the practice of the Percheron Society of America to appoint a proxy committee to receive and vote the proxies sent in, for the re-election of officers. A few cases have been recorded where good, straight men have been defeated—men who stood for clean pedigrees and were obnoxious to the "ring." There also have been exceptions to this practice, when compromises have been made. Three men were appointed, as usual, to vote the proxies. One of them, Mr. Fred Pabst, sent a message to the Percheron Society stating that he could not be present but was favorable to the present administration, which meant, as we understand it, that he was favorable to the re-election of all officers whose terms were expiring, including Mr. McLaughlin. This left remaining as the proxy committee, Wayne Dinsmore, secretary of the Percheron Society of America, and one other party. The other member states that although he was acting with Secretary Dinsmore as the committee, he did not know until after the election of directors, that Mr. Pabst had so expressed himself in his message, being led to believe that Mr. Pabst had merely stated that he could not be present.

Wayne Dinsmore personally received more than 100 proxies; the proxy committee received about 860. There were about 1,200 votes, all told. Jas. B. McLaughlin received less than 100 votes, which was evidence that Wayne Dinsmore, personally, voted his proxies to defeat Mr. McLaughlin. We do not believe that Dinsmore will deny his part in defeating Jas. B. McLaughlin, yet Mr. McLaughlin states that it was only a few hours before the election when Dinsmore talked to him about future investigations to be made by the Board. In that Society, when an officer is defeated his term expires immediately. Mr. McLaughlin states that he was led to believe by everyone that his re-election was assured and would be satisfactory.

When the defeat of Jas. B. McLaughlin was announced, H. G. McMillan, E. G. Wheeler and the Burgess element wore long, broad smiles. It seemed that the crooked element was familiar with the program. It is insulting and mortifying to honest people to see a man thus publicly humiliated, who has done his duty fearlessly and at a great expense to himself, both of time and money. And the insult was deepened by the smiles of these men who sought his defeat mainly because he had interfered with their operations.

## Another Good Man Beaten.

At this meeting the element which supported Mr. McLaughlin also made an effort to elect Prof. C. S. Plumb, head of the Department of Animal Husbandry of the Ohio Agricultural College, to take the place of C. M. Jones of Ohio, a McMillan follower. Professor Plumb is one of the cleanest and best posted men connected with the live stock industry in America. He has been fearless in fighting for what he thought was right, regardless of results. Wayne Dinsmore also voted against Mr. Plumb in favor of this Jones. It might be well to remember that this Jones was one of the first to come to the rescue of H. G. McMillan.

This is not a personal fight with us. Jas. B. McLaughlin has never spent a dollar with the American Breeder, or with the writer in any way, shape or form. But here is the largest Association registering horses in the world. It is supposed to be a leader. We feel it our duty to inform the public of these facts. We wish to be perfectly fair and if any of these statements are not absolutely true in every respect, we extend an invitation to Wayne Dinsmore, who is now the Secretary of the Percheron Society of America, through the columns of the American Breeder, to explain his actions. We will send him a marked copy of this issue, calling his attention to this matter and expect, in the near future, a reply for publication.

## BURGESS AND McMILLAN.

Burgess of Wenona, Ill., showed a gray stallion in the yearling class last year; it looked like a two-year-old. Jas. B. McLaughlin states that he looked up the breeding of this colt, which was recorded as out of a gray mare, and the only gray mare owned by the breeder whose name was given in the pedigree, had produced a colt which would correspond with the date Burgess had given, but that the colt had been killed. Our readers can use their own judgment as to the meaning and importance of this incident. This is one of the pieces of information which the defeat of Jas. B. McLaughlin may keep out of the Directors' meeting at which Burgess was slated to be tried.

One of the leading draft horse breeders in this country recently told the writer that Robert Burgess had told him he had never lost an animal by death. The man to whom Robert Burgess made this statement inferred that live horses were substituted for any that happened to die, so that the pedigrees continued in use. We are informed that this conversation started by the first mentioned breeder stating that his firm had a large number of certificates for animals that had died, and that all of them were marked "dead" in red ink across their face. These losses by death amounted to thousands of dollars.

Was such a statement from Robert Burgess of any advantage to the young man? Are the many statements Robert Burgess has made of any advantage to the rising generation? Who are the few remaining breeders who continue to uphold a crook like this?

McMillan of Sioux City and Rock Rapids, Iowa, and once president of the Percheron Society of America, does not seem to be so flush with finances as in former days. "Of the many law suits and judgments against him, there is one judgment for \$6,000 which, we are informed, has not yet been realized on. Breeders have learned that this man, for all his "underground" connections, is not so stable after all. It is instructing to note how much litigation these dealers in irregular pedigrees have finally connected up with.

We also find that Robert Burgess has been having some litigation. In one county there is a record of about one hundred law suits with which the name of Robert Burgess is connected. Some of these suits are for very large amounts of money. New suits are now being instigated against these men. The stallion inspection laws in several states are uncovering irregular pedigrees put out by these men, which results very often in law suits for recovery. We are told that in other states the stallion inspection boards will begin a careful investigation of pedigrees put out by these men.

There are a large number of animals registered by these men which are physical impossibilities. If a buyer should innocently purchase a stallion which was irregular, and a stallion registration board should refuse to grant a pure bred license, the buyer, of course, would be the loser. If a mare was purchased from one of these firms, which had an irregular pedigree, and that mare should produce a stallion, in later years there would still be a difficulty. Buyers will discriminate against these pedigrees for many years.

## HOW EVERY BREEDER CAN HELP.

When any paper or individual interferes with a crooked organization (for most crooks are organized and have many connections) it means "be on the lookout" night and day. No one knows until he has been all over the country collecting evidence, how many places the "underground wires" will be found, or to what unexpected places they will lead. The things we have "happened onto" in running down clews of things we had almost located, were often just as important as the thing we sought. Any breeder, at any time, is liable to hear a remark, see a statement, receive a letter or learn of a transaction which will form an important link in some new chain of evidence. Look out for these. If an honest man or movement is at-

tacked, or a crook defended, spot the man who does it. Send us his name and address. Simply tell what he said or did. Save, or make note of any of the other things, and send to the American Breeder. You are working in the interest of right, and every communication will be confidential, and appreciated.

## PERCHERON SOCIETY PROXY CARDS.

H. G. McMillan, while president of the Percheron Society of America, adopted a plan by which he might continue in office by controlling the votes of innocent breeders. He appointed a committee suitable for carrying out his plans, that would vote the proxies of the innocent breeders as he directed. The first excuse for this plan was that a majority of the entire membership must be present, either in person or by proxy, at each annual meeting in order to make it legal. If that is a fact, the last election was illegal, as only about one-fifth of the members were represented.

The latest excuse for proxies and the proxy committee is that all incorporations in the State of Illinois provide that every member should have a vote. As a matter of fact, there are other record associations incorporated in that state which do not permit proxies or proxy committees but which seem to conduct their business satisfactorily.

The President, no matter how good a man he may be, cannot appoint a proxy committee unless it is approved by the Board of Directors. If a majority of the Board of Directors are in favor of the "McMillan ring," that kind of men must be in charge of the proxy committee. By "in charge" we do not necessarily mean "in the majority," as one experienced man often overcomes the objections of an inexperienced member. Every proxy sent to the proxy committee retards the progress toward clean pedigrees and encourages the monopoly. Every breeder in favor of a clean pedigree should use his influence with all other Percheron breeders having votes, to insist that they do not send any proxies to Chicago at any time.

There are many Percheron breeders who do not have enough information on this subject. This work should be done by the Percheron breeders who are awake to the situation. This need not apply to Percheron breeders exclusively, but all breeders can be of much assistance in requesting Percheron breeders not to send their proxies to Chicago, or to any proxy committee appointed by the Percheron Society of America. Breeders can use the telephone and talk with other breeders at the different winter meetings. Begin right now to make a campaign against sending any proxies to the Percheron Society proxy committee as it is detrimental to the best interest of the live stock industry of this country.

This is a fight for Percheron breeders who wish to have their society run in a reputable manner. It is not our fight. We only feel that it is our duty to explain these things. Next fall, public spirited breeders who are taking hold of this matter will furnish all members plain instructions for getting their votes counted in the interest of honest pedigrees. This matter can be handled in such a way that a legal record can be kept for use in case an injunction suit has to be instituted.

We believe that when Percheron breeders give more study to these facts they will be able to aid greatly in correcting this condition, as they have done before. There are many good, honest workers who can be depended upon. Breeders in general are requested to be on the alert for carefully and skillfully prepared literature setting forth the details in such a manner as to protect and cover the crooks, which will probably be forthcoming. It may bear the signatures of men whose motives you do not understand.

# THE AMERICAN BREEDER

With which is combined  
CARLSON'S RURAL REVIEW.

DECEMBER 5, 1914.

Volume VIII. Number 7.

FRANK B. GRAHAM and T. W. MORSE,  
Editors.

Published semi-monthly (on the 5th and  
20th of each month) by the  
GRAHAM PUBLISHING COMPANY,  
INCORPORATED,  
225 WEST TWELFTH STREET,  
Kansas City, Mo.  
BELL TELEPHONE, 4297 GRAND.

All communications for this paper  
should be addressed to the American  
Breeder, or the Graham Publishing  
Company, and not to individuals.

Subscription Rates within the United  
States: \$1 for 3 years; 50 cents for  
one year. All other countries, \$2 for  
3 years; \$1 for one year.

When sending subscriptions, please  
state whether they are renewals or  
new ones. Always renew under the  
same name and initials as previously  
used, and at least two weeks before  
your present subscription expires, so  
that you will not miss any number.  
When changing your postoffice ad-  
dress, state the old address as well as  
the new one.

If you miss your paper please notify  
us at once and all lost copies will be  
replaced.

Entered as second class matter No-  
vember 28, 1911, at the postoffice at  
Kansas City, Mo., under the Act of  
March 3, 1879.

## STUD COLTS WANTED.

An Iowa breeder has asked us how  
to find about 20 head of registered  
Percheron stud colts and yearlings.  
He further states that he has done  
some traveling without any success.

This is a difficult proposition. The  
average breeder, raising one or a few  
pure bred colts, does not understand  
the necessity of advertising. In the  
draft horse districts of Europe many  
of those who wish to buy the young  
stock, maintain a high class sire and  
encourage a number of farmers in his  
district to keep good registered brood  
mares. He makes the service fee  
very reasonable with the understand-  
ing that he is to have the first chance  
of buying the colt. This gives him  
an opportunity of inspecting colts  
early. He sees the dam and the colt  
in such a way that he can form his  
opinion as to the outcome of each in-  
dividual colt. He encourages the  
owner of the dam to give the colt a  
good chance, then he purchases the  
colt early. This gives the purchaser  
an opportunity to thoroughly develop  
the colt.

The owner of every good sire in  
this country should be interested in  
this proposition. If he is not able to  
buy these colts, he can at least in-  
terest himself in finding someone who  
will buy them at a good price. By  
this plan he can increase the pure  
bred mares in his community. Every  
breeder who maintains a good sire  
and wishes to find buyers for that  
particular product might place a  
small advertisement in the paper;  
stating that there are a certain num-  
ber and kind of offsprings in his lo-  
cality for sale. This would put him  
in communication with buyers. He  
could frequently make enough com-  
mission out of this deal to pay him  
and by giving his time and attention

to finding a good market for the colts  
of his community, encourage the  
owners of the dams to further patron-  
ize his sires. This applies to stall-  
ions, jacks or bulls. Many men  
would be glad to correspond with  
owners of good sires where sufficient  
number of young stock of the right  
kind could be purchased. This not  
only accommodates those directly in-  
terested, but, in many cases, causes  
the offspring to be better developed  
and make a better showing for the  
sire and the dam.

We should like for breeders gener-  
ally to think about this.

## SAVE THE BROOD MARES.

A horse in the present European  
war is said to last less than one month.  
During the early purchases of our  
horses, very rigid rules were enforced,  
requiring horses from 15 to 16 hands,  
proper conformation, perfectly sound  
and from 5 to 8 years of age with all  
solid colors. Practically any kind of a  
horse will now be taken, weighing 800  
pounds or more, serviceably sound,  
from 4 to 10 years of age and nearly  
any color except white. Nearly every  
section of the United States where  
horses are bred, has been visited by  
foreign buyers.

Near one Missouri town there are  
now 20,000 horses purchased for the  
English government, ready for ship-  
ment. A great many horses and mules  
have been purchased in the southern  
states where farmers have been forced  
to dispose of them, because cotton  
could not be sold. Usually at this  
time of year southern buyers are buy-  
ing instead of selling. The southern  
output will necessarily have to be re-  
placed in the very near future. There  
are many more horses leaving this  
country than the breeders and  
farmers know about. Purchases in-  
clude many artillery horses weigh-  
ing from 1,000 to 1,500 pounds and a  
large number of mules, two classes,  
for which best farm demand makes a  
good market every spring. This coun-  
try can spare the geldings and mules,  
but it cannot afford to dispose of good  
brood mares. Every stallion and jack  
owner in the country should pay par-  
ticular attention to keeping the best  
brood mares in his community. Too  
small or inferior mares are not desir-  
able; but every good brood mare  
should stay here. This is an important  
time to the agricultural interest in  
this country. For a long time North  
America will be required to assist in  
feeding a large portion of Europe.  
This can only be done by thoroughly  
tilling the soil, which requires more  
horses at home.

The meat supplies of Europe are be-  
ing devastated, which will mean more  
grain consumed for food. Everything  
points to great prosperity among the  
breeders of live stock in this country;  
especially horses and mules. A great  
demand is sure to come for agricul-  
tural horses. With nearly all of the  
light horses and mules leaving, this  
country will see a strong demand for  
better individuals to take their places.

## PASTURING STALK FIELDS.

The annual toll from forage poison  
will soon be recorded. Abnormal  
weather conditions are usually respon-  
sible where there is especially heavy  
loss of live stock. Quite frequently  
this difficulty will be found in local  
sections. For this reason it is best  
to make some inquiry over the tele-  
phone concerning this trouble before  
pasturing stalk fields. Very frequent-  
ly the veterinarian will have some  
idea as to existing conditions. Crops  
planted in different seasons may vary  
as to destructiveness. Forage poison  
is known by many different names.  
It can occur on many kinds of forage.  
The great loss of horses in Kansas  
and Nebraska which was known as  
the Kansas-Nebraska horse disease did  
not occur in stalk fields especially,  
but was earlier found on the short  
grass. Stalks from a well matured  
field are not usually thought to be so  
dangerous; but it is advisable to be  
very careful at the beginning owing to  
other ailments at this time. Stock  
should be well filled and have access  
to plenty of salt and water when they

are turned to stalk fields. The first  
feeding period in the stalk field should  
be very short, gradually lengthening  
the time of pasturage until animals  
become accustomed to the new con-  
ditions.

## MARE OWNER EDITIONS.

If a breeder and his customers all  
get their horse breeding information  
from one source, they will work in  
harmony. There are now about 50,000  
of the best breeders in America read-  
ing the American Breeder. They be-  
lieve in its teachings. Yet this in-  
formation can hardly be of any more  
value to the breeders, than to the  
farmers who own mares. There are  
many old "foggy" notions that should  
be dispelled. American farmers are  
an intelligent lot of men, but many  
of them have never had opportunity  
to read much about real breeding  
problems. They will appreciate get-  
ting this information. It will make  
better customers of them, the same as  
it has made better breeders of other  
readers.

It is not very expensive to send  
these Mare Owner Editions. It is the  
best advertising that any breeder ever  
used, cost considered. The education  
(which will be permanent) means a  
greater per cent of foals for that com-  
munity. A lot of breeders are not  
breeding their mares, believing horses  
will be cheaper. This is the time that  
all good mares should be bred. Good  
horses are already becoming scarce  
and in the very near future will be  
higher in price.

It is easy for a breeder to get a list  
of these names of the men he wants  
to read this paper. We notify each  
one by mail, who has paid their sub-  
scription. Why not make a lot of  
friends and patrons a Christmas pres-  
ent of the American Breeder for five  
issues? Our prices for these editions  
in clubs of ten or more, is only ten  
cents for each name. One hundred  
subscriptions will cost only \$10.00. One  
extra colt should pay for sending five  
Mare Owner issues each, to 100 mare  
owners, and the help and influence of  
the information they will get will  
mean more colts and more customers  
for years to come.

We do not believe any breeder can  
overlook this great opportunity. We  
say "opportunity" because of the many  
who have told us how it helped their  
business. Where can a breeder spend  
five or ten dollars to a better advan-  
tage; and with the prospects bright  
for a greater horse demand. A good  
breeder may get in a rut. Now is  
the time to get out and get busy and  
be of service to your section and your-  
self.

Please send in these lists of names  
and addresses early as possible, as  
our entire force will be rushed be-  
tween now and the first of January  
adding subscriptions to our list. Send  
them early.

## HOG CHOLERA SERUM INFECTION.

Prominently along side of foot and  
mouth disease news during the past  
few weeks, some publications have  
carried the advertising of hog chol-  
era serum companies in which it was  
announced that their serum contained  
no foot and mouth disease germs.

In view of the fact that the germ  
of foot and mouth disease has never  
been put under a lens strong enough  
to reveal its identity—has never been  
isolated, in fact—there seems little  
likelihood that the widely advertised  
claims of such serum manufacturers  
are based on any positive knowledge.  
So far as scientists have taken the  
public into their confidence, there is  
only one way to tell whether or not  
any serum contains foot and mouth  
disease germs, and that is by inject-

ing some of the serum into suscept-  
ible animals and awaiting results.  
Nobody thinks for a minute that this  
precaution is being taken with the  
thousands and thousands of bottles of  
serum which are weekly being sent  
broadcast over the country. We are  
not saying that such serum contains  
the germ of foot and mouth disease,  
or that the disease has been spread  
by infected serum, but apparently the  
best authorities have found reason for  
suspecting such is the case, and we  
think it worth our while to point out  
the likelihood that no serum manu-  
facturer was warranted in the positive  
statement that his product contained  
none of the dreaded germs.

Here is a place in which seems to  
us where a little honest discretion on  
the part of the publisher might serve  
a very useful purpose.

## BUY BREEDING STOCK EARLY.

An Illinois subscriber states that he  
purchased a show stallion about the  
first of May. This stallion was very  
fleshy and soon after the season  
started his general condition became  
bad. He continued to breed two or  
more mares a day until very late in  
the summer, regardless of the health  
of the stallion. He further states  
that the stallion fell of in flesh about  
300 pounds and nearly all of the mares  
had to be rebred. He is now asking  
why this stallion did not settle his  
mares better.

Any sire must be in a healthy con-  
dition to give the best results. This  
breeder, very likely, proceeded to re-  
duce the flesh as rapidly as possible,  
on the theory that a thin stallion is  
more fertile than a fleshy one. Dur-  
ing the breeding season is a very  
bad time to reduce the flesh. If this  
stallion could have been kept in his  
fleshy condition, perhaps he would  
have made a limited number of sat-  
isfactory services.

There ought to be a good lesson in  
this for all breeders; buy breeding  
stock early. Begin the preparations  
in plenty of time. Do not change the  
feed too abruptly. All breeding stock  
should have plenty of fresh air, exer-  
cise, sunshine and plenty of water.  
In all probability this breeder changed  
the feed and quantity very suddenly.  
An abundance of exertion during the  
hot weather when the stallion was  
not accustomed to it, upset his gen-  
eral condition. Breeders who expect  
to purchase breeding stock should be-  
gin to look about as soon in the fall  
or winter as convenient. Do not put  
it off until the middle of next summer.  
Get the stock home where they may  
become accustomed to new methods  
of feeding, management and general  
conditions. It is also an advantage to  
get the sire early so that the patrons  
can be solicited. The matter of  
patronage is a big thing in the breed-  
ing business.

New sires should be shown at pub-  
lic sales and other gatherings. Some  
contend that an animal should not be  
placed on exhibition before a large  
crowd, as some might find fault with  
him. There are a few who will find  
fault with an animal of this kind at  
such a place. A good sire, and es-  
pecially a stallion, usually presents an  
appearance so much better than other  
stock with which prospective cus-  
tomers are familiar, that a great many  
complimentary expressions will be  
heard; but the principal thing is to  
get breeding animals early and get  
them into the best possible condition  
as breeders.

Whether you are a Percheron  
breeder or not, you want to read every  
word on page 3. The questions in-  
volved are broader than any breed.

## Renew Subscriptions Now!

For a limited time you can subscribe or renew  
subscriptions for the **AMERICAN BREEDER** (with  
which is now combined **CARLSON'S RURAL RE-  
VIEW**) at the old price of 50c for one year, or three  
years for \$1.00. The subscription rate will have to  
be advanced soon.

# TODAY'S TOPICS FOR CONSIDERATION

By G. L. CARLSON

### Speculative Producers.

The oldest of us can not remember a time when many farmers and other producers were not inclined to gamble on the future prices of their products. If wheat has been selling around 70 cents a bushel, and should suddenly go to a dollar, many farmers will hold their wheat for a little more. If a feeder has a load of cattle ready for the market and the price begins to go up, he will hold his cattle for a still higher price. If hogs run up to a very high point, many farmers will hold their hogs for a still higher price. When corn is selling for the highest price known for years, there is quite a temptation to hold corn for just a little more, and so on through the list of everything the farmer has to sell.

It is well to give serious thought to these things, since profit in farming and live stock breeding is not the result of occasional high prices, so much as it is a fair price all the time. It is well, too, to investigate the causes and results of this tendency to speculate on future prices, since the practice is had in ways other than that of being often disappointing to those holding for higher prices.

During the past two months farmers have experienced a decrease in the price of their hogs amounting to about \$2 per hundred weight. Those who aim to keep themselves informed on the market price of their products, and who try to remember these prices for the sake of comparison, will be able to recall the fact that two months ago hogs went to near the top price in this country, and yet many who were ready to sell held for still higher prices, only to be forced later to take much less for their hogs than they would have sold for earlier. In this way some farmers lost several hundred dollars.

These men lost their money because of not studying, and then remembering, the history of the hog market. When any product reaches the high water mark in price, that is the time to sell. A low market has more chances for an increase than it has for a further decline, but an extremely high market is almost certain to experience a fall. When this is known and remembered, it is easy to understand why we should sell any product that is ready for the market, if the market is reasonably good. When the average price of any farm product is known to us, if the market be above this average, and the product is ready for the market, the farmer will gain more often than he will lose by selling.

Where markets are controlled largely by speculators as they are in this country, there is bound to be a great deal of uncertainty about prices going up or down; but the law of averages cannot be controlled for long by any means at man's disposal. Then there is always a loss in holding any product beyond the proper time for selling. There comes a time in feeding animals for the market when the gains in weight are not sufficient to pay for the feed consumed. In the case of grain there is loss by shrinkage, and that occasioned by insects, rats and mice. On all products there is insurance and interest to be accounted for. A very few may make money by speculating in their own products, but while they are doing this very many will lose money by attempting to do the same thing. An old Scotchman who had been a very successful feeder of cattle was asked by a young friend when it was best to sell his cattle. The old man's advice was to sell the cattle when they were "ripe" for market. Speaking in the most general way, this is mighty good advice with reference to marketing any farm product.

### Eradication of Hog Cholera.

It must be admitted that the country knows much more about hog cholera, how to care for the infected herd, how to vaccinate, and how to

disinfect premises that have been infected with cholera germs, than it ever did before. On the other hand, farmers and swine breeders are beginning to inquire in what way the country is any safer from infection than it formerly was. The most intelligent hog breeders, those who have been most active in pushing vaccination and other propaganda for the eradication of hog cholera, are conceding the fact that in no way have we made ourselves more secure against this disease. That there is less cholera this year than last argues nothing, since in every outbreak from the first appearance of the disease, there will be a maximum point which the contagion reaches, then a less number of cases every year until conditions are favorable for another general outbreak and severe losses.

Breeders are now beginning to ask why something can not be done to make the reappearance of the disease well-nigh impossible. There seems to be a general division of opinion on the subject, many breeders agreeing that the disease should be put out of business by compulsory vaccination of all herds. The other view of the problem is to try and find some practical way of disinfecting so as to make the individual herd thus cared for safe from attack.

One reason why we have made such small progress in eradicating the disease, is the one of not understanding the dangers of infection. At a hog sale where the attendance is 100 or more persons, it is safe to say that nearly half of the number present have in some manner been sufficiently careless that cholera germs will be carried by someone to the sale, and most of those present might in turn carry germs back to their farms.

One successful hog breeder was heard to say quite recently that a system of disinfecting the farm could be made practical, and in this way every man who wished to protect his farm and herd could do so. This man also spoke of the uncertainty of our present knowledge of the disease, and that we were not certain of anything connected with the subject, except that we were likely to lose our hogs at any time. He mentioned lime as a disinfectant, saying many had been made to believe that lime was a disinfectant against hog cholera germs, yet nobody knew positively if it were true.

We should have more investigations of a practical kind, until some way is learned for breeders to feel that they are safe from the attacks of this disease. It would be very easy to learn if lime is a safe disinfectant for hog cholera germs. Experiments could be made, both with dry air slacked lime, and lime water. If lime water will destroy cholera

germs, we should find out what strength is required, with a view to learning if a dilute form can be depended on, which will make possible the occasional feeding of lime in the food of hogs. If air slacked lime can be depended on as a safe disinfectant, it will be an easy matter to make our farms and yards safe. It will also make it safe to scatter the litter from our hog yards in the fields, and as lime is needed on most of our soils, we would be benefited in a two-fold manner by the use of the lime.

Is it not time that swine breeders do something to make the frequent recurrence of this dread disease impossible, or at least less frequent? Either of the plans suggested by these breeders and farmers are good. Disinfectants can help the single herd only, while compulsory vaccination and immunity will help all. Two or three generations of compulsory vaccination would probably put the disease out of business as it has smallpox. This has been the world's most dreaded disease affecting man, but vaccination has given most of the race immunity from smallpox. It is worth trying with hog cholera.

### The Farmer and 1915.

Many farmers are desirous of knowing what the coming year may have in store for them. The daily press is giving much space for articles telling of the glorious times ahead for farmers. It is a fine thing to be an optimist, even to the extent of seeing the shining sun of prosperity beyond the dark cloud of gloom and despair. It is quite another thing if, because of one's extreme optimism, he should so shape his business affairs that failure would result. The farmer is the creator of most of our new wealth, and as such it stands him in hand to know what the future has in store for him. Of all men, he can least afford to be extravagant in his plans for the future.

We have been reading much of the new banking law that went into effect the 16th of the month. Much has been said for this law, some of which is true, and much of which is not true. It is in no sense a law for helping producers, being a banker's measure pure and simple. It may make it easier for one to borrow money, but there will be two banks to claim a profit in the transaction, where formerly there was but one. This means higher interest rates. To put it in another way, it means an added tax upon farmers who must borrow money.

There has been much said and printed about the good times that will be ours, as a result of the present war in Europe. This, too, should be taken less seriously than many are likely to do. The war will make it possible for farmers to sell their products at a higher price, but they

will have to pay a much higher price for everything they buy. Farm crops will be relatively cheaper than other products and labor. Every war of importance has raised the price of labor and manufactured products more than that of raw materials. War means the destruction of wealth, and wealth can not be destroyed in any section of the world without disturbing business in every other section.

The average man can scarcely understand the magnitude of this crisis. When one tries to tell the story of the losses in figures, they are so big that no one can really understand their meaning. The Economist, published at Berlin, places the cost of the war to the countries involved, for the first three months as follows:

Germany . . . . .	\$4,400,000,000.00
France . . . . .	3,000,000,000.00
Belgium . . . . .	2,225,000,000.00
Austria-Hungary . . . .	1,750,000,000.00
Russia . . . . .	1,000,000,000.00
Great Britain . . . . .	400,000,000.00

Total for 3 months. . \$12,775,000,000.00

This cost includes the loss occasioned by destruction of property, and makes an average cost of \$142,000,000 a day. Such losses can not go on much longer without leaving some of these countries and their people bankrupt. We cannot escape feeling this loss in some measure. During the past few years we have become one of the greatest of commercial nations. When the best of foreign buyers become pauperized and helpless, it is bound to be felt in this country.

In view of these facts, and this condition, it will be well for farmers to contract no needless debts. If they grow a good crop it will sell for a good price, but they will be compelled to pay a higher price for everything they have to buy. It will be safe enough to buy good live stock, or good productive land, if it can be had at a reasonable price; but it will not be best to buy unnecessary things, or things to be used as an experiment or for speculative purposes. It will be many years after the present European trouble is settled, before business assumes normal conditions in all parts of the world. There will be many who make money out of it, but there will be more who lose all they have. The farmers by reason of their position, and the fact that soldiers and others must eat, can not be seriously injured if they will use their best and most conservative judgment in the management of their affairs.

### SUCCESS TO THE COMBINATION.

To the American Breeder:—Please find inclosed check for \$1.00 to cover my subscription to the American Breeder for three years. The American Breeder was good but now when Carlson's Rural Review is combined with it, it certainly will be a world beater. I wish the combination every success, which undoubtedly it will be. —John Taylor, Kossuth County, Iowa.

### NAILING IT DOWN FOR NINE YEARS.

The American Breeder receives thousands of subscriptions at three years for \$1, but only occasionally does a subscriber pay nine years in advance. Mr. Shideler, whose letter follows, states his reasons, however. "To the American Breeder:—Enclosed find money order for \$3. for which please give me an extended subscription to the best breeders' paper in the United States. I want to take advantage of the low rate before the price is raised.—M. T. Shideler, Wayne County, Ind."

## Your Chance to Learn About Breeds

No feature of an agricultural education is more interesting than the study of live stock breeds. For success in some lines of agriculture it is among the most important. No knowledge adds more to the pleasure and profit derived from our state fairs than a knowledge of breeds. No agricultural development is more closely connected with human history than the improvement of these breeds. Books and school instruction on this subject are as yet inadequate and the demand for information is growing constantly. For that reason the American Breeder will start at once a series of breed articles, treating one recognized breed of farm animals in each article, and so arranging them that no breeder will wait long for an article in which he is especially interested. These, we believe, will constitute the most concise, authentic and up-to-date information on improved breeds of live stock ever given to the readers of any book or periodical. The price of a five-year subscription would not cover the value of this series of articles alone and no reader should take chances on missing a single copy.

## DIAGNOSING ILLS OF HORSES

### Lesson X; Defects in Respiration and Faulty Heart Action

Diseases of the lungs may be occasioned by other causes than those previously recited. There are certain kinds of small thread worms that find their way into the bronchial tubes where they set up considerable irritation. Such worms are not common in horses but they cause quite a large annual loss in nearly all the other domestic animals.

When present they set up a catarrhal state of the bronchi, and often cause inflammation of the lung itself. Their inroads are largely restricted to young stock but older animals are not exempt. An affected animal will have a loose, chronic cough, discharge from the nose, wheezing sounds in breathing, rattling sounds may be heard along the course of the trachea, etc. The animal gradually emaciates and if not relieved dies after several weeks' sickness.

Grave disturbances in the lungs may be induced by attempting to administer medicine in form of drenches. In such cases the animal may be in such a state of distress from its present ailment that it gives no heed to the fluid being poured into its mouth and permits a portion of the drench to pass down the wind pipe and enter the lungs, where it sets up an inflammation that kills the animal. Particularly is this true of oils that are of such a bland nature that they are almost devoid of taste. Almost any medicinal agent that finds its way into the lungs in this way is a source of great danger, and many an animal has recovered from the disease that occasioned the drench, only to die later from the treatment because of its having been administered in a faulty manner.

The symptoms of a horse suffering from pneumonia occasioned by some foreign substance are those of great distress in breathing. The animal has an appearance of serious sickness, breathes rapidly, is frequently almost ready to collapse, the pulse is very fast and weak, the extremities cold and rattling sounds may be heard at the base of the neck. If the animal lives for a few days there will many times develop a very offensive odor from the breath with a repulsive discharge from the nostrils. This is due to the development of a gangrenous condition of the lungs which fore-shadows death.

Heaves prevails in certain localities, particularly where the clovers are raised. It is quite difficult to properly cure this valuable forage plant so that it is free from mould and dust, and consequently heaves and dusty provender are often associated. While dusty clovers are prone to cause heaves, yet almost any dusty, mouldy, woody, indigestible provender will do the same thing. Under the influence of such feed the digestive organs become deranged, structural changes develop in the lungs and frequently heart disturbances are a part of the picture. A horse with heaves become a greedy feeder but does not thrive in proportion to the food consumed. They become unsatisfactory as work animals for the reason that they are unable to withstand hard service, particularly in hot weather. A horse with heaves has a chronic cough which is aggravated while eating.

While breathing such an animal has a characteristic lift at the flank just at the moment when the last of the air is being expelled from the lungs. In bad cases the back will move up and down at each respiratory movement and the anus move in and out. The nostrils will be dilated and whistling sounds may be heard, which become worse on exercise.

These characteristic movements are apparent when the animal is standing quietly in the barn, but become aggravated by exercise. Cases of heaves that have become very bad, if taken to new localities, particularly the West and Northwest, will nearly always make sufficient recovery that they become very satisfactory work animals.

While heaves may be one of the diseases that is responsible for horses being defective in wind, yet it is not the only ailment responsible for this objectionable condition. Sometimes defective wind can be traced to an abnormal condition in this region of the larynx, as in the case of the roarer. Such cases are due to the paralysis of the structures that control a certain membrane (the vocal cord) that is located within the larynx.

Paralysis of certain parts of the mechanism leaves the vocal cord free to flap back and forth under the force of the air being inhaled, and being suspended loosely it flutters rapidly back and forth producing the characteristic sound of the roarer. Such sound is heard on inspiration only.

Another class of noisy horses are those that have had some disease condition of the throat parts leaving the parts thickened with a slightly diminished calibre. When such an animal is put to fast work the air passes through the constricted opening so rapidly that it often produces a whistling sound.

Still another class of faulty wind horses are those having some chronic heart disease that was perhaps induced by some infectious disease that either left the heart weakened or defective in its values. When such a condition exists the animal is wholly unable to circulate the blood rapidly enough to keep up the necessary supply to parts that are undergoing rapid changes, such as takes place when an animal is doing hard work. Such animals puff and blow when put to only ordinary exertion. Another class, very common, are those that have had an unfortunate hot weather experience. They have been permanently injured by being overdone during the summer season and are almost worthless for service during that period.

Diseases of the heart are not of very frequent occurrence in the horse and when they do occur are often a sequel of some other disease. Probably the most noticeable affection is a disturbance of the lining of the heart leading to defective valves and imperfect closure of the same. Such conditions are not infrequently met with in aged horses.

The heart has two sets of valves, there being two valves in each set, that are all concerned in producing the sounds that are heard when the heart beats. Imperfect closure may occur in any one of these valves but it is not always easy to distinguish the particular one affected. A wave of blood returning up the course of the jugular vein along the neck is evidence that there is leaking of the valve on what is regarded as the right side of the heart.

In a general way the diseases of the heart are difficult to recognize by one not trained in the principles of diagnosis. As a rule, the pulse rate is rapid when the heart is disturbed and way out of proportion to the elevation of temperature.

An animal should not be put to severe work early after having had any period of severe sickness, especially any prostrating febrile disease, for the reason that the heart has been weakened by that disease and may develop a chronic, incurable condition if so abused.

It is frequently found during autopsies that the valves of the heart are entangled with blood clots that have formed some time previous to death. They may result from a variety of diseases and are active in terminating the life of the diseased animal. Clots called thrombi sometimes form in the large vessels in sufficient amounts to greatly interfere with a proper blood supply to the neighboring parts. An animal having a thrombus is ordinarily not incapacitated while doing slow work but if forced to go fast the circulation in the part is not sufficient and the animal goes distressingly lame. If the animal is permitted to rest for a short time the lameness disappears.

### MODERN BREEDING.

Breeders have accepted a wonderful lot of misinformation. Many of these men are doing things for which they do not know any reason. It would be a great satisfaction to many men who want to advance if they could learn what things are essential and what useless or detrimental. An important thing for a breeder, generally to do, is to talk intelligently to his customers. The Graham Scientific Breeding School issues a diploma to its students who pass certain required examinations. Those who pay close attention and make an effort, usually pass this examination in one term. It is possible even for a breeder who can neither read nor write to pass the examination, providing he pays strict attention to the instructions and demonstrations so that he can answer the questions and do the work. One of the most successful students that ever attended the school could neither read nor write English. It is not a matter of book learning. This school is intended for plain breeders. Hundreds of these students have doubled their incomes without increasing their investment. The possibility for breeders is great for those who apply themselves. No other field offers such an opportunity with the same investment.

Practically every progressive breeder has his mind made up to attend the breeding school some time. No intelligent breeder can doubt the hundreds of statements from other breeders which have been printed in this paper, in which are always given their names and addresses—men known to be practical and reliable. Names and addresses with statements have been given from hundreds of these breeders who have made a success and who invite prospective breeders to investigate their statements. This school is not an experiment. Its students get the results. The wonder is, how long prospective students put it off before they attend the school. These men do not realize what is in store for them. Perhaps some of these men cannot realize there is so much valuable information for them to get. Nearly every student states that "his eyes have been opened." They are surprised at the vast amount of valuable information they can acquire in such a short time.

Some breeders are afraid they cannot leave home to be gone a week. This is only imagination. Any breeder can arrange to be gone for this length of time. Some are afraid they will be lost in a large city. Any man can find the breeding school easily by inquiring for the Convention Hall. Every boy in Kansas City knows where the Convention Hall is. It is not necessary to even take a street car to reach the Convention Hall. The breeding school is in the first building north of the Convention Hall.

The tuition fee will be doubled after the first of next August. A few weeks will slip by and some will be too late for the present low tuition price. There is just one thing to do in a case of this kind which is of first importance, and that is to get ready to attend on a certain date. Make arrangements to leave at a specified time and then do not let anything interfere with that arrangement. If breeders wait until they have nothing else to do they will never leave home. The breeding season will soon be here. Then breeders will again be confronted with those diseased mares which are destroying their profits. Most of the mares of breeding age can be made breeders instead of requiring a wasted service every three weeks. This school is more necessary for those who are compelled to breed with the natural service that it is for those using capsules.

When the natural service is employed during the busy season every service should count, while capsule breeders can take more chances. It is very important for both. The diseased mare problem is growing. Those who neglect the school will lose time, money, customers and decrease the per cent of foals. Don't forget the date (January 4 to 9 inclusive) and be on hand.—Advertisement.

## Indestructible Feeding Troughs

Concrete improvements are permanent and increase the value of your farm. They are always sanitary. Concrete Feeding Troughs are easily built by following the instructions in our 112-page book of plans. The book also tells you about

## Ash Grove Cement

### Saves You 20%

You cannot afford to overlook the 20% saving made possible by using Ash Grove Superfine. With special machinery we grind our cement much finer than Standard. This extra fineness means 20% more efficiency in concrete.

## The Book is Free

We want you to have a copy of "Permanent Farm Improvements." It is fully illustrated. Contains building plans for more than 75 concrete farm improvements. A postal brings it.

**ASH GROVE LIME & PORTLAND CEMENT CO.**  
722 Grand Avenue Temple,  
Dept. N. Kansas City, Mo.

## Hotel Convention

12th and Broadway, Kansas City, Mo.

Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall

### AT SPECIAL PRICES.

Mammoth bronze turkeys, sired by a 40-pound tom, bought from Gov. Hadley. Also large, white Embden geese and White Rock chickens (Fishell strain). A few Peafowls for sale.  
**M. W. MAGNUSSON, SAFE, MO.**

### NOTICE

I have several full stock Red Polled calves for sale. Address,  
**JOHN GROSS, Elizabethtown, Ill., R. 3.**

## STOCK FEED AND WINTER PASTURE AND CARE

Have an abundance of feed—hay, sorghum fodder, corn and corn fodder, water and bluegrass. Can winter from 200 or 300 horses or other stock.

### MILLER STOCK FARM

**F. M. Lorimer, Mgr., Olathe, Kas.**

## SHOWS ENTERPRISE ON YOUR PART.

To the American Breeder:—I want to congratulate you on those pictures which you caught in the \$2,500 stake at the Missouri State Fair. It certainly shows enterprise on your part to reproduce these snap shots and these snap shots tell a wonderful story. It is very interesting for one who is really interested, to study the real action of the show—James A. Houchin, Cole County, Mo.

### THIS STALLION PLENTY BIG.

To the American Breeder:—I see in your issue of November 20, the result of two draft tops. I bred a Shire mare to a Percheron horse and got a mare colt; bred her to a Percheron horse and got a horse colt, and I think he is the largest horse in Oklahoma; he stands 18 hands and weighed 2,470 when he was five years old. I have used him as a stud ever since he was two years old. I don't think he ate two bushels of grain up to the time he was two years old. Measurements, heart girth, 9.4; length, 9.7; neck at collar, 6 feet; between front legs, 18 inches; arm 3; knee, 19 inches; hock, 23 inches; bone, 14 inches. Don't you think he is a dandy? I have been offered \$1,000 for him. I have lots of his colts; sold \$1,600 worth this year.—**H. J. Earl, Canadian County, Okla.**

## QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1334—LEGS "STOCK UP"**—I bought a driving mare recently that has been driven considerably and when standing in the barn her hind legs swell. Can you tell me whether anything can be done to prevent the swelling?—Nebraska Subscriber.

**REPLY**—The best thing you can do with such an animal is to pull her shoes off and turn her out for the winter. A few months' run in the open will do more good in repairing these overworked limbs than all the medicine you can apply to them. Try it and you will be convinced.

**1335—A BOOK ON THE HORSE**—I would like to have a book on the origin of the different breeds of horses, from the primitive age up. Is there such a book published?—Missouri Subscriber.

**REPLY**—In a brief way Prof. C. S. Plumb has treated this subject in a book on Types and Breeds of Animals. It will be worth your while to get this book if you haven't it already. It is published by Ginn & Company, Boston, Mass.

**1336—RIDGLINGS**—Will you please answer through your paper if there is a medicine that can be given to a ridgling that will make him give his testicles down? I have two and they are a nuisance.—Oklahoma Subscriber.

**REPLY**—We know of no medicine having the properties you mention and as such cases can be castrated without great risk by an expert in this line of surgery, you should have it done.

**1337—HEMORRHAGE FROM PENIS**—I have a jack that is in good shape and seems keen to serve, and I have not crowded him the past season, but when I let him serve, afterwards he bleeds or blood will run from his penis or from his privates. I want to know the cause and how to get it stopped, if there is any remedy for it.—Texas Subscriber.

**REPLY**—It is always a question as to the source of the blood in these cases. In some animals there are ulcers along the course of the urethral tube that bleed on account of the congested state of the parts during copulation. Again some of the glands higher up may be disordered. Such cases require a very careful examination by one versed in the location of the different anatomical parts before any treatment can be prescribed. In other words, the seat of the trouble must be found before it can be successfully treated.

**1338—ABSCESS**—I have a mare 12 years old. I was working her last spring and it started to rain in the afternoon. I unhitched her and put her in a warm barn; she seemed to be all right that night when I fed her, but the next morning I noticed she could not open her mouth, there was a big lump on her jaw swelled up something awful, so I took some liniment and rubbed it on and made some hot salt hags and put on it until I got it to break that night. There was an awful lot of matter ran out and then I took water and carbolio acid and washed it up, but it has been running matter ever since. Can you tell me what to do to cure it?—North Dakota Subscriber.

**REPLY**—For some reason an abscess has developed at this point and having broken it is either not healing as it should on account of improper drainage or because of some of the deeper parts being diseased. Such cases need the attention of a good surgeon who is conversant with the nature of the parts, and it is very likely that such a man can put things to rights without much expense to you. At any rate, it does not appear as if it was going to get well without some attention is given to it in this way, inasmuch as several months have elapsed since the abscess first formed.

**1339—MARE INJURED IN FOALING**—I have a French draft mare six years old, weight about 1700, that had her first colt last spring. I was there when the colt was foaled. It came a little hard and I helped as much as I could.

The next day I noticed that she could not hold her water; whenever she would step around in the stall the water would come from her. I let her run in the pasture all summer and fed her grain twice a day. I did not work her until this fall, and she is no better. I bred her three times during the summer but she did not get in foal. The water comes from her when she starts after standing, and not only water comes from her, but a lot of whitish, nasty stuff, and she gets it all over her hind legs. Where does all of this corruption come from? Is it from the uterus or the bladder, or from the vagina? What can I do to cure her so she will breed again? Where can I get treatment, and where will I need to apply?—Iowa Subscriber.

**REPLY**—Your mare was no doubt injured during the act of foaling in such a way as to cause paralysis of the muscles at the neck of the bladder, and it may be that not only the bladder but the vagina or uterus are now involved in a catarrhal inflammation. We are wondering why men owning so good and valuable animals as this one appears to be, do not take an interest in their welfare before the case becomes chronic and perhaps incurable. There is a chance that had you consulted a well qualified veterinarian shortly after this condition was noticed, that he might, after making an examination, have averted much of this trouble that is now annoying you. This you should yet do because you can expect nothing in the way of improvement until the real nature of the trouble is recognized.

**1340—RING BONE**—Can you give me a remedy to kill ring bone?—Illinois Subscriber.

**REPLY**—No. A judicious use of the firing iron, coupled with proper use of vesicants, will relieve many cases of ring bone. These remedial measures should be applied by skilled men only, as one not familiar with how to do it may ruin a valuable animal.

**1341—KERRY CATTLE**—Will you please send me the address of some one that is raising the Kerry cattle?—Nebraska Subscriber.

**REPLY**—The Secretary of the Kerry and Dexter Cattle Club is C. S. Plumb, Agricultural College, Columbus, Ohio. You can write Secretary Plumb for information and suggest to him that his members try advertising in the American Breeder.

**1342—WHO OWNED THESE MORGANS?**—Will inquire through the American Breeder where the Morgan stallion, Bullet (2108) A. M. R. was owned at death; also where the Morgan stallion, Beloit Morgan (830), was owned at death. There is a horse here combining these bloods, and he has been

a good one, too, and is sound as a bullet yet.—Illinois Subscriber.

**REPLY**—Our information of Bullet 2108, and Beloit Morgan 830, is contained in Vols. I and II, which I presume you have. Bullet is said to have been owned by Fanning & Hill, LaVergue, Tenn., and Beloit Morgan was taken in 1840 to Beloit, Wis., by John M. Bicknell and Samuel B. Cooper. Anyone having later, accurate knowledge, please answer.—T. E. Boyce, American Morgan Register.

**1343—CONCRETE WATER TROUGHS**—Do concrete water tanks freeze quicker than wood? I talked about making one and a neighbor said they froze too easily. I am building one anyhow, but thought I'd just ask you.—Nebraska Subscriber.

**REPLY**—Unprotected wood tanks will freeze more quickly than properly built concrete tanks, and concrete tanks are not only the most lasting, but also most sanitary. All out-door tanks for stocks should be warmed by tank heaters in the winter, for the welfare of the animals, if nothing else. Concrete tanks should be made with sloping sides. Just at this time Ash Grove Lime & Portland Cement Company is sending out, free, a book that gives directions and mixing tables for concrete construction of all kinds. Any reader can get this book by addressing the above firm at 722 Grand Avenue Temple, Kansas City, Mo.

**1344—SICK MULES**—On November 6th I discovered one of my mules, coming three years old, was inclined to be dumpy and was shaky in the muscles of the hind legs. A few days previous to this the mules had gotten into a field that had about ten acres of peas, which I hadn't cut, leaving them for hog feed. I thought this mule had got too many peas, so on November 7th I started to run the mules out of this pasture and I discovered another sick one, and in the same way as the first—awfully shaky in the hind legs. I put these mules in the barn and they had good appetites and would drink all the water they could get. Sunday, the 8th, the second mule lay down and could not get up, breathed fast, sweat around head and flank, heart beat fast, and that night it died. I had given a quart of linseed oil the 8th. There was no sign of anything wrong nor swelling any place on the mule; no water in nose, eyes, ears or mouth. The urine was of a reddish cast and the stool looked natural. I cut this mule open and found the liver with dark colored spots on it and the lungs looked blood-shot and there were yellowish looking strings from as big as a straw to the size of a man's finger, and from one inch to about 14 or 16 inches long in the arteries of the heart and out into the lungs. On November 9 the other mule died and the conditions were, as nearly as I could tell, exactly the same. I gave both the mules oil. After they died there was white froth came from their noses which I believe came from their lungs. I cleaned the barn up only to find I had two more sick mules. On November 11 I called a veterinarian and he said they had catarrhal fever; shot a dose 20 c. c. diphtheria antitoxin in each of the sick ones; left some medicine and went away; advised that the rest should be examined as a preventive, which we did the next day. The sick ones are doing much the same as the ones that died, droopy but don't shake; eat about the same, but don't drink so much. Yesterday morning one's fever was 104½; noon, 104; night, 102¾; this morning, 103. The other mules are running about the barn. I wish you would tell me what you think about this disease. There isn't any more sick ones.—Montana Subscriber.

relation between the sick mules and the peas. They died rather quickly for catarrhal fever and that disease is ordinarily not fatal unless complicated with other diseases. We think  
(Continued on page 15.)

## A NEW IMPREGNATOR.

The new Natural Temperature Semen Extractor was introduced last spring. It has given excellent satisfaction, both as a semen extractor, and as an impregnator. The Kansas City Impregnator Company, which manufactures this instrument, as well as other necessary breeding supplies, is always striving to have its material strictly up-to-date and of first class quality. Many of the improvements have come as suggestions from the most successful scientific breeders.

The Natural Temperature Semen Extractor is to be greatly improved when it is placed on the market next spring. One of its qualities as the name implies, is that it maintains the natural temperature when being used as a semen extractor. Among the improvements, is the use of it as an impregnator without using warm water when the weather is warm. A new arrangement for getting semen is also included. These new improvements have all been tried out under any and all conditions, so that it can be depended upon as the best instrument on the market, as a semen extractor, or an impregnator. It will be absolutely the best impregnator, as it can be used anywhere to transfer the semen from one mare to the other without any other expense.

Every owner of a stallion or jack should have one of these instruments, no matter what kind of a sire he may own. There are a lot of mares which absolutely cannot be fertilized with natural service that can be made producers by injecting the semen into the uterus. This instrument will also be very valuable to those who have only one or two extra mares to be bred at a time, and do not wish to use capsules.

Last year this extractor was sold on a guarantee, that if any breeder could not get the semen out of the uterus after a ten days' trial, he could return it and get back the full purchase price. Out of the thousands which were sold only six were returned. When the new improvements are on, it should be more than ever satisfactory for every breeder, for stallions, jacks or bulls.—Advertisement.

## A Department For Women

### CHEAPEST CHICKEN HOUSE PROVED BEST.

In a trial of eight different types of poultry houses made by the Kentucky experiment station, the least expensive type was found to be the most satisfactory. This house is 8 by 14 feet in size, 7½ feet high in front and 5 feet in the rear. It contains 112 square feet of floor space, or enough for twenty-two grown chickens, during the winter season.

The walls of the house were cheaply constructed out of rough 1 by 10 inch No. 2 pine boxing. The cracks were stripped over with ½ by 3-inch pine strips. The house was then white-washed inside and out, and the frames for the curtain were painted. The roof is covered with prepared roofing.

The house is, therefore, of cheap construction, and it has been found dry and sanitary. There are approximately 30 square feet of curtain front which is in excess of the one square foot, usually allowed per bird in this locality. It is believed that this amount of curtain front is better than one square foot.

The fact that the front wall extends two feet above the floor prevents the rain from blowing on the birds and the straw in the front of the house. Also the shed roof serves to drain all the rain water to the rear.

All the poultry houses at the Kentucky Experiment Station were built on posts that are 12 inches high. This serves to eliminate trouble from rats which hover under a house that is built on the ground. The space under the house furnishes a cool place for the chickens in summer.

A window two feet square was placed six inches above the floor in the rear wall of the house. All of the houses were built to face the southeast. The morning light, therefore, comes in the front of the house, and the afternoon sun shines through the windows under the dropping board. Therefore, the birds work the straw back and forth. Some of the houses were not provided with windows, and it was found that the birds do not work energetically under the dropping board where it is dark. In the summer, if it gets excessively hot, the window can be taken out entirely, and a wire screen placed over the opening.

This cost \$40.10, of which \$14.50 was labor. With the poultryman or farmer doing his own work the house would cost about \$20 to \$25. For colder climates the entire house could be covered with prepared roofing.

### KITCHEN TABLE ON CASTERS.

To the American Breeder:—If housewives will have casters put on the kitchen table, they will find it a great help toward saving steps. When work is being done at the sink, the table may be rolled near, or when cooking is being done it may be placed near the stove with the necessary cooking utensils upon it.—Miriam M. Haynes, Colorado Agricultural College.

### GOOD FORM OF EXTENSION WORK.

Athletic clubs for young men in a number of rural communities and smaller towns will be organized by the Young Men's Christian Association of the Kansas State Agricultural College. It is planned that baseball and basket ball leagues will be formed and a regular schedule of games will be planned in the rural towns and communities. The coaches for these teams will be supplied by the Y. M. C. A.

Lessons in wrestling and other athletic stunts will be given by the young men. The work will be under the general supervision of Walter Burr, rural service expert in the college.

### PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Winter number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

1107. Ladies' House Dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6½ yards of 36 inch material for a 36 inch size. The skirt measures 2 yards at the lower edge. Price 10c.

1092. Ladies' Kimono. Cut in 3 sizes: Small, medium and large. It requires 5½ yards of 36 inch material for a medium size. Price 10c.

1101. Girls' Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 40 inch material for an 8 year size. Price 10c.

9678. Child's Rompers. Cut in 4

1097-1098. Ladies' Costume. Waist, 1097, cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt, 1098, cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 5¾ yards of 44 inch material for a 36 inch size. TWO separate patterns, 10c FOR EACH.

### UNIVERSITY SUPPLIES ANTI-TYPHOID SERUM.

Nearly 1,000 treatments of anti-typoid serum have been supplied by the department of preventive medicine of the University of Missouri in the first half of November. The department is over-loaded with orders for the serum to prevent the dreaded disease. The University has agreed to supply the treatment and directions free of charge, but applications must come through practicing physicians. "This treatment," says Dr. M. P. Ravenel, professor of preventive medicine at the University of Missouri, at Columbia, "may be taken by children as well as adults. It is not dangerous. Its use is compulsory in the U. S. Army. Doctors have a record of 150,646 treatments with only three cases of typhoid following and no deaths resulting.

"Carelessness in controlling the water supply is the most frequent cause of the disease," says Dr. Ravenel. "Flies are next in spreading infection. The disease must always come from some existing case. Drainage and surface water carries the germs. The open closet is a menace to the life of a community, and must go," declares Dr. Ravenel. The Engineering Experiment Station of the University of Missouri is preparing plans for sanitary disposal of sewage for the farm and small community where no sewers have been laid.

An easy way to stop the breeding of the house fly, which is one of the greatest pests, is by use of three-fifths of a pound of borax to every eight bushels of manure, sifted on and then sprinkled with water.

### OLD CLOTHES CARRIED FEVER GERMS?

The attention of a state board of health has been attracted by a case of scarlet fever at a certain town, the only one in that county. There had been little scarlet fever in that section of the state for many years. In this case the physicians were unable to trace the cause until the mother happened to mention that 14 years before an older child died from the disease. The physician began asking questions and soon discovered that when the child died the mother

had taken all the clothing, packed it in an old chest and left it in the attic. A few weeks ago a younger child became the right age to wear this old clothing and the mother unpacked the chest, dressed the child in some of the clothing and within a week the child had scarlet fever. The moral is obvious enough and the health board urges less saving of old clothes, unless they are thoroughly disinfected, which is not always easy to do.

### KENTUCKY WANTS TO BE "TOOK."

To the American Breeder:—I received the pictures of the ten money winners in the \$2,500 saddle stake at the Missouri State Fair. They certainly are good. I thank you for them and hope you will come to Kentucky State Fair next year and make some pictures of our stock. We have some good ones here, and as you are from Missouri, if you will come we will "show you."—Jas. M. Terry, Director, Kentucky State Fair.

### A FREE BOOK ON CONCRETE.

Knowing that good concrete construction—door steps, sidewalks, pump platforms, watering troughs, barn foundations, etc., are not only the most economical and sightly, but also the most sanitary. The American Breeder has mentioned this material as often as space allows.

We believe farmers generally are awake to the economy and permanency of concrete construction and much more concrete would be used on the farms if the farmer fully understood mixing and the building of forms, etc. The Ash Grove Lime & Portland Cement Company has published a handsomely illustrated text book on concrete construction entitled "Permanent Farm Improvements." This is a 112-page book printed in clear, easy-to-read type and contains complete instructions for more than 75 farm structures—everything from a fence post to a barn. Complete instructions for building forms and the mixing of the concrete. All the different tables for the different mixings have been gone over by experts, and are authentic. By having this book any farmer can do his own concrete work and will produce good results as to stability and strength as well as appearance. This book cost The Ash Grove Cement Co. a big sum of money. It was published to sell at 25 cents a copy, which is less than cost. For a limited time these books will be sent free to all who write for one. Address The Ash Grove Lime & Portland Cement Co., 722 Grand Ave. Temple, Kansas City, Mo.

# Review of the Markets

Army Demand Grows and Horse and Mule Prices Are Going Up With Country Owners Less Anxious to Sell. Beef Market Lower But More Steady. Cholera Runs Have Aided Decline in Hogs. Sheep Hold Up Well.

A few horses and mules have been bought and shipped to cotton states, and some have gone to big eastern cities, but other than this limited outlet there is no demand except on army contracts. However, receipts of horses and mules in Kansas City were the largest ever reported in November and in Chicago and St. Louis about the second largest ever reported in the eleventh month of the year. While domestic demand probably was never smaller, total volume of business is large. Horses now moving out of the country are in larger numbers than would be moving between markets and to demand districts if trade conditions were entirely normal. The enormous orders for horses being given by the French and English for cavalry, wagon pack and artillery purposes are totaling far above anticipation, and they are still buying. Such animals are done for completely as far as future supply is concerned and producers ought to look far enough ahead to see that this big outlet cannot but tell on future supplies. Foreign demand will not cease with the war and in all probability instead of America being an importing country she will become an exporter especially of heavy mares and draft types for the demand for lighter ones will likely end with the war.

Country buyers say that the buying proposition is beginning to get "fierce." Their contention is that countrymen ask far in excess of the value of the animal, and are extremely indifferent about selling. It is well to realize the value of horses and mules but with the trade promising better demand there is no reason for selling any kind low.

The big cotton crop of the south, though moving slowly in comparison with former years is now an asset for borrowers, and is also bringing money into circulation. In the past two weeks conditions in the south have eased up materially. Horse and mule men expect January to bring a big trade in cotton mules and late February the beginning of the trade in farm horses.

It is hard to establish a reliable range in prices for either horses or mules, as most of the animals have been bought in the country and consigned direct to men who hold the government orders. Only rejects and a few good horses move through the auction ring and prices in that quarter have risen materially in the past thirty days. Indications are that from January on there will be few fat mules available. Many feed barns have stood empty from fall thus far and most of the others have only about 50 per cent as many on feed now as a year ago. Owing to the good fall rains and the open winter thus far most horses and mules are in good condition and ready to be shipped with little feeding. To that extent cost of handling equines has been a cheaper proposition than last year.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—	
Drafters, 1700-pound, extra quality.....	\$200@250
Drafters, good to choice.....	170@200
Drafters, fair to good.....	150@175
Chunks, good.....	135@165
Chunks, fair.....	100@120
Southerners, good to choice.....	120@175
Southerners.....	50@100
Mules—	
13½ to 14½ hands.....	\$ 90@110
14½ to 15½ hands.....	105@125
15½ to 16 hands.....	130@175
16½ or better.....	175@250

## Normal Conditions Returning in Cattle.

The past two weeks developed the most abnormal conditions ever known in the cattle market. Fourteen states and all of the principal live stock markets east of the Mississippi river were quarantined for the foot and mouth disease. In Chicago alone, November receipts of cattle, hogs and

sheep were 43 per cent short of those in November, 1913. At points, principally Missouri river markets, where no quarantine existed receipts were unusually large, and a new November record was made in Kansas City for receipts of hogs and cattle were the second largest on record. Eastern demand for cattle was diverted from regular supply sources and was a material factor in providing a ready outlet for the large supply at Missouri river markets.

The quarantine regulations are being modified and large areas freed from all restrictions. Chicago and St. Louis can now receive cattle for immediate slaughter and such cattle as originate in unquarantined area can be shipped from those points elsewhere, for so prompt and so thorough has the work of investigating and quarantining been done by the United States Bureau of Animal Industry that within two more weeks all markets are expected to be in a normal condition, and the movement of live stock to be in regular channels.

As the trade has been interrupted by the quarantine so prices have moved up and down the scale. Prime beefs have shown no important net change but grass fat and short feed grades, the former which are in small supply and the latter in larger numbers are 50 to 65 cents lower than two weeks ago. About all the range cattle that will come this year have been marketed, but both Kansas and the Panhandle will supply much more beef this winter than last winter. Prices for short fed cattle are expected to go lower. The top price for full fed beefs, \$11.05 was paid for two car loads of Missouri steers weighing 1,501 pounds. They would have been shown in the car lot division of the American Royal, had that function been held. The bulk of the steers now are selling at \$7.50 to \$8.75, those above \$8.25 show good grain fat, but it is this class which is expected to sell lower in the next few weeks.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers.....	\$9.25@10.25
Choice to good steers.....	8.50@ 9.20
Fair to good steers.....	7.50@ 8.45
Common to fair steers.....	6.00@ 7.45
Meal fed, choice.....	8.00@ 8.75
Meal fed, common to fair.....	7.50@ 8.00
Quarantine steers, fed.....	7.00@ 7.75
Quarantine steers, grass fat.....	4.50@ 7.00

## Fluctuating Cow Prices.

At times in the past two weeks there has been a total suspension of country demand for female cattle, because of fear of the spread of the foot and mouth disease. On such occasions killers, depressed prices also, but when the country demand reviewed, this raised the prices of butcher cattle. In this movement prices for female cattle have varied 40 to 65 cents, but with indications that normal trade will soon prevail, prices are about the same as two weeks ago. Veal calves are 25 to 50 cents lower.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice.....	\$6.50@ 7.25
Common to fair.....	5.00@ 5.45
Good to choice.....	6.00@ 6.45
Fair to good.....	5.50@ 6.00
Canners.....	4.25@ 4.90
Heifers—	
Choice.....	8.75@ 9.50
Good to choice.....	8.00@ 8.75
Plain to fair.....	7.00@ 8.00
Common.....	6.00@ 7.00
Veal calves.....	6.50@10.00
Bulls.....	4.50@ 7.00

## Uncertain Demand for Stockers.

Stock and feeding cattle have been subjected to the full force of uncertain quarantine conditions, and prices have fluctuated 50 to 75 cents. Last week for a short time there was no demand. This was caused by the report that the foot and mouth disease had broken out in Wichita, Kas., and the entire state was placed under quarantine for a few hours. Now there is no suspected case of that malady in any state west of the Mis-

Milch cows.....	60.00@110.00

## Big Decline in Hogs.

In the third week in November when quarantine restrictions held hogs off the market in fourteen states, prices were higher, \$8.00 to \$8.10 being the high point at river markets. In the past ten days those supplies that were held back owing to the quarantine began moving and in the past two days the markets were overwhelmed with supplies. Prices receded as receipts increased and the decline of the past two weeks is close to \$1 a hundred pounds. The 7 cent hogs is near the vanishing point, and the bulk of the hogs are selling under \$7. December under normal conditions would have developed liberal supplies, but with some moving now that should have come last month, many believe that receipts in the next thirty days will be the largest of the year. Many sick pigs are coming from Missouri, Kansas and Iowa, but the average health is better than a year ago.

The range in prices of hogs in Kansas City in the past two weeks:

	Preceding Week.
Monday.....	\$7.35@7.85 7.50@8.10
Tuesday.....	7.25@7.72½ 7.35@7.90
Wednesday.....	7.30@7.85 7.25@7.55
Thursday.....	7.35@7.85 7.35@7.65
Friday.....	7.40@7.90 7.40@7.85
Saturday.....	7.20@7.65 7.50@7.90
Monday.....	6.85@7.15
Tues., Dec. 5.....	6.75@7.05

The following quotations are for hogs:

Choice, 250@300 lbs.....	\$6.85@7.05
Medium, 200@250 lbs.....	6.75@7.00
Mixed, 190@215 lbs.....	6.85@7.00

Stags.....	4.25@5.50
Boars.....	4.00@4.50
Bulk of sales.....	6.80@7.00

## Sheep Prices Hold Up Well.

Sheep prices are holding up well for this season of the year and only a little under the record prices reported in November. Demand is active and since the range movement has ceased receipts have been unusually small. Supplies now are coming from feed lots in the Missouri valley. Fat lambs are quoted at \$8.50 to \$9; yearlings, \$6.65 to \$7.50; ewes, \$5 to \$5.65, and wethers, \$5.50 to \$6.25.

## November Live Stock Receipts.

In November the receipts of cattle at the five western markets were 580,000, almost 60,000 less than in 1913. The decrease in hogs was 137,000 and in sheep nearly 400,000. Chicago and St. Louis show the principal decreases as those markets were directly affected by the quarantine. Kansas City reported material increase for the month. The receipts for November at the five western markets were 580,000 cattle, 1,350,000 hogs, 748,000 sheep, compared with 640,000 cattle, 1,487,000 hogs and 1,151,000 sheep in November, 1913. In the eleven months this year the five markets received 6,263,000 cattle, 13,532,000 hogs and 11,233,000 sheep, a decrease of 830,000 cattle, 1,750,000 hogs and 715,000 sheep compared with the same period in 1913.

Wanted—To hear from owner of good farm for sale. Send cash price and description. **D. F. Bush, Minneapolis, Minn.**

to hold prices on the cereal well up to recent levels.

## Hay Prices Irregular.

While prairie and straw prices declined 50c to \$2 a ton, alfalfa, timothy and clover hay were up \$1 to \$2 a ton. Receipts continue liberal for this season of the year.

Quotations are as follows: Alfalfa, choice, \$15@15.50; No. 1, \$13.50@14.50; standard, \$12@13; No. 2, \$10.50@11.50; No. 3, \$9@10; prairie choice, \$11@12; No. 1, \$9.50@10.50; No. 2, \$7@9; No. 3, \$4.50@6.50; timothy, choice, \$16.50; No. 1, \$15.60@16; No.

**JACKS.**

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

**380 PACK BURROS**

For sale. Have been used by Mexican army, but now in fine shape. About half are jennets.

C. O. THOMAS

MARFA, TEXAS

**--JACKS--**

For sale. Two yearlings; 2, 3 and 4; one 10-year-old. Anyone needing jacks would do well to correspond with me. W. F. SCHUEY, MARION, ILL.

**TO QUIT FARMING.**

Will sell at a bargain, all my jennets; black, white points; registered; some weighing over 900; all of breeding age, bred to big 1,100-pound jack, Peter the Great. Also jacks, Percheron mares and stallions.

SANFORD HUTSELL, Hampton, Nebr.

**11Worth County Jack Farm**

Twenty-five head of jacks and jennets for sale.

CORSON BROS.

Potter, Kans.

**JACK FOR SALE**

Or exchange for one as good. Fairview Wonder 3705; black, white points; 15½ hands; 34½ inch ear; 9 inch bone; weighs 1,050 pounds. Quick server, either mares or jennets; 8 years; sound. Reason for selling, young jennets in his way.

R. N. MONTGOMERY, Rich Hill, Mo.

**MAMMOTH JACKS**

For sale. Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

**MAMMOTH JACKS.**

You will find at my barns the largest number and the largest and best quality, registered, big boned, black jacks; 15 to over 16 hands standard, to be found in the United States. Reference, Banks of Lawrence. Prices reasonable.

AL. E. SMITH, LAWRENCE, KAS.  
(40 miles west of Kansas City on the U. P. and Santa Fe R. R.)

**FAIRVIEW JACK AND JENNET FARM**

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP, Eolia, Pike County, Mo.

**JACK**

For sale; dark grey, with white points; 8 years; 59 inches tape measure. Good head, ears, heavy body, good bone and a sure foal getter. Good server on either mares or jennets. Would trade for any good stock that I can turn on pasture. Don't answer this advertisement unless you have good stock and mean business.

ADAM MATZ,

CARMI, ILL.

**12 JACKS.**

Suckers, yearlings, twos, aged jacks, with bone and quality. Priced to sell. GAREE & GAREE, NOBLE, OKLA.

2, \$13@15; No. 3, \$9.50@12.50; clover mixed, choice, \$15@15.50; No. 1, \$14@14.50; clover, choice, \$14@14.50; No. 1, \$13@13.50; straw, \$4.75@5.25.

**SUCKING MULE AT \$100.**

J. R. Berry, of Williamsburg, got the top price paid for a mule colt at stock sales in Fulton this month. He sold the youngster to R. E. Biggs east of Auxvasse, for \$100. The contract requires Mr. Berry to keep the colt until the first of December and not to wean it until that time.—Missouri Stockman.

**Feeding Questions**

Under this head will be answered all inquiries from subscribers on the questions of feeds, feeding methods, etc. We are glad to get the questions, and will gladly answer them through the paper. Call for any information you want, give the circumstances fully and sign your name and address.

**STEER PRICES AND FEEDS**—Will good quality 700-pound steers bought in April and grazed on first class blue-grass pasture until the following fall, sell as a general rule for more or less per pound in the fall than they cost in April?

As a general rule for a number of years past, how does the price of 700-pound steers in April compare with 1,000-pound steers of like quality, the following fall?

What would be the difference at present in the selling price of two loads of cattle; one fed on corn and meal, etc., and the other fattened on blue grass only?

To make export cattle on blue grass only, what weight of cattle would you prefer?—Missouri Subscriber.

**REPLY:**—Good quality, 700-pound steers during recent years have sold, after being grazed on first class pasture during the entire season, for as much per pound as they cost early in the spring. Until recent years the man who bought cattle for grazing purposes expected a decrease in value per pound. Their value in the fall depends very largely upon the demand for feeding cattle. When a large corn crop is raised, fat cattle are higher in price than the grass fat cattle and usually command an attractive figure. When the fat cattle market in the fall of the year is unfavorable and there is a prospect for a light corn crop then the grass cattle sell comparatively low. At the present time a load of cattle that had been fed corn and meal on grass throughout the entire summer as compared with other cattle fattened on grass alone would sell at approximately \$1.50 per hundred premium over the grass cattle, would be from 100 to 150 pounds heavier and would have utilized less than one-half of the area of grass.

A few years ago it was the general practice to make an effort to produce export cattle but in recent years the class of cattle that is being exported is rather inferior, but they must possess weight and be fat in order to stand a long shipping period. I do not believe it would be advisable to attempt to produce them on grass alone but if it would seem advisable, would prefer three-year-old steers weighing in the neighborhood of 1,000 pounds when they are turned on grass and from 1,210 to 1,310 at the close of the grass season.

**TO PRODUCE AND FATTEN ON SAME FARM**—We have forty cows and heifers (grade Shorthorns) bred to a good Shorthorn to calve in May and June. Father and I want to begin now preparing to make baby beeves of as many calves as we raise, for we will buy steer calves to replace the heifers we save for breeding. We have some alfalfa and can raise or buy what more we need. With plenty of alfalfa, should we build silos for our kaffir and milo (which do fine here) or should we let them ripen and use the fodder and ground grain? We have engine and good grinder so are at no great expense. We have plenty of pasture and aim to let the calves suck the cows as long as it will do, and have them on feed before weaning. About August I'd like to ask for advice about weaning, but want to know about silos now. We will dry up most of the cows after the calves are weaned, so don't care anything about silage from the dairy standpoint. If you advise silos, please state what capacity. We planned to sell the baby beeves at eleven months, or just before the new calves begin to come. Is that too young?—Kansas Subscriber.

**REPLY:**—The chief advantage in the use of silos comes from increasing the live stock carrying capacity of the farm by making palatable those portions of the corn, kaffir or sorghum stalks which would otherwise be refused. If the amount of kaffir and milo which you raise is sufficient in the worst years with which you are confronted to furnish an abundance of roughage for all of the

cattle that you carry on the farm, it would hardly be advisable to build a silo except to be used for supplementing pasture during periods of drouth or to carry over from one year to another the feed which would otherwise go to waste.

For making baby beef an ideal ration is made up of five pounds alfalfa hay and ten pounds of silage per head daily and a grain ration consisting of seven parts ground corn or kaffir to one part of cottonseed meal mixed by weight and fed according to the appetite of the cattle. It will be necessary to feed a concentrated ration in order that your calves will have a sufficient amount of feed over and above that required for maintenance to make them fat. This they will not do on rations of alfalfa hay and silage or alfalfa hay and fodder, although they will grow and keep in excellent growing condition without grain. As a general rule it is not advisable to market calves at the age of eleven months as the nearer to 1,000 pounds they will weigh the better they will be received on the market. The one greatest mistake in the production of yearling or baby beef on the part of the beginner is in shipping them before they are fat enough to sell at the top of the market for their class.

For forty cows and heifers with calves that you would feed, I would recommend a silo sixteen feet in diameter and from forty to forty-five feet in height.

**MARKET TOPPING LAMBS**—In this county I have succeeded in getting five or six farmers who have small flocks of grade ewes only fair in quality, to use young Hampshire bucks from my pure bred flock. I should like to buy up their spring lambs—in fact have bought some—and fit them to sell at as good a price as I can, both for the profit on the lambs and for the popularity it will give my breeding stock. Seventy-five or one hundred lambs is all I will feed next fall (am feeding 40 now) and I'd like to fix for making them market toppers. Have sloping, well drained lots and can provide shedding and pure water a plenty. Please tell me what I need in feed troughs and hay racks, as well as feed. My chief feed crops at present are corn fodder, corn, cow pea hay and millet hay and expect to buy mixed clover and timothy hay for all the additional roughness I need.—Missouri Subscriber.

**REPLY**—It is assumed that the lambs are delivered at weaning time during the month of September directly from the ewes, never having received grain in any form. They should be provided with protection from wind and rain under such conditions that they may always have a dry bed. A mixture of oats and bran will probably be the best grain ration to use while getting them accustomed to feed, after which it can be changed to corn and cottonseed meal fed in the proportion of seven to one, with fodder during the day and cowpeas at night. The lambs will consume when on full feed about 1.25 to 1.75 pounds of grain per head daily and two pounds of cowpea hay. Allow eighteen inches at both hay racks and feed troughs for each lamb. As the length of the feeding period should be not to exceed 90 days an effort should be made to secure more cowpea hay or to purchase clover with as little timothy as possible in it. Millet had better be sold or fed to some other class of stock.

A very convenient hay rack can be made thirty inches high and thirty inches wide, with floor eight inches from ground. The top board of the rack should be six inches wide and the bottom board of the same width placed ten inches below the upper one in order to give a ten inch feeding space. Two-inch slats can be used for upright divisions spaced ten inches apart for large lambs or mature sheep.

An ordinary flat bottomed trough is best for outside feeding, using a twelve inch board for the bottom and six inch boards for the sides. Legs or posts which will support the trough in such manner that the top of the boards will be sixteen inches from the ground would be satisfactory. This allows the removal of the trough so that it is easily cleaned from one feeding to the next, which is essential for successful handling of sheep, which by nature demand clean troughs, clean water and clean lots if they make satisfactory progress.

**Be an Auctioneer**

Travel over the country and make big money. No other profession can be learned so quickly, that will pay as big wages. Write today for big, free catalogue of Home Study Course, as well as the Actual Practice School.

MISSOURI AUCTION SCHOOL, Largest in the World.

NEXT TERM STARTS JAN. 4. W. B. Carpenter, Pres., Room 340, 818 Walnut St., Kansas City, Mo.

**Partner Wanted**

A good scientific man to go in a partner on two good stallions, on Percheron and one road stallion. Owner is not able to take care of two stallions. For further information and references, write

LOCK BOX 412,

TRAER, IOWA

**WANTED; HORSES TO WINTER**

Have an abundance of feed; hay, sorghum fodder, corn and corn fodder, water and bluegrass. Can winter 20 to 300 horses.

**Miller Stock Farm**

F. M. Lorimer, Mgr.,

Olathe, Kan.

**STALLION AND JACK**

For sale. King Toral 35475; record 2:25; handsome bay stallion with star two white hind feet. Can be handled by any one and is sure.

Seven year old Mammoth jack; black with white points; stands 15½ hands; is large; sure; prompt and a good breeder.

Also, Miss Buckler, a registered Thoroughbred mare. This stock is well worth my price. If interested come and see me, or write.

M. B. LANDIS,

ROBINSON, KAS

**STALLIONS, JACKS, JENNETS.**

Pure bred Percherons; 1,800 to 2,000 pounds. One of the best herd jacks in Kansas; also ten good young jacks and jennets. Prices way down. World horses, mules or light auto considered.

S. S. MOUSE,

LA CYGNE, KAS

**STALLIONS AND JACK**

For sale. Standard bred stallion, Ted die Andrew (50226). Spotted Arabian stallion, weight 1,225 pounds.

One Mammoth Jack, 15 hands. One Shetland pony stallion; gentle for children. Will sell all or any one. All classy stock.

CHAS. C. BUTCHER, V. S., Russell, Kas

**JACK---DUROC HOGS**

For sale. A black jack; light points; six years old; 15½ hands high. Also Duroc hogs.

LOUIS KOENIG,

Solomon, Kas

**JACKS---CLYDESDALE STALLION.**

FOR SALE—Three jacks, 4 to 6 years old; good flat bone; registered stock Price \$300 and up. Also two-year-old Clydesdale stallion from imported sire and dam; weight 1,450. Write or come and see me.

S. A. FARNSWORTH, Blairstown, Mo

**JACKS TO SELL OR TRADE**

FOR OTHER LIVE STOCK.

One extra good herd jack; one two-year-old jack and two suckling jacks. All extra good individuals. Can use good jennet or pair of good registered mares or fillies.

J. M. TRACY,

LA CYGNE, KAS

300 HEAD of Colorado raised Jacks, Jennets, Mules and Brood Mares. All guaranteed. Prices right. Lewis Swink & Son, Rocky Ford, Otero County, Colorado.

**JACKS AND JENNETS**

For sale; 30 black Mammoth jacks and jennets; recorded; some in foal by Jumbo R. 3964, one of America's best. And a 3-year-old French draft black stallion, and mares. Inquire

THEODORE CONRAD, Groom, Carson County, Texas.

**8 HEAD TENNESSEE JACKS**

For sale; white points; 2 to 7 years old; 15 to 16 hands. Good enough for herd jacks—the blocky kind. Will trade for heavy Standard bred horse.

A. G. BUSH,

Fairland, Okla.

**JACK TO TRADE.**

A good Mammoth jack; black, with white points; 7 years; 15½ hands high, horse measure. Colts to show. Can be registered. Would be a good jack to head a herd of jennets. Works slow with mares but a sure foal getter. Will trade for good young mules or mares. Write me what you have for trade.

J. F. NEWHERRY, Kirkland, Tex.  
R. R. No. 1, Box 9.

## A Reproduction Weakness

If a number of average men should guess at the one thing in agriculture causing this nation the most loss, many things would be suggested. Not many would guess the right thing. Very little is being done at the present time to reduce this great loss. Scientific men are constantly employed in the study of plant and animal diseases, soils and cultural methods. Practically all of the leading questions are being looked after carefully, except making our domestic females produce properly. The greatest leak in this country today comes from failure of females to produce with regularity. Mares are causing the most of this expense, with cows a close second. This country should have more live stock, more live stock means soil fertility maintained or restored.

Feeding experiments have been carried on to ascertain the relative value of different feeds; but not from a breeding standpoint. Diseased females have been treated with a view to curing the disease; but little attention has been given to such treatments from a breeding standpoint. Many of the females so treated have not been producers afterwards.

Much of this great leak is due to ignorance among those handling live stock. Lack of proper breeding methods results in conveying disease from one female to the other by the act of copulation. Another great difficulty is in the practice of "opening-up" females. Thoughtless or ignorant men will insert their dirty hands into the genital organs of a mare or cow, causing infection. There ought to be a law prohibiting the "opening-up" of females, unless the hands are thoroughly washed in soap and water, then rinsed in sterilized water. This at least ought to be a practice which all breeders should follow at all times. It is not uncommon to see a breeder open up several mares or cows without washing his hands. Where such methods are used there is usually enough bacteria under the finger nails of the breeder to destroy fertilization in a female, if introduced into the uterus. Very frequently a mare or cow will fertilize after being opened up. This convinces the breeder that he is doing something worth while. He does not realize that while he is getting one female fertilized by this method, that he may be doing a vast amount of damage to other females. We do not believe that any one would knowingly infect a female; but the result is just the same if infection is introduced.

When the average breeder is asked about this delicate question he just looks bewildered and then changes the subject. Too many men believe that such subjects are beyond their reach. Most any breeder who will study this subject can greatly improve and many of them can become experts. The American Breeder and the Graham Scientific Breeding School give more reliable information on the subject than can be found elsewhere. One can learn much about the generative organs in a short time. It is different from a study of veterinary science where practically everything connected with animal life must be studied. In the recognized veterinary colleges, only a very small amount of time is devoted to this subject. We hope to encourage every breeder to make a special study of this work. With the great opportunity for making examinations and keeping statistics which every breeder has, he can be of great service. This is one of the weakest spots in live stock production today.

A few days' work with practical instructors will prepare the average breeder. In making a careful study of the largest breeding places in the country, we have found that practically all of them, except those who have attended the breeding school, show this particular weakness. Many of these men are afraid to ask questions, for fear of showing their ignorance. Is it not time to wake up and realize their responsibility? This is more especially true of those keep-

ing animals for public service. Very frequently a breeder is very successful, who has never seen the inside of a female. But that particular individual could be of much more service, if he was better posted.

Now that this country will be asked to furnish stock of all kinds to supplant an exhausted supply in Europe, every breeder should learn how to make females produce with more regularity.

### C. F. JONES' SALE POSTPONED.

We are authorized to announce the postponement of the Percheron and Shorthorn sale of C. F. Jones, Rippey, Ia. The sale was set for December 16, but is postponed until about the middle of January—exact date to be announced soon. This will doubtless suit many intending buyers all the better, as a month's feed and care of an animal in midwinter is some item. Applications for catalogs should be made as usual, for Mr. Jones will send by letter notice of his new date to all who have applied, and will make, in the American Breeder, any additional announcements necessary.

### CLASSES FOR CAPSULE COLTS.

Significant of the extent to which capsule colts have become an institution in our leading horse growing sections, is the frequent mention of these interesting products in connection with horse and colt shows. We have a number of times published photographs of capsule colts which won prizes in such exhibitions. In one instance there were five capsule colts shown in a class of a dozen or so, and first and second prizes went to two colts out of the five produced through the use of capsules. Recently Henry King of Warren, Ind., mailed us a prize list of the Warren Horse Show in which four sections of Class D, namely: 19, 20, 21 and 22, were all devoted to capsule colts of the draft horse breeds represented.

### WHICH STALLION AND WHY?

A "straight-from-the-shoulder" bulletin, pointing the way for mare owners who are seriously considering to what stallion they will breed next season, has just been issued by the Kansas Agricultural College. There is food for a year's study and thought in the first three paragraphs—which we give herewith:

1. The breeding season is near at hand and every mare owner should study carefully the following questions:

- Why am I raising horses?
- What type and classes of horses are needed in large numbers on the farm and in the city?
- What types and classes of horses are no longer needed on the farm or in the city?
- Which type have I been raising?
- How much does it actually cost me to raise a colt to maturity?
- Have I been raising horses at a profit or at a loss?
- Do I really appreciate the value of a good, sound, pure-bred sire and am I willing to pay a reasonable fee for the service of such a sire?

2. The whole country is stocked with common and inferior horses for which there is no particular need or demand because they have proven to be an inefficient form of motive power, not only on the city streets but also on the farm. Some one has said the successful farmers make their money loading heavy, active horses with all they can drag away. The heavy, active horse is the one the farmer needs and the market wants. Horses of this class are bringing more money today than ever before. This is proven by the average price paid on the Chicago market for the past ten years for all that would class as draft horses. These interesting figures for various years run as follows:

Year	Average Price
1905.....	\$186.00
1907.....	194.00
1909.....	194.00
1911.....	205.00
1913.....	213.00

3. The profitable and efficient horse can be produced only by keeping the best mares on the farm and breeding them to the good, sound, pure-bred sire.

# 20th SALE OF ROBISON PERCHERONS

Headed by the Famous Winner of Many World's Fair and State Fair First and Championships, IMP. CASINO.

## Dec. 17

At Whitewater Falls Stock Farm

The Grandest Offering we have ever made

50 Imported Stallions, Mares and Colts, Including Championship and Many Other Prize Winners.

With a limited show herd this fall we won the bulk of the prizes at the greatest three state fairs of the Southwest, and found the interest in good draft horses the best it has been for many months. Because of the fall shows as well as this sale, we have reserved an especially good lot, including the

### Largest Stallion Offering

IN ANY SALE THIS SEASON.

Keep this in mind and write at once for catalog, mentioning the American Breeder.

## J. C. ROBISON, Towanda, Kas.

Col. R. L. Harriman and Others, Auctioneers.

# TAYLOR & JONES

WILLIAMSVILLE, ILLINOIS.

Our second importation for 1914 arrived July 6. Anyone wanting the best imported and American-bred Percheron, Shire and Belgian stallions should not fail to visit our barns.

BOX 160, WILLIAMSVILLE,

TAYLOR & JONES, Sangamon Co., Ill.

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

GEORGE EGGERT, Newton, Iowa.

## Belgians and Percherons

Roans and Blacks; Typical of These Great Draft Breeds.

Our stallions are two, three and four, some imported last year, some home bred, so that they are thoroughly acclimated. The Belgians are grandsons of the great Brussels champion, Indigene du Posteau. Come, or write, mentioning American Breeder.

CRAWFORD & GRIFFIN, - - NEWTON, IOWA.

JOHN W. SCHENCK,

I wish to close out my entire Bunch of Percheron Stallions, Jacks and Jennets.

I have six stallions, three gray and three black. Five of these horses are imported and one American bred. All first class stuff and all registered in Percheron Society of America.

I also have two jacks and three jennets. Will sell this stock worth the money, as I want to close them out. This stock is the result of 17 years' careful selection and they are all breeders.

FERRIS, ILL., R. R. No. 1.

## PERCHERON

STALLIONS AND MARES

For Sale or Lease.

**M. F. DILLON**

107 Grand Ave. PUEBLO, COLO.

### SHIRE STALLION.

For sale; eight years; imported by Trumans' Pioneer Stud Farm; will weigh close to a ton; sound and right every way; sure breeder; nice to handle. Will sell very reasonable, as I am going out of the business, or will exchange him for work horses or Poland China brood sows. This horse won first at Iowa and Indiana State Fairs, as a 2-year-old.

T. E. ORTH, Washington, Ill.

## PERCHERONS AND BELGIANS

For sale. Imported and Home-bred Percheron and Belgian stallions and mares. Come and see or write,

**F. M. CLEVENGER, Prop.**

Valley Home Stock Farm, Centerville, Ind.

### 12 REGISTERED CLYDESDALE Stallions and Mares.

For sale; all that are fully developed and in flesh will weigh 1,800 to 2,100 pounds. Young ones will develop to that.

J. G. THOMPSON & SONS,  
R. R. 1, Box 109, Steubenville, Ohio.

### SHIRE STALLION

For sale; 28 months old; weight 1,600; recorded; also state certificate. Sound, none better in Iowa; perfect disposition. Write,

AMOS HANSON, Collins, Ia.

## PRIZE WINNING PERCHERON

For sale; a 4-year-old stallion; black, with star and white hind foot; sure breeder and a good sire; weighs 2,100 pounds; a real drafter and fine mover. Was best American bred 3-year-old at International show, 1913. For a good one, see this horse.

S. S. RUSSELL & SON, Neponset, Ill.

### 2 REGISTERED CLYDESDALE STALLIONS

For sale or trade. One is two and the other five years old. I am obliged to sell at very low prices on account of not having time to care for them. Address,

H. J. PETRIE, Attica, N. Y.

### ELEVEN PERCHERONS

For sale. Four stallions, 2 imported and 2 home bred. Seven mares, 2 imported, balance home bred. Mares old enough are bred. They are large and of the ton kind, with splendid conformation and style. Must be sold by March 1st, as I intend leaving the farm. Write for description and prices. A bargain if all are taken. Come and see.

J. J. GUSTIN, MURDOCK, NEBR.

### Registered Percheron, \$500

A pure bred Percheron stallion; 5 years old; black, with small star; 16½ hands; good bone and good actor; well broken and a sure foal getter. This is an American bred stallion out of an imported stallion, and his dam took first premium at International when she was a yearling, shown by Taylor & Jones of Williamsville, Ill.

This stallion is recorded and all right in every way, but I have more stallions than I have business for, and will sell him to the first buyer for \$500, and he is a money maker for the man that has business for him.

CHAS. M. PIERCE, AUXVASSE, MO.

## Belgian and Percheron Stallions

Oklahoma bred, and priced right.

W. L. LAKE, FT. COBB, OKLA.

## IMPORTED AND HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

A. LATIMER, WILSON, Creston, Iowa.

### THREE PERCHERON STALLIONS

For sale; 2 and 3 years old; with state certificate of soundness. Will exchange one for another as good, not related. The younger, 26 months old, weighs better than 1,600 pounds; 16½ hands high; 11½ inch bone. Who has his equal?

S. S. LANGFORD, CRAIG, NEB.

### PERCHERON STALLIONS AND MARES

For sale, weighing from 1,900 to 2,100 pounds, with 11½ and 12½ inch bone. If you are looking for the good ones, I have them. Will pay your expenses if not as represented.

A. U. Dunbar, Galesburg, Ill., R. R. 1.

## Advertising Briefs

### PUBLIC SALES.

#### Percherons.

December 8—W. S. Corsa, White Hall, Ill.

December 10—Woodlawn Farm, Sterling, Ill.

December 15—Geo. S. Johnson, Pleasant Hill, Mo.

December 17—J. C. Robison, Towanda, Kas.

December 17—Brown & Walker, Clarinda, Ia.

December 22—W. H. Billiter, Carroll, Neb.

January 28—Spohr & Spohr, Latham, Kas.

#### Jack Stock.

December 8—A. C. Finn & Sons, Cartter, Ill.

Taylor & Jones, of Williamsville, Ill., widely known importers and breeders of Percheron, Shire and Belgian horses, start their advertisement in this issue. We ask all subscribers to mention the American Breeder when visiting or writing this firm.

The Northwestern Live Stock Insurance Company, of Des Moines, Ia., is one of the oldest and strongest firms in this business. Their regular advertisement starts in this issue of the American Breeder.

J. C. Robison's twentieth public sale of fifty Percheron stallions and mares will contain the largest stallion offering to be sold at auction this season. This is his greatest offering in point of quality and values, and contains many members of his successful show herd and much other prize winning blood. Mr. Robison found throughout his campaign at the western state fairs the most active interest in draft horses he has known for many years—a condition which means good business for every man who buys in his sale. Application should be made immediately for catalogue, addressing J. C. Robison, Towanda, Kas. (where the sale will be held), mentioning the American Breeder. The date of the sale is December 17. It is worth a long trip to see Whitewater Falls Stock Farm, where much of the offering was raised, although some choice imported stock is included.

The work of one of the greatest Percheron sires in America will constitute the chief attraction in Brown & Walker's dispersion sale to be held at Clarinda, Ia., December 17. When the Percheron stud of Brown & Walker was well established, the great International champion, Helix, was placed at its head. No effort has been made to produce Helix colts for show purposes, the stud being conducted at all times strictly on a farm basis. When it became necessary, however, to disperse the herd, selections were made of the Helix colts of suitable ages and they were shown at the strongest western fairs. They were uniformly successful and wherever shown owners of rival stallions united in the statement that Helix had made good as a sire. Not one sale out of a hundred contains such a feature as this Brown & Walker dispersion, for here practically every mare and filly is either the get of or in foal to a champion stallion, while the young stallions offered have the breeding to back them anywhere that their individuality warrants. Write at once for the Brown & Walker catalog as above, and mention the American Breeder.

The Billiter-Burress sale of Percherons and Belgians to be held at Carroll, Nebr., December 22, will attract many discriminating buyers by reason of the strong infusion of Galetas blood it contains. Galetas is one of the most massive, clean bone Percheron stallions ever brought to America, and he and his get have brought more attention to the Percheron business of his owner, W. H. Billiter, than everything else Mr. Billiter has or has owned. We are fortunate in having for the advertising of this sale the photographs of both Galetas and Burress Bros. herd stallion, Brise Tout, an example of Belgian massiveness equally striking. We ask every reader in position to attend, or interest others in this sale, to address W. H. Billiter, Carroll, Nebr., for catalog, and mention the American Breeder.

W. L. Lake, Ft. Cobb, Okla., has Oklahoma bred Belgian and Percheron stallions for sale.

M. W. Magnusson, Safe, Mo., is making special prices on mammoth bronze turkeys, white Embden geese and White Rock chickens, also a few Peafowls.

Considering the great loss of farm stock every year, it seems absolutely imperative to do something to prevent contagious diseases. In hogs alone there is a money loss of several millions of dollars annually—90 per cent of which is attributed to worms. Veterinarians are beginning to call attention to the danger of these parasites. Thousands of lambs are lost every year through stomach worms; horses and cattle are subject to peculiar contagious diseases that carry off hundreds. They are also subject to worms, and there is no doubt that many deadly contagious diseases find their first victims among stock that are badly worm-infected and in a run down condition. Healthy animals are usually exempt, or if attacked, recovered. It is evident that stock raisers do not fully realize the deadly destructiveness of worms or

# Dispersion Sale

Thursday, Dec. 17th

35 Percherons - 9 Stallions - 26 Females

The stallions include Helix 70340 (75752), grand champion Percheron stallion of America 1910. The females include 26 home-bred and imported mares and fillies. Practically all either sired by or in foal to Helix. Our offering includes our entire show herd of 1914 as follows:

## Winners at Interstate Fair, St. Joseph, Mo.

First and champion aged mare; first and champion mare under three years; first and champion stallion under three years. Best three mares owned by exhibitor; first and third produce of dam; second get of sire; second and fourth stallion foal.

## Winners at Iowa State Fair

First on mare with foal at side; third yearling stallion, open class; third in futurity; fourth in Iowa class; fourth, sixth and ninth in Percheron filly futurity; last five get of Helix; second on get of sire on get of Helix 70340; fourth on produce of dam, all by Helix.

Our aged mares are big, rugged, good workers and safe in foal to the champion Helix. Our young things are of the prize winning variety.

Write at once for catalog, mentioning the American Breeder.

# Brown & Walker

Clarinda, Iowa

## IRVINEDALE BELGIANS

We import 'em good and breed 'em likewise

One of the Few Establishments in America Offering Recently Imported Animals.

### OUR AUGUST IMPORTATION

Was one of the best we have ever had, and about the last to leave a European port. We have

40 Stallions; 20 Mares

A few good Percherons among them. Will refund the expenses of any visitor who thinks we have deceived him concerning what we have to offer. Ankeny is ten miles north of Des Moines on the Northwestern Ry. and Ft. Dodge Interurban. Always mention the American Breeder.

CHAS. IRVINE

Box 7

Ankeny, Iowa

## WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had direct from the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

## Bargains in Percheron Mares

I am preparing to quit the farm and My Entire Herd of 50 Percherons—Mostly High Class Mares and Fillies—Is for Sale.

I have a few good stallions, of course, and will make close prices on them, but any man who will take all, or a large part, of my mares and fillies, will get a bargain he cannot find anywhere else. Good registered draft mares will be the money makers for years to come.

GEORGE HIRSCHMAN,

PIERSON, IOWA.

### FOR SALE OR TRADE.

Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

H. H. BURNS,

Argonia, Sumner County, Kansas

### PERCHERONS.

Write for prices on imported and home bred Percheron stallions, mares and fillies, now on hand at the Sunny Plain Farm.

W. C. BAUGHMAN, PULASKI, IA

### REGISTERED PERCHERONS.

Weanling, yearling and 2-year-old fillies; yearling stallion. Mares over a ton; sire 2,160 pounds. Pair full sisters. Three-year-old jack.

S. J. MOLBY, AGRICOLA, KAS

Acclimated stallions—Belgians and

**IMPORTED AND HOME BRED  
STALLIONS AND MARES.  
PERCHERONS, BELGIANS, SHIRES.**

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Percheron this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

## Imported Percheron and Belgian

Stallions and Mares.

Not so many, but the right kind at the right price.

J. R. JUSTICE, GALESBURG, ILL.

## PERCHERON and BELGIAN

Prize Winners.

Won over \$1,200 in cash premiums in 1914. Buy the winners.

LONZO McCLAIN, LIMA, OHIO

## KODOMA 43372

The Great Ton Show Stallion and Percheron sire, for sale. Height 16.3; color gray; age 9 years. Absolutely sound and clean, with the best of feet, bone and pasterns. His sloping shoulders support a beautifully carried head and neck; while his short, broad back, over a deep ribbed middle, smoothly moulds into strong loins and level croup over the best draft hocks imaginable. Kodoma has 12-inch bone below his hocks and scales 1,920 pounds; today in active stud condition weighing some 2,200 pounds; fitted for showing. Guaranteed to get 60 per cent foals. Price \$1,000.

W. T. WILKINSON,  
Eureka, St. Louis County, Missouri.

Percherons—roans and blacks in color. Not fat, but hardy and heavy boned. The Belgians are grandsons of Indigene du Fosteau. Ages two to five years. A few good mares also. Crawford & Griffin, Newton, Ia.

Shetlands for Christmas presents are advertised for sale by W. J. Thompson, Dorchester, Neb. Either spotted ponies or solid colors furnished, as the herd is one of the largest in the country. Extra special low prices on weanling horse colts.

W. H. Billiter's consignment to the Billiter-Burgess sale at Carroll, Neb., Dec. 22, has been pronounced by one of the most discriminating importers, as equal in quality and bone, to any collection of similar number he saw on the farms of France. Write W. H. Billiter, Carroll, Neb., for a catalog of this sale.

J. P. & M. H. Malone, Chase, Kansas, start their regular season's advertising in this issue. They say they have the best lot of jacks and stallions they have ever offered for sale. All large, smooth fellows with plenty of bone and substance, and with plenty of colts, and mares in foal, to show for them. They are all in fine condition and acclimated.

Chas. M. Pierce, Auxvasse, Mo., is offering a registered Percheron stallion for sale at \$500, as he has more stallions than he can use.

J. J. Gustin, Murdock, Nebr., has 11 Percheron stallions and mares for sale at a bargain if all are taken, or will sell separately. He is going to leave the farm March 1st, so this stock must be sold.

S. L. Green, Celeste, Texas, is offering 25 young jacks for sale, sired by Longfellow 2126. His ad in this issue gives a good description of what he has.

F. M. Lorimer, Olathe, Kans., wants horses to winter, as he has an abundance of feed—hay, sorghum fodder, corn and corn fodder, water and bluegrass, and has room for 200 to 300 head.

O. J. May, Bennet, Nebr., is advertising a colic and indigestion cure for horses and cattle which sells at \$2.00 a bottle and a guarantee goes with each bottle. Try it.

Adam Matz, Carmi, Ill., has a jack for sale, or trade for any good stock that he can turn on pasture.

F. T. Wallace, Assumption, Ill., is advertising seven stallions and four mares for sale in this issue. He is anxious to dispose of this stock and will sell at a bargain.

Bruce Saunders, Holton, Kas., has registered Percherons, jacks and jennets of all ages for sale. His mares are bred to the champion stallion, Inclus.

Garee & Garee, Noble, Okla., have twelve jacks priced to sell.

Frank Premaner, Waverly, Kas., is offering his pure bred Belgian stallion, Biz 4972, for sale.

S. S. Mouse, La Cygne, Kas., has marked the prices way down on his Percherons, jacks and jennets, and will consider work horses, mules or light auto on a trade.

Crawford & Griffin, Newton, Ia., start their regular season's advertising in this issue. They have Belgians and Percherons.

Chas. C. Butcher, V. S., Russell, Kas., is advertising in this issue a Standard bred stallion and an Arabian stallion for sale, also a mammoth jack and a Shetland pony stallion. See the ad.

Nicholas Stamm, Muscatine, Ia., wants to sell two Percheron stallions and 20 high grade mares. Write him for full particulars.

### A STATE WRITING ITS LIVE STOCK HISTORY.

The new Missouri Shorthorn History, being issued by the State Board of Agriculture, is now in press and will be issued about December 1. Requests filed with Secretary Mayes at Columbia will be filled as soon as the bulletin is received from the state printer. It will be the best history of Shorthorn cattle in Missouri that has ever been issued, and is one of a series on the live stock industry.

### COCHEL CHOSEN VICE-PRESIDENT.

W. A. Cocbel, professor of animal husbandry in the Kansas State Agricultural College, was elected vice-president of the American Society of Ani-

# BILLITER - BURRESS

W. H. BILLITER & BURRESS BROTHERS, OF CARROLL, NEB.

AMERICAN BREEDER

AMERICAN BREEDER

Galetas (72194) 64798, Head of Billiter Percherons; a Famous Sire and Prize Winner.

Brise Tout (41932) 3135, Head of Burress Bros.' Belgians and Included in the Sale.

## 25 PERCHERONS AND BELGIANS

Nearly half this offering are massive, heavy, strong, clean-boned grays, the type that has been the mainstay of the Percheron breed. Nine of them are by Billiter's magnificent gray imported stallion, Galetas, famous as a sire and prize winner. From the Burress stud a similarly great Belgian sire will be sold. This is Brise Tout 3135, used seven years by Burress Bros., and for sale now only because of his mares and fillies, some of which are in this sale.

Mares are a feature of this sale—grays, blacks and roans—but do not forget the half dozen high class young Percheron stallions.

Most of the mares not akin, are in foal to the gray Percheron, Galetas, or the gray Belgian, Brise Tout.

Write for catalog, mentioning American Breeder, to

W. H. BILLITER, Carroll, Nebraska.

## Robison's Percherons

Largest Stud, Longest Established, and the  
Leader in Show and Sale Records for the  
West. Best in Blood; Most Common Sense  
in Care

None Can Undersell Me, Values Considered

J. C. ROBISON, TOWANDA, KAS.

### What About Imported Percherons?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few if any will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ton horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.

PERCHERON IMPORTING CO. Chas. R. Kirk, Pres. St. JOSEPH, MO.  
All street cars going south from Union Depot pass our stables.

mal Production at its meeting in Washington, D. C. Professor Cocbel made one of the principal addresses at the meeting.—Kansas Industrialist.

### THE BELGIAN ASSOCIATION INCREASES REGISTRY FEES.

The registry fees were increased and are as follows: To members, imported stallions, \$15.00; imported mares, \$10.00, and native bred animals, \$5.00; to non-members, double said amounts with a penalty that the respective fees be doubled when the application is not made and fees paid within one year of date of importation in case of imported animals, and within one year of date of foaling in case of native bred animals, the new fees to take effect January 1, 1915.

The election of officers resulted as follows: Samuel Bell, Jr., President; Henry Lefebure, Vice-President; J. D. Conner, Jr., Secretary and Treasurer; Milton E. Jones and Fred Holbert, Directors for three years, and Eli Sprunger was elected to fill out the unexpired term of Samuel Bell, Jr., elected to the presidency.

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT,  
Cedar Bayou, Harris County, Texas.

## 40 HEAD OF PERCHERON

Stallions and Mares

Now on hand at Woodlawn Stock Farm. Prices right. Write us.

SPOHR & SPOHR,  
Latham, Butler County, Kansas.

### SADDLE STALLION, PERCHERONS AND 10 JACKS

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14 to 16 hands high for sale at reasonable prices. Write your wants or come and see me.

W. L. GRAHAM,  
Mackville, Washington County, Ky.

## CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2. Plainfield, Ill.

## PERCHERON STALLIONS AND MARES

For sale. Seven stallions—5 yearlings, one 3-year-old, one 4-year-old; four mares; every one good bone and good individuals. I want to sell, and the first buyer will get a bargain.

F. T. WALLACE, ASSUMPTION, ILL.

## Banner Stock Farm

Home of Inclus.

Registered Percherons, jacks and jennets; all ages. Mares bred to the champion stallion, Inclus. Write your wants to

BRUCE SAUNDERS, HOLTON, KAS.

## PURE BRED BELGIAN STALLION.

Biz 4972; beautiful bay; 5 years old; weight around a ton all the time. Best of foal getter; sure breeder and sound. Will be sold under any reasonable guarantee.

FRANK PREMANER, WAVERLY, KANSAS.

R. R. 3.

## PERCHERONS

For sale. Two dark gray, 3-year-old stallions. Recorded. 20 high grade mares; weigh from 1,600 to 2,100.

NICHOLAS STAMM, Muscatine, Ia.

## SIX PERCHERON STALLIONS

For sale, including our imported herd stallion, Siroco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.

A. M. DULL & SONS, Washington, Kas.

## PERCHERON STALLION

For sale. Corbon 51151; 9 years old; dappled gray; 16 hands high; weighs 1,900 pounds; sound. Colts to show. Fillies in his way. Will sell so he will pay out the first season.

R. N. MONTGOMERY, Rich Hill, Mo.

## Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.

C. G. ANDERSON, Hector, Minn.

## Jack Type; Lesson II.

Jack No. 2, Age 5 Years; Height, 62 Inches; Heart, 70 Inches; Bone, 9½ Inches.

There has been a great variety of opinion as to the proper conformation of a jack. Any breed of live stock having such great value should be better understood. An early demand was created for tall, slim jacks, 16 hands or higher. There are still some who believe this is the proper conformation.

A general discussion as to the most serviceable type of American jack should benefit our readers. The above is the second of a series of photographs of jacks which all our readers are expected to discuss. This should be especially beneficial to those sections of the country where jacks are now being introduced. There are thousands of breeders throughout the country who own good stallions; they could just as well handle a jack in connection, and they will welcome this information.

Below the photograph are given the measurements of Jack No. 2. We want our readers to tell us where this jack is deficient and where he is good. All communications concerning this animal should be sent in immediately, so as to appear in the next issue. We want every one to feel perfectly free to express his opinion on this animal.

### Discussion by Subscribers, of Jack No. 1, Pictured in Issue of November 5.

Wm. Williams, Marion County, Ill.—"The jack shown in your paper is too tall for the size of his body; not square enough in the hind quarters; ears too short; badly shaped head; lacks style and quality."

Bernard Bergman, Nemaha County, Kansas.—"I do not claim to be an expert in judging a jack, but in my opinion jack No. 1 is altogether too light in his body and his shoulders are not sloping enough; too low in the neck and his ears are too short, and he has no muscles."

Loren Omba, Madison County, Iowa.—"In regard to jack No. 1, I think his ear tips a little too short. He is too long in back, and too low headed. As I am the owner of a good jack and a number of stallions I want to learn all the good points of a jack I can."

Albert Beauchamp, Grayson County, Ky.—"In regard to my objections to jack No. 1, will say, in the first place he is four inches too high for his weight, and fully six inches too small around the girth; bad hocks; small feet; stooped; rump narrow; straight back; thick, short neck; pony head and ears. Now I will say what shape and form suits me. From 15 to 15½ hands high; weight from 1,000 to 1,200 pounds; broad, heavy bone; large knees; round, large foot; broad, fairly straight hocks; square, fairly straight rump; wide, long back; long, deep shoulders and wide breast; long range neck; large, wide, Roman head; large ears, opened well at the bottom, long and pointed."

Wiley Clouston, Jr., Ness County, Kansas.—"Jack No. 1 is too tall and rangy and does not girth enough; has a light stifle and short hip and not coupled up very close; is a little low in front of withers, and has not a very good head; looks to be a little 'dish faced.' Bone is good enough. A jack that is not far from right for a good mule is the kind about 15 to 15½, with a 9½ to 10 inch bone, and girth about 73 inches; good heavy body at both ends and weigh about 1,150 to 1,200 pounds."

P. H. Vories, Gallatin County, Ky.—"I want to say right at the beginning that I don't know anything about a jack. Have always noticed that the least any one knows they always have the most to say. My opinion about jack No. 1, beginning at his head; faulty; dish face; too light in jaw; sleepy in the eye; ears too short; low carriage; too low in front of withers; back too long; bad coupling; droops too much from coupling to root of his tail. Tail comes out too low down; slab-sided; too narrow across, what I would call 'rabbit named'; too much daylight; too small in heart and flank. Some would say that his legs were too long. That would be no fault if his body was in proportion to his legs; hind legs stand out behind too far. Weight all O. K.; so is bone if measure is correct. Taking him altogether I take him to be a very bad type of a good jack."

Ed Fox, Mehaska County, Iowa.—"I find that a jack 15 hands, weight about 900, with plenty of body, bring the best selling mules, and with more snap to them. I had a 16 hand rough jack and his mules were rough, and had no style. He was all right on small mares. I don't like the head on jack No. 1, and body is too small and rough. He has good bone and feet but his neck and foreparts are all up-side down. There is no jack that is fit to breed 50 mares as they come, to get the best mule, without it is a small jack."

Corson Bros., Atchison County, Kansas.—"As to faults of jack No. 1, would say that his general make-up suggests a jack of very poor constitution. Holding his tail as he does tells that he is rheumatic. For a jack 16 hands his heart measure is deficient; should be at least 70 inches; flanked entirely too high; stifle too small; forearm likewise. Head sets on wrong; nose out too far; too thick in throat latch; ears short."

Wyatt Carr, Story County, Iowa.—"My objections to jack No. 1, are: he is too tall; weakly constituted; lacking quality; one of the kind that have everything happening to them; nothing to resist disease; will sire hony, long-legged mules that will be slow feeders and never will look like anything when they are fat; daylight never weighs anything and you can never sell it for anything, but when you buy too much of it under a jack it always costs you plenty."

## CLOSING OUT SALE December 15 15 Percherons and Jacks 15

Percherons all registered in the P. S. A. All broke to work but two and all O. K.

**Stallions**—One 8-year-old; coal black; a ton horse. One 4-year-old; brown; in the harness every day, but would weigh a ton if fat. One 3-year-old, 1500 pounds, and one colt.

**9 Mares**—2 to 16 years old, all in foal, 1600 to 1800 pounds.

**2 Jacks**—15½ and 14½ hands; 4 and 5 years old; both broke to mares.

Write for particulars.

**George S. Johnson**

PLEASANT HILL, MO., Route 2.

Sale on farm 2½ miles east of town. Free conveyance.

**R. L. HARRIMAN, Bunceton, Mo.**

*The Fine Horse and Jack Auctioneer  
of the West*

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

## Bigger Blood For Your Jennet Herd

Twenty-three young jacks for sale, sired by the Great Jennet Jack, Longfellow 2126. Longfellow is by Imp. Kingfinkler, and Longfellow's first dam was sired by Sant Magraren, another imported Majorica jack. Dr. J. L. Knight says in his book on the different breeds of jacks, that the Majorica is the biggest breed in the world. Jack men who want more size in their jennet herds (and who does not?) had better get some of this blood. I have them that are big enough, and black enough and bred strong enough to head anybody's herd of jennets. Longfellow and his get won first this fall at one of the biggest state fair jack shows ever held. These young jacks must go, to make room for next crop, so my prices are bound to be right. Write me or see me quick.

**S. L. GREEN**

**CELESTE, TEXAS**

### FAIRVIEW STOCK FARM.

Registered Jacks Bred to Meet the Modern Requirements  
For Bone Substance and Stamina.

25 head, from weanlings to seven years old, and up to 1,200 pounds in weight. We won championship on both jacks and jennets at the Kansas State Fair, both 1913 and 1914.

Also for sale—one two-year-old Percheron and two yearling stallions. See our stock and get prices. We can save you money. Everything guaranteed as represented when sold.

**H. T. HINEMAN & SONS,**

**DIGHTON, KANS.**

## MAMMOTH BLACK JACK

With White Points; 2d Prize Winner at Kansas State Fair, Topeka. Foaled August, 1911; 15½ hands; 1,000 pounds; in rather thin flesh. This is a very heavy boned jack, a sure colt getter, and a prompt server on mares. Its sire, Admiral Carter, is 16½ hands, weight 1,250; its dam, a big roomy jennet. This jack sells for \$800. Come or write—

**J. F. TRUE, Jr., Perry, Kansas**

### PERCHERONS, JACKS, AND JENNETS.

A few tried imported black Percheron ton stallions; extra breeders and well bred enough to head any pure bred herd.

12 head of registered big black Mammoth jacks, from 2 to 5 years old; 14½ to 16 hands high; well broke and quick performers. We have the best herd of well bred jennets in the state, bred to our imported Spanish jack.

Anybody can own a good jack or stallion the way we price them. We have no little stuff. Come and see us. Farm 30 miles northwest of Hutchinson. Will meet trains at Raymond or Chase.

**J. P. & M. H. MALONE, CHASE, RICE COUNTY, KANSAS.**

## GOOD JACKS AND JENNETS FOR SALE

One 4-year-old; 15½ hands; broad and deep. One coming 3, one 6 years; 15½ hands; broke to both mares and jennets. Three yearling jacks; extra good; one herd jack, sire of above jacks. These jacks are among the best in Central Missouri. Six splendid jennets. This stock is all black with white points, and registered where old enough. One German Coach stallion, 7 years old, from Crouch & Son. Will price this stuff right, as I want to sell. Write for prices and come to see me.

**O. L. POTTER**

(8 miles of M. K. & T. R. R.)

**ROCHEPORT, MO.**

### MILLER STOCK FARM

Jack and Jennet Bargains.

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull. No stock shown on Sunday.

**F. M. LORIMER, Mgr., OLATHE, KAS.**

### BIG MAMMOTH JACKS AND JENNETS

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles north of Monett on Frisco R. R., and six miles southwest of Hoberg on Mo. Pac. R. R. Write for prices to  
**Henry Obermann & Son, Frelatatt, Mo.**

## ANOTHER GOOD ONE

Jack colt foaled October 3, 1913; measurement October 3, 1914. Height, 55 inches; girth, 52 inches; length, 69 inches; head, 25 inches; muzzle, 21 inches; ears, 31 inches; hock flat way, 7 inches; bone, 7 inches. I own the sire and dam of this colt, also four other large size mammoth jacks ranging in age from 3 to 6 years old. Two extra good 2-year-old jacks and a herd of extra heavy bone mammoth jennets, and a registered Percheron stallion 3 years old; black in color; will make a ton horse in another year.

I will sell any part or all of this stock cheap for cash, or will exchange for land within 100 miles of Kansas City. Address

**OWL HOLLOW STOCK FARM,  
W. W. SHOTT, LATHROP, MO.**

**Kentucky Mammoth Jacks**, colts to 6 years. Style, bone, weight. Saddle stallions, mares, geldings. Write for pictures, etc. Home cured bluegrass seed and cedar fence posts. Cook Farms, Lexington, Ky.

## Astral King Excels

IN FORM, STYLE AND SUBSTANCE

and Breeding Ability, and

At Everyone of the Saddle Horse Gaits

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind of buyers.

Registered Herefords for Sale—Weanling bulls and heifers at \$100, and yearlings at \$150.

JAMES HOUGHIN, JEFFERSON CITY, MO.

## REGISTERED SADDLERS

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Fos McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

H. A. GREENWELL, LAKENAN, MO.

## REGISTERED SADDLE STALLION

For sale or trade for registered cattle or Percheron mares. Register No. 4846; weight 1,240; age nine. Also two good heavy boned jacks, ages five and nine.

PERKINS & COAD, Albion, Ill.

## War Horses

Registered Black Hawk Morgans, stallions and mares; all ages; one or a carload. None better for cavalry horses. Or will trade for a large jack or land. Write fully in first letter.

E. F. BROWN, Derby, Lucas Co., Iowa

## REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and naves, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered naves and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 10 colts from him next spring.

RICHARD SELLMAN, Rochelle, Texas.

## MILLER STOCK FARM

Bargains in Standard Bred Stallions.

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade or he above. No stock shown on Sunday.

M. LORIMER, Mgr., OLATHE, KAN.

## STANDARD BRED TROTTER STALLION

For sale. Ralph Forest 56816; 3 years old; 16½ hands high; weighs 1,400 pounds. Is a good individual. Priced to sell. No trades.

N. MONTGOMERY, Rich Hill, Mo.

## EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

## Shetland Ponies

100 HEAD IN HERD.

Solid colors and spots. Special values for Holiday buyers.

Nothing will give children the pleasure and service in proportion to first cost and care. Buy the good kind and they are always ready sale.

J. J. THOMPSON, Dorchester, Neb.

## Questions and Answers

(Continued from page 7.)

even a larger purge than the one I've now had been in order. It is not likely that more of your animals will become sick if you keep them out of the field.

**1345—BLOOD POISONING**—What is the best remedy to prevent blood poisoning when horses get cut in wire fence?—Nebraska Subscriber.

**REPLY**—Thorough and prolonged saturation of the wound with some of the well recognized antiseptics, being careful to use sterilized utensils, and all that goes with the care of the wound at all times.

**1346—STIFLE JOINT LAMENESS**—I have a colt six and a half months old that has been so he can hardly get up for three or four weeks. He has a sort of hard pus on stifle joints; one side larger than the other. He is getting quite thin on good hay and oats, which ought to keep a colt in good shape this time of year. I am using an absorbent liniment at present. Please advise me what caused it and what can be done, as he is one of a well mated span.—Washington Subscriber.

**REPLY**—We fear your colt suffered a navel affection while young and now has a joint disturbance as a result, which often occurs. If not that, it is quite likely it is a joint involvement of the nature of rheumatism which often leads to erosion of the cartilage of the articulation leading on to an incurable state. We very much fear you have an incurable case in any event.

**1347—UNTHRIFTY STALLION**—I have a six-year-old stallion that is not doing right. He eats good and feels good but does not gain in flesh, and has a slight cough at times. I am feeding corn chop and bran for grain, and a change of cane hay, prairie hay and a little alfalfa. He seems to cough worse when he eats alfalfa. What is the best feed for him?—Kansas Subscriber.

**REPLY**—Your stallion should be carefully examined by a competent veterinarian to learn why the chronic cough. He may have a chronic bronchitis or chronic heaves. You will find good, sound, heavy oats a better grain than what you are feeding. Add to this a little oil meal, also the newer feed of alfalfa ground and mixed with molasses. You will find this excellent if fed in moderation. Alfalfa hay is good if it is strictly first class, unless heaves is already present. Have his teeth examined so as to be certain the fault is not there. A course on Fowler's solution, giving one-half ounce in the feed three times a day, you will find will prove a good tonic. See that he has an opportunity to take exercise.

**1348—STRING HAIT**—I have a coming two-year-old registered Percheron stallion that two months ago seemed to have something like rheumatism, and after a week or two got over that and got crampy in one hind leg and now will take several steps all right and then first one leg will jerk or catch, and then the other. We have been using liniment on the stifles but it doesn't seem to do any good. Is there anything to be done?—Missouri Subscriber.

**REPLY**—It is evident that your stallion is affected with some disease the nature of string halt, an affection that is inclined to show up in an aggravated form as cold weather approaches. It is doubtful if anything either in the way of internal treatment or local application will be of any aid in his case. In some instances surgical measures effect a cure, but it will be necessary for some good veterinarian to pass on this point by giving him a careful examination before positive advice can be given.

**1349—CATARRHAL DISCHARGE**—I have a horse about 12 years old that has a bad discharge from the nose at times—three or more times a week. This is noticeable when he has his head down to the river or creek to drink; if in still water it sometimes sinks to the bottom. This is thick and of a yellowish cast. Most all the time his nose is somewhat waxy around the nostril; the nose is not clean or normal. He never coughs or wheezes, and it does not seem to affect him in any way. He is in good flesh and has a sleek, glossy coat and his appetite is normal. He has been this way for almost a year that I know of.—Montana Subscriber.

**REPLY**—From your description we would judge that your animal is af-

affected with chronic nasal catarrh which very likely has extended to and involves the guttural pouches. You should have this animal examined by a well qualified veterinarian with a view of fully determining the absence of glanders, and if suspicious symptoms are in evidence, he should by all means be given the mallein test.

**1350—HOLSTEIN-FRIESIAN ASSOCIATION**—Please give me the address of the Holstein-Friesian Association.—Missouri Subscriber.

**REPLY**—Frederick L. Houghton, Brattleboro, Vt., is the Secretary of the Holstein-Friesian Association of America.

**1351—UMBILICAL HERNIA**—I have a three-year-old mare, weight 1300 lbs., which has a rupture in the navel about the size of a walnut. The hole is about the size of a thimble where it comes through. This mare is with foal. Is there any danger with this mare being in foal and having the rupture? If so, please advise me what to do.—North Dakota Subscriber.

**REPLY**—It is not likely that such an opening as you describe will result in harm to the mare on account of being in foal. Also, it is not likely, if the opening is no larger than you represent, that it will even cause annoyance in the future.

**1352—WHO OWNS THIS STALLION?**—Who bred the Belgian stallion, Charger 2425? Also, who is the present owner?—South Dakota Subscriber.

**REPLY**—This stallion appears on our records in the name of A. Latimer Wilson, who registered him. Our records show no transfer of this stallion.—J. D. Conner, Jr., Sec'y Belgian Record.

**1353—RIDGLING COLT**—Will a colt that is a ridgling now, and is two and a half years old, be likely to come straight in time for service? Will a ridgling stallion be apt to get the same kind of colts?—Kansas Subscriber.

**REPLY**—If the testicles are not down in a thrifty, vigorous colt at two and one-half years, they rarely descend later. Such an animal should not be used as a breeder as this weakness is apt to be transmitted to the offspring.

**1354—WHO HAS DEVON CATTLE?**—Is there a man advertising Devon cattle for sale in your paper? If there is not, will you please tell me where they could be bought?—Oklahoma Subscriber.

**REPLY**—The columns of the American Breeder are open to advertisers of Durocs, or any other breed of cattle. If you have friends who have good pure bred cattle or hogs for sale—any established breed—you can

Many horses bought in this country for military purposes are being fed in bands of various sizes, not far from the market centers at which they were collected.

# I'll Rid Your Stock of Worms

# I'll Prove It Before You Pay

## I Want You to Know The Value of SAL-VET

—I want you to feed it at my risk—I want to prove to you on your own farm that SAL-VET will rid your stock of worms, put them in healthy condition, easier to keep on no more feed—more profitable in every way—and less liable to disease. I don't want you to send me a penny in advance—just mail the coupon. I'll ship the SAL-VET just as agreed, let you feed it 60 days—and if it does not do what I claim, then I'll cancel the charge. Is not that a fair, open offer?

### READ!

"Before I started to feed SAL-VET my hogs were sick, and I had lost six of them, since feeding SAL-VET I have lost none, although some of them were pretty sick before they had access to SAL-VET and had lost their hair. However, they pulled through all right and now have good appetites and are thriving."

ERNEST TRIEBEL,  
Route No. 2, Clearwater, Minn.

"After feeding SAL-VET to sheep, hogs, horses and cattle during the past winter, and found it a reliable conditioner and worm destroyer. My stock never looked so healthy and thoroughly conditioned as now."

U. H. SUMMER,  
Brownville Jet., Maine.

"My hogs are doing finely; have kept SAL-VET before them for two months and while there has been lots of disease amongst hogs in this section, none of mine have been sick."

GEO. A. ELINE,  
Route No. 20, St. Matthews, Ky.

"I have fed SAL-VET to all my stock; it has put them in fine condition, and improved them wonderfully. The cholera has been killing hogs all around my home, but I have not lost a single one, I have never used so effective a remedy."

SANFORD GERST,  
South Boston, Va.

"I enclose check in payment of the SAL-VET sent recently. Four times this sum would not begin to pay for the benefit I derived from feeding SAL-VET."

W. H. WALLACE, Franktown, Va.

"I have great faith in SAL-VET. Since feeding it, I can certainly see a great improvement in my stock. I have fed a number of different stock foods and remedies, but have never found any as good as SAL-VET. I am recommending it to my neighbors and others who lost hogs with the cholera."

C. G. FIELD, Hiawatha, Kansas.

### READ!

"I am feeding SAL-VET to 750 lambs and about 100 hogs. During this time there has been no sickness whatever among this stock," I consider SAL-VET cheap insurance."

THOS. J. LILLY, Wheeling, Mo.

"SAL-VET is certainly a great medicine. I have been feeding it all winter, so far and since I started, my stock are better than ever before."

ALBERT MEANS, Walthill, Nehr.

"Have been feeding SAL-VET to some of my horses which were very thin and in a run-down condition. They have now picked up in flesh and spirits in spite of the heavy work incident to this time of year."

ELI FURLAND, Artesian, S. D.

"I had a yearling colt which was not doing at all well. I had fed turpentine, tobacco and other worm remedies, but all failed. On the evening of the 19th of February, I gave this colt a dose of SAL-VET and the following day I had plenty of evidence of its value. It is doing the work, all right."

HARRY BRENNEMAN,  
Rt. No. 5—Ottawa, Ohio.

"I am well pleased with SAL-VET. I never knew a horse could have so many worms and live. SAL-VET surely brings them—big and small. Horses to which SAL-VET is fed, act 100 per cent better, and what we formerly thought was colic and meanness, was nothing but worms and worms."

J. E. TERKEURST,  
271 Dauphin St., Mobile, Ala.

"The more I use SAL-VET the better I find it. My sheep and hogs were never so thrifty and healthy as now. We butchered this week, and did not find a single worm, while our neighbors' hogs are wormy and dying. I have been recommending SAL-VET to them and they are now ready to use it too."

WESLEY CHAMBERS, Bussey, Ia.

# SAL-VET

The Great Worm Destroyer

REG. U.S. PAT. OFF.

The Great Live Stock Conditioner

—is the medicated salt which contains no antimony, fed just as you would feed common salt. There is no dosing—no drenching—no trouble—all animals need it—take to it readily—and so doctor themselves. You will find animals that you do not suspect of having worms just full of them. Stock that have been run-down will take on new vigor, grow thrifty and profitable. Stock kept free from worms will be healthier; will do better, act better, and be in better condition to resist dangerous diseases. As proof of this read a few of the thousands of letters from stockmen who feed SAL-VET—who depend on SAL-VET to help them make greater profits—and to prevent loss.

## Fill Out the Coupon Below Today

You take no risk whatever in accepting this no-money-down offer. Just fill out the coupon, tell me how many head of stock you have, and I'll ship enough SAL-VET to last them 60 days. You simply pay the freight charges on arrival, and when the 60 days are up, report results. If SAL-VET has not done all I claim, then I'll cancel the charge, and you won't owe me one penny. Address

Sidney R. Feil, Pres.

**THE FEIL MFG. CO., Chemists**  
Dept. AB Cleveland, Ohio

## Send No Money—Just the Coupon

THE FEIL MFG. CO., Dept. AB 12-5-14 Cleveland, O.

Ship me enough SAL-VET to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

# THE AMERICAN BREEDER

WITH WHICH IS COMBINED CARLSON'S RURAL REVIEW

A Farmers' and Breeders' Paper Devoted to the Breeding and Care of Live Stock and the Welfare of Farm Families and Homes

Published Twice a Month. Subscription Price, One Year 50c, Three Years \$1.00

Volume VIII

Kansas City, Missouri, December 20, 1914

Number 8

A STUDY IN MULE CONFORMATION, ACTION AND TYPE.

According to the government statistics, mules are the highest price class of live stock per head in this country. With a little more attention given to the sire, their value can be increased, for the margin in favor of the good ones holds good with mules the same as everything else. Breeders, generally, are recognizing the value of draft blood in mule production. About one-fourth of the mares in the United States are bred to jacks each year. In many Southern states brood mares are getting very scarce. The enormous mule production retards the increase in horse population. Our illustration shows good mules from many sections. Can you pick them out?

(Copyright, 1914, Graham Publishing Co., 225 West 12th Street, Kansas City, Mo.)

# HORSE AND CATTLE BREEDING SCHOOL

## January 4 to 9, Inclusive

### Double Your Income Without Increasing Your Investment

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate the different diseases and abnormal conditions. Students are impressed with facts in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be is eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

The sooner you get this knowledge the longer you can use it. Get a substantial foundation to work on. Get a Diploma. Make your business a pleasure. Breed intelligently.

**REMEMBER THE DATE---January 4 to 9, Inclusive.**

**SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT**

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Delivery—Scientific Mating—Horse, and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Female's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Stock Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a female is pregnant or not—Getting the Semen—Inserting Capsules, etc.

Remember the date and prepare to be here next term. All trains now enter the New Union Station. Take any street car north and transfer west on Twelfth Street. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

**EQUIPMENT AND EXPENSES.**

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

## IS IT YOUR DUTY?

If a child was being murdered and  
it was in your power to prevent such  
a crime, would you do it? If the live  
stock industry in this country was  
being jeopardized, and you could pre-  
vent it, where would you stand? A  
breeder of live stock recently was  
heard to say that it was not his busi-  
ness to engage in cleaning up the  
crooks, but it was the other fellow's.  
He did not undertake to name the  
other fellow, but contended that  
someone else should assume the re-  
sponsibility of exposing certain in-  
dividuals.

There are entirely too many breed-  
ers who assume this attitude in im-  
portant cases. We do not refer to  
little petty grievances. The methods  
and morals of all live stock registra-  
tion in this country are now on trial.  
Two big men have been registering  
animals fraudulently. Nearly every  
breeder in this country understands  
the situation. If there are any who  
doubt that these men have been reg-  
istering animals fraudulently, we can  
furnish more evidence. If these two  
men are permitted to continue, what  
will other men in the same line of  
business be forced to do? How long  
will it be before the registration of  
an animal will be considered a joke,  
if these men are allowed to continue?

This is a very serious problem. If  
every breeder takes the ground that  
it is the other fellow's duty and not  
his, who will assume the responsibil-  
ity of checking this problem at this  
time? This matter has been talked  
over by breeders of all kinds of live  
stock. They are all watching the out-  
come.

We contend that fraudulent regis-  
trations must be stopped and that  
this is the time to stop it. There is  
one way in which persons who have

been victimized can quickly put a  
crimp in the crooks. There is a pen-  
alty for using the United States mail  
to defraud. Breeders who have been  
defrauded by this method should  
place their cases with the postal au-  
thorities. They may not hear from  
them immediately; they may not even  
get a reply to their letter, but slowly  
and surely the wheels of justice will  
start grinding. The one who fur-  
nishes the evidence for the postal  
authorities need not be known until  
the case is thoroughly established.  
The penalty for using the United  
States mail to defraud is well known.  
Fraudulent applications, or sending  
registry certificates known to be  
fraudulent, through the United States  
mails, subject the sender to the pen-  
alty, when once the act is proved.  
Save all your correspondence. Be  
sure to fully and carefully state the  
case. It will not be very expensive  
to have an attorney prepare the evi-  
dence for you. We believe everyone  
interested can afford to do this in  
such an important cause. Send all  
evidence to the Chief Inspector, Post-  
office Department, Washington, D. C.

## MARE OWNER EDITIONS.

Breeders generally are recognizing  
the great value of educating their  
mare owners by sending the mare  
owner editions to them. This is the  
cheapest and the best advertising that  
owners of good stallions or jacks can  
get for their money. The subscrip-  
tion price for the Mare Owner edi-  
tions is ten cents each in clubs of ten  
or more. Each subscriber will get the  
paper for five issues, two in Janu-  
ary, two in February and one in  
March. We notify each subscriber  
by mail from this office, who has  
paid his subscription. All lists should  
be sent in early. No subscriptions  
for the Mare Owner editions will be  
received after January 1st. Do not  
put it off, but attend to it now.

## HOG CHOLERA PREVENTION.

It has been demonstrated in at least  
two counties that hog cholera can be  
practically eliminated in a very short  
time. The most important thing in  
this prevention, is proper quarantin-  
ing. Just as long as sick hogs are  
moved about and visitors are allowed  
to trespass, and dead hogs are im-  
properly disposed of, just so long will  
we have hog cholera in this country.  
A solution of the problem is now prac-  
tically figured down to one of two  
plans; either each county must have  
the opportunity to eradicate hog  
cholera, or growers must vaccinate  
every hog. Hog breeders should find  
out just what is being done under the  
first plan in Fayette County, Ohio,  
and in Pettis County, Mo.

This is the time to prepare for  
proper legislation along these lines.  
If a county is properly handled for  
two or three years, hog cholera can  
be eliminated at a cost very small  
compared with the great annual loss.  
There never was a better time to ad-  
vocate quarantine measures than at  
this time. The entire country has  
just received a lesson in quarantine  
measures as a result of the foot and  
mouth disease.

A veterinarian residing in one of  
the counties mentioned above, said  
that hog cholera was not included in  
his practice, because hog cholera was  
practically a thing of the past in his  
territory. In contrast with the ideal  
conditions in these counties there are  
great areas in which hog cholera is  
being spread by unscrupulous and  
ignorant men. The public is not fa-  
miliar enough with the subject to  
realize the serious need of preventing  
the spread of the disease. It is al-  
ways a case of the "innocent by-  
stander" being injured. While this  
disease is making a pile of money for  
serum factories, at the expense of the  
public, there has developed another  
important need in addition to that  
of proper quarantining and disposing  
of dead animals. That is to have all  
serum tested by the United States  
government before it is placed on the  
market. This will fix the fight re-  
sponsibility upon those now vaccin-  
ating hogs. If the serum is govern-  
ment tested, results will be absolutely  
up to the operator. It will determine  
his ability to diagnose and properly

administer. It would seem to us that  
by this time serum could be handled  
with such accuracy that with a good  
supply and reputable, scientific opera-  
tives, the same plan employed in Pet-  
tis County, Mo., and Fayette County,  
Ohio, could be put into effect in every  
country where hogs are raised.

We should like to see every state  
legislature appoint a committee to in-  
vestigate this work, with a view to  
relieving this great tax on the Ameri-  
can meat supply. Breeders should  
busy themselves at this time in con-  
ference with law makers of the dif-  
ferent states.

## BREEDING STOCK WANTED.

We have received several letters  
from breeders, dealers and developers  
who have encouraged the plan that  
some breeder act as an agent for his  
community or a county selling good  
draft colts. One importer suggests  
that a responsible breeder in each  
community use the telephone for  
making inquiries as to the kind of  
young stock to be seen conveniently  
from his town. He states that the  
colt owners will gladly pay him a  
good commission for selling the  
stock. After he has located the stock  
by telephone or other means, he  
should see it personally, so as to be  
able to answer inquiries intelligently.

There are hundreds of breeders  
over the country each of whom is  
well acquainted with practically all  
of the stock and has plenty of time  
for these transactions. A lot of im-  
porters, breeders and dealers are in  
the market for this stock, if they can  
find it worth the money. There are  
many big establishments that want to  
purchase young stock and develop it.  
The difficulty in locating this stock  
has stopped many who wish to buy.  
It seems to us that breeders have an  
opportunity profitably to supply the  
connecting link which will place the  
young stock in the hands of develop-  
ers. It will help the dealers to locate  
the stock and develop it so that it  
can be sold to the best possible ad-  
vantage.

One breeder writes us that he can  
furnish sixteen stud colts, nine 2-  
year-olds and five 3-year-olds and a  
good number of pure bred mares.  
This, as a matter of course, must be  
taken up with the advertising depart-  
ment. The advertising rate is always  
printed on the editorial page. Here  
is an opportunity for breeders who  
have a good acquaintance to make  
some easy money and with very little  
expense.

## CROOKS OPPOSE THE BREEDING SCHOOL.

There may be some good honest  
men who do not believe in some of  
the things taught at the Graham  
Breeding School at Kansas City.  
There may be others who do not be-  
lieve that it is of any value. There  
may be honest differences in opin-  
ions on all subjects.

But there is one particular class of  
men who are strictly opposed to the  
Graham Scientific Breeding School.  
This is the crooked element in horse  
breeding. Well do they know that  
every man who attends this school  
will get personally acquainted with  
the editor of the American Breeder  
and will be here long enough to in-  
vestigate and learn the exact conditions.  
Crooks are usually afraid of these stu-  
dents so they are using their influ-  
ence against the school. Men have  
been paid salaries to campaign against  
it. They are working now.

Many good honest men have been  
influenced by these crooks and their  
supporters. Spotters have gone  
through this school. They know what  
happens. They know how the men  
feel after they have attended this  
school. They also have realized the  
importance of this vast acquaintance  
with leading breeders in nearly every  
section of the United States where  
horses are bred. Practically every  
student is a fighter for clean business  
and clean records. Much of the evi-  
dence against these crooks has been  
gathered by students from the Breed-  
ing School. Anyone stopping to  
think could see at a glance why  
crooked men are so opposed to such

an institution. Some very good men  
have been influenced by these crooks,  
because they had not given the sub-  
ject enough thought.

The same influence is used against  
the American Breeder. A fortune has  
been spent by the crooked element to  
oppose the Breeding School and the  
American Breeder. One of the argu-  
ments used against the Breeding  
School, is that a less number of stall-  
ions will be required which will cur-  
tail the sale of stallions and jacks.  
The crooked element fails to give  
one of its real reasons, which is that  
practically every man who attends the  
Breeding School soon is in the market  
for better sires with clean pedigrees,  
and makes one less man who can be  
fooled with a counterfeit horse or a  
fake certificate.

## A TRUTH THAT IS UNIVERSAL.

One of the most striking incidents  
in connection with the establish-  
ment of national prohibition in Russia  
has been reported in a story of how the  
manufacture, as well as the sale and  
drinking of vodka, came to be forbid-  
den. By an imperial order the sale  
and drinking of the national intoxi-  
cant had already been stopped. The  
manufacture of this drink was a gov-  
ernment monopoly. In the course of  
a discussion of war measures one of  
the strong supporters of the prohibi-  
tory movement arose in the Duma,  
the Russian congress.

"I hold in my hand," he said, "an  
official report, showing that the gov-  
ernment now owns and has stored in  
warehouses and elevators rye, wheat  
and oats to the extent of over one  
hundred million bushels. This grain  
was purchased for the manufacture of  
vodka. It is apparent that if we use  
this grain for the manufacture of vod-  
ka we cannot use it for bread.

"The deciding factor in this great  
war in which we are engaged will be  
famine; that is, the country that has  
the greatest food supply will eventu-  
ally win. If we use our grain for vod-  
ka we cannot use it for bread. I,  
therefore, hereby introduce a bill pro-  
viding that the government shall  
cease the manufacture and sale of  
spirituous liquors in every form; that  
it shall also prohibit the manufacture  
and sale of strong drink, and that,  
on penalty, no grain or other food  
substances shall be used in this coun-  
try by any one under any condition  
for the manufacture of strong drink."

It was the vote on this bill that put  
Russia ahead (in one all important  
step at least) of England, Germany,  
France, United States and all the  
rest. How simply and directly true  
was the statement he made; so true  
that its application is universal; to  
every other country of the world  
which the curse of intoxication has  
reached, as much as to Russia and to  
every other condition in the world,  
as well as to the condition of war;  
so simple that even the most unlet-  
tered must realize its force and so  
direct that the adroitest sophistry  
could not dull the point of its argu-  
ment. "If we use our grain for vod-  
ka we cannot use it for bread," and  
whether "we" means the people di-  
rectly, through the government, as  
used to be the case in Russia, or the  
people indirectly through great pri-  
vate concerns made wealthy by sad-  
dling all the misery on, and taking  
all the profits from, the people,  
makes not the slightest difference in  
the world. Russia, not only has  
gained the bread from 100,000,000  
bushels of grain; perhaps gained  
mastery in a war which otherwise  
she would have lost, but what is of  
vastly more importance, she has  
gained mastery of a national vice as  
debauching to the governments as to  
the persons that indulge it.

## AVERAGE CAPACITY OF MEN.

Not so many years ago a little girl  
was born who could not see, hear or  
speak; blind, deaf and dumb; today  
she stands as a marvel of intelligence.  
It is unnecessary to recite the many  
accomplishments of Helen Keller.  
Everyone would ask himself this  
question: "What should my capacity  
be intellectually when I consider the

infirmities of this woman?" Very few of us live up to our capacities. Entirely too often we hear men say that they have never had an opportunity. Opportunities are knocking at the door of every man nearly every day. How many of us are sleeping, dreaming and resting and taking no thought of what is in store for us. Too many of us are just letting the days, weeks, months and years quietly slip by. No improvement is made. It is the same old story. Is it not time for those who have good health and normal faculties to take unto themselves a very substantial lesson from this wonderful woman, Helen Keller?

#### FOOT AND MOUTH DISEASE SITUATION.

Congress has just appropriated one million dollars to be used in the eradication of this malady. The work had been hindered to some extent by lack of finance. This fund will be of considerable importance in finishing up the work. Most of the country is now released from quarantine and the cleaning up is progressing satisfactorily in most sections.

The Chicago dairy show cattle were recently moved from the barns at the stock yards to a new location. Several millionaires are interested in this particular bunch of cattle. This may be one of the reasons that they were not slaughtered when others were. It would have been a great loss to the dairy interests to destroy these prize cattle, but it still is a question as to whether these cattle will be free from this infection for a long time. It is the opinion of many good substantial men that they will not. The loss would have been greater to owners of this stock as there is a limit to the appraisal on condemned stock. We do not believe that the Chicago stock yards will be benefited by having diseased animals still maintained in that vicinity. We sympathize with the owners of these fine cattle, as well as others who have met with serious losses.

Practically every great calamity teaches a permanent lesson. Should another outbreak occur, stockmen and veterinarians in general will have a better understanding of the symptoms and of the precautions necessary. It probably would not again have several weeks in which to spread over the country before it is recognized. So much of the first news of the outbreak was suppressed that many have never read where, when and how the outbreak began. To all such the following statement from the federal authorities in charge, will be of interest:

On October 18, 1914, the bureau of animal industry learned that cattle in the vicinity of Niles, Mich., were infected. Evidently before the disease was reported and before it was diagnosed shipments of infected animals passed through the Chicago stock yards.

Upon tracing shipments from these yards animals infected with the disease were found at points in Michigan, Indiana, Ohio, Wisconsin, Pennsylvania, Maryland, New Jersey, Kentucky, Iowa and Massachusetts. Subsequently other points of infection were discovered.

The most plausible suggestion as to the origin of the present outbreak is that it was introduced with importations of an article used in tanning. This article is imported from several countries. There is in the vicinity of Niles, Mich., a small tannery using the article in question, and swine owned by employees of the tannery kept in this vicinity were the first animals known to have contracted the malady.

Since the disease exists in a great part of Europe, in the orient, in South America and other places, there will be danger so long as there is any trade or travel with such countries. Apparently the only certain way to prevent the introduction of the disease into this country from abroad is absolutely to isolate this nation from others.

The only reasonable thing which can be done is to enforce as carefully as possible the inspection laws, to give the department of agriculture sufficient authorization and emergency funds to cope with the disease when it does appear, and to institute such scientific inquiry and experiments under absolutely safe conditions as may be practicable in an attempt to discover the cause (germ) of the disease and to ascertain and apply the remedy.

#### DISCOVERED A BIG BREEDER

A number of men in attendance at a live stock show were in conversation. One breeder said that he had 43 head of registered drafts mares; another one had a number of pure bred cows; others had smaller numbers. The man owning the pure bred mares said it was not profitable to breed high class stock, as it was impossible to find buyers for the young stock.

This man has been breeding pure bred stock for a great many years; has built up an excellent herd. After a little inquiry we found that he had been trying to dispose of his own stock to his neighbors. No one outside of his own county had ever heard of him as a breeder; they did not know that such a man existed. Breeders from that immediate section of the country did not know there was such a herd of stock in that section of the state. It is any wonder that this man has found it unprofitable.

It is a common thing for purchasers to prefer to travel to some distant state for their stock, believing it will give them a better reputation. Many of the best breeders in the country have not relied very much on their nearby territory for buyers.

One of the weaknesses of breeders of live stock is the inability to properly advertise. A reasonable amount of advertising would have made this man's business profitable. It is just as necessary to find buyers who are able, willing and ready to pay a fair market value for the production, as it is to produce them. A reasonable amount of advertising is necessary to place any breeder on the map as a breeder.

One frequently hears a man state that he does not have to advertise to sell his stock. Such breeders usually lose money, either by not making early sales, or selling too low. It is an advantage to the buyer as well as the seller to deal with men who advertise. The average buyer does not have time to make a complete canvass throughout the country. It costs him more to find the stock he wants than he can save in hunting for snaps. The up-to-date purchaser wishes to do business with men who are willing to advertise and answer their correspondence intelligently, for this method will quickly find what they want. The man who has acquired enough money to purchase stock is usually the individual who does not have time to go visiting about the country. The average man who wants breeding stock takes the live stock paper and a map, so as to see where he can get what he wants with the least expense of time and railroad fare. He may not be ready to buy today or for several weeks. The advertisements which appear in the paper at the time he is ready to buy will receive his attention. Advertisers can not expect good results from spasmodic advertising. It is better to have the advertisement running regularly throughout the season, changing the wording of the advertisement when necessary. This is an advantage for this paper, as it is issued only twice each month, and it is not expensive to keep an ad running for several months.

Blood lines, feed, attention and finding buyers are all essential to success with improved, pure bred breeding animals.

#### WINTER AGRICULTURAL MEETINGS.

We are up to the beginning of the winter agricultural meetings throughout the United States. For the most part the best meetings are held at the seats of the various agricultural colleges. It is possible for the resident of any state to have a full program and other information concerning the meetings he can most conveniently reach, and such are the strides that have been taken toward making these meetings of practical value that women, girls and boys, as well as men, are attending, and are finding themselves well paid for the time and expense.

In Colorado the meetings are January 11 to 16. In Kansas they have one week at Manhattan (December 28 to January 2), and one at Topeka

(January 11 to 16). In Iowa the Ames meetings had to be called off because of quarantine regulations, but the draft horse breeders, and some others, will meet in Des Moines, December 30.

#### WHY IS A LOVING CUP?

A question, which for many years has stuck, unanswered, in the writer's "craw" is recalled to mind by late stories of the prizes to be awarded at the various winter agricultural meetings. At the meetings in Manhattan, Kas., the Crop Improvement Association proposes a \$100 loving cup as one of the rewards for excellence in agricultural production.

For the extreme limit in "useless giving" (under such circumstances, at least) we pick the loving cup. The premium committee which invests in loving cups must be as barren of originality as a loving cup is of utility. Not so long ago a bright, energetic good looking and altogether natural Oklahoma girl grew an acre of corn that made the "average per" yield of the state look like the agricultural output of a Navajo squaw for a dry season in Arizona. The Kansas City Star printed a story about it which brought her orders for her entire crop for seed, to say nothing of offers of marriage, jobs in "vodeville" and the like. The extension department of the United States Department of Agriculture gave her an interesting trip to Washington and the cash prizes she won were of course all worth while. But she could not escape the loving cup. Somebody or something wished one upon her. The accounts said it was fourteen inches high.

Now the Star had given a picture of her home, on a stony hillside. A lot of us know the kind. The nearest approach to a library table is the sewing machine. The only thing approaching a mantel is the six-inch shelf where the lamp stands in the day time and the bottle of liniment and the bottle of rump cure for the chickens stand all the time. Such homes do not contain the little black walnut corner stands of the older states—stands just large enough to hold the family album or a bell jar with a glass deer inside. No such furniture ever got through the race across the "strip" in 1893—and has not been "on sale" since that time.

We could see that girl with her 14-inch loving cup looking through the house for a place to put it down. But the farm homes which turn out girls and boys with the pluck and gumption to do what that girl did and a lot of others are doing, do not abound in pedestals for loving cups.

#### KERRY AND DEXTER CATTLE.

Following each publication of the American Breeder cover page design showing typical animals of the various breeds of live stock, we receive more inquiries about Kerry and Dexter cattle than about any of the other cattle breeds. This is doubtless due to the fact that these two breeds are but little known in America and their newness to our readers excites such interest and curiosity as is usually the case with things which are new.

These breeds of little cattle have, of course, some peculiar qualities of fitness, especially for the localities in which they were developed. In fact, breeds do not become established unless to some extent they meet some special requirements. It is doubtful, however, if many of our readers have any need or use for these particular breeds. In Ireland, where they are native, the Kerries are known as the "poor man's cow," and there is hardly a counterpart in American agricultural or village life to the poor of Ireland. However, the possibilities as "town cows" of the Kerries and Dexter-Kerries, (for the Dexters are supposed to be a modification of the original Kerry breed) has had something to do with the starting of a few herds on this continent. The Kerries are slightly the larger of the two breeds and show more of a milk type. They are usually black in color. The Dexter-Kerries are more compact in form and show considerable variation in color, although they are usually dark. An idea of their size may be gained

from the fact that one of the best Dexter bulls brought out at the old country shows was only 36 inches high at maturity, and of course, many females run smaller.

The principal objection to attempting anything with Kerries or Dexters in this country is the difficulty in finding breeding stock. Animals of these breeds are so scarce that desirable ones are necessarily high priced. Kerries bred for many generations under American conditions probably would increase in size, and approach somewhat the general type and character of our smaller Jerseys. It would seem to us much more advisable to seek among Jerseys, or some other breed of which we have a plentiful supply, a type which would meet the requirements as to limited quarters or feed, than to undertake to find Kerries to fill the bill. Probably a generation will pass before the supply of Kerries and Dexters in this country is sufficient to give buyers any breadth of choice, and the difficulties of finding herd bulls, once a herd was started, manifestly would be considerable.

Prof. C. S. Plumb of the Ohio Agricultural College, Columbus, Ohio, is secretary of the Kerry Record, and is one of the best posted men in America on this breed.

#### TOO MANY DOCTORS AND LAWYERS.

A former Secretary of Agriculture has said, in discussing the spread of farm demonstration work: "Two classes of men are required for this work: First, in each county a first-rate farmer who has been a success on his farm and who understands practically, without much theory except what he may have incidentally picked up, how to handle the soil, the plant, and the animal; second, over large districts and states a different class of men is wanted, who have an agricultural college training combined with its application to practice in the field. As we read the daily papers and see the reports of the thousands of young men who are graduated in medicine and law throughout the country, the reflection naturally comes, what a pity that the great demand of the farm for intelligent men is not being more considered by our educational institutions. There is not medical and law work for more than a small per cent of these young men. No doubt the education and mental training they have had will make them brighter men, but there are no jobs waiting for them, that is for more than a very small percentage of them, while the fields are crying aloud for trained men. Housekeepers are complaining of the cost of living. It would seem to be wise for our educators in their national meetings to consider these problems. It might be wise to consider about how many young doctors and lawyers will be needed in the next year to take the place of the older men who are dropping out. That could be very easily determined. Then if the attention of this class of students were called to the demand of the industries for educated men, a different direction might be given to many young men who seem to be 'drawing their bows at a venture.'"

#### WOULD HOLD TO THE AMERICAN BREEDER.

To the American Breeder:—I have been taking your most valued paper now for three years, and along with it two more farm and stock papers, besides two daily newspapers, and if I were compelled to give them all up except one, I should keep the American Breeder, as I think it is the best paper that comes to the farmer.—H. H. Fox, Cowley County, Kansas.

#### QUALITIES OF A GOOD FARMER.

"The ability to make a full and comfortable living from the land; To rear a family carefully and well; To be of good service to a community; To leave the farm more productive than it was when he took it."—L. H. Bailey.

# ORGANIZING FARMERS; THE BEGINNING

By G. L. CARLSON

The observing man is already aware of the fact that few men are really successful. He is also aware of the fact that all along the line of distribution, every man who handles farm products is more certain of a profit than the farmers who produced the products. It is not well to ask ourselves why this condition exists? In view of this fact, those of us who are interested in launching any new policy of farm practice, must carefully study our proposed policies if we are so much as to hope for success.

There are class struggles that are yearly growing more acute in every part of America. Formerly, these struggles were confined to three basic classes, producers, consumers and distributors, or middlemen. Now, there is developing a class struggle that in the near future will overshadow all others. I refer to the constantly widening differences between landlord and tenant; between those who own land they will not work themselves, and those who are the real working farmers.

## Discussion Must Be Fair to Be Worth While.

There can be no good come from a discussion of any subject unless the subject is discussed in terms that are fair to all. Wherever there is occasion for differences of opinion, in nine cases out of every ten the differences are honest ones as understood by those who differ with their fellows. The trouble is one of viewpoint. By reason of the differences in environment and personal interests, there is enough of inherent selfishness in all of us to cause what we have a right to believe to be an honest difference of opinion. The man who has been given special privileges or advantages over his fellowman, however unjust they may be, will cling to them as he will to life. The man who is fortunate enough to own land that others have made valuable, will insist upon claiming all this value as his very own. The man who has it within his power to levy tribute on his neighbor in any manner, is most likely honest in his belief that it is right to do so. This can be even better understood if we remember that we are only human. We, too, often accomplish less than nothing in discussion because of our failure to understand that we ourselves are human as well as others. The only thing that distinguishes the cultured mind from the mind of the barbarian, is the one that makes it possible for the cultured mind to see things from the other's point of view, while the barbarian insists upon the other fellow seeing things from his point of view. In this article I will try and present facts as they might be presented by others, and with a frankness that can leave no doubt as to the meaning intended.

We have seen that every man along the entire line of distribution is more certain of his profit than the farmer who produced the product. We know as well that almost every industry in America is more certain of yielding a profit, than is our basic industry of agriculture. We have seen a few butchers without capital develop a packing industry that pays dividends in millions of dollars. We have seen a steel trust developed that can pay dividends on nearly a billion dollars of watered stock. We have seen an oil company developed that pays about as much net profit as do all the farms in this country. It is quite as true that hundreds of public service companies are paying immense profits. Then why are not our farms, and our forty billions of dollars invested in farm properties paying a better profit?

## All Industries, but Farming, Organized.

If a careful investigation of every successful industry in this country be made, it will be found that all of them are organized. They are not only organized in the usual sense, as to

efficiency of management, but they are also organized for political purposes, and it is mostly on account of their political organization that they are so successful. Because of every industry always being represented in every lawmaking body in this country, we have unconsciously built and developed institutions that aid all industries at the expense of the farmer.

Other industries have not stopped with their own organizations, but they have organized the farmers in such a manner that the farmer is very largely and quite easily controlled by other interests. Our city friends, and those whose business it is to depend upon the farmer for their profit, have been organizing farm clubs, writing essays on better farming, and discussing topics and solving problems of the farm to their entire satisfaction for several years. The increasing cost to them of farm products is their motive. It is cheaper farm products rather than a greater profit for the farmer that interests them. A larger yield per acre, bigger crops in other words, is what interests them. All this talk and noise coming from the cities and other industries, and especially from the daily press, has this one fact for a basis.

If we will only be honest with ourselves and others we are forced to admit, that every so-called farmers' congress ever held in this country has been dominated by those who were not farmers. If an analysis be made of these congresses, it will be found that 90 per cent of the farmers composing them need a qualifying or hyphenated word to make their title complete. Banker-farmers, lawyer-farmers, political-farmers, editor-farmers, has-been-farmers, merchant-farmers, and almost every known brand of farmer except the genuine working farmer is to be found in these congresses. Is it any wonder that farmers fail to get what they want in such bodies of men? The wonder is that we have a farmer left after taking all the dope prescribed by such a variety of professional dopesters.

It cannot be said that no good has ever resulted from these congresses of so-called farmers. Occasionally a condition arises that is likely to give small chance for profit to those who live off the labor of the farmer. Whenever such a condition confronts the country, these varied interests will bestir themselves until returns are seen coming their way, when harmless resolutions and beautiful words again take the place of actions. But who has ever heard a banker-farmer advocate lower interest rates? Who has ever heard a lawyer-farmer advocate the sending of real farmers to congress or to our legislatures? Who has ever heard a railroad-president-farmer advocate lower freight rates for farmers? Who has ever heard a merchant-farmer, a broker-farmer, or a commission-salesman-farmer advocate the co-operative plan of marketing farm products? I believe these questions will make more clear to the reader's mind what I mean when I say that farm congresses must be composed of real working farmers before any good can result from them.

## The One Exclusive Farming Farmers' Organization.

There is but one organization in America that is composed wholly of working farmers. This is the Farmers' Educational and Co-operative Union. This organization is not only composed of farmers, but it is doing things that will result in the highest value to farmers. Not only will one meet farmers who own and live on their farms in this organization, but he will also meet many farmers who do not own farms, that is, farm tenants. The Farmers' Equity Union is a similar organization, the chief difference being in the latter organization paying more attention to selling than to production, and partaking more of the commercial spirit than the former. These organizations may make mistakes; and there may be a

few among their membership who do not have the best good of agriculture, when considered broadly, at heart; but they are essentially farmers' organizations. They have within a very few years done more for themselves than has been done by others for them during our entire national life.

It is all very nice in a way for farm capitalists and others, to use fine words and to pass resolutions that are seemingly in the interest of farmers. It is a splendid thing for any person to show an interest in the labors and welfare of others. But the capitalist farmer has never lived that can feel or take the same view of farm problems that the man is compelled to feel and sense who has to work long hours for the little that is left him after paying his tribute to railroads, bankers, and a legion of useless and needless middle-men. Neither has the landlord ever lived who possesses the sort of sympathy for his fellows, that will cause him to see things as his tenant sees them. This condition of the human mind and heart, the result of widely differing environment, makes it mandatory that the farmer who is compelled to toil for the little he has, must be organized as other interests are organized, and from among his own kind.

Such an organization must not be wholly for the purpose of material gain or profit. There are many things the farmer needs quite as much as profit. He needs to be organized for the purpose of training him into a sense of the power of organization. He needs to be organized for the purpose of learning how to use organized power, and how to state clearly to a body of his fellows just what he wants, and how he wants it. He needs training in the more fundamental parliamentary practices so as to enable him to get the thing he wants.

## Training Needed Which Is Not of the Farm.

It is a very common thing for two or three smooth fellows to defeat a large number of untrained farmers in their purpose. It is a very common thing, something we have all seen many times, for a very few to dominate very many in organized effort. The farmer needs to organize for social, moral and civic growth as well as for making money. No man can be much working alone, but men can be anything, and do anything, when working together for a single purpose in a true co-operative spirit. Our national wealth increased twenty fold in 60 years. Our average per capita wealth is now \$1,400; but when we stop to think how few there are who have that amount, and how many that have more, a very few even possessing 90 per cent of all our wealth, we can the better understand how necessary it is that we co-operate if we are to get our share.

How best can the farmers organize? This is the most important question before the farmers of America at this time. There may be many ways, anyone of which may be as good as any other one. The essential thing is to organize, and a rule more vital to the success of the organization than any other is, TO ADMIT INTO THE ORGANIZATION NO PERSON WHO IS NOT A WORKING FARMER, LIVING UPON THE FARM HE OPERATES. In no other way, and by no other rule, can a farmers' organization be a success, or permanently helpful to the farmers who compose the organization.

There may be those who will want to say that we have organizations enough and to spare, without increasing the number at this time. This is both true and untrue. It is a fact that we have been organizing associations, clubs and other organizations until many persons are ready to believe that we are organization mad. It is equally true that few of these organizations have a very clearly defined purpose, and so far as or-

ganizations of farmers are concerned they are not composed of farmers who cultivate the soil, as we have already seen in the case of most farm congresses, or other gatherings of farmers. At best, these organizations are in no way representative of the great mass of farmers who actually till the soil and breed live stock.

The one thing wanting to make a success of farmers' organizations is some one to keep up interest, and to assist in making such organizations co-operative in character, and beneficial to members. This want has now been supplied. The Smith-Lever extension act will make it possible for many counties in each state to organize for the purpose of employing a county agent or demonstrator. The greater part of the cost of salary and maintenance will be paid from funds raised by this act.

## The "Farm Agents" Can Aid Co-Operation.

I know there are those among the farmers of the country who oppose anything in the form of county demonstrators, and they do so honestly, just as others have opposed county institutes and other forms of popular education. However, I believe this opposition on the part of these men is the result of not understanding the purpose of this movement. There are a few who honestly believe that it is a scheme to increase yields and make lower prices for farm crops. Others believe it is a scheme to create positions for a certain class of men. There are a few others who give other reasons for their opposition; but it is now too late to discuss the motives of those who are responsible for the movement or for the Smith-Lever bill. This bill is now a law, and if farmers do not, or will not, interest themselves to the extent of gaining some benefit, from its funds and provisions, the fault is their own, and they have no one to blame but themselves.

It is my belief that the objections named are not well founded. To increase the yield of farm crops is one of the least of a farm demonstrator's duties. If we investigate the work of those demonstrators, who by their good work have made a favorable reputation for themselves, we always find that their best work consisted of organizing boys' and girls' clubs, promoting short courses, combating hog cholera and other animal diseases, assisting the farmers in co-operative buying and selling, and other good work which it is impossible for the farmers to do for themselves individually. It is nothing more than well directed co-operative effect, the demonstrator giving it direction.

## A More Complete County Organization.

There is need of a better system of organization in order to secure the full limit of benefit from a demonstrator's work. The weakest part of the county demonstrator movement is to be found in the country organization, or rather want of organization. Most farm problems are very local in character, so that in a county of 16 townships, the farmers living to one side of the county know very little about, and care even less for, the farmers living on the other side of the county, or their problems. This makes it necessary for the demonstrator to spend most of his time in travel, time that could easily be saved by a system of local, or township, organizations. If each township had an organization served by a committee of three members, the chairman to act as a member of the county board, the county would have the strongest possible form of organization, and the demonstrator could save much time by working with the township organization, instead of being compelled to work with each individual farmer in the township.

This form of organization could be made even better by having some bright young man in each township

act as assistant to the demonstrator. By this means, in case of an outbreak of hog cholera, or other urgent need of help from the demonstrator, much of the local work could be done by the local committee and assistant demonstrator. A good organization of this kind, with each local working under the direction of the county demonstrator, would be able to accomplish a greater good than it is possible for a demonstrator to do without the organization.

#### Possible Benefits Beyond Calculation.

The benefits to the farmers of a county which can be their's with the help of a demonstrator and organization such as described, is beyond calculation. The township organization would be more helpful than one based on the county unit, since each member would know every other member and his problems quite as well as his own. It could be made the beginning of a co-operation in supplying all the wants of its members, in marketing surplus products, in the use of better sires, in giving the local community a social center, and in many ways that can not be named at this time. The advantages to be gained by its members in debate by holding meetings occasionally, while discussing their many problems, would be more valuable to them than any other one thing they will ever do.

Because of no practice or experience in meeting with others and discussing problems in a formal manner, many farmers are at a disadvantage in argument, although well informed and clear thinkers. Farmers will never enjoy their share of the advantages to be gained in legislation that is just to their industry, until they are competent to meet other interests on their own ground and terms. There is need of organization, but if farmers are to be benefited, the organization must be for farmers, and composed of farmers. If a county demonstrator never did more than give to the farmers of a county a perfect farmers' organization, he will have served them well. Past experiences should teach us that organizations composed of a few members from all sections of a state, with widely differing interests and problems, will never be a success. To succeed, members of a farmers' organization must have common interests and problems, and know one another well enough to have confidence in their motives. There never has, nor will there ever be, co-operation between persons who have nothing in common.

#### HOW TO MAKE A FARM INVENTORY.

The inventory on an ordinary farm is a matter requiring from two to five hours' work at the beginning and at the end of the year. The same inventory, of course, is used for closing one year's accounts and starting the next, so that this work is done only once a year. This inventory should be a detailed list, with values, of the following: The farm, subdivided into buildings and land, each building being listed separately, with the number of acres of land and its value per acre (the total value of buildings and land being equal to the listed value of the farm); the horses, listed by name and giving their ages, followed by other live stock listed separately, giving value per head; machinery, each item being listed separately, except that small tools may be bunched as one item; quantities of feed, produce, and supplies on hand; growing crops (value of labor and materials already spent for next year's crops); cash on hand and in bank; and bills receivable. The total of all these should be found and the mortgage and bills payable, if any, subtracted from it. The difference is what the farmer is worth above debts, or his present net worth.

In estimating values, the market price at the farm, or the price at the selling place, minus the cost of hauling to market, should always be the standard. The value put upon anything should be what it is thought can be obtained for it at a normal sale, and should neither be overrated nor underrated. In either case, one is fooling only one's self. It is better to be fair and unprejudiced and use one's best judgment.

#### PURE-BREDS HAVE GAINED 51 PER CENT OVER GRADES IN FOUR YEARS OF KANSAS STALLION LAW.

To the American Breeder:—In reading the current number of the American Breeder, I came across the article, "Horse Prospects and Stallion Laws," written by Ed. C. Barr of Coffey County, Kansas. His statement that "there are as many grade and scrub stallions licensed as pure-bred" was evidently made without regard for the facts, as shown by the records of the State Live Stock Registry Board, or the report for the year 1914, appearing in a recent issue of the American Breeder. These records show that for the year 1914, 3,087 pure-breds have been licensed and only 2,553 grades and scrubs, a difference of 534 or twenty per cent more pure-breds than grades and scrubs. In 1910, 2,599 pure-breds were licensed and 3,766 grades and scrubs, a difference of 1,167, or forty-one per cent more grades and scrubs than pure-breds. Let me repeat:

In 1910, 41 per cent more grades and scrubs than pure-breds.

In 1914, 20 per cent more pure-breds than grades and scrubs.

Further study of these figures show that during the past four years there has been an increase in pure-breds of 488 or 18.7 per cent and a decrease in scrubs of 1,213 or 32.2 per cent. Furthermore, in 1909, before we had a stallion law, over 2,000 grade and scrub stallions were advertised as pure-bred. A careful inspection during the breeding season of over 600 Kansas newspapers has failed to show a single instance where a grade or scrub was advertised as a pure-bred for the year 1914. These are only a few of the many benefits that have resulted from the operations of the Kansas stallion law, the purpose of which is to give patrons a means of knowing whether they are patronizing a pure-bred, grade, or scrub.

It would be a great thing for the horse breeding interests of Kansas if only good, sound, pure-breds were standing for public service, but such a condition must come by degrees rather than by a single leap. The thing that is needed most right now is not drastic legislation, but rather a more unselfish spirit and greater unity of action and purpose upon the part of those who are really interested in the production of more useful and profitable horses in Kansas.

The members of all successful enterprises are bound together by a strong, well organized association. They find that such associations are absolutely necessary. The horse breeders of Kansas must make their association a strong one before any great changes can be made in present conditions. Everyone interested in improving present conditions should attend the meetings of the Kansas Horse Breeders' Association at Manhattan, Kansas, December 30-31, 1914. A good program has been prepared and many important matters are to come before the association, one of the most important being the organization of a campaign for a more practical and effective lien law.—Live Stock Registry Board, by C. W. McCampbell, Secretary.

#### A STATE FAIR SECRETARY'S APPRECIATION.

To the American Breeder:—Ever so much obliged for the copy of the American Breeder which arrived this morning, and the strong editorial commenting upon the single state fair was read with interest. We, as one state fair, want to thank you for your hearty co-operation and support. We wish that you would put our name on your subscription list for three years and send us a bill for \$1.00 and we will remit. Along about the last of August, I believe, you sent us a copy of your publication which contained some very interesting statistical matter on the attendance of state fairs, and was just wondering if you would stake us to another copy for our files. If so, we will appreciate it ever so much. I believe you will know what issue I mean.—A. J. Breitenstein, Secy., Montana State Fair, Helena, Mont.

## HAVE YOU A GOOD SIRE?

How Breeders Are Learning to Realize on Their Investment As Well as on Their Time.

The services of many good sires are being wasted. Some breeders do not understand how to get the business. Others are not familiar with the best methods for making stallions useful. If a sire is good enough to be conscientiously recommended as an improvement, such an owner should prepare himself to use that individual to his full capacity. The owners have considerable expense connected with maintaining such sires. In the same community can usually be found a large number of mongrels that should be castrated. If the owner was more familiar with the breeding business, better results could be obtained.

Many students of the Graham Scientific Breeding School, who have given attention to the instructions and practiced its teachings, have doubled their incomes without increasing their investments. This is a profit not only for one year, but such knowledge can be used a life time.

Too many breeders have looked at the outside of mares. Few know anything about the inside. Diseases are being scattered in nearly every community, unnecessarily. A better understanding of existing conditions would be a great benefit to any community. It would also make more money for the owners of the sires.

Most of the females of a breeding age can be made producers. At this time of year stallion and jack owners should be able to make rectal examinations so as to know whether a mare is in foal or not before she leaves the community.

A traveling instructor from the Graham Scientific Breeding School can visit the students and prepare their customers for modern breeding methods. The traveling instructor lectures only for those who have attended the Breeding School. This makes it possible to adopt modern methods. This is an excellent advertisement for a breeder and gets good results. The students where the lecture is held thoroughly advertise it. No breeder need doubt that modern methods can be introduced by this plan.

Some do not attend the Breeding School because they are afraid someone will laugh at their ignorance. This is not a place for fun, and amusement, and a very bad place for "smart alecks." No matter what mistakes are made, nobody ever "cracks a smile." They do not attend school for that purpose; at least the management convinces them of that fact quickly.

Where else can a breeder spend a few dollars and a short time so that he can double his income without increasing his investment. Nor are the benefits limited to a money consideration, for when a breeder gets interested in his business as these students do, he enjoys it and is glad to see the difficult mares come. He wants to make an examination and get results. A lot of breeders are continually talking about quitting the business. If they will attend the Breeding School, they will not want to quit. That is the place to go to make money and make the business a pleasure, and to become of some service to their friends and customers.

Perhaps the greatest hesitation about attending this school is felt by those at a distance who anticipate difficulty in getting away from home. Breeders from the Pacific and the Atlantic Coast have attended, as well as some from foreign countries. They have been well pleased. Any breeder can get away from home for a short time if he will make up his mind to go. There is only one way to attend to a deal of this kind; make all arrangements and then go. It is too important to neglect, as many have been doing. Carefully read the following statements from men who

have been at this school. Notice where they live; many a reader will have a chance to talk with some one of them.

I attended the December term of the Breeding School. No man can be a first class stallion man without going to this school.—Ralph S. Cantwell, Sterling, Kas.

I have great pleasure and confidence in recommending the Breeding School as a clean moral factor for the spreading of the gospel of cleanliness and responsibility to all sections of America.—F. N. Strong, Sylvania, Ohio.

I attended the December term of school and found it one of the greatest schools for the breeding of horses and cattle. Would advise all stallion men to attend.—Jacob Price, Antigio, Wis.

I think that I have spent one of the best weeks in my life and think the school is fine and will do all I can to get others to come.—Otis Potter, Broughton, Kas.

I would like to state that I think attending the Breeding School the best and only way to get complete information on the breeding business and make both ends meet. The best thing about this school is, that its moral standard is so high that anyone, whoever it may be, need not hesitate to attend or send his boy, if of proper age to understand. This is my second term and I am not through yet. I am coming back again. You never meet better men than here.—Herman Henderkoff, Davenport, Ia.

I want to say that I am surely pleased with my first term at the Graham Scientific Breeding School. I hope to induce my neighbors to come to the school, both stallion and mare owners.—C. N. Wilkinson, Dodge City, Kas.

Having attended this school I feel that I can truthfully and conscientiously recommend any stock raiser to attend the Graham Scientific Breeding School for his own and his community's good.—Ralph M. Keeler, Lovell, Okla.

This Breeding School is all right. It is a good place to send the boys.—James H. Hall, Whiting, Ia.

Any man who intends to handle mares or stallions can not afford to stay away from this school.—R. T. Ishmail, Kiowa, Kas.

I am very thankful that I came to this school and have learned what I cannot learn anywhere else on earth.—Thos. Pepple, Carrington, N. Dak.

I have attended the December term of the Breeding School and am satisfied, and can recommend it.—Orlando Shotwell, Cushing, Okla.

I have attended the school. Think the instructions good and recommend it to every one as the very best thing of this kind.—S. Swinbank, Crawford, Neb.

I think the Graham Scientific Breeding School should be highly recommended for what it does for its students.—A. G. White, Sharon, Kas.

Having attended the December term of the Graham Scientific Breeding School, I can say that no man can afford to miss it, even if he only owns a Shetland pony.—Chas H. Cole, McHenry, N. Dak.

A full course anywhere would not give one a clearer conception of the correct problems of breeding, than a week's course in the Breeding School.—Wm. Barnes, Mitchell, Neb.

After having attended the school I take great pleasure in recommending the same to anyone, young or old. It teaches the science of breeding in a way that any ordinary mind can grasp the practical part of the same. No parent need be afraid to send his

MARVIN, MASSIVE 2-YEAR-OLD PRIZE WINNER OUT OF CHAMPION MARE, IMP. IMPRUDENTE.

BARON CHINDA, A 1,650 POUND YEARLING OUT OF THE CHAMPION MARE, IMP. GANDINE.

Here Are Two Genuine Headliners In An Offering of Practical

# High Class Percherons

And Shorthorns to be Sold

## At Auction (New Date) January 12

### 25 Percherons, of which the above are typical

The offering including the remarkable dam of Baron Chinda, shown above, and three of her colts. Marvin, shown above, and to which most of the mares are bred, is out of a \$2,000 mare. Draftiness is what I have sought in building my stud and I'll leave it to you if Draftiness does not "stick out" everywhere in this offering of **10 Stallions and 15 Mares and Fillies.**

#### THE 20 STRAIGHT SCOTCH SHORTHORN CATTLE

Including seven choice bulls and thirteen roomy females. Orange Blossom, Lavender, Rosebud, Ury Lass, Alexandrina, Victoria families represented. **Orangeman 2d**, Orange Blossom bull by Victor Linwood, sire of the young stock—a great breeder. **Lancaster Rosedale**, by Whitehall Rosedale out of Lancaster Bud, and **Orangeman 3d**, yearling by Orangeman 2d out of daughter of Cumberland's Last, constitute excellent quality bull offering. **Lancaster Bud**, championship winner in E. S. Kelly herd, will sell. **Sweet Maid 5th**, a My Lass, **Alexandrina Sultana** by Scotch Sultana, **Maid of the Ring** by Cumberland's Last, and their descendants comprise bulk of Shorthorns. Young stuff are thick-fleshed individuals of good type.

I want every interested reader of this paper to have my catalog and come to the sale if possible. I want to show what practical handling and thorough development will do where the right kind of blood is used.

The catalog is illustrated. Mention the American Breeder when writing for it. You'll be welcome here at the sale, and will meet many others interested in your line of business.

## C. F. JONES

## Rippey, Iowa

Rippey is on the M. & St. L. Ry., 9 miles south of main line of the Northwestern at Grand Junction and 12 miles north of Perry on main line of the Milwaukee.

boys. They are looked after from the time they arrive.—S. C. Hanan, Waynoka, Okla.

I think the Breeding School is a great success in its instruction for the work of the live stock breeder.—A. M. Goodheart, Lucas, Kas.

I think it will be of great benefit to any man to attend the Graham Scientific Breeding School.—D. M. Knowles, Garden City, Mo.

I think this Breeding School is a great thing for any man, and of special value to the breeder of live stock. The instruction is of the very best. The school is conducted in the best possible manner and will help any man.—L. W. Madden, Agenda, Kas.

I attended the Breeding School which closed December 12. I think everyone interested in live stock ought to attend.—John Tapp, Tingley, Ia.

There is nothing that will beat it. It is a school that teaches things that

every person should know. A place that I could recommend to any father or son. It is worth the price to me, even if I had never seen a horse.—F. W. Brown, Haskens, Okla.

I can highly recommend the Graham Breeding School to anyone as a good place to learn the business.—S. Morrison, St. John, Kas.

I would advise any man or boy to attend the Breeding School. The teachings are practical.—Louis A. Wilson, Logan, Iowa.

At the close of my first term as a student at the Graham Scientific Breeding School, it gives me great pleasure to state there is untold value in the course given for any breeder of live stock. The moral standard has been high and the watchword "cleanliness," for the conduct of our breeding business has been a most valuable one.—C. L. Corliss, Coats, Kas.

I have attended the Breeding School and say that it is worth many

times the cost. Can recommend it to all my friends.—W. P. Byard, Comanche, Okla.

I have attended the school and will recommend it to be the cleanest in America; teaching the science of manhood as well as of breeding.—Chas. C. Butcher, Russell, Kas.

I am more than pleased with the work. It is of more importance than I had expected. My wish is that the people will take up this work as it is needed throughout the land.—C. C. Booth, Little Sioux, Ia.

I am more than pleased with the Breeding School. It has done much good to all that attended this term.—John M. Zook, Conway, Kas.—Adv.

To the American Breeder:—I have been reading the American Breeder since it was started and enjoy it very much, but I wish particularly at this time to congratulate you on the interesting pictures, actual photographs, which have been presented on your

cover pages. They are appreciated.—E. A. Trowbridge, Professor of Animal Husbandry, University of Missouri.

#### MORE REPLIES THAN HE COULD ANSWER.

To the American Breeder:—I received so many replies from my ad in the American Breeder that I could not answer them all. I wish you would make a note in the American Breeder to the effect that I want to thank all those who answered the advertisement, but of course I could not buy all of the horses that were offered.—Amos Burhans, Waterloo, Ia.

"To the American Breeder:—Your paper of 5th at hand and I surely like the way you have arranged my ad. Believe I will get you to write them for me after this. Like it better than the ones I wrote myself. Am getting a nice lot of inquiries and everything looks good for a successful sale. I have 'the goods.' Thanking you and wishing you success.—J. C. Robison, Towanda, Kas."

## QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1356—AFFECTION OF THE SPINAL CORD**—I would like a little advice in regard to my three year old jack. I bought him in July and at the time I bought him he was not quite right, as his hind parts wiggled all over when he walked, but he made the stand this season and served 42 mares and the man I bought him of said he fell off of one mare when he had him; after I got him I bred several mares and he fell off of two mares. He don't seem to have the proper use of his hind legs and not very good use of his front legs. When he walks he just wiggles like an elephant and sometimes falls down when he goes into the stable and when he lies down he will have to make several trials before he can get up. The jack is in fine flesh, but does not eat very heartily, but is growing daily. Do you think anything could be wrong with his kidneys or what is wrong with him? He is worse than when I bought him.—Missouri Subscriber.

**REPLY**—We very much fear that you have a chronic case that will not yield to treatment, but it is worth your while to try. Give him a course on nux vomica, giving a dram of the powdered drug in the feed three times a day for several weeks. Such animals are commonly known as "wrigglers."

**1357—TAMWORTH HOGS**—On the cover of some of your issues I noticed a picture of a Tamworth hog. Please give me the address of some one who has these hogs for sale.—Arkansas Subscriber.

**REPLY**—Requests like this one are received almost daily. Among our readers there is demand for every class of improved farm animals. Every subscriber who has such stock for sale should advertise the fact and tell his friends and neighbors who have such stock that the American Breeder is a good paper for their use. Who has Tamworth hogs?

**1358—CROOKED KNEE**—I have a highly bred Clydesdale colt that has gone wrong in one front leg. The leg bows out at the knee and the joint above the knee seems to be out some, too. Now this was one of the straightest colts I ever saw when it came; came on the Fourth of July. The flies were very bad here this season and we stabled the mares in day time and pasture at night. This colt was about six weeks old when we noticed it was going wrong. He has never been kicked or bruised, but has gradually grown worse. He is not lame on it now and never has been, but is very awkward with that leg; this knee seems to be some larger than the other.—Minnesota Subscriber.

**REPLY**—Your colt may be a victim of a mild attack of navel ill, and we believe inasmuch as your colt is valuable you should have a competent veterinarian look the case over. Occasionally cases of this kind become deformed through rapid growth and lack of proper proportions of food. The cause of the defect should be searched for in order that proper treatment be administered.

**1359—POLLED DURHAM AND RED POLLED CATTLE**—Please send me the address of some man who has Polled Durham and Red Polled cattle for sale, the nearest to Pearce, Arizona.—Arizona Subscriber.

**REPLY**—There are many breeders of Polled Durham and Red Polled cattle in the territory covered by the American Breeder, but unless our readers who know the paper best say something to these cattle breeders concerning the merits of this paper, they are very likely to continue advertising in other agricultural papers which send out advertising solicitors. Every one of our readers can do a favor to some neighbor who has pure bred hogs, cattle or sheep to sell by persuading him to try a small advertisement for one month in the American Breeder. Our advertising rates are always published in the paper and every advertiser can know that he gets a square deal.

**1360—ABORTION**—I am having trouble with my cows and am afraid it is contagious abortion. I have lost so far four within a week. The cows are about four to six months in pregnancy. What can I do?—Nebraska Subscriber.

**REPLY**—These are cases that are very difficult to prescribe for without being on the premises so as to advise proper handling of the several problems that are essential in the control of infectious abortion. By all means you should call in one of your very best veterinarians in order that he may go over the situation with you and outline a plan by which the disease may be eradicated from your herd. You will find this no easy problem and a full co-operation on your part is imperative.

**1361—PNEUMONIA**—I have a four year old stallion that has just recovered from a light attack of pneumonia. He was taken with it on Saturday evening and his fever ran up to 106 by midnight and by the following Monday noon his temperature was normal and he has been all right ever since. That was a week ago. Now will an attack like this disqualify my horse from service commencing April 15th? Can you tell me of anything that will help rid his system of anything that the disease or medicine (aconite and bisulphate of ammonia) might have left.—North Dakota Subscriber.

**REPLY**—You are unnecessarily alarmed about your animal and notwithstanding his temperature was high for a short time, he was not sufficiently long sick to do him any permanent harm. Continue to care for him in a sensible way and refrain from doping him with medicine. Medicine is for the sick, not for the well animal.

**1362—COST OF PERCHERON MARES**—Could you tell me how much a pair of good Percheron brood mares will cost me? Nothing heavy, but weighing from fifteen to sixteen hundred pounds and five to eight years old.—Arkansas Subscriber.

**REPLY**—Many of our readers can give first hand information on this point, and we will be glad to print what anyone knows to be the value of such mares. It is understood, in connection with this matter, that we cannot print addresses.

**1363—PARTIAL PARALYSIS**—I have a stallion that is weak and wobbles in his hind parts; he can't back up without falling down. I have had a state veterinarian doctor him for the last two weeks, but he has not helped him much. There is a steady weakness of the urine, but is worse when he steps or walks around. He eats and drinks well but the steady weakness or leak of urine keeps him weak across the back. Can you please tell me what ails him?—Kansas Subscriber.

**REPLY**—Your stallion is affected with partial paralysis. The disease extending to the centers that control urination. It is not likely that much can be done for an animal affected as this one appears to be. However, some cases respond to a long course on nux vomica. Give a dram of the powdered drug in the feed three times a day for several months.

**1364—IRRITATED WOUND**—I have a nice mare that got her leg split open

# Dispersion Sale

## Woodland Stock Farm

**Percherons**  
**Thursday**  
**JANUARY 28, 1915**  
**At Diver's Stock Yards**  
**Wichita, Kansas**

Thirty-three head imported and American bred Percherons; 14 stallions and 19 mares; 11 stallions ready for service. As good as money can buy anywhere. Nine-teen choice toppey draft mares of all ages. Brood mares are showing heavy in foal to an imported stallion with best of quality, weighing 2,000 pounds. Be sure to attend this sale as everything sells. Get them at your bid. Sale will be held, rain or shine.

## COMBINATION HORSE SALE

### 10 HEAD REGISTERED PERCHERONS

Four ton brood mares, 5 and 6 years old. They have done most of the work on the farm for the three years past. Two 2 year old fillies. All the above are in foal by the imported stallion, La Palice 1016:3 (66824), whose pedigree appears in my catalogue for reference only. For catalogue write  
**C. M. LEWELLING,**  
The sale will take place in Cambridge, Nebraska, December 31, 1914.

BEAVER CITY, NEBR.

about four months ago on barb wire, and I would like to know something that would heal it up. It is her left hind leg and was split straight down in front from lower joint of knee to ankle bone, as straight as could be cut with a knife. It seemed to be doing as well as could be for about 20 or 30 days, but has not improved any since. There is a great deal of swelling in it all of the time and the gash is about three inches wide and nine inches long, and it won't heal at all; it protrudes out and seems irritated some. I have used everything I ever heard of, but it doesn't seem to get any better or much worse. She has not been a bit lame or stiff in the leg at all. I will certainly appreciate any information you can give me.—Texas Subscriber.

**REPLY**—Did it ever occur to you that you could positively injure a wound by doping it with "everything I ever heard of"? This wound, no doubt, has been too much treated and is probably in worse condition than if you had done nothing for it. There has been excited an excessive granulation which should be removed by surgical means so that the skin may have an opportunity to draw in and

(Continued on page 17).

### SHIRE STALLION.

For sale; eight years; imported by Trumans' Pioneer Stud Farm; will weigh close to a ton; sound and right every way; sure breeder; nice to handle. Will sell very reasonable, as I am going out of the business, or will exchange him for work horses or Poland China brood sows. This horse won first at Iowa and Indiana State Fairs, as a 2-year-old.  
**T. E. ORTH,** Washington, Ill.

### PARAMOUNT STOCK FARM

Breeds and Imports  
Percherons, Belgians and Shires.  
Home of the Iowa and International Grand Champion **FARCEUR 7332 (72924)**, the greatest Belgian stallion in the world today. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 lb. horses.  
**WM. CROWNOVER, HUDSON, IOWA.**

## PRIZE WINNING PERCHERON

For sale; a 4-year-old stallion; black, with star and white hind foot; sure breeder and a good sire; weighs 2,100 pounds; a real drafter and fine mover. Was best American bred 3-year-old at International show, 1913. For a good one, see this horse.

**S. S. RUSSELL & SON, Neponset, Ill.**

## PERCHERONS

For sale. Three registered Percherons; one 3-year-old black stallion; one of the big drafty kind.

One 7-year-old black imported mare with 5 months' old filly by her side, and in foal again. These horses have size and quality and are sound.

**L. P. YOCUM, CLARENCE, IA.**

### FOR SALE OR TRADE.

Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.

Also 16 hand registered Mammoth jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.

**H. H. BURNS,** Argonia, Sumner County, Kansas.

## Renew Subscriptions Now!

For a limited time you can subscribe or renew subscriptions for the **AMERICAN BREEDER** (with which is now combined **CARLSON'S RURAL REVIEW**) at the old price of 50c for one year, or three years for \$1.00. The subscription rate will have to be advanced soon.

TRUMANS' PIONEER STUD FARM, BUSHNELL, McDONOUGH COUNTY, ILL

ESTABLISHED 1878.

ADDRESS US AS ABOVE, FOR CATALOG, MENTIONING THE AMERICAN BREEDER

## NO SPLITTING OF STATE FAIRS

The American Breeder has, on occasion, said some pretty plain things on the subject of state fairs, but always we have spoken in the interest of the state in question, and never from any selfish motive. It is gratifying, therefore, to have our position, at any time, endorsed by those actually in the state fair business, and from among many letters received have selected the following for publication because of the additional ideas and information offered:

### One Great Fair the Greater Advertisement.

To the American Breeder:—I feel you have taken the proper stand and "hit the nail on the head" in this article. One of our Iowa agricultural papers got out an editorial last spring advocating that instead of appropriating money for permanent buildings for one great state fair, that the money should be divided among about four fairs and that there should be four state fairs instead of one. This, however, did not meet the approval of the newspapers of our state. It seems that the localities having made the worst failures in holding county and district fairs were the ones most anxious that this should be brought about. I am a firm believer that the state should make liberal appropriations for the payment of premiums on live stock and agricultural products exhibited at all county and district fairs. I also believe that the state should consider her state fair on the same basis as the other state educational institutions; that is, an appropriation should be made for the buildings and the proper equipment to house exhibits and maintain the plant properly. The money taken in through admission, concessions, etc.,

should be given back to the exhibitors in the way of premiums on live stock and other products, and to the patrons of the fair in the form of educational exhibits and clean, wholesome amusement features.

I thoroughly believe that one great state fair would be a greater advertisement to the state and be more successful in attracting worthy exhibits from other states than three or four state or district fairs, as you prefer to call them. I am thoroughly in accord with your article and expect to use it in the future editions of Greater Iowa, the official publication of this department.—A. R. Corey, Secretary, Department of Agriculture, Des Moines, Iowa.

### No Question But That You Are Right.

To the American Breeder:—I want to congratulate you upon the stand you have taken relative to State Fairs. There is absolutely no question, but that you are right. To have one great, grand fair, such as Iowa, is to be most devoutly desired by every state. To scatter the appropriations among several towns in the state, none of them would ever amount to such a magnificent exposition as we see at Des Moines. I believe in co-operation, of course, and also believe that all fairs should have some support from the state or county, or both. As it is now, all Kansas counties are authorized to make certain appropriations for county fairs. It has served a good purpose, too, and the fairs of Kansas are getting better and better. In Canada every fair held in the Dominion, has some aid from the public treasury, which accounts for the fact of the general excellence of the fairs of the Dominion of Canada. Since fairs do not conflict with any other institution

# TAYLOR & JONES

WILLIAMSVILLE, ILLINOIS.

Our second importation for 1914 arrived July 6. Anyone wanting the best imported and American-bred Percheron, Shire and Belgian stallions should not fail to visit our barns. Write us for catalog, mentioning the American Breeder.

**TAYLOR & JONES,**  
BOX 160, WILLIAMSVILLE, Sangamon Co., Ill.

## 200 PERCHERONS

Including probably the largest collection of imported stallions of this breed in America, and certainly the largest collection of mares now for sale. We have

### 100 HEAD OF EACH SEX.

The Singmaster Percheron business is conducted on the most permanent basis. Every year we import stallion colts and yearlings. In this way really getting first choice and insuring thorough acclimating and development under American conditions. In this way, too, our own breeding herd is constantly strengthened. Our visitors see imported and home bred stock developed side by side in a natural way—the best means of making a satisfactory selection and the best assurance of a satisfactory future.

Are They Good? We Simply Ask You to Come and See.

We have plenty of ton stallions, plenty of imported mares bred to our famous herd horses, Honorable and Jalap; our prize winnings are a matter of record. The square deal has been our motto for 30 years. Mention the American Breeder when you write us for particulars.

**J. O. SINGMASTER & SONS, Keota, Iowa**

or business in any state or nation, they should be particularly and especially fostered because after all is said and done, when conducted along real

**SHIRE STALLION**  
For sale; 28 months old; weight 1,600; recorded; also state certificate. Sound, none better in Iowa; perfect disposition. Write,  
**AMOS HANSON,**  
Collins, Ia.

## KODOMA 43372

The Great Ton Show Stallion and Percheron sire, for sale. Height 16.3; color gray; age 9 years. Absolutely sound and clean, with the best of feet, bone and pasterns. His sloping shoulders support a beautifully carried head and neck; while his short, broad back, over a deep ribbed middle, smoothly moulds into strong loins and level croup over the best draft hocks imaginable. Kodoma has 12-inch bone below his hocks and scales 1,920 pounds; today in active stud condition weighing some 2,200 pounds; fitted for showing. Guaranteed to get 60 per cent foals. Price \$1,000.

W. T. WILKINSON,  
Eureka, St. Louis County, Missouri.

### Registered Percheron, \$500

A pure bred Percheron stallion; 5 years old; black, with small star; 16½ hands; good bone and good actor; well broken and a sure foal getter. This is an American bred stallion out of an imported stallion, and his dam took first premium at International when she was a yearling, shown by Taylor & Jones of Williamsville, Ill.

This stallion is recorded and all right in every way, but I have more stallions than I have business for, and will sell him to the first buyer for \$500, and he is a money maker for the man that has business for him.  
CHAS. M. PIERCE, AUXVASSE, MO.

### IMPORTED and HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

A. LATIMER, WILSON, Creston, Iowa.

**FOUR PERCHERON STALLIONS** for sale, including my imported herd stallion, Marquis, a grandson of Besique. Marquis has the famous blood lines on both sire and dam's side; sound and sure. Also two black three-year-olds and one black two-year-old. Will mature to better than ton horses; sound, with size and quality; registered in P. S. of A. They are priced to sell. Come and see them.  
I. C. EVANS, TROY, IOWA.

### PERCHERONS AND BELGIANS

For sale. Imported and Home-bred Percheron and Belgian stallions and mares. Come and see or write,

F. M. CLEVENGER, Prop.

Valley Home Stock Farm, Centerville, Ind.

### FOR A SQUARE DEAL

In Breeding Stock—Percheron stallions and mares, jacks and jennets, and one Arabian stallion—see  
N. S. COX & SONS,  
Pattersonburg, Mo.  
Reference—Either bank in Pattersonburg.

## Maplewood Percherons

A choice lot of stallions and mares developed under practical farm conditions, with strong, rugged frames and constitution. Buy them now direct from the pastures at low prices.  
C. G. ANDERSON, Hector, Minn.

### PERCHERON STALLIONS AND MARES

For sale, weighing from 1,900 to 2,100 pounds, with 11½ and 12½ inch bone. If you are looking for the good ones, I have them. Will pay your expenses if not as represented.  
A. U. Dunbar, Galesburg, Ill., R. R. 1.

educational lines, no one can learn so much for the time and money spent as they can during the week of the State Fair. It is of especial benefit to young men. There they form ideals which never forsake them. They hold those ideals in mind as long as they live and compare all things they see at home and abroad with those specimens which they studied, or at least observed during their younger and more impressionable years.

It is so with girls as well as young men and boys. Older people are more set in their ways. Therefore all fairs should be conducted more and more for the benefit of the younger people. Since the older people have control of the public treasuries, it is necessary to play to them, but they do not get the real value of it that the younger people get. To the older people it is a magnificent thing socially; to the younger people it is a splendid thing educationally. We cannot build them too great; neither can we have too many good county fairs—A. L. Sponsler, Secretary, Kansas State Fair.

## THE BREEDS OF LIVE STOCK

### NUMBER 1; THE ARABIAN HORSE

Editor's Note: The following article is the beginning of the series referred to in our last issue. Again we urge upon our readers that not a single copy of the American Breeder be misplaced or destroyed while this series is running. Many times it is impossible for us to accommodate requests for extra copies. Single orders for several hundred papers of some special issue often exhausts our supply. The only way to be sure of this series, complete, is to save every copy of the paper. No publication (book or periodical) has ever covered the subject in a way to so well meet the demand for information on breeds, as does this series of special articles. Cattle, hogs and sheep will appear in the series early. No interest will be neglected, though horses will continue prominent. Do not miss a single copy.

The Arabian horse is of very little practical importance at the present time. It is, however, of great importance from an historical standpoint because it was the first breed of live stock which man originated, and also because it entered into the foundation and improvement of so many of our present day breeds. Every student of the horse is, therefore, interested in the origin and development of the Arabian breed, and this breed has been selected as the subject of the first of this series of articles because, from an historical standpoint, the Arabian horse rightly commands first place.

There is but one breed of the true Arabian—that termed the Kohl, so-called from "kohl," antimony, because the skin not only of the face, but all over the body, has the blue-black tint of the human skin when dyed with that mineral, so largely used by Eastern women to enhance their charms. From kohl came the derivatives "kheilan" and "keheilet," the names for the horse and mare of this breed.

All existing truebred Arabs, that is, horses of the Kohl breed, are descended from one or more of the strains known as Al Khameseh, (meaning "The Five"). The origin of these five strains is not so easy to determine.

There is a tradition held by all the Bedouin tribes that the five families in Al Khameseh are all descended from one particular mare, called Keheilet Ajuz, "the mare of the Old Woman." The five strains are known as the Keheilan, Seglawi, Abeyan, Hamdani, and Hadban.

The first of these is the most numerous and most esteemed. They are mostly bays with a white star or blaze and one or more white feet. This is said to be the fastest though not the hardest strain. It bears a closer resemblance to the English Thoroughbred than do the other four families, and no doubt rightly so, inasmuch as the Darley Arabian, the stallion to which so many Thoroughbreds trace, is said to have been a Keheilan. The Seglawi is a well-liked but comparatively rare family. The Abeyan is said to be the handsomest, but is small. The Hamdani is not common and not in good repute, and most of them are grays. The Hadban is also of secondary rank.

While these five families or strains

are recognized as distinct, at the same time the blood of any one of them is freely mixed with that of another care only being taken to breed to the best available sire. To attain this, mares are sometimes sent long distances across the desert to the horse of another tribe. Al Khameseh is therefore really one select breed, and not five distinct breeds.

The Arabian horse is undoubtedly of ancient origin, but the notion which many people have that Arabia is the original home of the horse is a mistaken one. The peninsula of Arabia, as known at present, could never have supported wild horses. There are no pools of water, but it must be obtained from dug wells, and as the pastures are burnt up during part of the year, horses would perish of thirst and hunger, unless in the care of man who would provide for them. But along the Euphrates river, water and pasture are both abundant and here, no doubt, the wild horses were captured from which sprang the Arabian horse of today.

It seems clear that the tribes of the desert had no horses at the beginning of the Christian era, but that for several centuries before Mohammed, horses were possessed by the leading men among them.

The bay color is found in the best of the Arabian horses. Some horses in Arabia are black, some are chestnut, and some are gray, but these colors are said to always indicate the admixture of foreign blood from Upper Asia.

Before Arabia had any domesticated horses, Palestine had four distinct types, one of which was a bay horse of quality and refinement, and beautiful in conformation. From this bay horse of Palestine the best Arab horses were undoubtedly derived.

The Arabian horse originated to meet a demand among the wandering tribes of the desert. On the backs of speedy horses and on their native desert wastes they were more than able to hold their own against invasion by a foreign army. Although Western Asia and Egypt had been mastered by the Babylonian, Egyptian, Assyrian, Mede, Persian, Macedonian, and Roman in turn, the Arab could defy any enemy rash enough to invade his waterless deserts. The Arab became a skillful horseman, and this was his chief salvation in war.

ARABIAN STALLION, IBN MAHRUSS.  
From a Photogravure in the Arabian National Stud Book.

## PERCHERON

STALLIONS AND MARES

For Sale or Lease.

M. F. DILLON

107 Grand Ave. PUEBLO, COLO.

### ELEVEN PERCHERONS

For sale. Four stallions, 2 imported and 2 home bred. Seven mares, 2 imported, balance home bred. Mares old enough are bred. They are large and of the ton kind, with splendid conformation and style. J. J. GUSTIN, MURDOCK, NEBR.

### PERCHERON and BELGIAN

Prize Winners.

Won over \$1,200 in cash premiums in 1914. Buy the winners.

LONZO McCLAIN, LIMA, OHIO

### CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2, Plainfield, Ill.

### IMPORTED and HOME BRED STALLIONS and MARES.

PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Percheron this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

### Imported Percheron and Belgian

Stallions and Mares.

Not so many, but the right kind at the right price.

J. R. JUSTICE, GALESBURG, ILL.

### THREE PERCHERON STALLIONS

For sale; 2 and 3 years old; with state certificate of soundness. Will exchange one for another as good, not related. The younger, 26 months old, weighs better than 1,600 pounds; 16½ hands high; 11½ inch bone. Who has his equal?

S. S. LANGFORD, CRAIG, NEB.

### PURE BRED BELGIAN STALLION.

Biz 4972; beautiful bay; 5 years old; weight around a ton all the time. Best of foal getter; sure breeder and sound. Will be sold under any reasonable guarantee.

FRANK PREMANER, WAVERLY, KANSAS.

R. R. 3.

### STALLIONS FOR SALE.

Two full blooded black Percheron stallions, coming 3 and 7 years respectively. Good ones.

S. R. KLEIN, Binford, No. Dak.

### THIS SUFFOLK STALLION,

Ashmoor Omar Khan, for sale because of his fillies ready to breed. I also want a young stallion; dark chestnut, coming two; not closely bred in Ormond or Saturn lines; one that will make a 2,200 pound horse.

CHAS. W. STEWART, Iowa.

### 2 REGISTERED CLYDESDALE STALLIONS

For sale or trade. One is two and the other five years old. I am obliged to sell at very low prices on account of not having time to care for them. Address,

H. J. PETRIE, Attica, N. Y.

### PERCHERONS.

Write for prices on imported and home bred Percheron stallions, mares and fillies, now on hand at the Sunny Plain Farm.

W. C. HAUGHMAN, PULASKI, IA.

fare. Mohammed himself held the horse in high appreciation and spoke of him as follows: "Thou shalt be for man a source of happiness and wealth; thy back shall be a seat of honor, and thy belly of riches; every grain of barley given to thee shall

## OWNERS OF PERCHERONS

I may need a carload of registered Percheron mares and one or two stallions. Please let me know at your earliest convenience what you have to offer. I am not prepared to pay fancy prices. Address

FRED J. KIESEL, OGDEN, UTAH.

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT,  
Cedar Bayou, Harris County, Texas.

## SEVEN PERCHERONS

For sale. Three brood mares, safe in foal. Two fillies coming three; two fillies coming two. All home bred, large and splendid conformation and style. Also four Hackney fillies coming three; three coming two, with splendid conformation. Write for description and price. Come and see.

H. B. SHELTON, Pearisburg, Va.

### SPECIAL PRICES

To close out my registered Percherons, consisting of six mares, from 1 to 7; 4 of them old enough to breed and showing in foal. One matched team, black, ton mares, in foal. Three young stallions, one imported 4-year-old that would be hard to beat. This ad will appear but once.

L. E. BLESSING, King City, Mo.

## PERCHERON, BELGIAN AND SHIRE

### Stallions and Mares

From suckers up to full age horses. I will sell you a stallion ready for service next spring from \$300 to \$500. Some extra good ones higher. Mares and fillies very cheap.

J. M. NOLAN, Paola, Kas.

### PERCHERON STALLION WANTED.

Registered; black; 4 to 10 years old; 1,900 to 2,000 pounds; sound, sure, broke to work. Give full description and lowest price.

C. STOWE, R. F. D. 4, Jefferson, Ohio.

### CLYDESDALE STALLION COLTS

For sale. Two registered Clydesdale stallion colts; 8 months old; good ones. See or write.

S. A. WALTER, Formoso, Kas.

### 12 REGISTERED CLYDESDALE Stallions and Mares.

For sale; all that are fully developed and in flesh will weigh 1,800 to 2,100 pounds. Young ones will develop to that.

J. G. THOMPSON & SONS,  
R. R. 1, Box 109, Steubenville, Ohio.

### SIX PERCHERON STALLIONS

For sale, including our imported herd stallion, Siroco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.

A. M. DULL & SONS, Washington, Kas.

### PERCHERONS

One imported stallion; 8 years. One two year old stud colt and one mare. All registered in the Percheron Society of America. Will sell worth the money.

FRED DAUBER, MERIDEN, KAS.  
Route 2.

## Belgian and Percheron Stallions

Oklahoma bred, and priced right.

W. L. LAKE, FT. COBB, OKLA.

## REGISTERED PERCHERONS AND FRENCH DRAFT

Stallions, mares and fillies, for sale.

A. E. PANTY, Lenox, Iowa, Rte. 1.

### STALLIONS

For sale. Black Percherons at a price so you can own one. Sound and right. Come and see them.

HENRY E. PETERSON, Lyons, Neb.

## 2 Imported Belgian Stallions

Color, sorrel and bay. Sorrel weighs 2000, bay 1900. Have been examined by state and have state license. Good movers; colts to show. Also a pair of 2 and 3 year old Belgian mares; registered; color, bay; one with foal.

FRANK LIESER, Jefferson, Ohio,  
Route 1.

purchase indulgence for the sinner!"

In later times the Arab has found his horse valuable in stealing up on caravans that cross the desert, looting whatever he could and then making a speedy getaway.

Wondrous tales have been told of the speed, endurance and intelligence of the Arabian horse, and he has frequently been made the subject of poem and story. The Arab horseman is as proficient a story-teller as he is a horseman and he has continually exaggerated regarding the ability of his horse. Within the last half century, actual trials on the desert between English Thoroughbreds and Arabian horses at both long and short distances have shown that the Thoroughbred is the superior of the Arabian in both speed and endurance. Nevertheless, the Arab horse is a highly-developed, refined, stylish and beautiful animal and never fails to arouse the admiration of horsemen because of these good qualities. As a utility horse in the present day, he is too small to be in great demand, but he has been and is today highly valued for crossing purposes in the production of various types of light horses. The large government studs in France, Austria, Germany, Russia and Italy contain many Arabian stallions which are being used on native mares to produce remounts. The best Arabian horses measure about 14.3 hands and the height is said to hardly vary a hand. About 87 per cent are of a dark color. The most common color is bay, with grays almost equally numerous, while chestnuts, browns and blacks are frequently found. Their heads are a striking feature—being clean-cut and tapering, with long rather than round nostrils, prominent intelligent eyes, and small, active ears. The neck is long, arched and fine, the withers and shoulders good, the back short and strong, the coupling well muscled, the tail set high and well carried, the bone and tendons fine, the joints clean, the pasterns sloping, and the feet small, but good. They are docile and excellently mannered, but have high spirit. The action at the walk, trot, and canter is springy, but not high, and is easy to ride.

### The Barb Horse.

These are dark bay, brown, chestnut, black, and gray horses of North Africa, found in the Barbary States. They are exceptionally hardy, enduring and useful animals, more heavily built than the Arab, but without his extreme quality, refinement and beauty. Morocco, Algeria and other Barbary States secured their horses from Syria, Arabia, Europe, and various parts of Asia. Both Arab and Barb horses were taken to England where they entered into the production of the Thoroughbred.

### The Turk Horse.

This horse also entered into the foundation of the Thoroughbred. He sprang originally from the dun-colored Turcoman pony to which much Arabian blood was added, so that while possessing much of the docility and beauty of the latter, he has not the Arab's vigor and endurance. The Turkish horse is found chiefly in Anatolia, and only to a limited extent in Turkey in Europe.

### BROWN & WALKER'S GOOD SALE.

The Brown & Walker Percheron dispersion, a sale of unusual interest because of the prize winning blood it contained, was held at Clarinda, Iowa, on the 17th, and was a success. Many buyers were present from a wide territory, attracted chiefly by the mares and young things in foal and sired by the champion stallion, Helix. There was competition for Helix, as well, as his sale for \$3,600 indicates. The general average of the sale was over \$575, notwithstanding the fact that one-fourth of the offering was under one year. Following is a nearly complete list of the sales:

Stallions.	
Helix (75752), 7 years, John I. Colgan, Wyoming, Ill. ....	\$3,600
Hellon 97205, 1 year, Robison Bros., Morton, Ill. ....	775
Halton 104964, 8 months, E. L. Humbert, Corning, Iowa. ....	500
Horatio 104965, 9 months, Al Dean, Hume, Ill. ....	310
Herbert 110283, 8 months, E. L. Humbert, ....	305

## Robison's Percherons

Largest Stud, Longest Established, and the Leader in Show and Sale Records for the West. Best in Blood; Most Common Sense in Care

None Can Undersell Me, Values Considered

J. C. ROBISON, TOWANDA, KAS.

## IRVINEDALE BELGIANS

We import 'em good and breed 'em likewise

One of the Few Establishments in America Offering Recently Imported Animals.

### OUR AUGUST IMPORTATION

Was one of the best we have ever had, and about the last to leave a European port. We have

40 Stallions; 20 Mares

A few good Percherons among them. Will refund the expenses of any visitor who thinks we have deceived him concerning what we have to offer. Ankeny is ten miles north of Des Moines on the Northwestern Ry. and Ft. Dodge Interurban. Always mention the American Breeder.

CHAS. IRVINE

Box 7

Ankeny, Iowa

## What About Imported Percherons?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few if any will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ton horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.

PERCHERON IMPORTING CO. Chas. R. Kirk, Pres. St. JOSEPH, MO.

All street cars going south from Union Depot pass our stables.

## WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had direct from the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

## Belgian Importers and Breeders

Largest in the West.

We specialize in the type best adapted to this section—the most modern one—clean, compact, good movers, weighing 1,800 to 2,200. One of the few firms selling good mares in foal and broke to work.

Stallions Always on Hands.

BLUE VALLEY STOCK FARM,  
W. H. Bayless & Co., Blue Mound, Kas.

## Closing Out Bargains in Percherons

I am preparing to quit the farm and

My Entire Herd of 50 Percherons—Mostly High Class Mares and Fillies—Is for Sale.

I have a few good stallions, of course, and will make close prices on them. But any man who will take all, or a large part, of my mares and fillies, will get a bargain he cannot find anywhere else. Good registered draft mares will be the money makers for years to come.

GEORGE HIRSCHMAN,

PIERSON, IOWA.

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

Ask for our new calendar, mentioning the American Breeder.

GEORGE EGGERT, NEWTON, IOWA

## Belgians and Percherons

Chestnuts and Blacks; Typical of These Great Draft Breeds.

Our stallions are twos, threes and fours, some imported last year, some home bred, so that they are thoroughly acclimated. The Belgians are grandsons of the great Brussels champion, Indigene du Fosteau. Come, or write, mentioning American Breeder.

Induse (81361), 6 years, W. E.	

### FOR GOOD BELGIANS

SEE R. F. FRENCH,

Independence, Iowa.

Twenty imported and home bred stallions for sale that weigh from a ton up to 2,200 lbs., thoroughly acclimated. Also brood mares in foal and with foals at side and re-bred. Matched pairs also.

### PERCHERON STALLIONS AND MARES

For sale. Seven stallions—5 yearlings, one 3-year-old, one 4-year-old; four mares; every one good bone and good individuals. I want to sell, and the first buyer will get a bargain.

F. T. WALLACE, ASSUMPTION, ILL.

## PERCHERONS, JACKS, AND JENNETS.

A few tried imported black Percheron stallions; extra breeders and well bred enough to head any pure bred herd.

12 head of registered big black Mammoth jacks, from 2 to 5 years old; 14½ to 16 hands high; well broke and quick performers. We have the best herd of well bred jennets in the state, bred to our imported Spanish jack.

Anybody can own a good jack or stallion the way we price them. We have no little stuff. Come and see us. Farm 30 miles northwest of Hutchinson. Will meet trains at Raymond or Chase.

J. P. & M. H. MALONE, CHASE, RICE COUNTY, KANSAS.

## I wish to close out my entire Bunch of Percheron Stallions, Jacks and Jennets.

I have six stallions, three gray and three black. Five of these horses are imported and one American bred. All first class stuff and all registered in Percheron Society of America.

I also have two jacks and three jennets. Will sell this stock worth the money, as I want to close them out. This stock is the result of 17 years' careful selection and they are all breeders.

JOHN W. SCHENCK,

PERRIS, ILL., R. R. No. 1.

## FOR SALE OR EXCHANGE

For Percheron, Myron Shilo 44249; chestnut sorrel; 9 years; 16½ hands; 1300 pounds; thin in flesh. Must change him on account of his colts. Sound and a good breeder. Worked 40 days and trotted a mile in 2:38. He is good enough to head herd. Double Wilkes cross. Also a black jack for sale; 9 years; 14½ standard; good server and sure. Bred by Luke Emerson, Bowling Green, Mo. Will pay expenses if not as represented.

A. J. ROBBETT, FARINA, ILL.

## CORSA'S SUCCESSFUL PERCHERON SALE.

The success of W. S. Corsa's annual sale of Percherons held December 8, brought much satisfaction to the believers in good draft horses and right methods. Although the day was cold and rainy a record crowd was present, twenty or more states being represented. Many undoubtedly came with the expectation that unsettled conditions would make it possible to buy some of the much sought breeding stock at low figures, but such was not to be the case. The general average of the sale was \$656, the half dozen stallions, some quite young, as our list will show, averaging over \$1,000. The mares, fillies and filly colts, making up the bulk of the sale, averaged \$580. The sale was held, as usual, on Gregory Farm, at White Hall, Ill. In spite of the weather discomforts the sale went forward briskly, arrangements being excellent and the values undoubted. The following list of sales completes the story:

## Stallions.

Carmerica 94311, 2 years, A. W. Green, Middlefield, Ohio.....\$1,475

## WOODLAWN PERCHERON DISPERSION.

The quarantine for foot and mouth disease which tied up all live stock business in so many Illinois counties, materially interfered with the success of the Woodlawn Percheron dis-

Astral King 2805.

## Astral King Excels

IN FORM, STYLE AND SUBSTANCE  
and Breeding Ability, and  
At Everyone of the Saddle Horse Galts

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind of buyers.

Registered Herefords for Sale—Weanling bulls and heifers at \$100, and yearlings at \$150.

JAMES HOUGHIN, JEFFERSON CITY, MO.

## REGISTERED SADDLERS

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Rex McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

H. A. GREENWELL, LAKENAN, MO.

## SADDLE STALLION, PERCHERONS AND 10 JACKS

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

W. L. GRAHAM,  
Mackville, Washington County, Ky.

## REGISTERED SADDLE STALLION

For sale or trade for registered cattle or Percheron mares. Register No. 4846; weight 1,240; age nine. Also two good heavy boned jacks, ages five and nine.

PERKINS & COAD, Albion, Ill.

## SADDLE STALLION.

Rice Squirrel 3736 for sale or exchange for draft stallion. Also Jack 2994, black, white points, 15 hands standard, for sale at less than his real value.

J. E. LEWIS, Stewartsville, Mo.

## WAR HORSES

Registered Black Hawk Morgans, stallions and mares; all ages; one or a carload. None better for cavalry horses. Or will trade for a large jack or land. Write, fully in first letter.

E. F. BROWN, Derby, Lucas Co., Ia.

## FOR SALE OR TRADE

Standard and registered mare, by Early Reaper, blood bay; 8 years old; 16 hands high; as pretty as a picture and fearless on the road; has been a full mile in 2:12½ this past season; will make a 2:10 trotter next season sure. Good reason for selling. Will trade on a two-year-old Percheron or Belgian stallion or two good young heavy draft mares or a big pair of young mules. Don't write if you don't mean business.

DR. JESSE Z. HILLEGASS,  
14 So. 6th St., Allentown, Pa.

## MILLER STOCK FARM

## Bargains in Standard Bred Stallions.

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade on the above. No stock shown on Sunday.

F. M. LORIMER, Mgr., OLATHE, KAN.

## FAST EXPRESS 27421.

I must dispose of this horse. Trotting record 2:17¼. A sure breeder and good disposition; a beautiful horse. Will sell cheap, or trade for auto. For particulars, address,

M. D. CONNOLE, R. 17, Richland, Kas.

## Shetland Ponies

## 100 HEAD IN HERD.

Solid colors and spots. Special values for Holiday buyers.

Nothing will give children the pleasure and service in proportion to first cost and care. Buy the good kind and they are always ready sale.

W. J. THOMPSON, Dorchester, Neb.

## EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

ers in this country will discover a shortage of horses that will take many years to supply. Every stallion and jack owner should get busy immediately and try to prevent the best mares going to war.

## Hackneys, Percheron and Jack

For sale or exchange—Three Hackney stallions; three Hackney mares; one Percheron stallion and one three-year-old jack. All choice stock. For cash, mules, cattle or saddle horses. Apply to

CHAS. G. MUNROE, Rushville, Ill.

## STALLIONS, JACKS, JENNETS.

Pure bred Percherons; 1,800 to 2,000 pounds. One of the best herd jacks in Kansas; also ten good young jacks and jennets. Prices way down. Work horses, mules or light auto considered.

S. S. MOUSE, LA CYGNE, KAS.

## STALLIONS AND JACK

For sale. Standard bred stallion, Teddie Andrew (50226). Spotted Arabian stallion, weight 1,225 pounds.

One Mammoth Jack, 15 hands. One Shetland pony stallion; gentle for children. Will sell all or any one. All classy stock.

CHAS. C. BUTCHER, RUSSELL, KAS.

## Banner Stock Farm

## Home of Inclus.

Registered Percherons, jacks and jennets; all ages. Mares bred to the champion stallion, Inclus. Write your wants to

BRUCE SAUNDERS, HOLTON, KAS.

Buy of the Breeder and save money on registered Percheron Stallions and Mares and Standard Bred Stallions and Mares; 35 head to select from.—E. P. Hamilton & Sons, Garden Grove, Decatur Co., Ia.

YEARLING PERCHERON STALLIONS and two jacks for sale. The Percherons are registered; blacks; 1300 lbs. each; sound and right. One high-class herd jack; one good yearling. For particulars, address

M. G. BIGHAM & SONS, Ozawie, Kas.

## GOOD RENTAL PROPERTY

To trade for good draft stallions and good jack. Would buy a good horse and jack. One yearling jack for older one. Old Cleveland Bay for Standard bred.

## Light Horse "Personals"

Mr. J. L. Dodge of Grovetown, Ga., recently had the misfortune to lose by fire his entire racing stable. Fifteen head were burned to death, including the sensational 3-year-old trotter, Lady Wanetka (2) 2:10, Silk Hat 2:09¼, Holyrood Ben (2) 2:17¼, Belgravia (2) 2:10¾, and Holyrood Nelly (2) 2:21¼, and some good young stock by King Cole, 2:05¾, and Joe Bowers, 2:09¼.

In losing the 3-year-old pacer Squantum (3) 2:09¼, Lon McDonald has lost his best prospect for stake paces next year. Squantum was a close second best in 2:01½.

The great speed sire, the Bondsman, sire of the champion, Colorado E, 2:04¾, was purchased at the old Glory sale by Ole Wilhite, of Bartlesville, Okla. He should be a big boost for the light harness horse industry of that state.

The great race horse, Ess H. Kay, 2:00¾, went to the McKennan farm at Washington, Pa. He is a grandly bred fellow and has been a great racer and should sire lots of speed.

The good ones sold for top prices at the Madison Square Garden sale. It pays to raise good ones.

It is reported, that in a matched race at Larned, Kans., November 20, between the pacers, Lester H, 2:15¼, by Lester Hill and Trixie Chimes, 2:24¼, by Council Chimes, the little Chimes mare came but had to pace an eighth of a mile in 14½ seconds to win.

The Panama-Pacific Exposition offers \$227,000 in purses for 24 days racing. We would not mind having a share of that ourselves.

A number of good mares were purchased at the old Glory sale for the Curles Neck farm and probably will be mated with the Harvester, 2:01. It is reported that the Curles Neck farm will sell all of their weanlings produced every year.

Ray Snedeker, who drove the sensational pacer, Directum I, 1:58, this year, has made arrangements to drive him again next year. If the stallion, William, 2:00, comes out next season in good shape, he may be able to turn the tables on the son of Directum Kelly. William is a great horse and as he is only a 4-year-old, should be even better next year.

One of the most consistent pacers on the half mile track of the middle west this season was Peggy Jim, 2:07½, by Never Fail, and he seldom failed to bring home the big end of the money.

Napoleon Direct, was one of the best performers on the grand circuit, everything considered, and last spring he was worked to a plow between two mules. He was taken from the plow and placed in training and gave a good account of himself, being one of the largest money winning pacers of the year. He closed the season with a record of 2:02¼.

There has been considerable dissatisfaction this season about the "No record rule" that made only race winning records a bar.

The grand little pacing mare, Minnie Chimes, 2:04¼, owned and driven by James McVey, of Hutchinson, Kans., was a big winner again this year and closed the season better than she was when she started.

Directum I, 1:58, tried to beat Dan Patch's record of 1:55¼ with wind-

## REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Would sell a ear load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Leadlight Morgan is now at the head of my stud and I am expecting at least 10 colts from him next spring.

RICHARD SELLMAN, Rochelle, Texas.

## Stallion Service Record Book

This book has 200 pages like the specimen page in this ad. It is substantially bound with a good, strong waterproof cover. It has 20 index pages for keeping the owners' names in alphabetical order so that any name or mare can be found quickly.

The breeding contract at the bottom is the strongest possible kind of a note. It is a big help in making collections, as nearly every state has a law for the collection of labor debts without exemption, and this is a contract to pay for services rendered. Before it is signed run a pencil through two of the lines in the contract, leaving the line that makes the kind of a contract you want. Many will sign a contract who would refuse to give a note.

This book has a calendar and a gestation table. It can be used for several sires without carrying more than one book. This is the most complete and up-to-date service record book printed. It is a nice size and can be carried easily in any pocket. Every breeder should have one. After improving it for several years, the result is this most satisfactory book. A complete new edition is just out. Although this new book has double the capacity of those offered heretofore, it sells at the old price. It is not bulky, as it carries no advertising or other unnecessary matter. It will be the standard record book used by the leading breeders.

If you are not satisfied with the book or do not consider it the best and cheapest on the market, return it and your money will be cheerfully refunded. The price is 50 cents; six for \$2.75; postage prepaid. Send all orders to the

**GRAHAM PUBLISHING CO.**  
225 West 12th St., Kansas City, Mo.

shield, November 5th at Kirkwood, Delaware. The pace maker could not keep pace with the chestnut stallion, the time for the first half mile being 1:01½. Directum paced the last half mile alone in 58 seconds, making the mile in 1:59¼. The Kirkwood track is kite shaped.

C. K. G. Billings rode Uhlan, the trotting king, an eighth of a mile in 13 seconds (a 1:44 clip) over the track at Curles Neck Farm, November 1st.

Peter the Great, 2:07¼, has 42 new Standard performers in 1914, which is a world's record. He is also the largest money winning sire in the world.

Lord Debry, 2:05¾, one of the greatest race horses of his day, dropped dead in the harness November 2, at Brownsville, Tenn. He was one of the most sensational trotters of his time, and held the race record to wagon of 2:05¾.

Bessie Admiral, by High Admiral, 2:07¾, dam by Arion, 2:07¾, broke the record for yearling trotting fillies on half mile track at Washington, Pa., on November 12, trotting the mile in 2:28 with ease.

Old "Aunt" Effie Powers, 2:08¾, is the dam of two new 2:10 performers, Liberty Patch, 2:08¾, and Power Patch, 2:09¼, both by Dan Patch, 1:55¼.

The fast 3-year-old pacer, Squantum, 2:09¾, died at Phoenix, Arizona, where he was taken to race. He was considered a possible world's champion. He made Anna Bradford, 2:00¾, pace a mile in 2:01½ at Lexington, Ky.

Racing begins at San Francisco next June. There is an early summer meeting and a fall meeting; the purses are all good. There are four \$20,000 purses. Twenty thousand dollars looks like a big purse, but the horse that wins the big end of it will doubtless know he has been to a horse race.

DES MOINES, IOWA AGENTS WANTED

OVER 20 INQUIRIES FOR ROAD STALLION.

To the American Breeder:—You may stop my ad and send me your bill. I have had over 20 inquiries; even more than I looked for. I don't believe the road horse business is as dead as some think it is. I wish you could see my horse; he is one of the nicest of his breed, so large and smooth. I think the American Breeder sure does the business. I may be in Kansas City before long and may come and see you.—J. C. Dunn, Cheyenne County, Neb.

SOLD 20 YEARS AGO AT \$3,500.

Twenty years ago last week R. T. Freeman & Son, of south Audrain county, sold Rex McDonald to John T. Hughes, of Lexington, Kentucky, at \$3,500. Rex Denmark, the sire of Rex McDonald, at that time belonged to Thomas S. Harrison, east of Auxvasse. Mr. Harrison now resides in Kansas City.—Missouri Stockman.

THREE INQUIRIES TO ONE.

To the American Breeder:—I think it is due you to say that I get, I believe I am safe in saying, three inquiries from my ad in your paper to every one that I get through every other advertising medium that I use. This also convinces me that you need a Saddle Horse Department.—Jas. A. Houchin, Cole County, Mo.

## Advertising Briefs

### PUBLIC SALES.

#### Percherons.

December 22—W. H. Billiter, Carroll, Neb.  
January 12—C. F. Jones, Rippey, Ia.  
January 28—Spohr & Spohr, Latham, Kas.

#### Jack Stock.

March 8—G. C. Roan, La Plata, Mo.

#### Short Horses.

January 12—C. F. Jones, Rippey, Ia.  
Draft Horses, Beef Cattle and Hogs.  
February 28—Miami County Breeders, Paola, Kansas.

George Hirschman, Plerson, Iowa, writes: "I am going to quit the farm and want to close out the Percherons without having a sale. These horses are just in farm condition and will be better for the buyer than if they were fit for the sale ring, and they can buy them for much less. These mares are bred to a black horse that has weighed 2400, and several of these mares will weigh over 2200 if put in show shape. I have a few mares sired by Nicholas 21997 (43394), and the weanlings, yearlings and two year olds are most all sired by the heavy horse, Keota Allen 44752."

J. T. Watson, New London, Mo., starts his regular season's advertising in this issue. He has registered Mammoth jacks and jennets at the right prices, and all guaranteed as represented.

Chas. G. Munroe, Rushville, Ill., has three Hackney stallions and three Hackney mares for sale or trade; also one Percheron stallion and a jack. He will trade for mules, cattle or saddle horses.

J. M. Nolan, Paola, Kansas, is offering some Percheron, Belgian and Shire stallions and mares for sale. He has stallions, ready for service, for \$300 and up.

E. P. Hamilton & Sons, Garden Grove, Iowa, has 35 head of Percheron stallions and mares for sale. They say "Buy of the Breeder and Save Money."

M. D. Connole, Route 17, Richland, Kansas, is advertising his trotting stallion for sale cheap, or will trade for an automobile. Write him for full particulars.

Ben M. Green, Cape Girardeau, Mo., has eleven head of jacks for sale, from three to six years old, and he will make the prices to suit.

L. E. Blessing, King City, Mo., is making special prices on his registered Percherons in order to close them out. He has six mares, one to seven years old; four of them are in foal. He has one matched team of mares, in foal, and three young stallions. Bear this ad in mind as it does not appear again.

Louls A. Wilson, Logan, Iowa, would be pleased to have any of our readers who are figuring on making a sale of live stock to write him for dates. He is conducting sales for some of the best breeders in the country.

N. S. Cox & Sons, Pattonsburg, Mo., has Percheron stallions and mares, jacks and jennets and one Arabian stallion that he is offering for sale on a "square deal" basis.

Lock Box 75, Haddam, Kansas, has some good rental property to exchange for draft stallions and jack. See the ad.

Owen L. Fitch, Barry, Ill., has registered, prize winning Devon cattle advertised for sale in this issue.

Henry E. Peterson, Lyons, Neb., has some black Percheron stallions for sale at a price so you can own one. Write him.

Geo. Eggert, Newton, Iowa, breeds and imports Percherons, Belgians and Shires and has them for sale at reasonable prices. He has a new calendar which can be had for the asking.

C. M. Lewelling, Beaver City, Neb., will hold a combination horse sale on December 31 at Cambridge, Neb., in which he will sell 10 registered Percherons. Write him for catalogue.

J. E. Lewis, Stewartville, Mo., is offering his saddle stallion, Rice Squirrel, for sale or exchange for a draft stallion. He also has a jack for sale.

Spohr & Spohr, Latham, Kansas, hold a dispersion sale at Wichita Stock Yards on January 28, 1915. Everything sells and can be had at your own price. Write them for a catalogue and be sure to attend the sale.

C. Stowe, Jefferson, Ohio, is in the market for a Percheron stallion. When writing him give full description and lowest price of what you have.

W. H. Hayless & Co., Blue Mound, Kansas, start their regular advertisement in this issue. They are importers and breeders of Belgians, and specialize in the type suitable for this section. Their mares are in foal and broke to work.

Dr. Jesse Z. Hillebrand, Allentown, Pa., wants to sell or trade his Standard bred mare. Read the ad in this issue and write him what you have.

S. A. Walter, Formoso, Kansas, is advertising in this issue two registered Clydesdale stallion colts, eight months old, for sale.

Dr. A. F. Saxton, V. S., Oxford, Ia., writes: "I have seen such good results in the use of Spohn's Cure as a preventive, and also a cure, in the various forms of distemper, that I am convinced that it is the safest and best

remedy for this class of diseases yet discovered."

Shoes for outdoor wear constitute one of the remarkable conveniences developed through advertising in agricultural papers. Through this system the special need of thousands has been supplied when no other means of supply was known. In this line the latest success is the special shoe manufactured by Bilger Bros., Dept. 31, Chicago, Ill., and advertised in this issue. We urge every interested reader to reply to this advertisement and get full information.

The Percheron and Shorthorn sale of C. F. Jones, Rippey, Iowa, on January 12 (new date), will be one of the season's most important auction events. Several features of the auction event add to this distinction any one of which would justify the attendance of a prospective buyer of either of these cosmopolitan breeds. In the Percheron section, for instance, is included the wonderful champion mare, Gandine, and three or four of her produce—a high class family of this sort upon which the most successful herds and studs are founded. We do not believe a greater yearling value will be offered this season than Baron Chinda, the 1,650 pound stallion out of this champion mare. This is simply one point. The catalogue illustrated by true-to-life photographs emphasizes many. In the Shorthorn section the usual richness of the Scotch breeding will alone command the attention of anyone familiar with the history of this breed in the section where its greatest practical value has been developed. Every one of the 20 Shorthorns to be sold is the kind the country needs and is backed by a Scotch ancestry that is hard to improve upon. Catalogues of this important sale are just out and will gladly be mailed to any reader who sends his request to Mr. Jones at Rippey, Iowa, mentioning this paper.

S. R. Klein, Blufford, No. Dak., is offering in this issue two full blooded black Percheron stallions for sale.

The Aladdin Mantle Lamp advertised in the American Breeder, has been proven by tests conducted by physics professors in a dozen universities, capable of producing about five times the "candle power hours" of the average round wick lamps not using mantles. For the exact figures, names of the universities or any other information about these superior lamps, address Mantle Lamp Co., 390 Aladdin Building, Chicago, Ill., and mention the American Breeder.

The Suffolk Stallion, Ashmoor Omar Kham, third prize in the American Breeder Suffolk "Stallion Show" last year, is now offered for sale by its owner, Charles W. Stewart, West Chester, Ia. Reason: fillies ready to breed. Mr. Stewart wants a young Suffolk stallion also.

Truman's Pioneer Stud Farm, Bushnell, Ill., writes: We have recently sold to C. L. Waltz of Spaulding, Iowa, the imported Shire stallion Darlaston Draughtsman to head his stud of pure bred Shire mares. This colt is three years old; bay, with tremendous width and depth, standing on best of feet and joints, and Mr. Waltz considered him the best stallion we had ever sold him, notwithstanding the fact that we have sold him several very high-class horses in the past years.

We have also sold to Mr. Samuel Insull for his Hawthorn farm the imported Suffolk mare Burgh Damsel. This mare was purchased by us in England this summer. After attending all the Suffolk shows we selected her as being the best Suffolk mare we had seen in England. She is three years old, a beautiful chestnut and weighing 1950 pounds. Is a very valuable addition to Hawthorn's farm stud of Suffolk horses which is the largest in the world.

### USING THE "STANDARD" FOR CORRECT MEASUREMENTS.

Our illustration shows Wm. E. Morton, 920 Scarritt Bldg., Kansas City, Mo., secretary of the Standard Jack and Jennet Registry of America, making an official measurement on a jack. Mr. Morton spends considerable time visiting breeders, state fairs and jack sales, in order to be thoroughly familiar with the existing conditions. He has been chosen as the superintendent of jacks and jennets at the Panama-Pacific World's Fair, San Francisco, California. He will be glad to assist those who expect to show stock in that department.

**FAIRVIEW STOCK FARM.**  
Registered Jacks Bred to Meet the Modern Requirements For Bone Substance and Stamina.  
25 head, from weanlings to seven years old, and up to 1,200 pounds in weight. We won championship on both jacks and jennets at the Kansas State Fair, both 1913 and 1914.  
Also for sale—one two-year-old Percheron and two yearling stallions. See our stock and get prices. We can save you money. Everything guaranteed as represented when sold.  
H. T. HINEMAN & SONS, DIGBYTON, KANS.

## MAMMOTH BLACK JACK

With White Points; 2d Prize Winner at Kansas State Fair, Topeka. Foaled August, 1911; 15½ hands; 1,000 pounds; in rather thin flesh. This is a very heavy boned jack, a sure colt getter, and a prompt server on mares. Its sire, Admiral Carter, is 16½ hands, weight 1,250; its dam, a big roomy jennet. This jack sells for \$800. Come or write—J. F. TRUE, JR., PERRY, KAS.

## Missouri Registered Mammoth Jacks and Jennets

FOR SALE AT ALL TIMES.  
As fine a bunch as can be found on one farm. Guaranteed as represented. Prices right. Come and see them. Also big type Poland Chinas.

J. T. WATSON,  
New London, Ralls County, Mo.

## GOOD JACKS AND JENNETS FOR SALE

One 4-year-old; 15½ hands; broad and deep. One coming 3, one 6 years; 15½ hands; broke to both mares and jennets. Three yearling jacks; extra good; one herd jack, sire of above jacks. These jacks are among the best in Central Missouri. Six splendid jennets. This stock is all black with white points, and registered where old enough. One German Coach stallion, 7 years old, from Crouch & Son. Will price this stuff right, as I want to sell. Write for prices and come to see me.

O. L. POTTER (8 miles of M. K. & T. R. R.) ROCHEPORT, MO.

We have a very large supply of high-class Shire, Percheron and Belgian stallions and shall be pleased to mail our 1915 catalogue to anyone mentioning the American Breeder.

Fred J. Kiesel, Ogden, Utah, is in the market for a carload of registered Percheron mares and one or two stallions, and would like to hear from any of our readers in regard to what they have.

H. B. Shelton, Pearlsburg, Va., has seven Percheron mares and fillies, and seven Hackney fillies for sale. Write for description and price.

Chas. W. Stewart, West Chester, Ia., wants to sell his Suffolk stallion and is in the market for a young stallion. Look up the ad.

A. J. Robnett, Farina, Ill., wants to sell or exchange his stallion, Myron Shilo—double Wilkes cross—for a Percheron. He also has a nine year old jack for sale.

M. G. Bigham & Sons, Ozawie, Kansas, are offering yearling Percheron stallions and two jacks for sale, and guarantee all stock as represented. Write them for full information.

Fred Dauber, Meriden, Kansas, has one Percheron stallion, one stud colt and one mare for sale—worth the money.

Frank Lieser, Jefferson, Ohio, wants to sell two imported Belgian stallions and a pair of two and three year old Belgian mares.

R. F. French, Independence, Iowa, well known breeder of imported and home bred Belgians, starts his ad in this issue. He has 20 stallions to select from. See his ad.

Crawford & Griffin of Newton, Iowa, write: "Our horses are all doing nicely and we wish to report the sale of two of our two year old Percherons. We sold a very nice black two year old recently to that well known Percheron breeder, M. J. Nelson of Cambridge, Iowa. This is an exception-

## ANOTHER GOOD ONE

Jack colt foaled October 3, 1913; measurement October 3, 1914. Height, 55 inches; girth, 52 inches; length, 69 inches; head, 25 inches; muzzle, 21 inches; ears, 31 inches; hock flat way, 7 inches; bone, 7 inches. I own the sire and dam of this colt, also four other large size mammoth jacks ranging in age from 3 to 6 years old. Two extra good 2-year-old jacks and a herd of extra heavy bone mammoth jennets, and a registered Percheron stallion 3 years old; black in color; will make a ton horse in another year.

I will sell any part or all of this stock cheap for cash, or will exchange for land within 100 miles of Kansas City. Address

OWL HOLLOW STOCK FARM.  
W. W. SHOTT, LATHROP, MO.

## BIG MAMMOTH JACKS AND JENNETS

For sale. I have some good jennets which are kin to my herd jack, for sale at a bargain. Also young jacks, one to coming four years old, and the large, big boned Poland China hogs, breed sows and boars old enough for service, and pigs. Seven miles north of Monett on Frisco R. R., and six miles southwest of Hoberg on Mo. Pac. R. R. Write for prices to

Henry Obermann & Son, Freistatt, Mo.

## FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP,  
Eolia, Pike County, Mo.

## JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Mollac, Elk County, Kas.

## JACKS AND JENNETS

For sale; 30 black Mammoth jacks and jennets; recorded; some in foal by Jumbo R. 3964, one of America's best. And a 3-year-old French draft black stallion, and mares. Inquire

THEODORE CONRAD,  
Groom, Carson County, Texas.

## TO QUIT FARMING.

Will sell at a bargain, all my jennets; black, white points; registered; some weighing over 900; all of breeding age, bred to big 1,100-pound jack, Peter the Great. Also jacks, Percheron mares and stallions.

SANFORD HUTSELL, Hampton, Nebr.

## 11Worth County Jack Farm

Twenty-five head of jacks and jennets for sale.

CORSON BROS. Potter, Kans.

**MILLER STOCK FARM**  
**Jack and Jennet Bargains.**  
One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old.  
From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.  
Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull. No stock shown on Sunday.  
**F. M. LORIMER, Mgr., OLATHE, KAS.**

**FAIRLAND JACK AND JENNET FARM.**  
40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.  
**U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.**

**MAMMOTH JACKS.**

**AL. E. SMITH, LAWRENCE, KAS.**  
(40 miles west of Kansas City on the U. P. and Santa Fe R. R.)

**SPECIAL VALUE IN HERD JACK**  
As I'm Saving His Jennets. Would Trade for Another as Good.  
A good yearling jack also. The herd jack is five years; 15½ hands, standard; 1100 pounds; extra bone; good head and ears; black with white points; registered; good performer on mares and jennets, and a sure foal getter. Colts to show.  
Two extra good yearling Percheron stallions. All stock just as represented. Come or write.  
**M. G. BIGHAM & SONS, Ozawkie, Kas.**

**300 HEAD of Colorado**  
raised Jacks, Jennets, Mules and Brood Mares. All guaranteed. Prices right. **Lewis Swink & Son, Rocky Ford, Otero County, Colorado.**

**MAMMOTH JACKS**  
For sale. Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.  
**JOHN HENRY, Fairfax, Ia.**

**Jack Stock For Sale**  
Eleven head of jacks; 3 to 6 years old; 15 to 16 hands standard measure. All the bone, head and ear, and weight you are looking for. Will make prices to suit.  
**BEN M. GREEN, Cape Girardeau, Mo.**

**JACKS—CLYDESDALE STALLION.**  
FOR SALE—Three jacks, 4 to 6 years old; good flat bone; registered stock. Price \$300 and up. Also two-year-old Clydesdale stallion from imported sire and dam; weight 1,450. Write or come and see me.  
**S. A. FARNSWORTH, Blairstown, Mo.**

**Kentucky Mammoth Jacks,** colts to 6 years. Style, bone, weight. Saddle stallions, mares, geldings. Write for pictures, etc. Home cured bluegrass seed and cedar fence posts. Cook Farms, Lexington, Ky.

**8 HEAD TENNESSEE JACKS**  
For sale; white points; 2 to 7 years old; 15 to 16 hands. Good enough for herd jacks—the blocky kind. Will trade for heavy Standard bred horse.  
**A. G. BUSH, Fairland, Okla.**

**JACK---DUROC HOGS**  
For sale. A black jack; light points; six years old; 15½ hands high. Also Duroc hogs.  
**LOUIS KOENIG, Solomon, Kas.**

**12 JACKS.**  
Suckers, yearlings, twos, aged jacks, with bone and quality. Priced to sell.  
**GAREE & GAREE, NOBLE, OKLA.**

ally good colt and should make Mr. Nelson a good herd stallion for next year, as well as a great show horse. We also sold recently a very nice gray two year old to F. E. Day of Oskaloosa, Iowa. This making the second horse for him in the last two years. We

**STALLION AND JACK INSPECTION LAWS.**

Nearly one-half of the states now have inspection laws; most of the best horse breeding states are included in this list. Some breeders believe they are too stringent, while others consider them a necessity. There is one thing quite sure, however; that these laws are with us to stay, and breeders might just as well arrange to take part in their framing. The most important thing about these laws is that the states not having any regulation are now the dumping ground for the rejected stock.

It is not for us to say what should be in these laws but for the breeders themselves in the different states. Laws which are too stringent are sometimes difficult to enforce. As breeders get more familiar with the rules and regulations they may be tightened up more satisfactorily. We are informed that efforts will be made in a number of states to pass stallion inspection laws; there is also a disposition to include jacks under the same regulations which stallions are required to pass. Several states have stallion laws which do not include jacks. Sooner or later jacks will be included with stallions, requiring them to be registered in a recognized association.

This is an important point for jack men to think about. For more than twenty-five years the Tennessee record has required only height and color. Very little effort has been made to encourage breeders to patronize it; consequently only a comparatively few have registered in that association. The Standard Jack and Jennet Registry of America, which was founded on right principles, is getting practically all of the patronage. Last year over 4,000 good jacks and jennets were registered; and nearly all of the breeders are now flocking to that association. This means that in a short time the other association may have mighty little to support it.

We contend that a jack record should continue to tighten the rules, so that in the near future only the offspring of registered ancestry would be admitted to the registry. Those who have registered their stock in the Tennessee book might, in a short time, find themselves without a record association, owing to the want of patronage. If the owner of a jack was required to advertise that the animal was a grade or a scrub he would wish that its ancestors had been registered in a permanent, recognized association. We are of the opinion that a few jack breeders will yet be forced to advertise their stock just that way, no matter how good the jacks may be. Our advice to jack buyers would be to see that all stock is registered in the Standard Jack and Jennet Registry of America before parting with the money; then there should not be any difficulty. As it is growing rapidly we expect soon to see this the only jack record association recognized by all of the states having stallion and jack inspection laws.

"This association is still recording animals on measurement. Those who have jacks to sell should see that they are recorded now while they can be. All of the jennets should be registered so that the offspring can be registered. When a jennet is

have a goodly number of old customers that continue to return to us, and we are very proud of this fact, as old customers are the best advertisement any firm can receive."

**Spohr & Spohr's** dispersion sale of 33 head of registered imported and American bred Percheron stallions and mares, will contain 11 stallions of serviceable age, several mares showing heavy in foal, several mares coming three years old that are the right kind for successful breeding. A few younger animals of both sexes will also be included in their sale. Every horse offered will be sold. This offering is up to their standard in size and quality. Two year old stallions are weighing 1800 to 2000 lbs.; mares from 1600 to 1950 lbs. The date for their sale is January 28, 1915, and the place, Driver's Stock Yards, Wichita, Kansas.

If you wish catalogue write them at Latham, Kansas, mentioning the American Breeder.

**R. L. HARRIMAN, Bunceton, Mo.**

*The Fine Horse and Jack Auctioneer of the West*

I sell more horses and jacks than all others. Terms always right: work always up to the highest standard.

bred she should be bred to a registered jack, which should not be less than 14½ hands standard measure; 62 inches heart girth and seven inches bone between the knee and the ankle. The sire must be that large before the offspring (see rule 5) can be registered in the Standard Jack and Jennet Association. The first of next June stringent rules will go into effect. Every animal that can be registered should be registered soon.

Another association that needs some tightening up is the Saddle Horse Record Association. In conversation with a breeder who owns 40 head, the latter stated that he would not register anything until it was sold. This is a very loose way of doing business. That association ought to thoroughly advertise a time when new rules are to take effect. Those who do not wish to register the stock can continue to have grades. If blood lines are of any value, steps should be taken to make the records concerning them complete, up-to-date and reliable. These loose methods of doing business reminds one of the oldtime cowboy farmers who did not believe it was necessary to make hay during the proper season, but would go out and cut it any time of year.

It is difficult to make rules that please everybody; but we believe in improvement. Breeders should get busy with this association and bring it up to the standard. It is nearing

the time when breeders must know more about the stallion and jack inspection laws, as many proposed laws will be up for consideration during the next few months. Those who have animals to sell should have them properly registered before showing them to prospective purchasers. Many good sales will be lost, otherwise. Buyers are not going to accept unsupported statements in every case. They want to know that the animal is registered when the money is paid, so they will not have any difficulty later on.

**A World-Wide Response Greet**  
**The Silent Seven**

Again the OLIVER has scored another triumph. Again it has raised the standard of typewriting, lightened labor for thousands of typewriter users, given greater speed, easier, smoother action.

Since our announcement of the new OLIVER NUMBER 7, it has aroused a furore of enthusiasm the country over. Experts have pronounced it the greatest advance in typewriter mechanics for a decade. Typists proclaim it perfection in lightness of touch, quick response and delightful ease of operation. Yet this beautiful machine, complete, equipped with Printype if desired, with all its added cost and value, is being sold at the same price as previous Oliver Models.

We earnestly urge you to see the new OLIVER NUMBER 7. In no other way can you so quickly appreciate the marvels of this masterpiece—so clearly understand its mechanical excellence—so surely convince yourself that in the new OLIVER NUMBER 7 typewriter building has reached finality.

**The OLIVER 7**  
**Typewriter No.**

*The Standard Visible Writer*

**Automatic Devices**  
**---Easy Action**

Equipped with "cushioned keyboard," with "anchor keys" and with a score of improvements, refinements and automatic features that make this model supreme.

The result is less effort, less eye-strain, greater speed, and a 25 per cent greater value. And yet any typewriter user anywhere can buy this splendid Model 7, on the same terms as previous models, for our famous 17-cents-a-day plan still applies.

**Now on Exhibition at**  
**Oliver Agencies**

Go see the new OLIVER NUMBER 7 at any Oliver Branch or Agency in the United States. Mark the beautiful simplicity of its construction. Note the rapidity with which it writes; its smooth, silent movement, how the minimum of effort is needed. Inspect the automatic features. Then compare its work with that of any typewriter you know. Try it on many kinds of work no other typewriter will do.

The Oliver was first with visible writing, first with visible reading, first with Printype and it is but fitting that it should be first with automatic methods of operation.

**OLIVER BOOK DELUXE**

We have just issued a richly illustrated catalog describing the Oliver No. 7. A copy will be mailed free with your compliments if you send your name. A postal will do.

# Review of the Markets

**A Broadening of Foreign Demand Threatens Supply of Horses for Farm Work—  
Hold Your Good Mares, the Warning—Christmas Beeves Fitted for  
Show Sold From \$10.50 to \$13.00, But All Other Cattle and  
All Hogs Lower—Sheep Hold Up—Grains Stronger.**

Horse and mule dealers who are engaged in supplying the British government with equines for the war zone are still as active as ever and the departure from the established custom in former years is that there will be no suspension of trade during the Christmas holidays. While war orders keep the volume of business, large general trade is out of ordinary channels and the regular outlets that open at this season of the year. Foreign orders now embrace nearly all classes except the best heavy drafters, and while a few weeks ago they were buying only cavalry animals now they are taking a good many chunks, and heavy horses for the harder work in connection with army hauling. For a time last week inspections of mules was suspended, but in a short time this outlet will resume again. Government officials who are looking after the inspections for the British say they are operating under open orders and have no idea as to how much longer the needs from abroad will continue. A definite move for peace, or actual suspension of hostilities, in the opinion of dealers, are the only two conditions that will interrupt purchases from abroad.

Dealers are much concerned as to the south's ability to purchase horses and mules after the first of the year. The cotton crop (about 15,600,000 bales) is the largest on record, but its value is unusually low owing to the lack of demand. Only limited sales are being reported, so that credit in the south will have to be extended materially, without reflecting increased purchasing power. This condition acts primarily against large purchases of horses and mules. This year the south bought more horses and mules in the first three months than in any similar previous period. Actual need would not be less in 1915 if other conditions were equal.

Eastern demand is limited and will remain quiet for the next sixty days. Farm needs will not be evident until the latter part of February or March.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—	
Drafters, 1700-pound, extra quality . . . . .	\$200@250
Drafters, good to choice . . . . .	170@200
Drafters, fair to good . . . . .	150@175
Chunks, good . . . . .	135@165
Chunks, fair . . . . .	100@130
Southerners, good to choice . . . . .	120@175
Southerners . . . . .	50@100

Mules—	
13½ to 14½ hands . . . . .	\$ 90@110
14½ to 15½ hands . . . . .	105@135
15½ to 16 hands . . . . .	130@175
16½ or better . . . . .	175@250

## Fluctuating Cattle Prices.

Prices for fat steers in the past two weeks have run up and down the value ladder in a rather uncertain fashion. Demand has been restricted to some extent by a fear in some quarters that animals afflicted with the foot and mouth disease were permitted to pass into meat channels. Also the large use of poultry during the holidays tended to crowd beef off the bill of fare. While demand was slumpy a large supply of short fed beeves released from quarantined areas east of the Mississippi never hit the market, and supplies were far above requirements. The entire area that recently felt the scourage of the foot and mouth disease is in the process of liquidation and will continue selling until the short fed cattle are cleared. No fresh cattle are moving into feed lots to take their places so it looks as though for the next sixty days there will be heavy runs and then only meager supplies to follow. While the east is on the selling side the west is inclined to hold back and only normal supplies are coming to river markets. This means that most of the western cattle will run at a time when the east is through selling. The first week in December killers gathered in their supply of Christmas beeves. These bullocks

were prime. In Chicago most of them sold at \$11 to \$13 and in Kansas City only a few loads were offered. They brought \$10.50 to \$11.35. In both instances the cattle had been intended for the International and American Royal, but when those events were called off the only outlet was the open market. There they brought new record prices.

Compared with late November, the bulk of the cattle, which are short fed steers, are selling 35 to 50 cents lower, at \$7.75 to \$8.50. A few bunches of thick fleshed steers sell above \$9. During January sales above \$9 will be an exception and killers will gather lots of good beef at \$8 to \$8.50. Much ordinary and cannery stuff is coming from below the quarantine line at \$5.25 to \$5.75.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers . . . . .	\$9.00@10.25
Good to choice steers . . . . .	8.25@ 9.00
Fair to good steers . . . . .	7.50@ 8.45
Common to fair steers . . . . .	6.00@ 7.45
Meal fed, choice . . . . .	8.00@ 8.75
Meal fed, common to fair . . . . .	7.50@ 8.00
Quarantine steers, fed . . . . .	7.00@ 7.75
Quarantine steers, grass fat . . . . .	4.50@ 7.00

## Cow Prices Lower.

In the past two weeks a large supply of half fat and ordinary cows and heifers was reported at markets and sold 25 to 50 cents lower. This sort of a run was in line with killers' hopes and their ability to get them at lower prices leveled up the demand. "Canner" grades, however, maintained about the same price level, and sold freely. Prime heifers were scarce, and choice fed cows were lacking. Veal calves declined 25 to 50 cents, and tops now are holding at \$10. Bulls were off 25 to 40 cents.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice . . . . .	\$6.50@ 7.00
Common to fair . . . . .	4.85@ 5.25
Good to choice . . . . .	5.85@ 6.45
Fair to good . . . . .	5.30@ 5.85
Canners . . . . .	4.25@ 4.90

Heifers—	
Choice . . . . .	8.50@ 9.25
Good to choice . . . . .	7.85@ 8.45
Plain to fair . . . . .	6.85@ 7.80
Common . . . . .	6.00@ 7.00
Veal calves . . . . .	6.50@10.00
Bulls . . . . .	4.50@ 7.00

## Three State Demand for Stockers.

Kansas, Nebraska and Missouri are the only states buying stock and feeding cattle. More are going to Kansas than to the other two states. Iowa and the entire section east of the Mississippi river are buying none and are making efforts to sell. Prices are about the same as two weeks ago, though in the meantime have fluctuated 25 to 40 cents.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders . . . . .	\$ 7.65@ 8.25
Good to choice feeders . . . . .	7.00@ 7.60
Fair to good feeders . . . . .	6.35@ 7.00
Plain to fair feeders . . . . .	6.00@ 6.30
Selected stockers . . . . .	7.50@ 8.00
Good to choice stockers . . . . .	7.00@ 7.45
Plain to fair stockers . . . . .	5.75@ 6.95
Stock calves . . . . .	7.00@ 8.50
Stock cows . . . . .	5.25@ 6.25
Stock heifers . . . . .	5.75@ 7.50
Milch cows . . . . .	60.00@110.00

## A Seven Dollar Hog Market.

Packers have hog prices about suited to their ideas and are buying them freely. Twice in the past two weeks quotations were \$7 to \$7.50, and twice below 7 cents. The biggest demand occurred when quotations were 7 cents or less and now with the market around that level indications are that a well established trade will prevail. Receipts have been liberal and will continue so for the next sixty days. Iowa and Illinois will market large supplies in the next thirty days. Packers say that the north central states have nearly 50 per cent more hogs than a year ago. A good many Missouri hogs are sick with the cholera, but other states report better health among hogs than a year ago. Hogs are showing 5 to 7 pounds more weight now than last winter and that lead is expected to increase.

The range in prices of hogs in Kansas City in the past two weeks:

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Monday	Tues., Dec. 15.
Preceding Week.	\$6.80@7.15	6.95@7.30	6.90@7.27½	6.90@7.22½	6.80@7.15	6.75@7.05	6.70@7.05	6.75@7.10
Monday	7.00@7.45	6.90@7.20	6.75@7.05	6.70@7.05	6.75@7.10	6.75@7.10		

The following quotations are for hogs:

Choice, 250@300 lbs. . . . .	\$7.00@7.12½
Medium, 200@250 lbs. . . . .	7.00@7.15
Mixed, 190@215 lbs. . . . .	6.90@7.15
Light weights . . . . .	6.75@7.10
Light lights . . . . .	5.50@6.80
Common mixed . . . . .	6.50@6.85
Rough heavy . . . . .	6.65@6.90
Stags . . . . .	4.50@7.00
Boars . . . . .	4.00@4.50
Bulk of sales . . . . .	6.95@7.10

## Grain Prices Stronger.

The cash wheat market is receiving the support of a large export demand and prices are up 2 to 3 cents from the level of two weeks ago. Bran, shorts and other grain feeds are higher also. Corn prices show no important change. Oats are lower.

Wheat—	
No. 2 hard . . . . .	\$1.11 @ 1.12½
No. 3 hard . . . . .	1.10½ @ 1.11½
No. 2 red . . . . .	1.11½ @ 1.12
No. 3 red . . . . .	1.10½ @ 1.11

Corn—	
No. 2 white . . . . .	.62½ @ .63
No. 3 white . . . . .	.62 @ .62½
No. 2 mixed . . . . .	.62½ @ .63
No. 3 mixed . . . . .	.62 @ .63

Oats—	
No. 2 white . . . . .	.46 @ .46½
No. 3 mixed . . . . .	.42½ @ .43½
Bran . . . . .	1.00
Shorts . . . . .	1.15 @ 1.26
Corn chop . . . . .	1.22
Rye . . . . .	1.03
Kafir . . . . .	1.10 @ 1.10½
Barley . . . . .	.57

## Hay Prices Irregular.

Quotations are as follows: Alfalfa, choice, \$15@15.50; No. 1, \$13@14.50; standard, \$11.50@12.50; No. 2, \$10@11; No. 3, \$8@9; prairie choice, \$12.50@13; No. 1, \$10.50@11; No. 2, \$7@10; No. 3, \$4.50@6.50; timothy, choice, \$16.50; No. 1, \$15.60@16; No. 2, \$13@15; No. 3, \$9.50@12.50; clover mixed, choice, \$15@15.50; No. 1, \$14@14.50; clover, choice, \$14@14.50; No. 1, \$13@13.50; straw, \$4.50@5.

## RANCHES

In small or large tracts, adapted for stock raising, alfalfa growing, general farming, etc., or for colonization purposes if desired—can be procured at reasonable prices and on good terms. Excellent opportunities for money making.

I will gladly send you complete and authentic information.

**R. A. SMITH,**  
Colonization and Industrial  
Agent, Union Pacific R. R. Co.,  
Room 3733, Union Pacific Bldg.  
OMAHA, NEB.

## REGISTERED, PRIZE WINNING DEVON CATTLE

OWEN L. FITCH - - BARRY, ILL.

## HEREFORD BULLS

For Sale and Wanted.

My herd is strong in Beau Brummel blood. Cannot spare females at present, but **Hulls From Calves to 18 Months** always on hands. Prices reasonable. When you write state what you want or what you have for sale. Always mention American Breeder.

W. F. SIPES, WINDSOR, MO.

## NOTICE

I have several full stock Red Polled calves for sale. Address,  
**JOHN GROSS, Elizabethtown, Ill., R. 3.**

## AT SPECIAL PRICES.

Mammoth bronze turkeys, sired by a 40-pound tom, bought from Gov. Hadley. Also large, white Embden geese and White Rock chickens (Fishell strain). A few Peafowls for sale.

M. W. MAGNUSSON, SAFE, MO.

## Hotel Convention

12th and Broadway, Kansas City, Mo.  
Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall.

## Stock Farms For Sale

888-acre stock farm; 480-acre stock farm; 566-acre stock farm; 1,020 acres suitable for small ranch; 1,046-acre stock farm; several smaller tracts; 1,024 acres rich bayou farm. For particulars address,

J. A. WATKINS, WARREN, ARK.

## 280 Acres of Land

For sale or trade, near Selby, South Dakota. All fenced; part under cultivation; house, barn and other improvements; four head horses and farm machinery; good well. Will trade for a bunch of good, big, young jacks and a few Mammoth jennets in foal. A home for some one.

O. J. MAY, Bennet, Neb.

## FOR SALE BY OWNER AT BARGAINS

Four choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

**Wm. M. SPRINGER**

621 Gas and Electric Bldg., Denver, Colo.

## SAVE EVERY COPY OF THE AMERICAN BREEDER

Hundreds of our readers have written us that they are doing this, that the many articles and the Questions and Answers thus preserved make them a breeder's reference library they could not get any other way "for love or money."

## HERE IS THE BEST WAY

to have such a store of information where it can always be reached.

Photo of Binder (now holding 50 copies) That Has Been in Daily Use in The American Breeder Office for Two Years.

Send to us for one of the American Breeder binders pictured above. We had two of these binders made for our own use two years ago, and the one shown in the photograph has been in daily use ever since. When the photo was taken it contained 50 copies of the American Breeder, with room for many more. The covers of the binder project beyond the edges of the pages and protect them perfectly. A minute's time (a child can do it) is all that is needed to fasten each paper securely in its place in the binder.

We are having a special lot of these binders made up for our subscribers and will send them, by Parcels Post, Prepaid, at \$1.00 each. Address orders to

**GRAHAM PUBLISHING CO., 225 WEST 12th ST., KANSAS CITY, MO.**

**Look at these Prices!**

2 H-P, \$34.95; 4 H-P, \$69.75;  
6 H-P, \$97.75; 8 H-P, \$129.05; 12 H-P, \$219.90.  
Other sizes up to 22 H-P, proportionally low.

**Direct from Factory to User!**

Why pay two prices for any good engine, or take chances on a poor, or an unknown engine, when the "WITTE" costs so little, and saves you all the risk.

**LET ME send you a "WITTE" engine to earn its own cost while you pay for it. It's cheaper than doing without one. I have proved that to thousands who are now WITTE users.**

Ed. H. Witte.

## ENGINE PRICES DOWN ANOTHER NOTCH!

# WITTE ENGINES, Kerosene, Gasoline & Gas

Stationary, Portable and Saw-rig Styles. **Liberal 5-Year Guaranty** CASH OR EASY TERMS.

GET your engine from an engine specialist. All my life I have done nothing but make engines. The success of my customers and nothing else, makes my success. I've simply got to sell better engines. I can't lose money on an engine and make back the loss on something else. My factory is the only one, that started in the engine business 27 years ago, which has come through successfully under the same management with which it started. Only WITTE engine-quality has made that possible.

It is cheaper and easier to own a "WITTE" engine than to do without one. My New Offer makes it easier to get the work done by machinery than by muscle or brute power. No need now to get along without a "WITTE."

**New Book Free** My New Book—the finest in the whole engine business—explains all. It tells you how to be sure in your selection, even if you don't pick a "WITTE." Send me your address today, so I can send you this book FREE with my New Offer.

**HOW TO JUDGE AN ENGINE**  
READ THIS BOOK BEFORE YOU BUY ANY ENGINE IT IS SENT FREE FOR THE ASKING.

**Ed. H. WITTE, Main Desk, Witte Iron Works Co.**  
2554 Oakland Ave., Kansas City, Mo.

## Questions and Answers

(Continued from page 8.)

cover the raw surface. At this time the proper thing for you to do is to employ a competent veterinarian to put things in shape for you and outline a plan of treatment for the future from which you should not depart.

**1365—INFORMATION ABOUT MORGANS.**—Can you tell us, in an early issue of your paper, something about the Morgan horse, the probable purity of the breed at present; their size, numbers and characteristics?—Nebraska Subscriber.

**REPLY.**—The American Breeder is starting now a series of articles on the improved breeds of live stock known in this country, which will cover the points you inquire about, not only for the Morgans, but for all breeds of horses with which our readers have to deal. We believe this series will furnish the most complete, authentic and up-to-date information on the improved breeds that has yet been made available in either books or periodicals.

**1366—POSSIBLY TUBERCULOSIS.**—I have a four year old cow; last winter she was fresh; had her first calf; she gave four gallons of milk a day. Long about the last of July she gradually fell off and got poor and I quit milking her. In October she lost a calf; the calf was five or six months along. The cow did not clean after calving and she began to cough; she coughed quite freely for about three weeks and still coughs some. When the cough was the worst her throat swelled and he roots of her tongue down to the pricket and her bag swelled on the right side clear to the navel; the left side did not swell. When her bag began to swell I started to milk her; the right front teat became hard and I could not get the milk out; the milk was thick and full of hard clotted hunks; the right hind teat and bag were the same, but not so bad. The right side of the bag burst about two inches from off the right front teat. I bathed the bag with warm water twice a day and now after bathing the bag and drying, I rub it with ampor and whisky. The cow is giving about one-half pint of milk at a milking—one pint of milk a day. She is eating good now. I keep her in a stall and feed her alfalfa hay first lass, second crop; feed all she will at and about two gallons of bran a day. I am feeding a stock food. She is eating good now, but does not gain flesh; she is very poor. What was the cause of her getting poor? She was on good feed on the range in the day time and stabled and fed hay at night. What was the cause of her coughing? Also what was the cause of swelling and calving and bag swelling and bursting with no more milk than she was giving.—Colorado Subscriber.

**REPLY.**—By all means you should have this animal examined by a competent veterinarian for tuberculosis and the tuberculin test made if found necessary. Do not under any circumstances use or permit others to use the milk from an animal in this condition. You are at the best keeping a very unprofitable animal and no doubt it could prove economical to have her destroyed. An animal with an udder such as you describe is wholly unfit to give milk that is to be utilized for food, even barring tuberculosis.

**1367—WART.**—My brother has a three year old Standard bred mare and I found on the front of her arm something about like the inside of a grape after it had been removed from the peeling. I was currying her and did not know it was there when I struck it with the curry comb. I could not see it with the stable was a little dark, but I put my hand on it and found the scab easily removable and it began to bleed slowly. It has been there about two months according to the owner's knowledge. Can you tell me what it is, and a remedy?—Illinois Subscriber.

**REPLY.**—It is quite likely that the growth is the nature of a wart. Touch it with a stick of nitrate of silver once a day until the parts become perfectly dry.

**1368—ABORTION.**—I have a mare that loses her colts about this time every year. The case seems to be a chronic one. Can you advise me the best course to pursue in case of abortion or chronic miscarriage. She has lost some two or three colts and she loses them about this time every year. I suppose it is chronic.—Oklahoma Subscriber.

**REPLY.**—A mare that continues to abort as the above reported case persists in doing is a menace to the breeders of the community, and as it is a losing game with you, you should discontinue breeding her. It is through such mares as this that abortion is perpetuated and the disease is spread through a stallion becoming contaminated by such a mare and conveying it to others subsequently during service.

**1369—STALLION COUGH.**—I have a pure bred stallion that was shipped from Texas, on January 4th, 1912. He took a cough at once and now he will stand and hold his mouth straight out and hold it open like there was something in his throat. What is wrong with him, and what can I do for him?—New Mexico Subscriber.

**REPLY.**—It is now nearly three years since you received the stallion, shortly after which time the cough began. Are we to understand that he is still coughing? You should have a careful and expert veterinarian make a thorough examination of the throat and teeth with a view of locating the difficulty. We doubt if any foreign substance will be found if the case is of as long standing as you represent.

**1370—BOGGY HOCK.**—I have a colt eight months old that has a bad bog on hock. It is on the inside and outside. The colt walks lame when beginning to walk of a morning, but after walking some it does not limp. I am pretty sure this is a bad case of bog spavin. Will you tell me what to do to remove it?—Missouri Subscriber.

**REPLY.**—You fall to state just how long this condition has been present. Joints of this nature are to be viewed with suspicion in young things for the reason that they are so frequently a result of a mild attack of navel ill. At this time perhaps the best thing you can do is to bathe the hock thoroughly once a day until the parts become pretty well blistered with the tincture of iodine.

**1371—RHEUMATISM.**—About 12 months ago my mare began to get lame in right shoulder and seems to be getting worse; is worse in wet weather than at other times. Some-

times she seems to be all right and isn't lame and then gets lame again. She doesn't seem to be sore anywhere when you press on shoulder or leg, but soreness seems to be in point of shoulder. Have been working her most all the time until now and she is too lame to work. The veterinarian pronounced it shoulder lameness. Is there a disease like that? I thought she might have rheumatism. Do horses have rheumatism? She is a fine mare; weight about 1,500 pounds and is fat and seems to be all right except the lameness. After she moves around some she doesn't seem to be so lame nor sore. Can you tell me the cause of lameness and remedy for it?—Texas Subscriber.

**REPLY.**—Horses occasionally have rheumatism and the symptoms you describe are very much like that disease. Discontinue the animal from service but give her access to a lot for exercise on pleasant days. Avoid exposure to inclement weather. Apply a cerate of cantharides blister to the part that appears sore, rubbing it in well over a surface about six inches in diameter. Give internally in the feed a half ounce of salicylate of soda three times a day for five or six days. Repeat the medicine for the same length of time in about a week after discontinuing.

**1372—CHRONIC COUGH.**—I would like to know what to do for a mare that has had a bad cough ever since we began plowing in August. She had a light cough a year ago but got over it in the winter, but this fall it is worse. She is worse when at work and when she isn't at work she will start to cough when she is fed hay or straw every time there is a little dust stirred up. There is not and has not been any discharge from the nose and she has not swelled up any around the head. It is just a dry cough and she hasn't the life now that she had before she had the cough. She eats good and is in good shape; when she is standing in the barn she will stand with her head normal, but she lets her ears lop down and her eyes do not look as clear as they ought to.—South Dakota Subscriber.

**REPLY.**—It is quite likely the cough is aggravated by the dusty food which you should by all means avoid giving. Nothing but the best hay and grain should be fed this animal, and if there is any tendency to dust, it should be slightly moistened by sprinkling with water. Give her three-fourths of an ounce of Fowler's solution mixed with the grain three times a day.

**1373—PARALYSIS.**—I have a young sow that raised a litter of pigs in the spring and when the pigs were about old enough to wean she got down in the back. I weaned the pigs and treated her by pouring turpentine on her loins once in a while; later I fed her a teaspoonful of Fowler's solution of arsenic twice a day in slop, but she does not seem to be much improved. She has been this way about three months. Please tell me what is best to do for her.—Colorado Subscriber.

**REPLY.**—Your sow is affected with paralysis due to some impairment of the spinal cord, and inasmuch as the case is becoming chronic we do not believe you will make any progress treating her. The best thing for you to do is to feed and market her.

A Ft. Worth, Texas, dispatch states that a local commission firm is buying hogs for the president of Cuba. They will be used for stocking and breeding purposes. This will be the second shipment of Texas hogs to Cuba.

## You Can't Beat Galloway Prices and Quality!

My New Low Down No. 8 Spreader

with cut under front wheels and trussed channel steel frame is positively the best spreader in the world. Light draft, endless apron, positive force feed, double chain drive. Just ask for my book, "A Stroke of Gold," FREE, and I will tell you the truth about manure spreaders and how to get the greatest profit out of your manure products.

## New Sanitary Cream Separator

I will send it anywhere in the United States without an expert to set it up to any inexperienced cream separator user

for a 90-day free trial, to test thoroughly against any make of separator that even sells for twice as much and will let you be the judge. Built up to a high standard and not down to a price. 20,000 miles of travel would prove it the most modern, the most sanitary, the most scientific, the cleanest skimmer, the most beautiful in design of any cream separator made today and I have seen them all. A postal gets our big free Separator Catalog and Cow book.

## Galloway Masterpiece Big Six

Positively supreme in power, simplicity and design. All our years of engine building are built into it. A mechanical masterpiece. Long life and satisfaction to engine users are built into every one of these Galloway Masterpiece Big Six Engines. Great volume, perfected design and simplicity are what make this price possible. A heavy weight, heavy duty, large bore and long stroke engine not overrated. Get right on engines before you buy. Get my free engine book before you buy an engine at any price.

## A Department For Women

### REMOVE HEAT-WASTING ASHES EVERY DAY.

To the American Breeder:—Ashes are heat wasters.

Cleaning the range daily saves fuel.

The ashes should be cleaned from the top of the oven every morning, leaving a very thin layer to act as a non-conducting medium and so prevent excessive heat in the oven. Close all drafts and shake the ashes out of the grate into the ash pan.

If there is an ash sifter above the ash pan sift the ashes to save unburned coal, otherwise the ashes must be sifted later when they are removed. Carefully remove all ashes for if left they absorb heat and are wasteful.

Return the ash pan to its place, saving the unburned coal for use on the fire when it is burning well. Brush any remaining ashes into the ash box and remove the clinkers.—Department in Home Economics, University of Wisconsin.

### WILD WHITE CATTLE.

To the American Breeder:—For the second time in history, specimens of the wild white cattle of Great Britain will be sent outside the famous Chillingham Park, where they have been confined in their wild state since the year 1220. This herd is the only one in existence, and that these animals should have maintained their character, their beauty, their strength and their qualities, throughout the more than seven hundred years of restraint in this famous park, without the advantage of the infusion of any new blood, is one of the most remarkable things in Nature.

While it has been the pleasure of Lord and Lady Tankerville to invite their friends for an annual hunt among these wild cattle, for the purpose of reducing the surplus number of bulls, it is true that in the entire period during which they have been restrained in Chillingham Park, no live animal has been removed from this herd, except two specimens which were trapped and removed for exhibition in the London Zoological Park. Some of these cattle were secured for exhibit at the Panama-Pacific International Exposition, through the activity of Mr. D. O. Lively, Chief of the Department of Live Stock, and Hon. Eugene Grubb, whom Mr. Lively secured as special representative of the department of live stock to European countries.—I. D. Graham, Assistant Chief Dept. of Live Stock.

### PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Winter number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

**1090. Ladies' Costume.** Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7½ yards of 44 inch material with 1½ yards of 36 inch material for the sash girdle for a medium size. The skirt measures about 1½ yards at its lower edge. Price 10c.

**1106-1041. Ladies Coat Suit.** Coat cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt cut in 6 sizes: 22, 24, 26, 28, 30, and 32 inches waist measure. It will require about 8 yards of 44 inch material for the entire suit in a medium size. For skirt with tunic it requires 5½ yards; without tunic 3 yards of 36 inch material. The coat requires 3¾ yards of 44 inch material. TWO separate patterns. 10c FOR EACH pattern. The skirt measures 1½ yards at the lower edge in a medium size.

**1095. Ladies Dressing Sack.** Cut in 3 sizes: Small Medium and Large. It requires 3 yards of 36 inch material for a Medium size. Price 10c.

**1091. Men's and Boys' Night Shirt.** Cut in 5 sizes for Boys: 8, 10, 12, 14 and 16 years of age and in 8 sizes for

Men: 36, 38, 40, 42, 44, 46, 48 and 50 inches breast measure. It requires 4½ yards of 36 inch material for a 42 inch size and 3¾ yards for a 14 year size. Price 10c.

**1109. Girl's Dress with Guimpe.** Cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3¾ yards of 40 inch material for a 12 year size, for this dress, and 2¼ yards for the guimpe of 27 inch material. Price 10c.

**1108. Girls Dress with or without Peplum.** Cut in 4 sizes: 8, 10, 12 and 14 years. It requires 3 yards of 44 inch material for an 8 year size. Price 10c.

**1102. Ladies House Dress.** Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44 inch material for a 36 inch size. The skirt measures 2 yards at its lower edge. Price 10c.

**1084. Costume for Ladies and Misses, with tunic.** Cut in 4 sizes for

Misses: 14, 16, 17 and 18 years and in 6 sizes for Ladies: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 44 inch material for a 14 year size, and 6½ yards for a 36 inch size. The skirt measures about 1½ yards at the lower edge in the Misses sizes and 1¾ yards in the Ladies' sizes. Price 10c.

### INSTEAD OF PAPER BAGS.

To the American Breeder:—Fruit jars of three sizes for pantry shelves not only look neat, but also serve to show the busy housewife at a glance just what each contains. This is also much more sanitary than storing food material in paper sacks and boxes.

In the largest size, standing in the back row, keep brown sugar, rice, tea, etc.; use the medium sized jars for raisins, currants, beans, etc. The smallest size may be used for spices, baking powder, soda, etc. Have the jars neatly labeled and brush over labels with shellac or white of egg. Jelly tumblers may be used for the spices.—Miriam M. Haynes, Colorado Agricultural College.

### GENUINE TEXAS FRIENDSHIP.

In sending us a neighbor's subscription, J. J. Campbell of Childress County, Texas, writes: "I do not like to send check for this amount, but as I live 15 miles from postoffice, and five miles from R. F. D. line, it is not convenient for me to get money order, and when I get a chance to get a subscriber for the American Breeder, I just won't turn it down, as I know it is practically the only real stock paper I have ever seen for the stock breeder, and as I tell some of them, if they own only a cow they ought to take the American Breeder. Not a dissatisfied subscriber have I heard of yet, and have some of them to tell me they would not miss two issues of this paper for the dollar they paid for it."

### NEBRASKA HEN TIED WORLD'S TRAPNEST RECORD.

To the American Breeder:—All previous records have been broken in the National Egg Laying Contest, the third year of which closed December 1 at the Missouri State Poultry Experiment Station at Mountain Grove; Lady Laymore, hen No. 611, a Single Comb White Leghorn from Nebraska, tied the world's trapnest record for an egg laying contest. She laid 286 eggs in twelve months. She beat Lady Showyou's record by five eggs. The English pen of Single Comb White Leghorns won the grand championship by laying 2294 eggs. Every one of the hens in this pen, except one, laid over 200 eggs.

Why is it that some other pens have only a single hen in a pen of ten hens that will make a very high record and the remaining birds in the pen will be below the average? We think it is due to the fact that a poultryman like Barron has given much thought and much time to the question of selection and breeding for egg production. Such breeders have done some trapnesting, some pedigreeing, and they know the kind of males and females that they are mating from. Such poultrymen have selected and bred from 200 egg males, that is, males bred from hens with 200 egg records, so long that they have so nearly fixed the egg laying characteristics and the egg laying ability in the entire flock, that practically all their hens average well, barring sickness, accident, or improper methods of feeding and housing. The other fellows have bred more or less promiscuously and unknowingly. Therefore, they only get an occasional high hen. A good fancier might see an exceptionally beautiful bird exhibited by an amateur, but not knowing whether the bird had a line of good breeding back of him, a good fancier would not give much for such a bird to cross on his flock because the bird's good points might not be fixed by generations of breeding.

There is an egg type and a meat type in poultry, just as true as there is a dairy type and a beef type in cattle.

### Costs You Nothing

to try this wonderful new Aladdin kerosene (coal oil) mantle lamp 10 days right in your own home. You don't need to send us a cent in advance, and if you are not perfectly satisfied, you may return it at our expense.

### Twice the Light on Half the Oil

Recent tests by noted scientists at 14 leading Universities, prove the Aladdin gives more than twice the light and burns less than half as much oil as the best round wick open flame lamps on the market. Thus the Aladdin will pay for itself many times over in oil saved, to say nothing of the increased quantity and quality of pure white light it produces. A style for every need.

### Over Three Million

people now enjoy the light of the Aladdin and every mail brings hundreds of enthusiastic letters from satisfied users endorsing it as the most wonderful light they have ever seen. Such comments as: "You have solved the problem of rural home lighting"; "I could not think of parting with my Aladdin"; "The grandest thing on earth"; "You could not buy it back at any price"; "Beats any light I have ever seen"; "A blessing to any household"; "It is the acme of perfection"; "Better than I ever dreamed possible"; "Makes my light look like a tallow dip"; etc., etc., pour into our office every day. Good Housekeeping Institute, New York, tested and approved the Aladdin.

### We Will Give \$1000

to the person who shows us an oil lamp equal to the Aladdin (details of this Reward Offer given in our circular which will be sent you). Would we dare invite such comparison with all other lights if there were any doubt about the superiority of the Aladdin?

### Get One FREE

We want one user in each locality to advertise and recommend the Aladdin. To that person we have a special introductory offer under which one lamp is given free. Just drop us a postal and we will send you full particulars about our great 10 Day Free Trial Offer, and tell you how you can get one free.

**THE MANTLE LAMP COMPANY**  
391 Aladdin Building CHICAGO, ILL.  
Largest Manufacturers and Distributors of Kerosene Mantle Lamps in the World.

### Men With Rigs Make Big Money

delivering Aladdin lamps. No previous experience necessary. One farmer who had never sold anything in his life made over \$500.00 in six weeks. Another says: "I disposed of 34 lamps out of 31 calls."

**No Money Required** We furnish capital to get started. Ask for our distributor's Easy-System-of-Delivery plan quick, before territory is taken.

We find both of these types in all varieties of poultry.

### "VETERINARIAN WANTED."

To the American Breeder:—We had two horse doctors and they have both left us. One got a job with the government in Chicago, and the other was working by the month and has a job at Salina. We would like for you to send us a good one for there is a good opening for the right man. We want a man who is trying to improve himself instead of degrading himself with booze fighting. No cigarette fiend (rather they would use no tobacco) nor pool hall loafer (rather go to church to find them than to a pool hall). We want one who will not rob the customer the first few times he is called out. If you can find any one who will pretty nearly fill this bill, send him along. We would like for him to be a man from the ground up, for we have been badly bored with horse doctors since we have lived here. Please let me hear from you for we need one right away.—I. O. George, Ellsworth County, Kansas.

STATE TO FIGHT HOG CHOLERA.

The College of Agriculture of the University of Missouri hopes to almost entirely remove hog cholera from the state. To fight the disease it is helping the farmers to organize anti-hog-cholera clubs for the prevention and cure of the disease.

The college works by counties. This system of fighting hog cholera was started by the College of Agriculture last fall, with the successful organization of Johnson County.

The Missouri College of Agriculture is building what will probably be the finest plant for the manufacture of hog cholera serum in the United States. This plant became necessary because of the increased demand for serum from the farmers of the state amounting to 30 per cent over last year. The plant is now practically completed. The extent of the work done by the College of Agriculture in eradicating the disease is shown by the fact that 208,619 doses of serum, representing almost as many hogs treated, were sent out by the college during the year. Between 85 and 90 per cent of those treated were saved, which alone is a saving to the state of Missouri of almost one and a half million dollars.

SYMPTOMS OF BLACKLEG.

To the American Breeder:—"The symptoms of blackleg are very easily recognized by anyone who has ever seen a case. As a rule, the disease appears in a lot of young cattle when on good feed or pasture and making rapid growth. As a rule, it affects the fattest calves in the lot. It runs a very rapid course, lasting as a rule, from twelve to twenty-four hours and almost invariably results in death. The calf first shows lameness. Within a few hours, a swelling appears on some part of the body and generally on one of the quarters. Rubbing the swelling causes a crackling sound beneath the skin. When the animal is skinned, the affected portion appears bruised as if it had been hit with a club. These symptoms are unmistakable.

"The carcasses of blackleg calves should be thoroughly burned in order to destroy infection and prevent the spread of the disease. If these carcasses are not burned, the infection will remain on the premises for years and make cattle-growing unprofitable unless all young cattle are regularly vaccinated.

"Whenever there is an outbreak of blackleg, all the young cattle in the community should be vaccinated. In the event that a case is lost in a herd, and a little time would be required to secure the vaccine, it is advisable to reduce the feed so that they will shrink slightly. They are not so apt to develop blackleg while shrinking as while gaining in weight. Three days after the vaccine is administered, they may be put back on full feed or good pasture."—Dr. D. F. Luckey, Boone County, Mo.

"SHOWED UP" THE OLD MAN.

B. H. Wood, one of our subscribers, writes from Benson, Minn., of the big corn and alfalfa show held there, and incloses a report by one of the Minnesota papers, from which we clip the following:

"That a woman can sow and reap as ably as a man was proven last night, when it was discovered that Martha Uhle, of Morris, Minn., had won over all male contestants at the Corn and Alfalfa Exposition of the West Central Development Association with a five pound sheaf of alfalfa. The judges contend that no better sheaf has ever been exhibited in the state.

"To add to the humiliation of all men exhibitors, Mrs. Johanna Schumacher, of Fairfax, took an easy first in Renville county with a single ear of yellow dent corn. She won fourth in the open classes. At an ordinary show Mrs. Schumacher would have swept all before her.

"The boys, too, cut in on the Old Man with victories running into the scores. Not a single entry from Otter Tail and Wilkin counties succeeded in winning but those entered by the

boys. Entered in competition with the best corn that it has been possible for professional corn breeders to raise, boys' exhibits in all lots played havoc in the open classes. A considerable share of the money offered has been won by the boys."

AZOTURIA IS TOO COMMON.

Azoturia, sometimes called "spinal disease," is altogether too common among Minnesota's horses in winter. This is especially true, since the disease often proves fatal and yet may be prevented with just a little care.

The trouble results from taking horses that have been idle in the warm and sometimes damp air of barns into the cold crisp outer air, and putting them to work.

The symptoms are easily recognizable. A horse comes out of the stable apparently in the best of condition. He is driven but a short distance before he shows signs of lameness or stiffness in his hind legs. He staggers and may fall before he can be unhitched. He perspires freely. The muscles over the loin and hips become rigid and frequently tender, often trembling and twitching.

According to Dr. M. H. Reynolds of the Minnesota Experiment Station the best thing for azoturia is prevention. When a horse must remain idle for a few days the grain ration should be reduced. If a horse is very fat he should be fed no grain. Every horse should be given plenty of water and turned out for exercise daily. If the grain ration has not been reduced during a period of idleness in any case, the horse should have a cathartic before being put into harness again. A quart of raw linseed oil 36 hours before hitching is a safe dose. Work should be light for the first day after idleness, as violent exercise is likely to invite an attack.

QUARANTINE ON HAY AND STRAW MODIFIED.

The provisions of the Federal quarantines declared on account of the foot and mouth disease have been somewhat modified insofar as they apply to shipments of hay and straw. The new regulations provide that hay and straw cut prior to August 1, 1914, and baled prior to October 1, 1914,

may be shipped without disinfection from any of the quarantined areas, provided that it has been stored away from cattle, sheep or swine. Hitherto

it was only if but if baled

THE RIGHT WAY

IN ALL CASES OF DISTEMPER, PINK EYE, INFLUENZA, COLDS, ETC., of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it.

50 cents and \$1.00; \$5.00 and \$10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.

SPOHN MEDICAL CO.,

Chemists and Bacteriologists.

I'll Stop Your Losses From Worms—I'll Prove it or No Pay

If you will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough Sal-Vet to last all your stock 60 days, without asking a single penny of pay in advance. All I ask is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—make you more money.

The Great  
WORM  
Destroyer

The Great  
LIVE STOCK  
Conditioner

is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and greatly lessens the danger from hog cholera and many other diseases.

I'll Feed Your Stock 60 Days Before You Pay

Send no money—just tear off the coupon below, mark down the number of hogs, sheep, horses and cattle and mules you own, give your name and address and shipping station and I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. If it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny.

SIDNEY R. FEIL, Pres.

THE FEIL MFG. CO., Dept. AB Cleveland, O.

PRICES 40 lbs. \$2.25; 100 lbs. \$5.00; 200 lbs. \$9.00; 300 lbs. \$13.00; 500 lbs. \$21.12. Special discount for large quantities. No order filled for less than 40 lbs. on 60 day offer. Never sold in bulk; only in Trade-Marked "Sal-Vet" Packages. 60 day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle.

Send No Money Just the Coupon

SIDNEY R. FEIL, Pres.  
THE FEIL MFG. COMPANY  
Dept. AB  
Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

shape. Outlast 6  
leather soles.

**For Health, Looks,  
Warmth, Comfort**

**Greatest Work-Shoe Discovery Ever Made**

## Warmer Than FELT BOOTS

Thousands of Farmers and Workers in all lines, who  
used to wear Felt-Boots—Overshoes—Rubber Boots,  
Heavy Steel Shoes, etc., now wear our regular \$3.35 HY-D  
RUBBER WOOD Soled shoes, shown above. But, if you  
suffer particularly from cold feet, we make this

## Special Offer to FELT BOOT Wearers

If you request, we line these shoes with extra-weight AA  
quality, red flannel. Warmer than felt boots or felt-house shoes  
and may be worn outdoors on stormiest days in wettest places  
with perfect health and comfort.

## Here's How They are Made

Back of our guarantee stands our lifetime reputation for  
perfect shoe making and highest values given. This work-shoe  
is the patented perfected result of our lifelong study to solve the  
objections to and mistakes in other work shoes.

Regardless of expense, we have already proved that it pays to  
give the Farmers and Workers of America only the highest grade ma-  
terial and skilled workmanship in a perfect work shoe specially designed  
for health, comfort, longest service and economical first cost direct  
from the factory.

## BEST LOOKING! NEATEST WORK SHOE You Ever Saw!

Seeing is believing. So we make you our Free 10-day Try-On offer direct to  
your own home anywhere. Then you can see, handle, examine and wear our shoes  
around the house for 10 days proof—or no sale. You are the judge.

You've made a discovery. You wouldn't give them up. They never come back. But  
your friends will want them. Every pair sells many more than that way for us. HY-D-RUBBER-  
WOOD Soled SHOES are built from the ground up on the only right work-shoe principles.

## Built for Longest Hardest Wear: Winter—Summer—in Ice, Snow, Slush, etc.

Even the best of other all-leather or rubber shoes are porous, absorb moisture, get water-  
soaked, out of shape, uncomfortable, curl up, become hard, wear out fast, cost extra for repair  
bills, etc. Steel soles are heavy and cost more. Aluminum soles cost almost double.

But HY-D RUBBER WOOD manure and water proof SHOES now meet all those objec-  
tions and outlast 3 to 6 pair of other work shoes, with health—comfort—economy and foot happiness.

## Comfortable—Oil Soaked—High AA LEATHER UPPERS

Uppers or tops of full grain, soft leather. Strong tough fibre because it absorbs the bark  
from old-fashioned tanning to resist alkalies and acids of manure, creamery floors, etc. Soaked with spe-  
cially prepared oil, thoroughly worked in to last a year or more. Absolutely water proof to snow, water,  
rain, barnyard, wet manure acids and alkalies. See illustration and arrow points described above. Only  
2 wax-thread can't leak strong seams. Protected arch, no flat foot troubles. HY-D RUBBER and Sea-Is-  
land Cotton ton-pressure made, soundless heels and soles (like auto tires) for hardest wear. Easy walking.  
Uppers bound to inner wooden sole by non-rusting nickel steel wire, star-shaped, kiln-dried specially  
selected perfect foot arched wood. Light weight. Cold and damp and sweat proof. Outlast 6 leather soles.

Prove every point and promise at our risk, as thousands have done. The lowest  
price ever offered for the most perfect work-shoe ever made.

**Bilger Bros. Dept. 31, 2422 N. California Ave. Chicago, Ill.**

**References**—To banks, commercial agencies, thousands of our shoes, the Publisher of this Paper. Also you can see every way, and wear these shoes. Money back and postage too if not perfect.

**Reader:** Show this ad to your friends and tell them also about this offer so they won't miss it. Tear  
out this ad and use it as your REMINDER TO ACCEPT our Special Offer by first mail.

## Short Time Introductory Offer to Readers \$3.35 of this Paper at Only \$3.35

For a short time only, we offer you our HY-D-RUBBER-  
WOOD Soled Manure and Water Proof SHOES at our rock-bottom  
manufacturing and selling cost price—only \$3.35 a pair. We do this to make new  
wearers acquainted with these wonderful new work-shoes. The price must be  
advanced soon on account of war-time advances for leather and for our fair  
regular factory profit. Here's what other work shoes cost.

6 Pair Leather Brogans per year at \$2.00 cost	\$12.00
Heavy Steel Sole Work Shoes	cost 3.50
Aluminum Sole Work Shoes	cost 5.00
HY-D-RUBBER WOOD Soled Manure and Water-proof WORK SHOES	only 3.35

We're saving the Farmers and all Workers of America thousands and thou-  
sands of dollars for extra work shoes and repairs that are not necessary when our shoes are worn.

## Big Savings All Ways!

Our HY-Ds not only cost you less right at the start, but once purchased, they  
STOP the drain on your pocket-book, by giving you almost unlimited service,  
while keeping your feet dry and happy. Save repair bills. Save extra shoe buying.  
Save doctors bills. Save loss of time from illness. Make work faster and easier  
from their greater comfort and light, easy-to-walk-in design and principles.

**NO DEALERS** If we sold HY-Ds through dealers, they would charge  
you much more. Dealers prefer to sell several pairs of  
less durable shoes and make many profits per year, besides the shoemaker's  
repair bills. One pair of HY-Ds will outwear and outlast several pairs of  
good leather or other style work-shoes. So dealers won't sell HY-Ds.

## For Your Health and Comfort!

For health's sake think of the spells of sickness you or your friends have had—starting  
with cold, wet or sweating feet. Hy-Ds will not only stop all that, but—actually put your feet them-  
selves back into comfortable easy shape.

Think of having dry, happy, healthy feet, free from bunions, corns, chafings, callouses and pain!  
Think of having no fear on the worst days, of catching cold, rheumatism, neuralgia, stiffness of  
the joints, sore throat, quinsy, or pneumonia, all of which usually start from wet, cold  
or sweating feet.

## Greatest Health and Pocketbook Protectors —Keep Your Feet Happy—Easy—Dry and Warm —Perfect Fit in Any Regular Size You Wear

Seeing and trying-on and wearing is the test we offer you.

At our risk, prove the perfect fit, comfortable shape, easy, pliable, snug fitting high tops, easy  
walking qualities of our HY-Ds. You take no chances in sending us the price \$3.35 with your or-  
der, because, if you say so, back goes your money without argument or delay, including postage.

## FREE 10-Day TRY-ON Sent Anywhere by Pre- paid Insured Parcel Post

Let us send you your size HY-D RUBBER-WOOD Soled manure and water proof shoes on 10 days tri-  
al. Examine them every way. Compare them every way. Wear them around the house and if they do not convince  
you, if you are not perfectly delighted with their perfect principles of construction, high grade workmanship and  
materials, handsome appearance, perfect fit, comfort and all points we claim for them, send them back at our expense,  
and we will immediately return all you have paid out, including price and postage. That's fair and square.  
But, if you are from Missouri and do not need the shoes immediately, write us a postal or the coupon, and ask for  
our free booklet, telling Why and How we are able to give such splendid value for only \$3.35.  
Get the best bargain—the most satisfactory pair of shoes you ever had the chance to buy, or wear in your life, by  
ordering your size today. For your health, comfort and pocketbook besides happy foot ease, send this coupon  
or write your letter. Order now, before you turn this page, or forget it.

### Special Attention—FREE 10-Day No-Risk Try-On

Highest grade materials and war-time advan-  
ces in AA Leather, makes \$3.35 practically our  
manufacturing and selling cost. **Acting Now Saves You 50c**  
Write Plainly Please—PENCIL WILL DO.

**Bilger Bros.**  
Dept. 31, 2422 N. California Ave., Chicago, Ill.

Under your satisfaction guaranteed 10-Day Try-On Free offer, please send me by **Prepaid,  
Insured Parcel Post**, 1 Pair HY-D—RUBBER-WOOD Soled manure and water proof SHOES.  
Size..... (Be sure to state your regular shoe size or send outline on ordinary paper of your  
foot.) Enclosed find \$3.35 to be returned to me if I say the shoes are not satisfactory within 10  
days. (If you want red flannel lining, enclose cost price 25 cents extra, or \$3.60.)

AMERICAN BREEDER

THE MOTIVE POWER FOR WHICH CORN BELT FARMERS USUALLY SHOW PREFERENCE.

# HORSE AND CATTLE BREEDING SCHOOL

## February 1 to 6, Inclusive

### Double Your Income Without Increasing Your Investment

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate the different diseases and abnormal conditions. Students are impressed with facts in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be is eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

The sooner you get this knowledge the longer you can use it. Get a substantial foundation to work on. Get a Diploma. Make your business a pleasure. Breed intelligently.

### REMEMBER THE DATE---February 1 to 6, Inclusive.

#### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Cap-sules, etc.

Remember the date and prepare to be here next term. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

#### EQUIPMENT AND EXPENSES

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

## PERCHERON SOCIETY AFFAIRS.

In the American Breeder of Decem-  
ber 5, important questions were asked  
of Wayne Dinsmore, Secretary of the  
Percheron Society of America, bear-  
ing upon some of his official acts.  
Percheron breeders and stockholders  
in the Percheron Society of America  
who help pay his salary are anxious  
for him to explain. He was given an  
invitation to answer through this pub-  
lication. A marked copy was sent to  
him. So far he has not answered.  
There are other questions which the  
Percheron breeders would also like  
to have answered.

Mr. Dinsmore, you might explain  
the conversation you had with H. G.  
McMillan just before the last annual  
election. You might also state what  
you said to Mr. Swift just before he  
placed the name of Archie Robison in  
nomination at that meeting. You  
might explain why it was reported  
that you secured a new contract im-  
mediately after the annual election,  
although your old contract had not  
expired. Is this report true? If so,  
you might explain the rush for a new  
contract.

Mr. J. B. McLaughlin states that  
he notified you that he would not ac-  
cept any more H. G. McMillan pedi-  
grees until McMillan's stock was in-  
vestigated. Is this the reason you  
voted against Mr. McLaughlin and  
Professor C. S. Plumb? These two  
men were officers in the Percheron  
Registry Company, which is now a  
part of the Percheron Society of  
America, and don't you think these  
men should be on the present Board  
of Directors to represent the Perch-  
eron Registry Company—which put  
out the cleanest Percheron stud book  
ever published in this country? Don't  
you think these men could have

served the Percheron breeders better  
than the two men more friendly to  
H. G. McMillan, for whom you voted?  
Mr. Dinsmore, why have you refused  
a member the opportunity to inves-  
tigate the records of the Percheron  
Society concerning H. G. McMillan  
and Robert Burgess?

Mr. Dinsmore, do you know of any  
man in America that stands higher  
among the breeders of live stock, ag-  
ricultural colleges and all his ac-  
quaintances than Professor C. S.  
Plumb, head of the Department of  
Animal Industry, at the Ohio Agricul-  
tural College? Can you find any one  
thing or place where he has not been  
absolutely square and in favor of  
clean records?

Could you have selected any one  
man in America who would have been  
more help in giving the Percheron  
Society a reliable reputation? Could  
you have done anything better for  
the Association which you are paid  
to serve, than to have cast your vote  
for Professor Plumb? Why did you  
vote against Professor Plumb in fa-  
vor of C. M. Jones, a former McMillan  
advocate?

We will send you a marked copy of  
these questions and ask you to an-  
swer, for publication in this paper,  
these, and also the questions in our  
issue of December 5.

Mr. Dinsmore, it will not be neces-  
sary for you to spend a fortune of  
the Percheron breeders' money in get-  
ting out special literature and employ-  
ing detectives to investigate honest  
men, as was done by some officers  
of the Percheron Society in a former  
campaign. You can make your ex-  
planation in this paper without cost  
to the Percheron breeders. You are  
requested to make direct answer,  
signing your name individually, and  
not as secretary of the Percheron So-  
ciety of America.

## ANONYMOUS COMMUNICATION.

An anonymous communication (un-  
dated as well as unsigned) was re-  
ceived recently at this office, inclosed  
in a plain white envelope. The send-  
er possibly was afraid to sign his  
name. There was nothing of interest  
offered, even if the rule of all papers  
concerning anonymous material had  
not insured its consignment to the  
waste basket. With this communica-  
tion was inclosed what purported to  
be copies of several letters written  
to S. D. Thompson, while he was sec-  
retary of the old Percheorn Stud  
Book, which existed before the Perch-  
eron Society of America or the Per-  
cheron Registry Company were start-  
ed. The dates were omitted from the  
copies of the letters—possibly for a  
misleading purpose. The letters (if  
genuine) probably were written about  
twenty years ago. We do not believe  
that the breeders are interested in the  
old S. D. Thompson records. What  
the breeders want is not ancient his-  
tory, but an explanation of recent con-  
duct on the part of the present sec-  
retary of the Percheron Society of  
America.

## RAISING COLTS.

The first year of a young animal  
is the most important. A colt should  
weigh about one-half as much when  
it is twelve months old as at maturity.  
Plenty of evidence can be found at  
all the leading horse markets to show  
that young stuff that has been half  
starved is not profitable. A little  
extra feed can be used to excellent  
advantage in growing young stock of  
the right kind. The men who make  
money are good feeders. A lot of  
farmers use good stallions but starve  
the colts, then say that the stallion  
is of no account. It can be heard oc-  
casionaly that it does not make any  
difference what kind of a sire is used.  
The colts sell for about the same.  
Feed is just as necessary as breed-  
ing. Without feed, young stock can-  
not be properly developed. The mar-  
kets are full of chunks that would  
have been draft horses if they had  
been given the proper care and atten-  
tion. Young stock will not develop  
all of the good qualities as nature in-  
tended, without sufficient nourish-  
ment. Raising young stock "cheaply"  
is usually really expensive. The de-

velopment of young stock should be-  
gin with the mares before birth.  
Every mother should be well nour-  
ished before the delivery of the colt-  
spring. A few well-bred, well-cared-  
for colts will clear a greater profit  
than any other property, as a rule, on  
the average sized farm. There is sure  
to be a scarcity of good horses and  
mules over the entire world for a long  
time, according to the best authorities.  
Only the best of sires should be used  
and the progeny well developed, in  
order to net the greatest possible  
revenue.

## PERCHERON HORSES.

One of our subscribers writes that  
he is now ready to buy some pure  
bred Percheron mares. He wishes to  
thank us for the information we have  
printed concerning fraudulent regis-  
trations, as he now will not be afraid  
to part with his money. He has  
heard rumors and never knew exactly  
what to steer clear of. This proves  
conclusively that the breeders have  
more confidence in any proposition  
that they are entirely familiar with  
than one which has so many rumors  
connected with it which they cannot  
locate. Buyers of Percheron horses  
need not be afraid to buy from repu-  
table breeders and importers, no mat-  
ter what may happen to any record  
association. Honest Percheron horses  
will always be valuable wherever they  
may be found.

## STALLION BUYER COMPLAINS.

A subscriber writes that he has pur-  
chased a stallion which is a "counter-  
feit." He has located a former owner  
of this horse, who had also given it  
a fair trial without results. The  
stallion was purchased for cash, with  
the usual guarantee. The seller re-  
fuses to do anything, although the  
subscriber writes that he has com-  
plied with the guarantee in every re-  
spect. He also states that the descrip-  
tion of the horse does not fit the  
pedigree.

This subscriber evidently has paid  
no attention to former statements  
concerning advertisers, which have  
been printed in this paper. Although  
the man he bought the "counterfeit"  
stallion from is a large advertiser, he  
has been barred from advertising in  
the American Breeder. He cannot buy  
any space in this publication at any  
price. We might also state that there  
are a few other big advertisers who  
cannot get their advertisements in  
this paper. While their advertising  
means a lot of ready money to those  
who carry it, we do not want to be in  
any way connected with them. We  
are acquainted with nearly all of the  
men and firms engaged in selling  
draft horses. We want to carry the  
advertisements only of such people as  
will give our readers fair treatment.  
We have a good class of advertisers,  
and practically any kind of horses can  
be found advertised in these columns.

If any of our readers are not treated  
right in connection with advertise-  
ments in this paper, we want to know  
the facts. All we ask when our read-  
ers write to any of our advertisers  
is to say that they saw the ad in the  
AMERICAN BREEDER. We do not  
require any of the red tape (that more  
often serves to protect the publisher  
or advertiser).

The subscriber referred to above  
will probably have to bring suit at  
some place where service can be had  
on the seller of this horse, in order to  
make the seller comply with the writ-  
ten guarantee. Even if the seller  
should refund the full purchase price,  
the purchaser will be a heavy loser,  
and not only himself, but his com-  
munity as well.

## YOUNG MULES GOOD PROPERTY.

There seems to be a disposition  
among some men who have formerly  
purchased young mules for specula-  
tion to stay out of the game, owing to  
the dull demand for developed stock.  
This, however, is usually with the  
smaller purchasers. Most of the big-  
gest and best buyers are now laying  
in a good supply of young stock at  
very reasonable prices. In a recent

conversation Mr. Judy of Illinois, one  
of the largest mule developers in the  
country, recently stated that he was  
in the market for several hundred  
head of good young mules. He be-  
lieves that the right kind of a young  
mule is the best investment available  
at the present time.

## CAPSULE BREEDING.

There is probably not a breeder liv-  
ing who does not know of at least one  
colt being produced without the mare  
being served by a stallion or a jack.  
The average discharge of a stallion or  
jack contains countless numbers of  
spermatozoa, only one of which can  
be used in settling a single mare. The  
rest are wasted when the natural ser-  
vice is employed. A number of mares  
can be bred at each fertile service.  
If fertile semen is transferred from  
one mare to the other in a natural  
condition and placed in the uterus of  
the mare which is bred with the cap-  
sule, it should average in results  
about thirty per cent better than  
natural service. The most complete  
service that can be made results  
when capsules are used properly, as  
the semen is placed directly into the  
uterus. A great many services of  
stallions and jacks are never injected  
into the uterus. A mare having a  
closed cervix must have some assist-  
ance, otherwise she cannot be fertil-  
ized, as the semen cannot enter into  
the uterus, where it must be before  
the mare can settle.

There are numerous reasons why  
capsule breeding is to be preferred to  
natural service. It is not usually diffi-  
cult to introduce capsule breeding in  
any community. A matured stallion  
can be advertised to make nine ser-  
vices a week—capsule services on  
Monday, Wednesday and Saturday at  
four o'clock only, and for the other  
three days two natural services each  
day. When a mare is presented for  
breeding, explain to the customer in  
case the stallion is billed ahead, that  
you can breed his mare at a certain  
time with capsules, or she may be  
booked ahead until such a time that  
the natural service may be had. By  
sticking strictly to the capsule days  
a good number of mares may be bred  
with capsules the first season. Ex-  
plain to the owner of this mare if she  
does not get in foal from the capsule  
he can bring her back at the next  
heat period and get a natural service.  
Breeders, formerly, have not had  
much trouble by this plan. It is not  
advisable as a rule to adopt the cap-  
sule system exclusively the first sea-  
son, but explain to the customer that  
it is your desire to satisfy everybody.  
After the first crop of colts is pro-  
duced there is not much difficulty.

We are wondering why more breed-  
ers do not study this proposition. A  
lot of men keep a barn full of horses  
that they do not have any use for.  
They are all eating high priced feed;  
they are all getting older; more help  
is required and more accidents occur  
when all mares must be served. The  
average breeder who has a barn full  
of horses could dispose of his inferior  
ones and probably get just as much or  
more business. If it is found neces-  
sary the best stallion in the country  
can be stood at a very small fee.  
Those who have adopted this system  
and given close attention to their  
business have made money and in-  
creased their business.

## THE MOTIVE POWER FOR WHICH CORN BELT FARMERS SHOW PREFERENCE.

All of the draft teams shown on our  
cover page, except one, were exhibited  
at the last Iowa State Fair. These  
horses, mostly mares, will average  
nearly one ton each and represent a  
value of about \$650.00 per animal.  
Some are geldings, some are not  
registered, but most of them are ca-  
pable of producing a pure bred colt  
each year, beside doing a lot of work.  
A majority of these horses were  
raised on Iowa farms.

It is an inspiring sight to see these  
splendid, powerful animals pass in re-  
view before the judges. We have  
thought of suggesting that every state  
fair require entries of this class to be  
paraded single file throughout the fair  
grounds each day, giving all present  
an opportunity to benefit from such an

educational exhibit. These teams can be handled anywhere and the horses need the exercise. Everyone attending an exhibit of this kind should have this education. Every farmer should be stimulated by such an exhibition. It would be a good advertisement for the breeds and the breeders. There are so many other attractions at a big state fair, that comparatively few are at the ringside during such shows.

#### WORLD'S FAIR LIVE STOCK DISPLAY.

The breeders of live stock in this country have a wonderful opportunity to get education and to help educate others who are interested. The management of the Pacific Exposition at San Francisco has extended to the live stock breeders and their record associations an opportunity to have "Display Herds" on exhibit throughout the exposition. They have gone to a great expense in providing suitable locations, different from anything ever heretofore attempted in a live stock exposition. Each animal will stand in such a position that visitors can see most of the animal and have an opportunity to study it. The live stock department is to be commended for this arrangement, also for the idea of display herds.

The live stock department has shown that it is ready and willing to co-operate in this great educational campaign. What are the breeders going to do about it? What are the record associations doing? Every record association should immediately arrange for a complete display of the best material obtainable for that great show. Breeders should correspond with their secretaries concerning this display. A number of breeders can each furnish an animal and get a lot of free advertising. The name of the animal, the breeder and his address, with other information, will be posted over each animal so that the public will be interested in the exhibits from the different sections of the country. This stock can probably all be sold at San Francisco for a good price. Record associations could well afford to employ reputable men to hand out literature, answer questions and advertise each particular breed of live stock. It would not be very expensive for a number of breeders to send one animal each. It will be only a short time before the exposition will be open. The management wishes to advertise a full display of all breeds of live stock which will attract the attention of those interested in live stock from this and foreign countries. Will the breeders avail themselves of this great opportunity?

#### HELPING US HELP OTHERS.

We receive hundreds and hundreds of testimonial letters, at this office, concerning the appreciation of this paper. We very much appreciate these communications. They are a stimulant. On many occasions such communications have been read several times. We are glad to be of some service. Any human is grateful for such appreciative acknowledgments. We are trying to handle really useful material that will help others. We have wondered if it would be possible for each of our readers who appreciate the effort to say a word to someone else interested in this line of work. Perhaps they would like to belong to our large family of readers. We are very proud of our subscribers. We believe they are the most intelligent and progressive class of people in the world. Their object is improvement. Just a word from one who is known as a leader in his community will naturally have much weight. The more of the progressive upbuilders we have, the greater will be our influence for advancement.

Answer any of our advertisements in which you feel an interest. Always mention the American Breeder when you write. Should any advertiser prove unreliable, let us know at once, with full information. You can depend on the American Breeder to do its part.

## DIAGNOSING ILLS OF HORSES

### Lesson XI; Parasitic and Non-Parasitic Skin Affections

Diseases affecting the integument may be properly classified as non-parasitic and parasitic. Diseases of the skin are quite common among horses. Where animals are kept in high condition and given but little exercise an obstinate pruritus or itching may develop.

Stallion and jack owners often complain of this state of affairs, particularly with the approach of warm weather when heavy reeking has been mingled in with a view of having the breeding animals present the very best condition. Some animals become so frenzied by this plethoric state that they rub and destroy patches of hair on parts of the body and ruin finely kept manes and tails. When this itching condition is once developed in an animal it is very difficult to suppress it entirely for the reason that it frequently persists for some time after proper regulation of diet and exercise has taken place. One having charge of valuable stock should always be alert to the development of a pruritic state and not overload the system with heating foods. Excessive fat may please the untutored but the chances of encouraging permanent injury are too great from many sources that it does not pay.

It frequently occurs that continuous rubbing of a part develops an eczema which ordinarily is a very intractable skin affection. The more an animal rubs a part, the more it appears to itch until great patches become abraded. Oftentimes such are found to be merely irritated areas that heal and recover promptly if the tendency to scratch and rub the parts is overcome.

As a rule eczema in the horse presents a dry scaly appearance denuded largely of hair. It may appear on almost any part of the body, but is most generally observed on the sides of the neck and trunk and also on the fore arm and breast. There is a tendency for this skin disease to become worse during the heated part of the year and animals once having had the disease frequently show a recurrence at such periods unless particular care is observed in restricting those conditions responsible for it.

Occasionally some horses develop deep transverse cracks in the skin just back of the knees and anterior to the hock. Such cases usually have either an abnormally thick inelastic skin or the parts have been subjected to too much washing. On account of these cracks being located where there is a great deal of skin movement during flexion of the limbs such cracks become very persistent when once formed, similar cracks sometimes appear at the quarters and are occasioned by the same influences. Certain work stock that are compelled to labor during wet, inclement weather, keeping these parts continuously wet, are prone to develop this state of affairs. This condition is also met with among race horses and may be traced to a too frequent application of soap and water to these parts.

An active inflammation of the skin may be developed at the quarters by permitting a horse to stand in filthy, ily drained stables or allowing an accumulation of manure to take place.

Such affections are ordinarily alluded to as scratches and many times become sufficiently aggravated that large wounds appear immediately above the heels. An animal so affected, in addition to the local redness and swelling with often a wounded surface, will show a decided stiffness in gait due to the pain occasioned during movement.

A correction of the insanitary surroundings generally prevents scratches and is necessary to promote a subsidence of the difficulty.

Certain of the heavy draft breeds appear to be predisposed to a peculiar form of skin diseases which is a great annoyance because of its persistent nature. Any stallion owner who has had experience with grease heel can

testify to the difficulties in the care and successful treatment of this obstinate skin lesion.

This trouble, like many skin affections, is inclined to become aggravated during the warmer months and there is no question but what flies greatly interfere with kindly healing of wounds of this nature. It must be remembered that all wounds during the fly season heal less readily than at other periods of the year. These insects are by nature great carriers of infection and wounds that are not protected from these pests are very apt to take on an aggravated state due to the infection that is daily carried into the parts by the contaminating fly.

While protection from flies would not entirely prevent grease, it would greatly lessen the number of cases and if it could be fully practiced it would be of material aid in coaxing a more healthy healing. As a protection against this and other recurring skin diseases animals should be protected against wounding and infection from flies.

The more aggravated cases of grease often are manifested by swelling of the affected limb and by the appearance of wounds, that are inclined to exhibit a very red and soft, pulpy state. In the course of twenty-four hours the granulation surface may extend considerably above the surrounding skin surface and will be noticed to bleed easily. A bloody serum oozes from the wound which mats the surrounding hair, and pollutes the air with its nauseating odor.

The places given rise to considerable itching and the affected animal is inclined to rub the parts with the opposite foot, if the location will permit, or may cause serious damage by biting with the teeth. Under these influences such wounds enlarge rapidly and soon cover areas several inches in diameter. In the course of time the parts become more dry but the excessive tissue formed at the point projects above the surrounding skin to such an extent that it fails to be covered with the integument. Such areas if healed are the seat of large, unsightly scars.

It is a very difficult problem to prevent the development of grease in certain breeds of heavy horses where a predisposition to the disease seems to have been pretty well established. This tendency could be much improved by a more careful selection of breeding stock, coupled with attention to those conditions that are active in developing an attack.

Bursattee, so far as local appearances go, is a somewhat similar skin affection, but may be found on horses of almost any breed. Even the smaller, clean-limbed, short-haired types are not exempt. Jacks and mules are as frequently affected as horses. While the disease attacks by preference the limbs, no part of the body is exempt. Beginning as a small wound the part rapidly enlarges through the repeated annoyance the animal gives to the wound.

There no doubt exists an intolerable itching of the parts as evidenced by the animal persistently gnawing or rubbing the wound. This feature is very difficult to control and makes the successful treatment of bursattee very slow.

Inasmuch as this skin affection has been observed to be more in evidence during warm weather, the name "summer sore" has been very appropriately applied to it. There appears to be some relation between this class of skin lesions and the warm months of the year, and a careful study of conditions will demonstrate that flies are in a great measure responsible for this class of wounds. In order to successfully treat these wounds during the warm months when flies are abundant, it is quite necessary to place the animal in stalls protected from these pests, and the cooler the stall is the better for the local conditions. These wounds, like grease, heal tardily, leaving behind huge

granular masses or scars. In some cases the process of healing does not fully take place during the late fall and winter months so that with the return of the fly season a very serious state of affairs promptly develops.

An animal that develops these wounds may be treated successfully and the wounds heal and present a rather respectable appearance, but such an animal is quite apt to have a renewal of the experience with the advent of warm weather. Any animal having large scars on the limbs or body that cannot be fully and logically accounted for, should be viewed with considerable suspicion by one contemplating a purchase.

Some horses appear to have skins that are very susceptible to infection. Such infections are sometimes observed at points where the harness or saddle rubs. The irritation encourages an abrasion that may not be observed with the unaided eye but it is sufficient to permit organisms to pass into the skin where inflammation is established. Such infection is found beneath the collar, back band or breeching, and may at first appear only as a hardened little mass. The pressure on the part often develops a surface wound that proves annoying and may develop into a wound of considerable proportions. Frequently collar wounds have their origin in small nodular inflammations, as described above. If pus organisms are present there may develop a small abscess which proves very annoying on account of being located where some part of the harness continuously irritates it.

The parasitic diseases are largely such as are due to the mange mite. Mange is a transmissible disease because it is dependent upon a parasite for its cause, capable of setting up the disease in all susceptible animals with which it comes in contact. In other words an infested animal is capable of disseminating the disease to other animals of a like kind and in some instances to animals of different species.

Mange ordinarily shows itself on some part of the body in the form of a dry crusted scab. The skin becomes thickened and the hair falls out so that bald areas that increase in extent soon become in evidence.

The presence of the parasite causes a great deal of annoyance to the animal, resulting in frequent rubbing the parts.

Mange, when present in a herd of horses, is not difficult to recognize for the reason that several animals will shortly show similar symptoms. In a single suspected case the microscope is a valuable aid in diagnosis. Scrapings from the deeper parts of the skin will disclose the parasite under the lens.

Ring worm is not frequently met with among horses but being due to a parasite of a little different nature it produces local conditions that in some particulars resembles mange.

In ring worm there is a tendency for the skin affection to enlarge in a circular manner and as new territory is encroached upon the hair falls out. In large circles the new hair may be noticed to be returning in the center at the point where the disease first began. This disease, like mange, may be transmitted to other animals by contact.

#### DRAFT HORSE BREEDERS' PROGRAM.

Below we give the papers arranged for at the Missouri Draft Horse Breeders' meeting, January 12. This is one of the many "Farmers Week" meetings held annually at Columbia, Mo. Discussions of all papers make an important part of the meeting.

President's Address—J. F. Roelofson, Maryville, Mo.

Building a Stud of Draft Horses on a Missouri Farm—W. M. Roberts, Maysville, Mo.

Possibilities of Colt Shows—Col. R. L. Harriman, Bunceton, Mo.

Draft Horse Sires for Building Up the Horse Stock of a Community—Dr. C. M. McWilliams, Jackson, Mo.

Can a Farmer Afford High Priced Pure Bred Mares?—Wm. Hartman, Baring, Mo.

Results of the Kansas Stallion Law—Dr. C. W. McCampbell, Manhattan, Kas.

# ORGANIZING FARMERS; DIFFICULTIES

By G. L. CARLSON

(Continued from Last Issue).

In the last issue of American Breeder I stated that every industry, business and profession in the country, except that of agriculture, was organized. I showed that there was need of organization of farmers for other purposes than the one of a larger profit. I even described forms of organizations and methods of procedure that would prove highly beneficial to farmers. In this article I will try and give some of the causes why agriculture is not making greater progress. To do this it will be necessary to briefly review the history of agricultural progress in other countries.

### Agricultural Progress in Denmark.

There is a wide difference between the present need of co-operative effort among farmers in this country, and that which forced the small farmers of Denmark to unite for their common good and protection. Here it is waste in distribution caused by an army of needless middlemen. In Denmark it was to protect the small farmer from the large land-owner, the remains of a former feudal system. These large estates were able at an early day to conduct their farm and dairy work in accordance with the strictest principles of business economy, by employing the most skilled labor, buying in large quantities, and selling their immense production of the staple farm products in the best possible market. This the small farmer could not do.

To two men is due the credit for the remarkable success of co-operation in Denmark, and the great prosperity of the farmers of that country. Thirty-nine years ago this winter, Prof. Fjord began work among the owners of small Danish farms, with a view to combining science and practical knowledge. In many respects his work was similar to that of our farm institutes and other university extension work. The chief difference consisted in that of paying more attention to each farm as the basis of work there, than we do here. I believe it can be stated as a matter of educational history that Prof. Fjord is the world's pioneer in college or university extension work. His work not only proved of great value to the farmers in a practical way, but by learning how to work together for the purpose of solving their own problems, it proved to be educational work of the highest character.

Six years later, as a result of Prof. Fjord's work, a number of farmers in the western part of Denmark employed a young man by the name of Anderson to act as their adviser. This is probably the beginning of the present-day movement in this country of employing county agents or demonstrators. Mr. Anderson was a graduate of an agricultural college, and earlier a product of a dairy farm. He soon learned in his new work that it was impossible to run a first-class dairy on a small farm, because of the great expense for the necessary equipment. This suggested the idea of a central plant for all, and from this idea has grown the great co-operative movement throughout that country.

### After All, It Is Education.

It is interesting to note the different forces at work in this country and Denmark, and to carefully study how the central thought as to the purpose of education in the two countries has everything to do with the uses made of the education, since it is the difference in our educational systems that makes all the difference in the agricultural progress of the two countries. The central thought of all the work which Prof. Fjord did for the farmers of Denmark was self-help, by so combining the best intelligence of a community that the people of the community could co-operate for the purpose of solving their own prob-

lems. In this country the central thought carries us in an entirely opposite direction, in that it decreases our sense of individualism and selfishness. Our agricultural colleges differ in no sense from every other institution of higher education in this country, in making the chief aim and purpose of their work the one of individual gain, by making it possible to command a higher salary by reason of the college training. Then, too, there are not the many other industries offering excellent opportunities to the best young men from the farms in Denmark, that there are here.

We are constantly asking ourselves, "Why do our farm boys and girls leave the farm?" when an idiot should feel ashamed of himself for asking such a foolish question. Of all the places in the country for making money, the farm is the poorest, and yet we continue to teach our youth that the sole aim of life is to make money. It will be seen that our boys and girls are not such fools after all, and that most of them are doing the thing we are fitting them for in our schools and colleges, looking for the biggest dollar. We have no right to blame them for doing the thing we have trained them to do.

### Every Other Industry and Calling Pays Better Than Farming.

Why should a farm boy go from college to a farm that cannot pay him more than a few hundred dollars a year, working 365 days of fourteen or fifteen hours each, when railroads are paying up to \$3,000 a year for locomotive engineers, and other salaries up to \$50,000? Why should the boy go back to the farm to worry about paying the banker his interest after a crop failure, when he can go

into a bank, and let the other fellow worry for him? Why should a boy go back to the farm to worry about a gasoline engine that refuses to work, when he can make so much more manufacturing, or even selling the engines, than he can in operating them on the farm? Why should he care to ride a grain binder all day under a hot sun, when he can become a multi-millionaire by making the binders and selling them to others who have no more sense than to play the hot-sun act all day? Why should he worry about hogs dying of cholera, when it is so much more profitable to make serum to immune the other fellow's hogs? Why should he care to milk cows when he can make a \$30 separator that will sell for \$100, and let the other fellow do the milking, and buy the separator? What pleasure is there in occasionally riding of an evening from the farm to some country town in an auto costing the farmer around \$1,200, compared with making the car for \$450 and selling it to some other chump for the \$1,200? Why should an intelligent boy care to spend his life in an occupation that pays a greater profit to the small army of middlemen who live off his labors than it does to himself, when he can just as well join the army of middlemen?

### Why It Is Difficult to Organize Farmers.

The reader should now understand why it is so difficult to organize farmers. He will likewise understand why every other interest under the sun wants to help in organizing him. The greater part of them live off the farmer's labor, and it is only human that they should want to so organize farmers that their sure-thing business may be perpetuated.

Another reason why farmers have not succeeded in organizing themselves is that up to the present time every effort toward perfecting an organization has begun at the top. It is a well-known principle in mechanics that every structure must have a good foundation. Before farmers will ever succeed in a permanent organization they must begin at the bottom, by organizing a small unit or community, a combination of these units to make the organization higher up through county, state and nation. Unless the unit of organization, the foundation, is organized along the most helpful lines, the higher organization must of necessity be failures. Farmers will find it more to their own interests to discuss their local problems than problems of tariffs. What concerns the farmer most is how to produce a larger product at a low cost, and how to dispose of this surplus at the highest price. These things always have been, and always will be, vital to his success.

More necessary than all else is a change in the aim and purpose of our schools and colleges. I have shown how in Denmark the best education work necessarily and unconsciously brought the people together, making co-operation and organization the only thing to do; while in this country our educational work develops selfishness, making co-operation and organization both difficult and undesirable. The thing to do is to carry the college to the farm, to combine science with the necessary and best practices of everyday farming; to make our educational work truly helpful by fitting our youth for the farm, rather than for the shop, counting room or some profession. We will never succeed in sending back to the farm a class of trained farmers, so long as we make it possible for this class to make a better profit, or command a better salary in every other activity.

There are fundamental changes to be made in our economic system before farming will be profitable, or before we will be able to keep our boys and girls on the farm. Congress and our legislatures are constantly creating new offices and new commissions, the members of which are given large salaries. Everywhere one goes the cry is heard for an increase in salary. Extravagance has been running wild throughout the land, but not a word is heard about raising the salary of the farmer.

Only by organizing so that the farmer can make his influence felt, is there any future for the farmers of this country. If the farmers will lay aside all their personal prejudices and selfishness, and organize on a correct and substantial basis, their industry can be made as profitable as any in this country, and in a few years the needless middlemen can be made to find a new job. Nothing will be accomplished by trying to organize large units as a basis. This has been tried many times during the past 50 years, and all it has ever done is to interest enough politicians and those of other interests to dominate the organizations. The organization must begin with small communities, the township, for instance, where all problems are common to all, and this organization must be made to include the majority of the farmers of the township, and it must of necessity, be more educational in purpose than commercial. It will be impossible to profit by organization in the way of dollars, until the farmers learn how to do so. At present the future of agriculture in this country is not a promising one, but with organized effort, and the right kind of educational work it can be made more promising than the future of any other industry.

## GET BUSY WITH YOUR STATE SENATOR OR REPRESENTATIVE IF YOU WANT THIS LAW

Since the publication in the American Breeder, November 5, of the proposed stallion lien law, with the suggestion that the text of the law be made the heading for petitions which any interested breeder could circulate, we have had many requests for additional copies of the proposed law. These we have supplied as far as possible by sending samples of the issue in which this law was printed. It is not necessary, however, to get a printed copy. If one has that issue of the paper the proposed law can be copied on a typewriter and an additional sheet or sheets of paper pasted at the bottom for the names of those who wish to sign a petition that such a law be advocated by their representative at the legislature.

In the interest, however, of the many breeders who have become subscribers since November 5, we re-publish below the text of the proposed law and ask that every one save it and be prepared to use it in petitioning his state senator or representative to thus safeguard the interests of an important business.

Following is the text of law, which has stood the test of the courts and we believe will be satisfactory in any state. Breeders can clip out or copy the following and paste it at the top of a large sheet of paper and use it as a petition:

### THE PROPOSED STALLION LAW.

"The owner of any stallion or jack which is kept for the propagation of his species, shall have a lien upon any female animal and her offspring to which such male is let for the sum contracted therefor, which lien shall attach at the time of service of such male, and shall not be lost by reason of any sale, exchange or removal from the country, or other disposition without the consent of the person holding the lien, the same may be immediately enforced. Provided, also upon the sale, exchange, removal or disposition of such female animal without consent of person holding the lien or with intent to defraud him, the owner of such female animal shall be guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not less than twenty-five dollars (\$25), nor more than fifty dollars (\$50).

"At any time within twenty months after his right of action accrues, the owner of such male animal may file with any justice of the peace in the county, a written statement, duly verified, setting forth amount of his claim, his cause of action, and a description of the animal upon which he has a lien, and the justice shall thereupon issue summons as in other cases and embody therein a description of the animal and an order to the constable to take the animal and her offspring, if there be an offspring, and hold her (or them) subject to the order of the court.

"If upon trial, judgment be rendered for the plaintiff, the court shall order a sale of the animal or animals, as on execution sales, to pay the judgment on the bond against the sureties for the amount of the plaintiff's debt and cost.

WE, THE OWNERS OF HORSES, BEING INTERESTED IN THE IMPROVEMENT OF LIVE STOCK, REQUEST THE LEGISLATURE OF THIS STATE TO ENACT THE ABOVE TEXT INTO A LAW IN THIS STATE.

NAMES OF SIGNERS.....ADDRESSES.....

#### SCIENTIFIC BREEDERS ORGANIZE.

An educational movement has been started among breeders, in the way of organizations. The object is to hold breeding demonstrations, horse shows, etc., upon regular dates, for educational purposes. Each member of the organization is to take some part in the work. Dates will be so arranged that all of the members of any particular association can be present. This movement is usually started by a graduate of the Graham Scientific Breeding School, who has realized the importance of team work in modern breeding methods. All other students in his locality are requested to join.

The purpose is to encourage other leading breeders in that section to attend the school and become members of the organization. All such men, who may own good stallions or jacks, are solicited. The object, in having members attend the school, is to get the latest practical work in demonstrations. These students are also given instructions in horse judging, which helps them to serve as judges in the horse and colt shows, and also prepares them to give demonstration work in horse judging, for the benefit of the farmers at each meeting.

A great many of these organizations are now being formed. Students who have attended the Breeding School are making a very strong effort to get other breeders to attend in order to have a good strong organization. Many of these organizers spend a lot of time in visiting other breeders. Practically every student

is now organizing a breeders team. Six or eight good successful breeders, who have had special training, can visit almost any community where a special meeting has been advertised, and be of wonderful service to that particular section. There will be enough of these men present who are able to talk and explain to satisfy all of the skeptics, or, at least, silence them. This new method of organizing will get great results. There will be a lot of scrub horses and jacks put out of work. It will improve the quality of the horses and make more money for the men engaged in the business.

A number of breeders expect to attend the next term of the Scientific Breeding School and each bring with them several other breeders, who will join such an organization. These organizations can be formed all over the country. A good live breeder can start them in any section. These men can be of much service to each other. Their experiences and records can be used to a good advantage. It is not necessary that members be close competitors, although we like to encourage breeders of better stock to be on the best terms with each other. In nearly every community there are a lot of good mares bred to stallions and jacks of an inferior kind which could be saved for the better sires, by a little more education. This kind of team work will not only get results for the mare owners, but the best method of mastering any subject, is to teach it. A course at the Graham Scientific Breeding School prepares the breeder to talk intelligently to his customers and make satisfactory demonstrations.

There is always one difficulty when a student tries to encourage other men to come with him to the school. He encounters too many breeders who believe that they cannot learn any more. Some will state that the proposed study is not practical. Still others believe that it is not necessary for them to learn the modern methods. Probably the majority who object, believe they have learned all that can be learned, that is of any use to the breeder. The Graham Scientific Breeding School has recently prepared a list of questions that are being sent to anyone interested in the advancement of horse breeding. These questions will give the breeder who believes that he knows everything, an idea of what he ought to know. It is not any wonder that the students who attend are enthused, as they have an opportunity to see demonstrations and learn things that they could not learn in any other way. A school to be a success, must first, have instructors who can impart information which will stand the test. A breeders' organization which is expected to do team work, must have all of the reliable knowledge available.

The Graham Scientific Breeding School guarantees its course to be perfectly satisfactory to every student who attends the school. The student alone is to be the judge. If the student is not satisfied no tuition fee will be charged. Not a single student has been dissatisfied with the course.

If prospective students understood the experience and expense required to develop and maintain this school they would see how little they risk when they accept the invitation to at-

tend on a "money back guaranty" that the course of instruction will be satisfactory in every way.

Any breeder can afford to cross the continent to get the instruction and take part in the dissecting of diseased females in order to become familiar with diseased and abnormal mares. They can thus become able to prevent the scattering of disease. This is worth much to any breeder. Every breeder who can do so should be on hand at the next term, February 1 to 6, inclusive, and prepare for the spring breeding season.—Adv.

#### BIG IMPORTERS OPTIMISTIC

To the American Breeder:—We are glad to note that the Percheron stallion, Helix 70340 (75752), sold last week at Messrs. Brown and Walker's sale brought such a good price. This stallion was imported by us in 1910 and was shown by us the same year, winning First in class and Grand Championship at the Illinois State Fair and the Chicago International. He was afterward sold to W. C. Brown, and the high price at which he sold last week is ample evidence that he is still a most wonderful horse, and we are glad to know he is coming back to Illinois. (He was bought by John I. Colgan of Wyoming, Ill.) We wish his new owner success with him.

Our business for 1914 has been as good as any year in the past. Inquiries seem to be good from all parts and we are glad to say we are making good sales. The outlook for 1915 is exceedingly good.—Taylor & Jones, Sangamon County, Ill.

## NORTH DAKOTA STALLION LAW RESULTS

To the American Breeder:—North Dakota's first Stallion Enrollment law went into effect January 1, 1910. This provided that every person, firm or company standing or using any stallion or jack for public service in the state, should secure a license from a stallion enrollment board comprised of the Professors of Veterinary Science and Animal Husbandry of the Agricultural College, the Presidents of the North Dakota Live Stock Sanitary Board and the North Dakota Live Stock Association, together with the Commissioner of Agriculture and Labor of the state. Before the license could be issued, the horse was required to pass an examination for soundness made by a graduate, licensed veterinarian, under the direction of the board, and his pedigree verified to determine whether he was entitled to a "Pure Bred," "Crossbred" or "Grade" license. In making the inspections for soundness a schedule of the dates and places of inspection would be mailed to the stallion owners at least ten days in advance, and the owners required to present their horses in town at the specified time for the examination. All stallions affected with any of the unsoundnesses specified in the law were to be refused licenses, stallions to be examined every three years until they were ten years of age, after which they were to be exempt from further examination. Other provisions of the law arranged for methods of caring for protests, penalty for violations, the granting of temporary licenses in case veterinary examinations could not be made immediately, fees for inspection, licensing, renewal and transfer of license, inasmuch as no appropriation was made for carrying on the work. It was further provided that the owners of these stallions should keep a copy of their licenses posted during the breeding season, wherever the horses stood. IF ALL OF THE PROVISIONS WERE COMPLIED WITH, A LIEN WAS GIVEN ON THE COLT FOR THE AMOUNT OF THE SERVICE FEE.

One of the most important changes that have been made in this law was the additional provision in 1911 for a "Scrub or Mongrel" license certificate for stallions, neither of whose sire or dam were pure breds. This feature did not go into effect until July first of 1911, hence had no effect that season. In 1912, however, over 1,100 stallions were labeled as "mongrel or scrub." The effect of this discrimination in labelling will be readily apparent after a glance at the following figures:

Number of Stallions Licensed.				
Year.	Pure Bred.	Grade.	Scrub.	Total.
1914....	1445	565	769	2779
1913....	1362	519	904	2786
1912....	1271	534	1100	2915
1911....	1052	1386	2438	
1910....	1006	1339	2345	

The 1913 Legislature of North Dakota enacted a still more progressive

provision, providing that after January 1, 1916, no scrub or mongrel stallions shall be licensed, excepting, of course, those that were licensed before that date, which can be renewed. The steady increase, nearly fifty per cent, in the number of pure bred stallions licensed since the law went into effect, notwithstanding the fact that 242 stallions of pure breeding were refused licenses during the five year period, for unsoundness, together with the rapid decline in the number of scrub stallions in service, surely signifies the success of the law and the progressiveness of the horse breeders of North Dakota.

Since the enactment of the first law, about seven thousand applications have been made for licenses. The first year seventy-seven fraudulent pedigree certificates or those from non-recognized associations were found. In 1914 there were only five of these. Six thousand six hundred and sixty-five stallions have been examined for soundness in the five year period. Out of this number 565 were found unsound and refused licenses. This is a percentage of 8.48 or one unsound stallion out of every twelve. As before stated, 242 of these unsound stallions were pure breds, the balance (323) grades or scrubs.

One of the strongest features of the North Dakota law is the method of inspection for soundness. In the majority of the other states that have stallion laws, the owner is free to take his stallion to any licensed veterinarian. This, for obvious reasons, has not been satisfactory, and has made several of the state stallion laws a farce as far as the soundness feature is concerned. In North Dakota, the veterinarian is in the employ of the Stallion Board and only the most competent men are used for the work. No veterinarian is allowed to examine horses in his own territory and the inspections are always arranged by the officials of the Board.

The successful licensing of stallions has not been accomplished by merely directing the work from the office. Campaigns against violators have been waged annually, and during the five years nearly a hundred delinquents arrested and fined, or allowed to plead guilty and pay their fines and take out licenses. Dealers importing horses into the state are required to keep their horses licensed since the 1913 Legislature enacted the provision requiring the owners of stallions offered for sale or exchange to secure the regular license certificate. This feature is proving a great protection to the farmers of the state, who are not always posted on the unsoundness of horses, and the validity of pedigree certificates, and legitimate dealers find no fault with the provision.

During the five year period the North Dakota Stallion Registration Board has been self-supporting from the fees received from the licensing

and inspections. All of the expenses of investigating and prosecuting violators has been taken care of out of this fund and some institute and illustrated lecture work done as well.

A feature of the stallion law amended by the 1913 legislature that is going to work out to the benefit of the owners of pure bred stallions, provides that in event of a pure bred stallion, previously licensed being found unsound at a re-inspection, the Stallion Registration Board may grant the owner a license on which the unsoundness is specified. Grade and scrub stallions will not be licensed, however, in this manner, should they be found unsound upon re-inspection. In 1913, sixty-eight of these special unsound licenses were issued. In this way a great many pure bred stallions that may become unsound through mismanagement and improper shoeing will be retained in service in the state.—B. H. Critchfield, in charge of Stallion Enrollment, North Dakota Stallion Registration Board.

### WINTER STALLION SHOW AT DES MOINES.

A spring stallion show and sale for the benefit of Iowa breeders to be held annually at the State Fair Grounds, has been provided for by the Iowa State Fair Board. The first show will be staged either in the latter part of February or the first part of March, 1915.

Under the plans outlined no entry fee will be charged the breeders and no admission charged at the gate. Stable room will be provided free and the pavilion where the exhibition will be staged, heated to avoid discomfort for the patrons. Four breeds of horses will be eligible for competition, Percherons, Clydesdale, Shire and Belgians. Premiums to the amount of \$1,500 will be provided by the state and some of the registering associations have indicated that they will offer additional prizes.

### 'SOLD EVERY PERCHERON.'

To the American Breeder:—Enclosed find \$1.00 for subscription to American Breeder to be sent to H. B. Shelton, Pearisburg, Va. I am also enclosing an advertisement for Mr. Shelton. He is wanting to dispose of some valuable Percherons. My little ad in your paper sold every Percheron I had for sale. Hurrah for the American Breeder, best paper of its kind in the United States.—W. H. Thomas, Giles County, Va.

### AN ACTIVE HORSE BREEDERS' ORGANIZATION.

The North Missouri Valley Horse Breeders' Association met December 29 at Trenton, Mo. W. A. McVay was elected president for the ensuing year. Mr. Roberts of Weatherby, vice-president, and Dr. Sam Sheldon of Trenton, secretary. It was decided to hold a public sale at Trenton, Mo., on March 2.

## Roofing Bargains on Steel Shingles

We Are Offering for a Limited Time UNUSUAL PRICES on EDWARDS STEEL SHINGLES

Edwards Steel Shingles are fast displacing wood shingles, which cause disastrous fires, leaky roofs and endless expense. Use beautiful, indestructible Edwards Steel Shingles. Cost less, last longer than wood—better in every way. Over 125,000 Edwards Steel Shingles now in use—the shingles that never rot, rust or burn, due to our patented "Tightcote" process. They come in big clusters, easy to put on, hammer and nails only things needed.

### Edwards STEEL Shingles

are dipped in molten zinc after being cut, no raw or exposed edges. Patented Edwards Interlocking Device permits contraction and expansion—makes joints water-tight forever! \$10,000 guarantee bond free against lightning loss.

### Direct from Maker, Freight Paid

We sell direct from factory to user. No middlemen's profits. You save 25% to 50%. At this Special 30-Day Low Price, Edwards Steel Shingles offer more for the money than any other roof you can lay! Costs nothing to find out. Write today.

### Give Roof Dimensions if Possible

It will save time if you can give size of roof when you write.

If you can't, send anyway for new Bargain Circular No. 176 and we'll quote prices that will astound you.

THE EDWARDS MFG. CO.

125-176 Lock St. Cincinnati, Ohio

## ENGINE PRICES DOWN ANOTHER NOTCH!

Look at these Prices!

2 H-P, \$34.95; 4 H-P, \$69.75; 6 H-P, \$97.75; 8 H-P, \$139.65; 12 H-P, \$219.90. Other sizes up to 22 H-P, proportionally low.

Direct from Factory to User!

Why pay two prices for any good engine, or take chances on a poor, or an unknown engine, when the "WITTE" costs so little, and saves you all the risk.

**WITTE ENGINES, Kerosene, Gasoline & Gas**

Stationary, Portable and Saw-rig Styles.

GET your engine from an engine specialist. All my life I have done nothing but make engines. The success of my customers and nothing else, makes my success. I've simply got to sell better engines. I can't lose money on an engine and make back the loss on something else. My factory is the only one, that started in the engine business 27 years ago, which has come through successfully under the same management with which it started. Only WITTE engine-quality has made that possible.

**Liberal 5-Year Guaranty**

It is cheaper and easier to own a "WITTE" engine than to do without one. My New Offer makes it easier to get the work done by machinery than by muscle or brute power. No need now to get along without a "WITTE." My New Book—the finest in the whole engine business—explains all. It tells you how to be sure in your selection, even if you don't pick a "WITTE." Send me your address today, so I can send you this book FREE with my New Offer.

ED. H. WITTE, Main Desk, Witte Iron Works Co. 2554 Oakland Ave., Kansas City, Mo.

CASH OR EASY TERMS.

HOW TO JUDGE AN ENGINE

READ THIS BOOK BEFORE YOU BUY ANY ENGINE IT IS SENT FREE FOR THE ASKING.

LET ME send you a "WITTE" engine to earn its own cost while you pay for it. It's cheaper than doing without one. I have proved that to thousands who are now WITTE users. Ed. H. Witte.

## DOUBLE THE WHEAT AND OAT CROPS.

Money must be made by better farming; it is common sense to see grain drilled only three inches apart, not six inches or seven inches between rows; means much better seed distribution, better surface covering with crop, less wasted land, better saving of moisture, crowding out the weeds, and many other advantages. One maker of three-inch drills guarantees 25 per cent or better increase or no pay for the machines. Fetzner & Co. of Springfield, Ill., claim a dry year the yield has been increased four times more per acre, besides making a good stand of clover where the clover with wheat was dried out with seven-inch rows.

Write today to Fetzner & Co., as above, for the proof and guarantee and free printed matter. Mention the American Breeder when writing.—Adv.

## THE KANSAS CITY SOUTHERN COUNTRY

has good land at low prices. Descriptive magazine free for a year.

W. Q. NICHOLSON, INGR. AGENT,

K. C. S. Ry., Kansas City, Mo.

## Grain, Stock and Hay Farm

400 acres, 25 miles from Kansas City, 6 miles from county seat, 1/4 mile from school, on rural route and phone line. Wheat, corn, oats, alfalfa, good prairie meadow and some timber pasture. Abundance of water. For price and other information, write

MRS. H. S. MILLER, Olathe, Kans.

### TWO FARMS FOR SALE.

One is three miles southeast of Plantersville; 320 acres, 150 in cultivation, 60 or 75 in pasture, balance in wood land. Suitable for raising corn, cotton, small grain, alfalfa. Five deep wells of fine water on place.

Also some land in Southwest Texas for sale; one half section; level, rich land, unimproved. For further information, write

J. F. McWHORTER, Plantersville, Miss.

## FOR SALE BY OWNER AT BARGAINS

Four choice irrigated alfalfa ranches in Colorado, with excellent water rights, adjoining good ranges; taken on debts. Call on or write

Wm. M. SPRINGER

621 Gas and Electric Bldg., Denver, Colo.

## RANCHES

In small or large tracts, adapted for stock raising, alfalfa growing, general farming, etc., or for colonization purposes if desired—can be procured at reasonable prices and on good terms. Excellent opportunities for money making.

I will gladly send you complete and authentic information.

R. A. SMITH,

Colonization and Industrial Agent, Union Pacific R. R. Co., Room 3739, Union Pacific Bldg.

OMAHA, NEB.

# Review of the Markets

Trade in Army Horses Was Active Throughout Holidays. Possibly Four Nations Buying, and Supply Short in Many Sections. Other Classes Still Dull. Some Hope of Southern Buying. Post-Holiday Runs Lowered Most Meat Animal Prices. Wheat Still Climbs.

A holiday season with the movement of horses and mules as large as in any former period of the year was the feature in the horse and mule market. Just as there was no cessation in fighting in Europe for over Christmas, just so there was no let up in the buying of horses for war purposes. Italy, England and France are buying in this country. Italy's orders are much in the character of agents for the Germans.

This buying of war animals seems to have settled into a mighty big proposition and many dealers as well as growers are beginning to see an aftermath of short supplies. In one sense of the word, the supply of good to choice heavy horses has not been curtailed materially, but the plain to good classes are moving at a large rate. A good many mares, of fair quality that would bring a good mule or colt from a worthy sire, are going abroad, and the future supply on medium work horses is threatened. As the foreign demand continues, dealers who hold the contracts are having to raise prices, and bring horses from longer distances. Some range horses have already been bought and more will be purchased, so it is quite evident that demand is drawing on all sections. If the European war continues, shortage is the only thing that will check the movement abroad.

Demand for horses and mules from the cotton states is the next possible outlet of importance due in the market. Some inquiries as to price and supply are being received, and January may develop a fair volume of business from that source. Financial conditions in the South are much better than a month to six weeks ago. There is also general evidence that the South will have the greatest variety of crops, this year, ever produced, and that sort of farming needs larger horse power. Eastern demand for heavy drafters is at a standstill, though some are selling in Western cities. Farm demand will not show much before the latter part of February. In general, dealers are predicting a good year in horses and mules.

Prevailing prices for serviceable sound horses and mules, 4 to 7 years old, are as follows:

Horses—  
Drafters, 1700-pound, extra quality, ..... \$200@250  
Drafters, good to choice, ..... 170@200  
Drafters, fair to good, ..... 150@175  
Chunks, good, ..... 135@165  
Chunks, fair, ..... 100@130  
Southerners, good to choice, ..... 120@175  
Southerners, ..... 50@100

Mules—  
13 1/2 to 14 1/2 hands, ..... \$ 90@110  
14 1/2 to 15 1/2 hands, ..... 105@135  
15 1/2 to 16 hands, ..... 130@175  
16 1/2 or better, ..... 175@250

### Cattle Prices Lower.

The year 1915 is started with optimism prominent among cattle men of the Central West. They have passed through the year 1914 of extraordinary conditions, and have not had reason to believe that their line of business has suffered a set back. On the contrary, they have plenty of reasons to believe that the need of increased cattle production is necessary by existing conditions in Europe, South America, Mexico and Canada. We are the one great people whose needs exceed any others in the meat line, yet the demand on us from elsewhere is increasing, both from the breeder's point and the consumer's. The foot and mouth disease which is well under control, is left as a legacy from 1914 as the effects of the 1913 draught were a legacy to 1914. This disturbance will be stamped out in the early months this year, and with a good season to follow, live stock men will forget their troubles of 1914. Mostly on account of irregular marketing late in December, cattle prices ruled lower. This is the season of the year when large supplies of fed cattle are normal, but the East is in the midst of general liquidation, without

any refilling of feed lots. This means a bare spot in the Eastern run later, and probably higher prices. Prime steers now are bringing \$9 to \$10, though Chicago is the only market receiving finished cattle, and no sales at river markets have been reported above \$9 in the past three weeks. Monday the market showed 10 to 15 cents decline in Chicago, and the same in Kansas City, excepting on the better classes of stockers and feeders, which were steady. Chicago got 24,000 cattle Monday and Kansas City, 15,000. The five western markets got 54,000.

The Western markets count on a liberal supply of fed cattle from Texas, Oklahoma, Kansas and Nebraska. Most of them are on a cotton seed meal feed now, though beet product is a big factor in Western Kansas and Eastern Colorado. Hay fed steers from the West and Northwest will be a big factor late in January and the succeeding two months. Such steers as the Central West is now receiving are bringing \$7.50 to \$8.50. Killers say that they expect better industrial conditions to reflect improved demand for beef.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers, ..... \$9.00@9.75  
Good to choice steers, ..... 8.25@9.00  
Fair to good steers, ..... 7.50@8.20  
Common to fair steers, ..... 6.00@7.45  
Meal fed, choice, ..... 8.00@8.65  
Meal fed, common to fair, ..... 7.50@8.00  
Quarantine steers, fed, ..... 7.00@8.00  
Quarantine steers, grass fat, 4.75@7.00

A strong demand for butcher cattle is evident in the market again. Prices were unusually low the middle of December, and that fact, together with moderate receipts, stimulated the demand. Killers now are looking for good, fat cows and tidy weight heifers. January will develop only small supplies of fed heifers, and killers will miss that line of beef. The corn belt is not feeding female cattle as it did a few years ago, and spring will show some high spots in the market. Veal calves declined two weeks ago, but the loss has been recovered.

The following quotations are for the various grades of butcher cattle:

Cows—  
Choice, ..... \$6.65@7.25  
Common to fair, ..... 5.00@5.45  
Good to choice, ..... 6.00@6.50  
Fair to good, ..... 5.50@6.00  
Canners, ..... 4.35@5.00  
Heifers—  
Choice, ..... 8.65@9.50  
Good to choice, ..... 8.00@8.60  
Plain to Fair, ..... 7.00@8.00  
Common, ..... 6.25@7.00  
Veal calves, ..... 6.50@10.00  
Bulls, ..... 4.50@7.00

### Good Feeder Outlook.

The inability of the great feeding section east of the Mississippi river to refill feed lots until the quarantine for the foot and mouth disease is raised is causing a big demand for feeding cattle from points west of the Missouri river markets. Supplies are small and prices are firm. Receipts will continue small for some time, and it will be late March before the movement to grass begins.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders, ..... \$ 7.75@ 8.25  
Good to choice feeders, ..... 7.25@ 7.70  
Fair to good feeders, ..... 6.60@ 7.20  
Plain to fair feeders, ..... 6.35@ 6.60  
Selected stockers, ..... 7.65@ 8.15  
Good to choice stockers, ..... 7.00@ 7.60  
Plain to fair stockers, ..... 6.00@ 7.00  
Stock calves, ..... 7.00@ 8.50  
Stock cows, ..... 5.25@ 6.25  
Stock heifers, ..... 5.75@ 7.50  
Milch cows, ..... 60.00@110.00

### Moderate Strength in Hogs.

Though December developed a liberal movement of hogs, the supply was smaller than expected. Whenever the 7 cent level was near the vanishing point at markets, farmers checked the movement. While packers believed they would be able to get hogs under 7 cents last month, their drives cost them slightly above \$7. Now the market is holding well

## ORDER LUMBER FROM KING NOW!

King's Prices are lower than ever now. Send us your order now, and with your lumber order we'll send enough

**FREE ROOFING**  
to cover it, in case you haven't shed room. Write today for estimate.

**WE SELL IT FOR LESS**  
Everything Known in BUILDING MATERIAL. Simply send name, a post card will do, for free copy of our big illustrated catalog. We have just what you need—large or small—from carloads of Lumber to odds and ends. Our three acre plant and eight years in business is proof that we make good.

**KING'S HOUSEWRECKING SALVAGE AND LUMBER CO.**  
1814 Troost Av., Kansas City, Mo.

### Why Pay Two Prices for Fences?

Buy direct from our factory. Hundreds of exclusive styles. Wire and Ornamental Iron guaranteed Fences for every purpose: Gates, etc. Write for Free Catalog, First Order and Early Buyers' Offer! **WARD MFG. CO.** 618 Ward St., Decatur, Ind.

## The OLIVER 7 Typewriter No. 7

The Standard Visible Writer

## Now the Supreme Achievement

This Brand New Oliver Model Inspires All

In making this extraordinary announcement we realize how the typewriter world has waited for what we now give. How typewriter users look to us for the first advances and refinements. Our responsibility has grown with every Oliver innovation—visible writing, visible reading, Printype, and our numerous epoch-making inventions.

### The No. 7 Model

Reduces human effort to the minimum. Performs automatically many operations.

The new cushioned keyboard, the new anchor keys—all the ingenious advances that raise this model to the peak of typewriter perfection. Less effort required, less attention, less eye-strain. Yet at most speed and 25 per cent more value!

### 17 Cents a Day

We have applied our popular purchase plan to this new Oliver. And we will not increase the price one penny.

Now see this typewriter at any Oliver agency. Send for the Oliver No. 7 De Luxe Catalog—FREE.

**THE OLIVER TYPEWRITER CO.**  
102 W. 9th St. Kansas City, Mo.

# THE WONDERFUL STORY OF POWER FARMING

## SEE for yourself the many uses DETROIT FARM ENGINES *can be put to*

**USE  
CHEAP,  
EFFICIENT  
DETROIT  
FARM  
ENGINE**

It is no longer necessary for the farmer to be an expert engineer because this engine has no intricate collection of valves, cams, gears, sprockets or cranking devices. There is absolutely nothing about the Detroit which can get out of order, and a half grown boy can run it as well as anybody else.

### The Cost of Operation

An engine which is designed to use only gasoline cannot be run satisfactorily on any other fuel. Three gallons of kerosene can be produced in the same time that it requires to make one gallon of gasoline. So it stands to reason that gasoline may at any time advance in price while kerosene will cost less and less every year. So why buy an engine which uses only gasoline when you can have a Detroit Farm Engine

**GET AN  
ENGINE  
WHICH  
YOUR BOY  
CAN RUN**

**ASK ANYONE  
WHO HAS  
USED ONE**

All the drudgery has been taken out of farming—all the back-breaking effort is a thing of the past. And now—with considerably less effort—the farmer can more than double his profits, and find time for recreation with his family and friends.

The man who is engaged in farming for profit no longer questions the fact that he needs a reliable farm engine for a score of different uses every day in the year.

But the early farm engines were great, massive, cumbersome things, weighing nearly one thousand pounds per horse power. They were complicated and costly. Even when they were finally installed on the farm it required the services of mechanics to keep them in order and—as a consequence—only the well-to-do farmer could consider such equipment. Those days, however, have gone once and for all.

In place of the clumsy, heavy engine (which needed two or more horses to drag it around) we have the compact, ever reliable

## DETROIT FARM ENGINE

which is designed for, and runs successfully, on kerosene. Also remember, the Detroit is not a gasoline engine with "kerosene fittings," but an engine built to run on kerosene, alcohol, distillate, or gasoline—just as you prefer. Furthermore, it uses but one pint of fuel per horse power hour.

The saving in fuel cost in a month's operation of the Detroit, will pay your lubrication bill for a year.

### What the Detroit Farm Engine Will Do For You

This engine will grind your feed, saw your wood, make perfect electric light, churn butter, separate milk, pump water, mix concrete, operate hoists, truck feed, shell husk and grind corn, run your grind stone, lathe or drill press, run washing machines, shearing machines, threshing machines, and practically any type of machinery around the farm. It will also elevate silage into silos.

No matter what your need may be you will find just the correct engine in the Detroit line to do the work easily and satisfactorily.

### The Proof of Efficiency

It is not necessary to take our word for the performance of the Detroit Farm Engine. Your neighbors and fellow farmers will tell you what it is doing—what it has done—and what it can do. Ask us for our book of satisfied customers and recent testimonials.

We issue large and instructive catalogues on farm engines, farm machinery, and farm electric lighting plants. We will be glad to send copies of any or all on request.

### Detroit Engine Works

67 Bellevue Ave.,  
Detroit, Mich.

There are six sizes of Detroit Farm Engines—2½ horse power, 4 horse power, 6 horse power, 8 horse power, 12 horse power double cylinder and 18 horse power double cylinder.

### This Engine is Sold on Trial

We sell all Detroit Farm Engines with the distinct understanding that the purchaser may try them for thirty days on his own work—in his own way. If, at the end of that time, he is not satisfied with the engine we will refund every penny paid to us without question or argument. Surely there can be no fairer way to back up our claims. Every Detroit Engine is sold with a binding ten year guarantee. A guarantee bond in the sum of \$50,000 is given by us to every purchaser to protect them against any possible failure on our part to keep every agreement we make.

2½ to 18 h. p.

## 20 Reasons Why You Should Investigate the SANDOW Kerosene Stationary ENGINE

It runs on kerosene (coal oil), gasoline, distillate and alcohol without change in equipment—starts without cranking—runs in either direction—throttle governed—hopper and tank-cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—light weight—easily portable—great power—starts easily at forty degrees below zero—complete ready to run—children operate them—low factory prices based on enormous output—30-day money-back trial—10 years ironclad guarantee. Size, 11.2 to 18 horsepower. Send a postal today for free catalog which tells how Sandow will be useful to you. No go-betweens. Pocket agents and middlemen's commissions by dealing direct with factory. (602) Detroit Motor Car Supply Co. 52 Canton Ave., Detroit, Mich.

## A Department For Women

### HOW TO PREVENT PNEUMONIA.

The person who makes a hot-house out of himself is the one who is apt to take pneumonia, which is so prevalent at this time of the year, says the preventive medicine department of the University of Missouri. Living in artificially heated rooms till all the resistance of the body is lowered, is the poorest way to resist such a disease. Instead, one should sleep in the open or on in a room with the windows open and having no artificial heat. In addition, one should take a cold bath every morning, followed by a good hard rub.

Pneumonia, which is an inflammation of the lungs, is no respecter of persons. It is caused by a germ which is found in the saliva of many healthy persons at this time of the year, especially if they live in cities. These persons will take the disease any time that for any reason the vitality of the body is materially lessened. Such a weakening of the resisting power of the body is caused often by the use of alcoholic liquors or by any other abuse of the body. Overwork, mental worry, prolonged exposure to cold or impure air, exposure to noxious dusts and gases are other causes. The disease is contagious. It often occurs in prisons or other crowded places as an epidemic.

Prevention of pneumonia must come from the banishment of the causes of lowered resistance. Common sense must be used in caring for the body. Take as much exercise in the open air as possible. There is no danger from exposure to cold as long as it is not for any great length of time. Avoid overheating in the workroom or office, especially when it is accomplished with dryness of the air, as is usual with artificial heating. Sleep in the open or, if not in the open, in a room with the windows open, and where there is no artificial heat. Every morning one should take a cold bath lasting from one to three minutes. Start before the weather gets cold and you will find it easier, but any one in good health can get accustomed to the cold water by using a sponge. Rules must be modified for very old or very young people or for those suffering from an organic disease. Indications of injury are blueness of the lips and the finger nails and failure to respond with a warm feeling to the rub-down afterwards.

The symptoms of pneumonia are sharp pains in the chest, followed almost immediately by raising of blood. The patient should be put to bed in a well-ventilated room and a physician should be called. Pneumonia, instead of making the patient immune to future attacks, makes him more susceptible. Persons have been known to have nine or ten attacks. The rate of mortality is very high, from 20 to 40 per cent.

### GOOD SALADS FOR WINTER.

To the American Breeder:—Here are two good recipes for winter salads:

Potato salad (warm).—Five potatoes, 2 tablespoons butter, 2 tablespoons flour, 1 cup water, 2 eggs, 2 teaspoons sugar, 1 teaspoon mustard, salt and pepper, 1-3 cup vinegar. Melt the butter, add the flour and cook until bubbling; add the water, cook until smooth, remove from the fire, cool slightly and add the well beaten eggs, then the vinegar and seasonings. Return to the fire and cook until smooth and thick. Have ready sliced potatoes slightly warm, pour the warm dressing over them and mix lightly. Garnish with hard cooked eggs.

Egg and cabbage salad.—Cut the whites of three hard boiled eggs in small pieces, crumple the yolks with a fork or by pressing through a sieve. Have ready one and one-half cups cabbage finely chopped, sprinkle with salt, pepper, and one teaspoon celery seed or salt. Mix the cabbage lightly with the eggs, add the dressing, tossing until well mixed. Arrange on

beds of lettuce or serve in small cup shaped cabbage leaves.—Instructor in home economics, University of Wisconsin Extension Division.

### PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Winter number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

1167. Girls' Dress.. Cut in sizes: 4, 6, 8 and 10 years. It requires 3 yards of 44-inch material for an 8 year size. Price 10c.

## New KEROSINE Light

Beats Electric or Gasoline

## 10 Days Free Trial

Send No Money

BURNS  
94 %  
AIR

## Costs You Nothing

to try this wonderful new Aladdin kerosene (coal oil) mantle lamp 10 days right in your own home. You don't need to send us a cent in advance, and if you are not perfectly satisfied, you may return it at our expense.

## Twice the Light on Half the Oil

Recent tests by noted scientists at 14 leading Universities, prove the Aladdin gives more than twice the light and burns less than half as much oil as the best round wick open flame lamps on the market. Thus the Aladdin will pay for itself many times over in oil saved, to say nothing of the increased quantity and quality of pure white light it produces. A style for every need.

## Over Three Million

people now enjoy the light of the Aladdin and every mail brings hundreds of enthusiastic letters from satisfied users endorsing it as the most wonderful light they have ever seen. Such comments as "You have solved the problem of rural home lighting", "I could not think of parting with my Aladdin", "The grandest thing on earth", "You could not buy it back at any price", "Beats any light I have ever seen", "A blessing to any household", "It is the acme of perfection", "Better than I ever dreamed possible", "Makes my light look like a tallow dip", etc., etc., pour into our office every day. Good Housekeeping Institute, New York, tested and approved the Aladdin.

## We Will Give \$1000

to the person who shows us an oil lamp equal to the Aladdin (details of this Reward Offer given in our circular which will be sent you). Would we dare invite such comparison with all other lights if there were any doubt about the superiority of the Aladdin?

## Get One FREE

We want one user in each locality to advertise and recommend the Aladdin. To that person we have a special introductory offer under which one lamp is given free. Just drop us a postal and we will send you full particulars about our great 10 Day Free Trial Offer, and tell you how you can get one free.

**THE MANTLE LAMP COMPANY**  
392 Aladdin Building CHICAGO, ILL.  
Largest Kerosene (Coal Oil) Mantle Lamp House in the World.

## Men With Rigs Make Big Money

delivering Aladdin lamps. No previous experience necessary. One farmer who had never sold anything in his life made over \$500.00 in six weeks. Another says: "I disposed of 34 lamps out of 31 calls.

**No Money Required** We furnish capital to reliable men to get started. Ask for our distributor's Easy-System-of-Delivery plan quick, before territory is taken.

## Sunshine Lamp 300 Candle Power FREE

### To Try In Your Own Home

Turns night into day. Gives better light than gas, electricity or ordinary lamps at one-tenth the cost. For Homes, Stores, Halls, Churches. A child can carry it. Makes its light from common gasoline. No wick. No chimney. Absolutely SAFE.

## COSTS 1 CENT A NIGHT

We want one person in each locality to whom we can refer new customers. Take advantage of our SPECIAL FREE TRIAL OFFER. Write today. AGENTS WANTED. **SUNSHINE SAFETY LAMP CO.** 204 Factory Bldg., Kansas City, Mo.

## THE ACORN LANTERN Storm and Rain Proof

Absolutely Wind, Bug and Dust Proof. Burns 16 hours on one filling, costs 1/16 per hour, made to stand hard knocks. Farmers: livery barns, garages, watchmen, store keepers, every one, buy at sight. **AGENTS MAKE MONEY**—Men and Women, Quick, easy, sure, every home a prospect.—Write Quick. **ACORN BRASS MFG. Our representatives are earning \$50 to \$150 per week. Write quick for sample and territory. It's selling like wild-fire. Everybody's a Customer. Hytee's Factories, Majestic Bldg., Indianapolis, Ind.

9934. Ladies' House Dress. Cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of

## Close of Third Year of National Egg Laying Contest.

Concerning the third year of the National Egg Laying Contest, which has just closed at Mountain Grove, Mo., Superintendent Quisenberry writes:

The highest pens from the different countries and provinces ranked as follows at the close of the third year's contest:

	Eggs.
Pen 0—S. C. W. Leghorns, Best English Records.....	2,296
Pen 65—S. C. W. Leghorns, Best American Records.....	2,104
Pen 102—S. C. W. Leghorns, Best New Zealand Records.....	1,814
Pen 77—S. C. W. Leghorns, Best Vancouver Island Records.....	1,774
Pen 3—S. C. W. Leghorns, Best Australian Records.....	1,660
Pen 21—White Wyandottes, Best Ontario Records.....	1,641
Pen 64—S. C. W. Leghorns, Best British Columbia Records.....	1,460
Pen 76—S. C. W. Leghorns, Best S. African Records.....	1,352

Our experience with foreign pens leads us to believe that on account of the change of season, change of climate and long distances that it is almost impossible to ship birds from Australia and New Zealand and other countries of equal distance and then get satisfactory results. We believe we can breed from these pens one year at this place and raise their young in this climate and they will do far better than their parents.

In this contest which just closed, 115 hens laid more than 200 eggs each. The highest hens of each variety is as follows:

	Eggs.
Hen No. 611—S. C. White Leghorn, Nebraska.....	286
Hen No. 180—White Wyandotte, Pennsylvania.....	265
Hen No. 566—Barred Plymouth Rock, Iowa.....	254
Hen No. 24—Ancona, Missouri.....	243
Hen No. 335—Black Orpington, Nebraska.....	243
Hen No. 576—White Plymouth Rock, Texas.....	242
Hen No. 456—R. C. Rhode Island Red, Missouri.....	239
Hen No. 236—Silver Wyandotte, Missouri.....	233
Hen No. 363—Buff Orpington, Texas.....	230
Hen No. 476—S. C. Rhode Island Red, Missouri.....	227
Hen No. 48—S. C. Black Minorca, Missouri.....	225
Hen No. 197—Buff Wyandotte, New York.....	222
Hen No. 13—Campine, New Jersey.....	216
Hen No. 42—S. C. Buff Leghorn, Michigan.....	215
Hen No. 278—Black Langshan, Missouri.....	215
Hen No. 524—Buff Plymouth Rock, Missouri.....	210
Hen No. 895—White Orpington, Missouri.....	205
Hen No. 141—Black Rhineland, California.....	202

All hens in the National contest made an average of 159 eggs per hen. There were several hens which did not lay an egg. These will be killed and examined to determine, if possible, what was the cause of their barrenness. The average would have been at least from five to eight eggs more per hen had the contest started the first of November, 1913.

The highest ten pens in this contest were as follows, each pen being composed of ten hens:

	Eggs
Pen 0—S. C. White Leghorns, England.....	2,296
Pen 24—White Wyandottes, England.....	2,047
Pen 18—White Wyandottes, Pennsylvania.....	2,006
Pen 47—S. C. Reds, Missouri.....	1,996
Pen 59—Barred Plymouth Rocks, Ohio.....	1,867
Pen 9—S. C. White Leghorns, Pennsylvania.....	1,821
Pen 53—Barred Plymouth Rocks, Illinois.....	1,809
Pen 51—White Plymouth Rocks, Arkansas.....	1,784
Pen 23—Silver Wyandottes, Missouri.....	1,764
Pen 57—White Plymouth Rocks, Texas.....	1,752

The average number of eggs laid by all hens of each variety was as follows:

	Eggs Per Hen.
All White Wyandottes averaged.....	190
All Barred Plymouth Rocks averaged.....	176
All S. C. White Leghorns averaged.....	172
All S. C. Reds averaged.....	171
All White Plymouth Rocks averaged.....	171
All Buff Wyandottes averaged.....	169
All Silver Wyandottes averaged.....	167
All R. C. Reds averaged.....	164
All Buff Orpingtons averaged.....	163
All Anconas averaged.....	162
All S. C. Black Minorcas averaged.....	160
All Black Langshans averaged.....	158
All Buff Leghorns averaged.....	154
All Buff Plymouth Rocks averaged.....	148
All White Orpingtons averaged.....	143
All Black Orpingtons averaged.....	139
All Campines averaged.....	135
All R. C. Black Minorcas averaged.....	128
All Black Rhinelanders averaged.....	124

Those are records which any breeder should be proud of. All made good averages.

6-inch material for a medium size. The skirt measures 1 3/4 yards at the foot. In a medium size. Price 10c.

1144. Ladies' Apron with Princess front. Cut in 3 sizes: Small, Medium and Large. It requires 4 3/4 yards of 7-inch material for a Medium size. Price 10c.

9930. Girls' Apron. Cut in 5 sizes: 6, 8, 10 and 12 years. It requires 3 1/2 yards of 27-inch material for a 6 year size. Price 10c.

1149. Child's Night Drawers. Cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires 3 1/2 yards of 36-inch material or an 8 year size. Price 10c.

1162-1161. Ladies' Costume. Waist 162 cut in 5 sizes: 34, 36, 38, 40 and 2 inches bust measure. Skirt, 1161, cut in 5 sizes: 22, 24, 26, 28 and 30 inches waist measure. It requires 2 1/2 yards of 40-inch material for the skirt without flounces, and 5 yards with flounces, for a 24-inch size. The waist requires 4 1/4 yards of 40-inch material for a 36-inch size; without

the cape section it requires 5/8 yard less. The skirt measures about 2 yards at its lower edge. This calls for TWO separate patterns, 10c FOR EACH.

1172. Ladies' Dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2 3/4 yards of 44-inch material for the skirt, and 6 yards for tunic and waist for a 36-inch size. The skirt measures about 2 1/2 yards at the foot. Price 10c.

### TENNESSEE GIRL DIVERSIFIES CROPS.

Madge Farrar, a Tennessee girl, has proved the possibilities of growing crops all the year around in her state. By raising and selling vegetables throughout the year she made a net profit of \$131.62, while the second best girl, who also did good work but did not diversify, made \$96.20 profit. The girl with the second average grew only beans and tomatoes during the

## A BIG, STOUT, LUSTY CHICK

From every hatchable egg when you hatch with a FAIRFIELD Incubator.

### THE WORLD'S BEST HATCHER.

You Can't Fail

With a FAIRFIELD Hot Water heated Incubator. No loss of high priced eggs. Use good, fertile eggs and follow the simple, easy instruction, then

You Must Have Hatching Success.

Get right down to brass tacks in this Incubator and Brooder business. Learn the facts. Then you will take a FAIRFIELD for your silent partner in your hatching and chick raising business.

The Incubator with ten years of the GRANDEST hatching record ever known. It is the Incubator that will give you the GREATEST service, and produce the BEST, BIGGEST results in money making chicks, with less oil and less personal care than any other.

501 MAIN ST.,

FAIRFIELD, NEB.

fall and summer. Miss Farrar, however, having grown these crops put in onions during the winter which she sold at a good profit early in February. She then proceeded to plant cabbages which brought her an income during April and May, while peas were her main crop in June. This brought her back to the tomato and bean season and rounded out a year of profitable vegetable growing.

Another young woman found a peach orchard into which hogs had been turned. She took her canner with her and established herself in the orchard to save what was left from the hogs, and made \$60 in one week from her work. Similar instances have demonstrated the possibilities of saving waste in that section and there has been a more general interest exhibited not only by the farmers' daughters but by many of their wives.

### NARROWER DRILL ROWS TO INCREASE YIELD.

To the American Breeder:—The manner of seeding in Europe should be a very profitable subject for the American farmer to consider at this time; very little has been said in the Agricultural papers about seeding wheat, rye and other grains in the fields of Europe where it is not unusual at all to produce 60 bushels of wheat per acre, and sometimes as

many as 80 bushels per acre have been claimed.

Land, of course, is very valuable in the farming sections and the price of labor is much cheaper than we can realize or understand here in America, so that labor perhaps might be wasted in Europe but the greatest possible care is taken to avoid waste of the land. With this in view, the European land owner or renter uses a grain drill, putting in the rows often as close as 2 1/2 inches apart, never more than 3 inches, and you simply could not give an European farmer a grain drill making the rows more than 3 1/2 inches apart.

Again, if you investigate the type of grain drill used in Europe it will be seen that they use 2 men and very often 3 men to operate one grain drill; one man doing the driving of the oxen, camels or horses and, (if 2 men are operating the machine), the second man sees to it that the hopper is kept properly filled with seed and that the seed is kept flowing steadily and accurately, besides continually guiding the machine by the fore-carriage (called vordikarre) by a long lever that extends clear behind the seed hopper. Not an inch of land is allowed to be wasted by crooks in the rows. Where three men operate the machine, the second man simply looks after the keeping of the seed in the hopper and that everything about the machine is working perfectly, doing accurate and reliable seeding continually and then

EUROPEAN TYPE OF FORE-CARRIAGE DRILL.

## THIS SUFFOLK STALLION.

Ashmoor Omar Khan, for sale because of his fillies ready to breed. I also want a young stallion; dark chestnut; coming two; not closely bred in Ormond or Saturn lines; one that will make a 2,200 pound horse.

CHAS. W. STEWART,  
West Chester, Iowa.

## CLYDESDALE HORSES

Stallions and mares of all ages for sale.

ALSO SHORTHORN CATTLE.

W. A. DeMerritt

Route 2. Plainfield, Ill.

## 2 REGISTERED CLYDESDALE STALLIONS

For sale or trade. One is two and the other five years old. I am obliged to sell at very low prices on account of not having time to care for them. Address,

H. J. PETRIE, Attica, N. Y.

## 12 REGISTERED CLYDESDALE STALLIONS and Mares.

For sale; all that are fully developed and in flesh will weigh 1,800 to 2,100 pounds. Young ones will develop to that.

J. G. THOMPSON & SONS,  
R. R. 1, Box 109, Steubenville, Ohio.

## CLYDESDALE STALLION COLTS

For sale. Two registered Clydesdale stallion colts; 8 months old; good ones. See or write.

S. A. WALTER, Formoso, Kan.

it is the exclusive duty of the third man to guide the machine and instead of the long lever extending behind the hopper, it is hinged so that it can be turned to allow the third man to walk alongside of the wheel of the fore-carriage so that he can closely watch the track of the wheels of the fore-carriage to see that the machine is driven absolutely straight, so that not an inch of the land is wasted.

Let us make a comparison of this European system with our manner of seeding in America; the American farmer uses a grain drill with the rows never closer together than 6 inches, and more generally in the Corn Belt states it is 7 inches, or sometimes 8 inches apart; this American manner of drilling the grain is found to be really better than broad-casting, but it permits a wonderful waste of land, the seed is not properly distributed, and there is a great waste of moisture because of the bare spaces between the seed rows, which allow the sun to bake the surface crust and to rapidly take up the surface moisture. Besides the wide spaces between the seed rows allow much room for weeds to make a start and every practical farmer knows that it takes just as much strength out of the ground to produce weeds as it does to produce grain.

Another feature of importance to consider in seeding grain is the width of the seed furrow made by the furrow openers, because if the seed furrow is very narrow it simply puts one grain of seed nearly on top of another, to the serious detriment of both stalks, as mentioned in the report of the Missouri State University, by Professor C. B. Hutchinson, wherein it is found that "not more than 50 to 75 per cent of the seed plants that sprout in the narrow seed rows of a grain drill ever mature."

I succeeded in being able to buy a 3-inch American grain drill in January, 1912, and have now used this machine for 3 years, putting the grain drill rows only 3 inches apart, and I have never failed to produce at least 10 bushels of wheat per acre more than any of my neighbors seeding with the rows made 6 inches or 7 inches apart, and my oats likewise, correspondingly increased over the wider seed rows.—William Pritchett & Son, McHenry County, Ill'nois.

## THE BREEDS OF LIVE STOCK

## NUMBER II; JERSEY CATTLE.

Editor's Note: The following article is the second in a series that is satisfying the desires of thousands for authentic information in this line. Again we urge upon our readers that not a single copy of the American Breeder be misplaced or destroyed while this series is running. Many times it is impossible for us to accommodate requests for extra copies. Single orders for several hundred papers of some special issue often exhaust the last of our reserve supply. The only way to be sure of this series, complete, is to save every copy of the paper. No publication (book or periodical) has ever covered the subject in a way to so well meet the demand for information on breeds, as does this series of special articles. Cattle, hogs and sheep will appear in the series early. No interest will be neglected, though horses will continue prominent. Do not miss a single copy.

The Jersey breed of cattle originated on the Island of Jersey, which is in the English Channel about fourteen miles from the coast of France. The island is very small, being eleven miles long, four miles wide, and containing 28,717 acres. Market gardening is the leading industry, but the Island has made its international reputation through its cattle. The farms are small in size, ranging from five to twenty acres, and on the average there is about one Jersey cow for every acre.

Originally the Jersey sprang from the large, red cattle of Normandy and the small, black cattle of Brittany, the latter blood predominating. This amalgamation of blood occurred several centuries ago; since that time a very fixed and uniform type has been established by careful selection. So

sized butter-fat production, the quantity of milk being secondary, but important.

Today Jersey cows average about 850 pounds in weight, and bulls about 1300 pounds. Some families average considerably larger in size than do other families of the breed. Jerseys reach breeding age quickly; some few breeders have practiced having the heifers calve at 18 to 20 months of age, and it has been reported that heifers under 365 days old have produced calves.

The Jersey has excellent dairy form and is very lean in appearance. They have superb quality throughout, but sometimes lack constitutional vigor and desirable ruggedness. Their color varies, including various shades of fawn color from silvery and yellowish to orange and brownish. Some are a mulberry black. White markings are

EMINENT'S BESSIE (IMPORTED), A CHAMPION COW.

much progress was made by 1799 that laws were passed forbidding the importation of any cattle to the island, save for immediate slaughter, and similar but more stringent laws are still in force.

As early as 1812, Jersey cattle were said to be phenomenal milkers. In color they were, at that time, red, red and white, cream colored, and cream colored and white. Some few were black, and some were black with brownish stripes down the back. In 1834 it was stated that Jersey cows were poor in shape, had bad udders, and some had short, bull necks and heavy shoulders, but the exhibitions at the Royal Jersey Show worked steady improvement in these points. Inferior animals were sent to the butcher.

A number of breeders in England took up Jersey cattle and improved them, beginning as early as 1811. The most noted of these was Philip Dauncey of Buckingham County, who began his work about 1821 and continued it until 1867. He bred for large average better production, constitutional vigor, and a uniform color, free from white markings. In this way a color fad was started which gave the breed a setback for a time, inasmuch as useful points were in many cases made secondary to color. However, Mr. Dauncey bred many notable animals.

Eventually the Jersey was given a fixed, uniform type, showing the most extreme dairy temperament and yielding the richest milk of any breed of dairy cattle. Breeders have empha-

should be straight, and the rump is long and lean, but sometimes narrows too much at the tail-head. The thighs are thin and nicely hollowed inside the leg to make room for the udder.

The Jersey udder is usually very mellow and milks out well, but some Jerseys are criticised for small udders and small teats. However, many cows of the breed have beautiful udders of great capacity. Short, cut-up fore udders are rather too common. The development of the milk veins and milk wells is very good. Jerseys are economical butter-fat producers, and on small or hilly farms, and where concentrated feeds are fed in goodly amounts as compared to roughage, this breed is excellently adapted.

The milk of the Jersey contains very large fat globules, and the cream rises, separates, and churns easily. Many cows produce 14 to 17 pounds of butter per week, while a few exceed 20 pounds. The butter color is excellent. A fair grade of Jersey milk will contain at least 4.5 per cent of fat, and the breed commonly averages more than this. In quantity of milk, Jerseys do not rank high, although some produce 5,000 pounds of milk per year.

Jerseys were first brought to the United States in 1850, and following that date many importations were made, mostly by wealthy men. In 1870 came the color fad, and the breed began to boom about the same time. The boom culminated in 1883, and then prices fell and many fancy herds were dispersed at prices low enough to put the cattle into the hands of men of moderate means. From that time forward, the utility points of the animals received greater attention and development in this country.

The American Jersey Cattle Club was organized in 1886 and has done much to encourage and foster the breed. This association publishes the Herd Register, in which 364,000 animals have been recorded to date. The Club started its seven-day tests in 1884, and in 1903 established the Register of Merit, in which are recorded those animals which meet the requirements for official tests. The official requirement for a mature cow is 360 pounds of butter-fat in one year.

The highest record cow of the breed is Sophie 19th of Hood Farm. At eight years of age she produced in one year 17,557 lbs. of milk, testing 5.7 per cent butter-fat, and her butter-fat yield was 999.2 lbs. Eminent's Bessie, at the same age, made a yearly record of 18,782.9 lbs. of milk and 962.8 lbs. of butter-fat.

The list of famous Jersey sires includes Exile of St. Lambert 13657, St. Lambert Boy 17408, King of St. Lambert's King 30752, Ida's Rioter of St. Lambert 13656, King of St. Lambert 15175, Pedro 3187, Diploma 16219, Tormentor 3533, Fancy's Harry 9777, and Stoke Pogis 3rd. 2238.

Prices for Jersey cattle have reached high levels in America. The cow, Imported Blue Belle, sold for \$3,600 in 1904, and the bull, Noble of Oaklands, sold for \$15,000 in 1909.

In conclusion it may be said that the good points of Jersey cattle are: 1. Extreme quality. 2. Extreme dairy temperament. 3. Good dairy form. 4. Early maturity. 5. Beauty of appearance. 6. Mellow udder. 7. Good mammary capacity. 8. Good

not uncommon, but the solid fawn color is preferred. Brindles are disliked.

The head is very clean-cut, very "breedy," dished, rather short, and fairly broad. The eyes are very large and prominent. The horns are short and strong in the bull, but are fine and curving in the cow. White or amber colored horns with black tips are liked best. A long, finely modeled neck is characteristic of the breed.

The chest is deep, but often lacks proper width. Depth and capacity of barrel are good. The back and loin

A JERSEY "LINEUP" AT THE ROYAL IN ENGLAND.

**IMPORTED AND HOME BRED STALLIONS AND MARES. PERCHERONS, BELGIANS, SHIRES.**  
The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Percheron this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

**PARAMOUNT STOCK FARM**  
Breeds and Imports  
Percherons, Belgians and Shires.  
Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 lb. horses. WM. CROWNOVER, HUDSON, IOWA.

**PERCHERON and BELGIAN**  
Prize Winners.  
Won over \$1,200 in cash premiums in 1914. Buy the winners.  
LONZO McCLAIN, LIMA, OHIO

**FOUR PERCHERON STALLIONS**  
for sale, including my imported herd stallion, Marquis, a grandson of Besique. Marquis has the famous blood lines on both sire and dam's side; sound and sure. Also two black three-year-olds and one black two-year-old. Will mature to better than ton horses; sound, with size and quality; registered in P. S. of A. They are priced to sell. Come and see them.  
I. C. EVANS, TROY, IOWA.

**FOR SALE OR TRADE.**  
Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.  
Also 16 hand registered Mammoth Jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.  
H. H. BURNS, Argonia, Sumner County, Kansas

**STALLIONS**  
For sale. Black Percherons at a price so you can own one. Sound and right. Come and see them.  
HENRY E. PETERSON, Lyons, Neb.

feeding capacity. 9. Especially adapted to rough lands and hot climates. 10. Breed true to type. 11. High per cent of butter-fat. 12. Large fat globules. 13. Good butter color. 14. economical butter-fat producers. 15. Popular as a family cow.

**ILLINOIS FARMERS VALUE AMERICAN BREEDER.**

To the American Breeder:—Inclosed find check for \$2; \$1 as payment for a three years' subscription to the American Breeder, the other dollar is for the cut of my Percheron stallion that stood seventh in the contest. Here on the farm I would rather be without all the other farm papers than the American Breeder.—A. J. Hatteberg, Ford County, Ill.

**RECORD ASSOCIATION MAY COME TO KANSAS CITY.**

In their next annual meeting at Maryville, Mo., stockholders of the Standard Poland China Record Association will vote on a proposition to establish an office in Kansas City. As incorporated the Standard Poland China Record's headquarter office is fixed at Maryville, and the plan for making the change includes the adoption of an amendment to the by-laws so as to provide for a branch office at Kansas City. Many active members in this Association have for years favored some sort of a business headquarters in Kansas City for their record, and are hoping for the success of the proposed amendment to the by-laws.

**MISSOURI BREEDERS GIVE MEDALS.**

Missouri breeders are giving medals to be awarded to the best judges in various lines, developed among students in the Missouri Agricultural College's short course work. The medal givers are R. W. Brown, breeder of Galloway cattle; F. L. Crosby, breeder of Clydesdale horses; C. B. Walker, breeder of Shropshire sheep, and W. B. Wallace, breeder of Poland China hogs.

QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.  
Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.  
Sign Your Name and Address to all Questions.

**1374—RING BONE**—One of my mares, 9 years old, is forming a ring bone on hind left leg. The enlargement extends only on the outside of coronet; is somewhat lame. Have blistered same with some patent remedy, but without results.—South Dakota Subscriber.

**REPLY**—It is not likely that this case can be permanently relieved without the use of the firing iron. This instrument should be applied by one experienced and thoroughly familiar with its use.

**1375—PLACING CAUSE OF ABORTION**—Please tell me if you consider it the mare's fault or the stallion's. For instance, from 30 mares with foal to one stallion, owned by different owners, we will say three or four abort or drop their colts before foaling time. Is that any indication that it is the stallion's fault any more than the mare's?—New York Subscriber.

**REPLY**—If the stallion has been improperly handled or has made an extreme number of services some of the blame could be placed on the stallion, otherwise it is the fault of the owners of the mares. About ninety-nine times out of every hundred, an abortion is the fault of the management of the mares, unless it could be attributed to contagious abortion.

**1376—DYSENTERY**—We are having trouble with some of our young cattle, especially weanling calves. They become weak with diarrhoea of a bloody nature. Your advice will be appreciated, as situated as we are it is almost impossible to consult a qualified man.—South Dakota Subscriber.

**REPLY**—It is more than likely your stock is infected with certain disease germs that are capable of setting up a disturbance of the bowel of a hemorrhagic nature. In weanling calves give them a teaspoonful of creolin in milk twice a day. Study the feed proposition carefully as you will more than likely find the source of the trouble there.

**1377—BELGIAN SHOW AWARDS**—In the American Breeder Show of Belgian stallions held last summer, how were the first, second and third prize horses standing in regard to the different judges' votes?—Ohio Subscriber.

**REPLY**—The awards were printed in our issue of June 20, along with portraits of the 12 animals ranked first to twelfth, respectively. After the paper was off the press, the correspondence connected with this show was destroyed. We could not give the votes of the separate judges anyhow, but explain how these matters are handled and to emphasize the importance of saving all copies of the paper.

**1378—THREATENED ABSCESS**—I have a draft filly 2 years old that has a fistula; both sides are very hard. Have tried blister to soften, but without effect. What would you advise?—Ohio Subscriber.

**REPLY**—The measures you are employing generally have the effect of either dispelling the threatened abscess or causing the parts to soften up. We would suggest that in addition to continuing the blistering at intervals that you have your veterinarian give her an injection of bacterin about every five days.

**1379—FREQUENT URINATION**—I have a large stallion that I use for a teaser in the spring. He can hardly serve a mare at all; his penis bleeds when he tries to serve. He is 8 years old; I traded for him last spring. He is affected in the kidneys; he urinates about every thirty minutes when at work; water is clear except in the spring when he is teasing mares. Please let me know what to give him for his kidneys.—Missouri Subscriber.

**REPLY**—We suspect there is some relation between the bleeding alluded to and the frequent urination. It is quite likely that the hemorrhage

comes from some point along the course of the urethral canal, and the irritation existing there may be sufficiently exciting cause to provoke frequent attempts at urinating. You

should call to your aid a good, competent veterinarian as he may have an opportunity to not only examine these parts, but the bladder also. Such an examination should include an analysis of the urine. By first finding out the seat of the disease you will be in a position to more effectively carry out curative treatment.

**1380—"CORN STALK" DISEASE**—In my neighborhood the horses have been dying with what they call the "corn stalk" disease. There have been 75 or 100 die within ten miles of me. The symptoms are different; some are stupid and some go crazy; they seem to be paralyzed on one side, and blind. There seems to be no one that knows just what causes it. One veterinarian said that he had lost 49 out of 50. It has been dry all summer here and there seems to be a good many worms in the corn and there was a lot of

STALLIONS

Young, sound and drafty, are going to be at a great premium before the breeding season opens. No opportunity should be overlooked for buying the right kind, like that offered in

C. F. Jones' Public Sale  
Rippey, Iowa,  
Tuesday, January 12

Get a catalog if you have not, but by all means be at the sale. His catalog shows the actual photographs of massive, heavy boned young stallions like Marvin and Baron Chinda (both out of champion mares), as well as mares like Imp. Gandine (a champion, and in foal to Marvin), along with her great family.

These Are Percherons You Can Be Proud Of.

PERCHERON SALE!

On Wednesday, January 20, 1915, I will sell at Public Auction, commencing at 10:30 a. m. on my Pioneer Stud Farm, 17 miles south of Salina, three miles east and one mile north of Lindsborg, two miles south of Bridgeport:

45 HEAD 45

Registered Stallions, Mares and Colts

Consisting of

Ten (10) Mares, Sixteen (16) Fillies, Thirteen (13) Stallions, Six (6) Colts

These mares are all bred and in foal by the Grand Champion Stallion, Ilmen (80190) 78696.

Ilmen (80190) 78696 was awarded Grand Championship at the American Royal Live Stock Show at Kansas City in 1912.

Most of these mares were worked on my farm the past summer and every attention was given to secure them safe in foal.

My stallions consist of yearlings and 2, 3 and 4-year-olds, and without any exceptions I can show you as much weight and conformation as you will find in any one barn. No breeder owns a bunch of yearlings that will excell the ones I am offering in this sale.

Wednesday, Jan. 20, 1915

NOTE: Also, twenty (20) head of Mules, fifty (50) head of Farm Mares, part of them heavy in foal and as good as you will find anywhere in the country, from 3 to 7 years old; five (5) Saddle Horses.

Trains leave Kansas City on Union Pacific for Salina at 8 a. m., 10:30 a. m. and 6 p. m. each day.

Special Train for station at farm will leave Salina on Union Pacific at 8:30 a. m., morning of sale, returning after the sale.

When the Clock Shows 10:30 We Will Be Selling Horses.

AUCTIONEERS: Sayer, Curphey, Crews and Morener.

Write for Catalogue.

C. W. LAMER  
SALINA, KANSAS

**STALLIONS FOR SALE.**

Two imported Percheron stallions, 5 and 7 years old.

Also 2 home bred Shire stallions, 2 and 3 years old.

Will sell any of them cheap, as I have too many on hands. All registered.

A. S. HARTMAN, Bte. 6, Tuscola, Ill.

### MAPLEWOOD PERCHERONS

STALLIONS AND MARES

For sale. A good selection always on hand. Ages from 2 to 5 years.

#### C. G. ANDERSON

Hector, Renville County, Minnesota.  
Main Line C. M. & St. P. R. R.

#### BLACK PERCHERON STALLION

For sale. Registered P. S. A.; 5 years. good size, sound certificate under stallion law of this state. Also other draft stallions. Describe your wants. CARL HIBBS, Oxford, Ind.

### FOUR PERCHERON STALLIONS

For sale. One 4 years old last September; one 3 years old; one 2 years old and one weanling. Will also sell or exchange the imported sire of these colts for one equally as good. Will test these stallions for prospective buyers with microscope. Am also offering a few mares. C. STAHLY, Milford, Nebr.

### KANSAS PERCHERONS.

Bone and constitution developed in natural way; breeding the best. We have 50 registered stallions and mares, mostly blacks and grays; weanlings to 7 years. Come and make selections. Write for particulars, mentioning American Breeder.

HARRIS BROS., Great Bend, Kas.

#### PERCHERON STALLIONS AND MARES.

From suckers up; good individuals; well broke and good workers, at a low price. Would exchange one stallion for another good one. Write your wants today.

L. F. NEWBOLD,  
Minden, Kearney Co., Neb.

#### PERCHERONS

For sale—Two-year-old black stallion; weight 1,800; one-year-old black stallion, weight 1,500; pair of black mares, 5 and 6 years old, weight 3,800; safe in foal. Pair one-year-old black fillies, weight 2,800; all sound. A snap if taken soon.

ARMAND N. GROSSAINT, Clifton, Ill.

#### PERCHERON STALLION AND JACK

For sale—Imported Percheron stallion, color black, weight 1,900; a sure foal getter. Also a Mammoth black jack; good breeder and quick worker. For particulars address

A. E. GIBBENS, Ness City, Kas., Rt. 1.

### Percheron Stallions and Mares

For sale—Registered Percheron stallion, 20 months old; weighs 1,500 lbs.; 16 hands high; passed sound inspection; has the best of bone and quality; is black, with small star. Also have two registered mares.

B. N. LEWIS, SOUTH BEND, NEB.

## FOR SALE

One pair black, registered Percheron mares, 5 years old; with the very best of breeding, and bred to a son of the International champion, "Pink." Photo and breeding on request.

L. E. TOMPKINS, Palatine, Ill.

## FOR SALE

One two-year-old Percheron stallion, sired by an International prize winner, and out of a show mare. Photo and breeding on request.

L. E. TOMPKINS, Palatine, Ill.

## PERCHERON

STALLIONS

For Sale or Lease.

M. F. DILLON

107 Grand Ave. PUEBLO, COLO.

### A BIG BARGAIN

Bay Percheron stallion; (inbred Brilliant). A proven foal getter. Pedigree and photo on application to W. E. HAYLER, Washington, Ill.

#### RUGGED STUD COLTS

The surplus from a small, but good herd of Percherons. They are one and two year olds, got by my imported stallion, Sanson (67842) 78879 and are priced to sell.

JOHN S. HORSWELL, Estherville, Ia.

smut on it. Can you tell me anything about the disease; what causes it and anything that will help?—Illinois Subscriber.

REPLY—The disease alluded to is one that nearly every season appears in some form in some part of the country. It is unquestionably due to some poisonous substance taken in with the food. Some of the moulds no doubt are the most probable cause of the ailment. It is nearly always observed during seasons when the corn worm produces its greatest damage, as it will be noted that the tips of many infected ears are mouldy. The more common name of forage poisoning has been applied to this disease while the medical man refers to it as cerebro-spinal meningitis. The brain and its coverings are the chief organs attacked which accounts for the stupor, blindness and violent symptoms. Post mortem examinations disclose a congested state of the brain with degeneration and abscess formation in the majority of cases, especially those that have been fed mouldy corn. This disease is very fatal on account of the rapidity of its progress and the nature of the organs involved. Some die in less than 24 hours and a few may live three or four days. Medicine is of little aid as a brain once diseased does not repair as rapidly as other parts of the body. It is the proper seat of control of the vital processes in the animal economy and when the presiding centers become deranged through disease it becomes easy for life to cease. Stock owners should carefully study preventive measures. Infected fields should not be pastured by susceptible stock. Sometimes a field that is destructive to horses may be pastured with impunity with cattle. Mouldy corn should be run through a fanning mill and the remaining damaged grain floated off by throwing it in water before being fed. Experiments have demonstrated that there is nothing to the smut, lack of salt, and in the majority of cases lack of water theories. Mould poisoning is not restricted to corn stalk pasturing. Cured fodder, ensilage, cane and pastures have claimed their victims. Properly prepared ensilage largely eliminates the dangers due to pasturing stalk fields and the feeding of cured fodder, and is in itself a strong argument for the silo.

1381—CASTRATION—I have a 4-year-old stallion that I wish to castrate. Is it safe this time of year?—Iowa Subscriber.

REPLY—Yes, if carefully done and the animal protected against inclement weather, and at the same time properly exercised.

1382—COLTS GO OVER IN FRONT—I have a young jack that has made one season and some of his colts when they come can't stand; they pitch over on their forelegs, and their legs are crooked. Some can't walk at all.—Louisiana Subscriber.

REPLY—Have your blacksmith make a very light piece of iron, about one inch wide, without any sharp edges on it, to fit the front part of the hoof, extending up nearly to the knees, weld on the bottom a flat piece of material representing the shoe for the foot. The iron may be very light, yet strong enough to support the colt. Get plenty of cotton to place between the iron and the leg. Run a big strong bandage from the toe by winding around the hoof and the leg to a point above the iron. Remove the bandage once a day and rub the legs down for about 20 minutes, so as to increase the circulation to these parts. Do not put the bandage on too tight. Gradually loosen the bandage so as to increase the strength in the leg. Give the colt plenty of room for exercise, but do not force it to travel. From your statement it would be advisable to have a number of these appliances ready so they could be loaned out to the different customers.

1383—PROBABLY RHEUMATISM—I have a 2-year-old Percheron gelding that has rather peculiar symptoms. He feels around with one of his front feet as if he dreaded to put his weight on it; finally he brings it back to its natural position and stands perfectly natural as if in no pain. He repeats this several times while eating; also when he starts off, but after he gets started shows very little signs of lameness. The ankle is swollen and is

tender to the touch. He is also crampy in one of his hind legs. Raises it as high as he can and holds it there. Will be very thankful for any information.—Indiana Subscriber.

REPLY—Bathe the fetlock with the following twice a day until the skin is sore: Oil of sassafras, one ounce; oil of turpentine, one ounce; tincture of iodine, four ounces, alcohol to make one pint. Mix all together and rub in well with the hand. Give the animal a half ounce of salicylate of soda three times a day for four or five days and if improvement is noted in the cramping discontinue for a week and then repeat.

1384—WINTERING JACK STOCK—Would like some information about how to winter jennets and jack colts, and what feed is the best for them.—Missouri Subscriber.

REPLY—Oats is the best grain. About one-third alfalfa and the other two-thirds of available roughage will give good results. Any new feed should be started gradually. A careful study of each animal is necessary, as to the amount, in growing animals. If alfalfa or good clover hay is not available, a good supply of carrots, along with other roughage, is the next best for your purpose. Bran may also be substituted. If alfalfa hay or clover hay are not available, oats and bran in equal measurements, when fed with prairie hay or timothy hay may be used. A self-feeder for grain is the best way to feed young colts. If they are started in this manner before they are weaned they can continue on full feed for a long time without injury. A good supply of pure water is also very necessary. A constant supply of grain and water and frequent feeding of roughage is necessary in young colts, as the stomach is very small. Jacks should be separated from all jennets, or mules when weaned. They should be kept far enough away from this kind of stock so they cannot hear, see or smell them. A timid filly should be placed with the jacks. The filly might as well be a good one as she will get plenty of feed and can develop into a money maker. The jacks should be placed in separate paddocks when about one

# Dispersion Sale

## Woodland Stock Farm

Percherons  
Thursday  
JANUARY 28, 1915  
At Diver's Stock Yards  
Wichita, Kansas

Thirty-three head imported and American bred Percherons; 14 stallions and 19 mares; 11 stallions ready for service. As good as money can buy anywhere. Nineteen choice toppey draft mares of all ages. Brood mares are showing heavy in foal to an imported stallion with best of quality, weighing 2,000 pounds.

Be sure to attend this sale as everything sells. Get them at your bid. Sale will be held, rain or shine.

For sale, or trade for cattle. Two 10-year-old imported black stallions; one 10-year-old imported mare in foal; one 5-year-old French draft mare in foal; one 8-months-old Percheron stud colt.

Also Angus bulls for sale.

L. C. DANNEN, Marshalltown, Ia., Rt. 2

## YEARLING PERCHERON STALLIONS

and two jacks for sale. The Percherons are registered; blacks; 1300 lbs. each; sound and right. One high-class yearling jack; one good yearling. For particulars, address

L. G. BIGHAM & SONS, Ozawie, Kas.

## THREE PERCHERON STALLIONS

For sale; 2 and 3 years old; with state certificate of soundness. Will exchange one for another as good, not related. The younger, 26 months old, weighs better than 1,600 pounds; 16½ hands high; 11½ inch bone. Who has his equal?

S. S. LANGFORD, CRAIG, NEB.

## SIX PERCHERON STALLIONS

For sale, including our imported herd stallion, Siroco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.

M. DULL & SONS, Washington, Kas.

## PERCHERONS

One imported stallion; 8 years. One 2-year-old stud colt and one mare. All registered in the Percheron Society of America. Will sell worth the money.

RED DAUBER, MERIDEN, KAS. Route 2.

## PERCHERON STALLIONS AND MARES

For sale, weighing from 1,900 to 2,100 pounds, with 11½ and 12½ inch bone. If you are looking for the good ones, I have them. Will pay your expenses if not as represented.

L. U. Dunbar, Galesburg, Ill., R. R. 1.

## STALLIONS FOR SALE.

Two full blooded black Percheron stallions, coming 3 and 7 years respectively. Good ones.

R. KLEIN, Binford, No. Dak.

year of age, where they can have plenty of freedom and green grass in its season, in addition to the grain in a self-feeder.

1385—CHRONIC FOUNDER—I had a horse that got foundered and the frogs of his feet have grown down past level of his feet, and are raw. I would like to know what to do for them.—Missouri Subscriber.

REPLY—The feet should be protected with shoes so that the frog does not contact the ground and injure it in the manner described. Are you sure there is no canker present? Better have your veterinarian look the case over carefully.

1386—ENLARGED CLITORIS—I have a coming 3-year-old gray registered Percheron filly that has a growth where her clitoris should be. This growth is like a half of a black walnut, with a slit on top side. When she urinates the water raises up and then scatters out and falls. After she has urinated this growth will swell. If I put my finger on this growth and push down and in she will look natural. The cord to this growth is again as large as one to a natural clitoris. When this colt was a suckling she did not look all right, but when a year old she looked all right; when 15 months old I found her in this shape in pasture. Last winter this growth would go back in and she would look natural except that there was an enlargement there. If there is anything that I have not made clear to you, if you will let me know, I will send it.—Kansas Subscriber.

REPLY—You should call in a good veterinary surgeon with the idea of having this enlargement removed, which ought to be successfully accomplished.

1387—CHRONIC INTESTINAL CATTARRH—I have a mule colt that has the scours very badly and has had them ever since it was a month old. I have given it spirits of lavender and laudanum and salts mixed in water, and gave tablespoonful three times a day, but that did not do any good, and now I am giving castor oil and laudanum; two tablespoonfuls oil and 30 drops of laudanum twice a day. Please give me a remedy that will cure him, if there is any.—Illinois Subscriber.

REPLY—Your mule is affected in a chronic manner and needs the personal care of a good veterinarian who can direct, not only the medicine but the feeding of the animal. You will find that the latter will be one of the very important items to be considered if you make any headway in overcoming the trouble. You have no easy problem to solve so you must be careful as to details and above all patient during the course of treatment.

1388—DIAGNOSING PREGNANCY—I wish you would give instructions through your paper how to tell when a mare is with foal about four months after being bred. You have probably given instructions for this in previous issues, but I can't find it in the back numbers.—Montana Subscriber.

REPLY—The rectal examination is the best for the average breeder to make. If the mare has been fertilized three or four months this examination is very easily made by one who has had special training. We have never tried to explain that in print as it is advisable for anyone who attempts this examination to have some special training, as he would not know what to hunt for and there might be some damage connected with it.

1389—PROBABLE TUMOR—I have a Standard bred mare that had a pus to come out of her about the size of a hen's egg, just like the water bag that comes before foaling, but not so large, and I think that she is in foal, yet what caused her to do this way I can't tell. Please tell me what this was and what caused it.—Illinois Subscriber.

REPLY—It is quite like the object alluded to is the nature of a new growth and you should have your veterinarian examine the case with a view of learning its nature and extent. It may be necessary to have it removed if large enough to interfere at foaling time.

1390—KEEPING FERTILE SEMEN—What is the greatest length of time the spermatic fluid has been taken from the stallion and allowed to be out, then used with the impregnator and get a mare with foal?—New York Subscriber.

REPLY—It is not our business to encourage breeders to see how far they can go in taking wild chances. The intelligent thing to do in a case of this kind, is to use the semen as soon as possible. While some breed—

Trumans' Pioneer Stud Farm, Box A, Bushnell, Ill.

## 200 PERCHERONS

Including probably the largest collection of imported stallions of this breed in America, and certainly the largest collection of mares now for sale. We have

100 HEAD OF EACH SEX.

The Singmaster Percheron business is conducted on the most permanent basis. Every year we import stallion colts and yearlings. In this way really getting first choice and insuring thorough acclimating and development under American conditions. In this way, too, our own breeding herd is constantly strengthened. Our visitors see imported and home bred stock developed side by side in a natural way—the best means of making a satisfactory selection and the best assurance of a satisfactory future.

Are They Good? We Simply Ask You to Come and See.

We have plenty of ton stallions, plenty of imported mares bred to our famous herd horses, Honorable and Jalap; our prize winnings are a matter of record. The square deal has been our motto for 30 years. Mention the American Breeder when you write us for particulars.

J. O. SINGMASTER & SONS, Keota, Iowa

## HIGH-CLASS SHIRES

For sale. Two extra good growthy yearling Shire stallions. One imported in dam; color gray; weight 1,590; fine style and action; sound. The other from imported sire and dam; color, a beautiful roan; weight 1,550. Won first prize and American bred championship at Bushnell, Ill., Horse Show. These colts are both absolutely sound and will be priced reasonable, quality considered.

GEO. J. STOLL & CO.

CHESTNUT, ILL.

CONVINCING EVIDENCE.

To the American Breeder:—I used the capsule system in 1913 and am satisfied it will get as good a percent with capsules as with natural service. The men who object most to the capsule system here are men who have had mares bred by capsules by men who used unclean instruments and let the semen chill, therefore not getting results. If capsule system is used correctly it is O. K.—Frank Conway, Casey, Iowa.

To the American Breeder:—In regard to capsule breeding, will say that I doubled my percent of foals by using the capsule system last year. If anyone doubts this I am ready at any time to show them. Can also show

mares 7 and 8 years old that have never been in foal before, until this year, but a capsule did the work. One term of the Graham Breeding School will convince any stallion owner that he didn't know anything about his business before he attended, but too many haven't the grit to leave home.—Harry Evans, Alva, Okla.

To the American Breeder:—I think one of the reasons more people do not believe in capsule breeding is that too many stallion keepers do not understand their work. If the work is done properly, I think the doubters will soon be convinced that they have better success getting mares with foal and colts will be just as good.—J. A. Akin, Rantoul, Kansas.

## STALLION AND JACK INSPECTION LAWS

We are continually getting complaints from states which do not have laws requiring pedigrees to be inspected. There are now nearly one-half of the states which have these laws. From all appearances some kind of inspection laws are bound to remain in the statutes of these states. States not having any protection are now the dumping ground for bogus pedigrees.

There are not many who object to advertising an animal's pedigree for just what it is. We have had many complaints from states which require a rigid physical examination. In some cases owners have been forced to take their breeding stock considerable distance for examination; others have been charged too much money, but the real difficult problem is to find men who are qualified to make such examinations, who can distinguish between accidental and hereditary weaknesses. Who can accurately diagnose an hereditary weakness before the real unsoundness has developed. No organ or part is strong enough to withstand all accidents. The average breeder will never know all about pedigrees. The method of inspecting pedigrees is a protection to the buyers of such stock. Forcing everyone to advertise the pedigree just as it is, is a protection to the public. This may work a hardship on a few men, but as a whole it has given good results and has passed the experimental stage.

Every stallion inspection law should include jacks. The Standard Jack and Jennet Registry of America should be the standard. States which have recognized the Jack Stock Stud Book may possibly continue to do so for some time. There are not enough animals registered in it, however, or likely to be, to make it of much consequence. There should be a board in every state to specify what record associations should be recognized. This is very necessary. There is no other standard by which laws can be measured since the U. S. government has withdrawn its recognition from all American records. At any time a record association might come into bad repute. The state boards in such cases could require such an association to clean up and meet certain requirements, under the penalty of withdrawing their recognition.

An effort has been made to have the National Association of Live Stock Records used as a recognizing body. It might be well to remember at this time that when the United States government was forced to withdraw its recognition to all American associations on account of the bad state of affairs found in the Percheron Society of America at that time, men connected with the Percheron Society became active in forming the National Association of Live Stock Records. The first letters which were sent out boosting the National Association of Live Stock Records were printed on Percheron Society letterheads and were signed by the present Percheron secretary, who was also made secretary of the National Association. There are a lot of good men in the National Association, but until such association takes the responsibility and secures authority to regulate all member records, it should not be accepted as authority by stallion registration boards. New developments within the next few years might be very embarrassing, should the National Association of Live Stock Records be accepted as such authority.

The state of Kansas has a law which seems to be one of the most satisfactory with the breeders. The law provides that an owner of a stallion may have his stallion examined and if sound may advertise the fact. It is not compulsory to have the stallion examined, but it is an advantage to the owner of the sound stallion to advertise it as such. Hereditary weaknesses should be made a question of education, so far as stallion inspection laws are concerned. Laws which are too rigid, meet with so much oppo-

sition that they are difficult to enforce. A law satisfactory to the majority will have many substantial supporters, which helps to enforce statutes.

When one breeder advertises a sound sire, it gives him a wonderful advantage; it serves as a reminder to the breeders in that community to investigate the weaknesses of sires which are not advertised as sound. Some states have laws prohibiting the use of unsound sires. This has interfered with the purchase of breeding stock, because the prospective purchasers are not absolutely sure that the stallion could be introduced in another state or that he might become unsound at any time through an accident.

We should like to see the various states in the Union have a uniform law. A careful study of the Kansas State Inspection Law (but with jacks included) should be made:

### THE KANSAS LAW.

**CHAPTER 318.—Relating to the Registration and Licensing of Stallions.—Senate Bill No. 277.** AN ACT regulating the registration, advertising and licensing of stallions for public service in the State of Kansas, and repealing chapter 168 of the Session Laws of 1903 and all laws and parts of laws in conflict herewith.

Be it enacted by the Legislature of the State of Kansas:

Section 1. Every person, persons, firm, corporation, company or association that shall stand, travel, advertise or offer for public service in any manner any stallion in the State of Kansas, shall secure a license certificate for such stallion from the Kansas State Live Stock Registry Board, as hereinafter provided. Said board shall consist of the dean of the division of agriculture, head of the animal husbandry department, and head of the veterinary department of the Kansas State Agricultural College.

Sec. 2. To obtain a license certificate as herein provided, the owner of such stallion shall comply with the following requirements: first, the owner of a pure-bred stallion shall forward to the Kansas State Live Stock Registry Board for inspection, the registry certificate or a certified copy of the registry certificate of such stallion, also other necessary papers or documents relating to the breeding and ownership of such stallion. Second, owners of cross-bred or grade stallions shall forward to the Kansas State Live Stock Registry Board affidavit showing the breeding of such stallion. Third, owners of scrub stallions shall forward to the Kansas State Live Stock Registry Board a statement of the breeding of such stallion. Fourth, the fee for such stallion license shall be \$2.00 and said fee shall accompany each application for license, provided, however, that in case the stallion was licensed previous to July 1, 1913 under provisions of chapter 168, Laws 1903, the fee for a new license shall be one dollar.

Sec. 3. The Kansas State Live Stock Registry Board shall have power to revoke, cancel, and recall any license when said board shall find that such license does not truly and correctly represent the horse for which said license was originally issued, and when a license is revoked by the said board, it shall be the duty of the sheriff or a constable of the county where such license is located, to take possession of said license and deliver the same to said Kansas State Live Stock Registry Board when called upon by said Kansas State Live Stock Registry Board to take possession of said license.

Sec. 4. The Kansas State Live Stock Registry Board shall issue four kinds of licenses as follows: pure-bred, for stallion correctly recorded in stud books recognized by the Kansas State Live Stock Registry Board; cross-bred, for stallion whose sire and dam are of different breeds but each is correctly recorded in a stud book maintained for that particular breed, providing said stud books are recognized by the Kansas State Live Stock Registry Board; grade, for stallion whose sire or dam is recorded in a stud book that is recognized by the Kansas State Live Stock Registry Board; scrub, for stallion whose sire and dam are neither recorded in a stud book recognized by the Kansas State Live Stock Registry Board.

Sec. 5. It shall be the duty of the Kansas State Live Stock Registry Board to examine and pass upon the merits of each registry certificate and statement of breeding submitted, as herein provided, and it shall use as its standard the stud books and signatures of the duly authorized officers of the various horse pedigree registry associations, societies, or companies certified by the U. S. Department of Agriculture, Washington, D. C., Bureau of Animal Industry, in Order No. 136, dated June 20, 1906, and any other stud books which may be established in the future when an association or company establishing such stud books

## Belgian and Percheron Stallions

Oklahoma bred, and priced right.  
**W. L. LAKE, FT. COBB, OKLA.**

shall prove to the satisfaction of the Kansas State Live Stock Registry Board that they are doing an honest, reputable and creditable business, and that such stud books are necessary for the protection and encouragement of that particular breed.

Sec. 6. Each license issued by the Kansas State Live Stock Registry Board shall expire on December 31 of the year in which it is issued, but each license may be renewed each year, provided the owner of said stallion make application for renewal before March 1, following the date of expiration, and forward with such application for renewal a fee of one dollar for each renewal, and submit satisfactory evidence establishing the identity of stallions for which renewal of license is requested. Each renewal shall expire on December 31 of the year for which it is renewed. Failure to have license renewed, as herein provided, before March 1 following the date of expiration, shall forfeit the right of renewal and when such right has been forfeited, the owner of such stallion shall procure a new license as provided in Section 2.

Sec. 7. The license certificate for a stallion correctly recorded in a stud book recognized by the Kansas State Live Stock Registry Board shall contain the following information: license number, registration number, breed, color, age, pedigree, name and address of owner, date of issue, the seal of the Kansas State Live Stock Registry Board, and the signature of the secretary of the Kansas State Live Stock Registry Board. The license for a cross-bred, grade, or scrub stallion shall contain the following information: license number, statement of breeding, color, age, name and address of owner, date of issue, seal of the Kansas State Live Stock Registry Board, and the signature of the secretary of the Kansas State Live Stock Registry Board.

Sec. 8. Every bill, poster, or other advertisement of every kind or nature, issued by the owner, keeper, or person in charge of any stallion enrolled and licensed under this act and used to advertise such stallion by said owner, keeper, or person in charge, shall have as a heading for such advertisement the class of license issued for the said stallion and the number of his license; thus, "Pure-bred License No. ....", "Cross-bred License No. ....", "Grade License No. ....", or "Scrub License No. ....", as the case may be. In all advertisements this heading shall be set in the largest and boldest type used in the advertisement.

Sec. 9. The owner, keeper, or person in charge of any stallion standing for public service in this state shall post and keep affixed during the entire breeding season, the license certificate of each stallion issued under the provisions of this act, in a conspicuous place in each stable or building where said stallion stands for public service.

Sec. 10. Upon transfer of ownership of any stallion licensed under the provisions of this act, the new owner shall forward to the office of the Kansas State Live Stock Registry Board, the license issued in the name of the former owner together with the fee of fifty cents and satisfactory evidence that the stallion transferred is the one for which the license was originally issued. It shall then be the duty of the Kansas State Live Stock Registry Board to record such transfer and issue a license in the name of the new owner.

Sec. 11. It shall be the duty of the county clerk of each county in the state of Kansas to file with the Kan-

## Robison's Percherons

Largest Stud, Longest Established, and the Leader in Show and Sale Records for the West. Best in Blood; Most Common Sense in Care

None Can Undersell Me, Values Considered

J. C. ROBISON, TOWANDA, KAS.

### What About Imported Percherons?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few if any will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ten horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.

PERCHERON IMPORTING CO. Chas. R. Kirk, Pres. St. JOSEPH, MO.  
All street cars going south from Union Depot pass our stables.

### WHITEOAK STOCK FARM

American Bred Percheron Stallions and Mares.

The best to be had direct from the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augustin, Carlock, Ill., R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

### Closing Out Bargains in Percherons

I am preparing to quit the farm and

My Entire Herd of 50 Percherons—Mostly High Class Mares and Fillies—is for Sale.

I have a few good stallions, of course, and will make close prices on them, but any man who will take all, or a large part, of my mares and fillies, will get a bargain he cannot find anywhere else. Good registered draft mares will be the money makers for years to come.

GEORGE HIRSCHMAN,

PIERSON, IOWA.

## REGISTERED PERCHERON STUDS

We have them, BIG FELLOWS, 1, 2, 3 and 4-year olds. Real drafters, BIG BONE, lots of quality and action; grown right. Will go out and make good, both as to sires and foal getters. You lose money if you don't look at BISHOP BROS. STUDS before buying. 20 miles east of Wichita on Mo. P. Ry.

BISHOP BROS. BOX C TOWANDA, KANSAS

### PLEASANT VIEW PERCHERON STOCK FARM

Has for sale a choice lot of prize winners, imported and home raised, stallions and mares.

Big, heavy boned, rugged fellows, the kind that will do you good. A number of them are sired by the famous horse, Barnum, that was champion at the International in 1904. Prices reasonable. Come and see them and I will save you money.

CHAS. P. QUIRIN,

MARCUS, IOWA.

Marcus is located 44 miles northeast of Sioux City on the I. C. R. R., in Cherokee County.

## OS. ROUSSELLE, SEWARD, NEBRASKA

20 Miles West of Lincoln. Farm Joins Seward on the North. Imported Percheron, Belgian and Shire Stallions and Mares Of the best type; clean, rugged, with bone and action a plenty.

Paris, Marners and Nebraska State Fair winners in our barn. Ages 2 to 5 years; weights from 1,850 to over 2,100 pounds. Intending buyers of herd headers will do well to visit our barn.

Also Shorthorn bulls and heifers. All stock guaranteed. Terms to suit customers.

## PERCHERONS AND BELGIANS

For sale. Imported and Home-bred Percheron and Belgian stallions and mares. Come and see or write,

F. M. CLEVINGER, Prop.

Wiley Home Stock Farm, Centerville, Ind.

## EVEN PERCHERONS

For sale. Three brood mares, safe foal. Two fillies coming three; two fillies coming two. All home bred, age and splendid conformation and color. Also four Hackney fillies coming three; three coming two, with splendid conformation. Write for description and price. Come and see.

B. SHELTON,

Pearlburg, Va.

### FOR GOOD BELGIANS

SEE R. F. FRENCH, Independence, Iowa.

Twenty imported and home bred stallions for sale that weigh from a ton up to 2,200 lbs., thoroughly acclimated. Also brood mares in foal and with foals at side and re-bred. Matched pairs also.

THREE REGISTERED SHIRE STALLIONS For Sale.

G. A. Tallmadge, Madison, S. Dak.

## IRVINEDALE BELGIANS

We import 'em good and breed 'em likewise

One of the Few Establishments in America Offering Recently Imported Animals.

### OUR AUGUST IMPORTATION

Was one of the best we have ever had, and about the last to leave a European port. We have

40 Stallions; 20 Mares

A few good Percherons among them. Will refund the expenses of any visitor who thinks we have deceived him concerning what we have to offer. Ankeny is ten miles north of Des Moines on the Northwestern Ry. and Ft. Dodge Interurban. Always mention the American Breeder.

CHAS. IRVINE

Box 7

Ankeny, Iowa

### Belgian Importers and Breeders

Largest in the West.

We specialize in the type best adapted to this section—the most modern one—clean, compact, good movers, weighing 1,800 to 2,200. One of the few firms selling good mares in foal and broke to work.

Stallions Always on Hands.

BLUE VALLEY STOCK FARM,

W. H. Bayless & Co., Blue Mound, Kas.

## Belgians and Percherons

Chestnuts and Blacks; Typical of These Great Draft Breeds.

Our stallions are twos, threes and fours, some imported last year, some home bred, so that they are thoroughly acclimated. The Belgians are grandsons of the great Brussels champion, Indigene du Fosteau. Come, or write, mentioning American Breeder.

CRAWFORD & GRIFFIN, - - NEWTON, IOWA.

## Oak Lawn Stock Farm

Breeds and imports champion draft stallions and mares; Percheron, Belgian and Shire. All stock for sale at reasonable prices. Come and see them before you buy.

Ask for our new calendar, mentioning the American Breeder.

GEORGE EGGERT, NEWTON, IOWA

## ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.

LEON VAN MELDERT,

Cedar Bayou, Harris County, Texas.

### SHIRE STALLION.

For sale; eight years; imported by Trumans' Pioneer Stud Farm; will weigh close to a ton; sound and right every way; sure breeder; nice to handle. Will sell very reasonable, as I am going out of the business, or will exchange him for work horses or Poland China brood sows. This horse won first at Iowa and Indiana State Fairs, as a 2-year-old.

T. E. ORTH,

Washington, Ill.

## BELGIAN STALLIONS

Three coming three years, one coming two years; will mature to ton horses with lots of quality. One six-year-old imported Belgian and one registered Shire. If interested, come or write.

STAMP & DONNER, Roachdale, Indiana

## BELGIAN STALLION

For Sale—Why pay dealer's profits from \$100 to \$1,000 on each stallion you buy of them? Write me, and come and see my high class Belgian stud colt, coming 3 years old. He is sound, in good flesh, registered and an outstanding good one.

H. D. FERRIS, Galesburg, Ill. Route 4

## 2 Imported Belgian Stallions

Color, sorrel and bay. Sorrel weighs 2000; bay 1900. Have been examined by state and have state license. Good movers; colts to show. Also a pair of 2 and 3 year old Belgian mares; registered; color, bay; one with foal.

FRANK LIESER, Jefferson, Ohio. Route 1.

### A BLUE RIBBON WINNER.

For sale or trade. A registered son of Allerton; dam by Gambetta Wilkes, etc.; coal black, weight 1350; sound; a blue ribbon winner at two state fairs. A good breeder and gentle in or out of harness; a great road horse and perfectly safe for anyone to drive. Could use a draft stallion; Percheron preferred.

BOX 97, LAKE PRESTON, SO. DAK.

### Saddle Stallion

For sale or exchange. Carrol Bourbon 3920; sire Bourbon Chief; dam Red Squirrel; chestnut; 16 hands; great individual; an excellent and sure breeder. Could use pair of Percheron fillies; registered. This ad will not appear again.

G. D. CARPENTER, R. F. D. No. 1, Sanders, Ky.

## Hackneys, Percheron and Jack

For sale or exchange—Three Hackney stallions; three Hackney mares; one Percheron stallion and one three-year-old Jack. All choice stock. For cash, mules, cattle or saddle horses. Apply to

CHAS. G. MUNROE, Rushville, Ill.

### FAST EXPRESS 27421.

I must dispose of this horse. Trotting record 2:17 1/4. A sure breeder and good disposition; a beautiful horse. Will sell cheap, or trade for auto. For particulars, address,

M. D. CONNOLE, R. 17, Richland, Kas.

### WAR HORSES

Registered Black Hawk Morgans, stallions and mares; all ages; one or a carload. None better for cavalry horses. Or will trade for a large jack or land. Write fully in first letter.

E. F. BROWN, Derby, Lucas Co., Ia.

sas State Live Stock Registry Board before July 1 of each year, a complete list of all the stallion owners in his county, together with the number of stallions owned by each, as shown by the assessors report of that particular county. He shall also file with the Kansas State Live Stock Registry Board before July 1 of each year, the total number of horses in his particular county.

Sec. 12. It shall be optional with owners, keepers, or persons in charge of stallions standing for public service whether or not said stallions shall be examined for soundness, but no stallion shall be advertised in any manner either directly or indirectly as a sound stallion until a certificate of soundness has been issued for said stallion by the Kansas State Live Stock Registry Board, and then said stallion may be advertised as sound only during the life of the certificate of soundness. This certificate of soundness shall become null and void and not in force on December 31 of the year during which it is issued. The fee of each certificate of soundness shall not exceed \$2.00 for each stallion.

Sec. 13. Any person, persons, firm, company, corporation or association that shall violate any of the provisions of this act, shall be deemed guilty of a misdemeanor and upon conviction in any court of competent jurisdiction shall be punished by a fine of not less than \$20 and not more than \$50 for each offense.

Sec. 14. The funds accruing from the above named fees shall be used by the Kansas State Live Stock Registry Board to defray the expenses of enrollment of pedigrees and the issuing of licenses, to publish reports or bulletins containing lists of stallions, li-

censes and transfers, and all money accruing above the amount necessary for said purposes shall be turned into the general revenue fund of the state. It shall be the duty of the Kansas State Live Stock Registry Board to make annual report, including financial statements, to the governor of the state, and all financial records of said Kansas State Live Stock Registry Board shall be open to inspection.

Sec. 15. All licenses issued by the Kansas State Live Stock Registry Board under the provisions of chapter 168, Laws 1909, shall become null and void and not in force on and after July 1, 1913.

Sec. 16. All laws and parts of laws including chapter 168, Laws of 1909 in conflict with this act are hereby repealed.

### BELGIAN REGISTRATION FEES.

To the American Breeder:—Your letter at hand, calling attention to the notice of the Belgian meeting, which you printed, and advising me that Mr. Lefebvre thought there is an error. Mr. Lefebvre is correct, and there is an error in your report, but it is not your fault, as that is the way the report went to you. There seemed to have been a misunderstanding of the amendment, but that has all been straightened out, and below I give a copy of the amendment, and which is now Section 1 of Article 4.—J. D. Conner, Jr., Secretary American Association of Importers and Breeders of Belgian Draft Horses.

"Section 1, Article IV: The fees for registering horses and mares shall be as follows: To members, \$5.00; to non-members, \$10.00. Provided that, as a penalty, the said respective fees shall be doubled for the registry of all animals the application for whose registry is not filed with the Secretary and the fees for same paid within one year from the date of importation in the case of an imported animal, and within one year from the date of foaling in the case of a native bred animal. Said rule to be in effect on and after January 1, 1915."

## Astral King Excels

IN FORM, STYLE AND SUBSTANCE  
and Breeding Ability, and  
At Everyone of the Saddle Horse Gaits

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind of buyers.

Registered Herefords for Sale—Weanling bulls and heifers at \$100, and yearlings at \$150.

JAMES HOUCHIN, JEFFERSON CITY, MO.

Astral King 2805.

### SADDLE STALLION BARGAIN.

For sale or trade—My fine saddler, Collin King, 4503 A. S. H. A.; 7 years, 16 hands, 1,200 pounds; bay with little white in face; left hind foot white. A fine breeder and perfectly gentle. Must move him account of his fillies and will sell cheap or trade for a good young jack.

H. D. POWER, Alto, Tex.

### STANDARD BRED STALLION.

Swastika 45382, for sale or trade. One of the best bred stallions in the South. Also some good brood mares, ready bred. Prices right. Reason for selling, fillies in the way. Shorthorns, Durocs or stallion colt considered in trade.

W. P. DORTCH, Jr.,  
Kerrs, Lonoke County, Ark.

### REGISTERED SADDLERS

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Fos McDonald 3096; out of the finest lot of brood mares in the land; 60 head to select from. Address

H. A. GREENWELL, LAKENAN, MO.

### SADDLE STALLION, PERCHERONS AND 10 JACKS

For sale. Registered saddle stallion by the Great Chester No. 10; sound and a good breeder. Two, two-year-old registered Percheron stallions and ten jacks from yearlings to five years old; from 14½ to 16½ hands high for sale at reasonable prices. Write your wants or come and see me.

W. L. GRAHAM,  
Mackville, Washington County, Ky.

### MILLER STOCK FARM

Bargains in Standard Bred Stallions.

Two grandsons of Croesus, 3 and 4 years, at \$150 and \$175; two bay sons of Claremont Director (Matinee) 2:17, a 1,260-lb. horse, at \$250 and \$300. The breeding, style, speed, manners and quality will astonish you; the prices mean business.

Will consider good Percheron stallion or Hereford bull in a trade on the above. No stock shown on Sunday.  
F. M. LORIMER, Mgr., OLATHE, KAS.

### FOR SALE OF EXCHANGE.

Elizabeth Staggs 9568, A. S. H. R., by Rex Peavine 1796; dam Jewell Eagle 4295, by Woods Eagle Bird; 2nd, 3rd and 4th dams registered. Dark bay; 15.3, weight now 1075; foaled 1911; well broke single and to ride; goes fast and straight in harness and will make a high class saddler and brood mare. Absolutely sound and a fine individual. Price \$250, or will exchange for high class saddle gelding, 4 or 5 years old, that can be used by a woman. Am prepared to pay difference for right kind.  
JOHN C. GRAFF, Rushville, Ill.

### REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.  
RICHARD SELLMAN, Rochelle, Texas.

### Shetland Ponies

100 HEAD IN HERD.  
Solid colors and spots. Special values for Holiday buyers.  
Nothing will give children the pleasure and care in proportion to first cost and service. Buy the good kind and they are always ready sale.  
W. J. THOMPSON, Dorchester, Neb.

### EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. W. H. Fulcomer, Belleville, Republic County, Kansas, Member American Shetland Pony Club.

tisement in this issue, and write for  
catalogue.

**R. O. Lane, Colfax, Ind.,** has two  
Percheron stallions, a black and a  
gray, for sale. Write him.

**J. E. Park, Cameron, Mo.,** starts his  
regular season's ad in this issue. He  
has jacks and Percheron stallions for  
sale, and he is pricing to sell.

**W. S. French, Allison, Kas.,** is offer-  
ing a bargain in the way of a Perch-  
eron stallion, as he must sell on ac-  
count of his fillies.

**G. B. Dowell, Center, Mo.,** is adver-  
tising jacks, jennets and mules for sale  
in this issue, and will pay the ex-  
penses of any of our readers if the  
stock is not found as represented.

**Hytee's Factories, Majestic Building,**  
Indianapolis, Ind., want salesmen and  
saleswomen. Write them for informa-  
tion.

**G. A. Tallmadge, Madison, S. Dak.,**  
has three Clydesdale stallions for sale.

**C. G. Anderson, Hector, Minn.,** always  
has a good selection of Percheron stal-  
lions and mares on hand. Get his prices  
before buying.

**John C. Graff, Rushville, Ill.,** wants  
to sell or exchange his saddle stallion,  
Elizabeth Stag. He will take a high  
class saddle gelding in exchange. Read  
the ad in this issue.

**M. F. Dillon, Pueblo, Colo.,** is adver-  
tising Percheron stallion for sale, or  
lease.

**W. F. Schade, Jackson, Mo.,** holds his  
sixth annual sale on February 23. He  
will sell 40 high class jacks and Poland  
China hogs. Send for catalogue.

**Carl Hibbs, Oxford, Ind.,** has a five-  
year-old black Percheron stallion for  
sale. Also other draft stallions.

**A. S. Hartman, Tuscola, Ill.,** has two  
imported Percheron stallions and two  
home bred Shire stallions for sale  
cheap, as he has too many.

**J. H. Smith, Kingfisher, Okla.,** starts  
his regular season's advertising in this  
issue. He has 65 head of jacks and  
jennets at reasonable prices and terms.

**William Deierling, Queen City, Mo.,**  
has 40 head of jacks for sale, from one  
to five years old. There are a number  
of prize winners among this lot.

**Harris Bros., Great Bend, Kas.,** are  
advertising in this issue 50 head of  
registered stallions and mares for sale  
and will be glad to give full particu-  
lars to any one who is interested.

**C. Stahly, Milford, Neb.,** has four  
Percherons to dispose of; also a few  
mares. He will test these stallions  
with microscope for prospective buyers.

**Jos. Rouselle, Seward, Nebr.,** starts  
his regular season's advertising in this  
issue. He has imported Percheron,  
Belgian and Shire stallions and mares  
for sale; also Shorthorn bulls and hel-  
fers. All stock guaranteed. Write him  
for prices.

**J. A. DeCamp, Shenandoah, Iowa,**  
holds an auction sale on January 19.  
He will sell registered Percherons,  
other horses, cattle and mules. Write  
him for particulars.

**Bishop Bros., breeders of Percherons,**  
start their advertisement in this issue.  
These gentlemen have been in the Per-  
cheron horse business a number of  
years, and have made the stallion busi-  
ness a specialty, hence it has long been  
their policy to try and keep on hands  
stallions to supply the wants of all  
who are looking for good animals.  
Bishop Bros. lay claim to selling a  
bigger and a better stallion for the  
money than can be found elsewhere.  
Call on this firm or write them, telling  
them what you want, and at the same  
time telling them you saw their ad-  
vertisement in this paper.

**Last call for Spohr & Spohr's disper-  
sion sale, Wichita, Kas.,** January 28,  
1915. Diver's stock yards, rain or shine.  
If you want to buy Percherons at your  
own bid better send for a catalog now  
before you forget. Weanlings, fillies,  
young brood mares and mares of ma-  
ture age, showing in foal to the im-  
ported stallion, Farceur, weighing 2-  
000 pounds. Several stallions ready for  
service. Be sure to attend this sale.  
For catalog address Spohr & Spohr,  
Lathrop, Kas., mentioning the Ameri-  
can Breeder.

**Jacob Layland, Audubon, Ia.,** is of-  
fering for sale in this issue two French  
draft stallions.

## FRANK P. SHEKLETON & SONS, LAWLER, IOWA

IMPORTERS AND BREEDERS OF

### Percheron, Belgian and Clydesdale Stallions and Mares

Our barns are full of the choicest stallions and mares of the  
above named breeds, both imported and home bred. We can fill  
your order for one or a dozen at prices that will outdo all our  
competitors.

**CALL AND SEE US.** Lawler is on the C. M. & St. P.  
R. R. (The Iowa and Dakota Division) midway between  
Mason City and No. McGregor, both points making connections  
with all points of Minnesota and Wisconsin. We are 8 miles from  
New Hampton on the Great Western, making good connections  
with all Lawler trains.

### PERCHERONS, JACKS, AND JENNETS.

A few tried imported black Percheron ton  
stallions; extra breeders and well bred enough  
to head any pure bred herd.

12 head of registered big black Mammoth  
jacks, from 2 to 5 years old; 14½ to 16 hands  
high; well broke and quick performers. We  
have the best herd of well bred jennets in the  
state, bred to our imported Spanish jack.

Anybody can own a good jack or stallion the  
way we price them. We have no little stuff.

Come and see us. Farm 30 miles northwest of Hutchinson. Will meet trains  
at Raymond or Chase.

**J. P. & M. H. MALONE, CHASE, RICE COUNTY, KANSAS.**

### RIVERSIDE STOCK FARM.

Stock for sale. One black Percheron colt, coming 3 years old in June;  
weight now 1600; heavy bone and very compactly built. Name, Mignone 93121.

One standard bred black stud colt, coming 2 years old in April; very large;  
will mature to weigh over 1200; sired by Pactolus Ellwood 50245; he by Pactolus  
9102, 2:12; dam, Bessie Miller by Tom Miller Jr., 2:10. One black mare 5 years;  
weight 1200; registered name Estan Selotta; sired by Blackleer 46643; he by  
Symboler 19869, record 2:09; dam, Bessie Miller by Tom Miller Jr., 2:10. Bessie  
Miller, brown mare; weight 1250; nine years; by Tom Miller Jr., 2:10; safe in foal  
by Pactolus Ellwood 50245; record 2:27.

One pure bred Guernsey bull; 16 months; fawn and white; large for age.  
**O. L. THISLER, CHAPMAN, KAS.**

I wish to close out my entire Bunch of  
Percheron Stallions, Jacks and Jennets.

I have six stallions, three gray and three  
black. Five of these horses are imported  
and one American bred. All first class stuff  
and all registered in Percheron Society of  
America.

I also have two jacks and three jennets.  
Will sell this stock worth the money, as I  
want to close them out. This stock is the result of 17  
years' careful selection and they are all breeders.

**FERRIS, ILL., R. R. No. 1.**

The other stock includes one span 3-year-old mules; one fall mule, 3 years old; two coming 3-year-old mules; 1 weanling mule; two 4-year-old geldings, weight 1,300 and 1,200; one 3-year-old filly, weight 1,200; two cows; 1 yearling heifer; one bull, 2 years old. All the above high grade Durham stock.

Write at once for full particulars, mentioning American Breeder.

## J. A. DeCAMP, Shenandoah, Ia.

## Second Annual Breeders' Horse Sale

AT STREATOR, ILL., FEBRUARY 2, 3 AND 4, 1915.

We will sell 300 head full blood draft horses, including stallions and mares, all ages, of the Percheron, French Draft, Belgian, Shire and Clydesdale breeds; 25 head trotters, pacers and fancy drivers; 75 head Shetland and Welsh ponies.

Sale opens at 9:30 a. m., Tuesday, February 2, 1915. For catalogue and information write,

T. F. KENNEDY, Secretary.

STREATOR, ILL.

saver, is one of the most thoroughly proven of all the many farm improvements, and any one, whether he is now in the market for a gasoline engine or not, will be benefitted by answering this page advertisement and getting the information offered by the Detroit Engine Company, Detroit, Mich.

The Kokomo Fence Company, 451 North Street, Kokomo, Ind., puts out an ornamental steel fencing at a low price. Write this company for catalogue.

At Enid, Oklahoma, the greatest market center for pure bred live stock, two very important sales already are advertised. The first of these will be under the management of Frank S. Kirk of Enid, and will occupy the week of February 8 to 13 inclusive. In addition to an offering of draft horses it includes a number of head sired by the champion stallion, Carnot, or mares and fillies in foal to Carnot. There will be offerings of the leading breeds of beef cattle and of hogs. On February 18, W. S. Boles and J. H. Jackson, leading Percheron breeders of that state, hold their annual sale. Both firms get their mail at Enid, and inquiries for catalogues should be addressed to them at once.

King's Housewrecking Salvage & Lumber Co., 1814 Troost Ave., Kansas City, Mo., is saving money for thousands of men in the Kansas City territory through its low prices on all sorts

of building material, roofing and fencing. The catalogue of this company, in fact, contains dozens of other useful articles and all sold at close prices. Every reader between the Mississippi river and the Rocky Mountains will be interested in their catalogue. Please mention The American Breeder when writing for it.

C. W. Lamer, Salina, Kans., holds his annual sale of registered Percherons with a supplementary offering of farm mares, work horses and mules, on January 20. Full particulars are given in the quarter page advertisement in this issue. Send for catalogue, mentioning The American Breeder.

C. F. Jones, Rippey, Iowa, has in his coming sale of Percheron horses and Shorthorn cattle, two of the most important features any of the season's sales have offered. In the Percheron section, the feature referred to is a strong line of young stallions from exceptionally good mares. At least two of the stallions are out of champion mares that have proved great producers. In the Shorthorn section, the offering is made up entirely of cattle of Scotch breeding, a fact which gets favorable attention from every one familiar with the development of Shorthorn cattle in this country.

Thousands of our readers are interested in the best methods of poultry raising. No one can afford to raise poultry in any numbers without the help of an incubator. We are glad,

therefore, to present the advertisement of an incubator and an incubator manufacturer that stand high in this line. We refer to the Fairfield incubator, manufactured by Sam Thompson of Fairfield, Nebr., and ask that every interested reader answer Mr. Thompson's advertisement, mentioning The American Breeder.

## Questions and Answers

(Continued from page 15.)

ers have had good results keeping semen a long time, we advise using it quickly.

1391—RHEUMATISM—I have a young jack 2½ years old that has something the matter with his pastern joints in both front legs. I think it is rheumatism. The joints are so weak that he cannot stand straight or lie still long at a time; they want to pitch forward and bow out. They are not swelled; just so weak that he can't have good use of them. He don't stir about much and lies down a good part of the time, but it is a hard job for him to get up when he is down, on account of his front legs being so weak from the knees down. He ran on short pasture all summer and fall. He is very tall; long body and legs; good size bone; rather light weight for his make and height; rather thin in flesh, but made good growth the last year. He is about four inches taller than his sire or dam. I began feeding him early in the fall. He was gaining a pound a day for three months, then I noticed these joints getting weak and he has grown gradually worse all the while. He eats very well. I feed him corn, oats, pea and timothy hay and fodder and he drinks regularly. I keep him up in bad weather in a dry stall; dirt floor, and let him out to exercise when the weather will permit. I have never used him any, yet he is reasonably lively, but not like he was last fall. These joints seem to give him some pain. I wish you would tell me what you think is the matter with this young jack and advise any treatment that you think would do him any good. I have not doctored him any yet, except to give him a stock tonic powder, but cannot see that they have done him any good. He has the appearance of making an unusually large jack.—Illinois Subscriber.

REPLY—It is quite likely your jack is affected with rheumatism. Continue to give him good care both as to feed and housing, being careful not

## STALLIONS AND JACKS

For Sale. Two draft stallions, one all purpose, one combination and one saddle stallion. Also four head good jacks, 14 to 15½ hands. All this stock guaranteed breeders and good lookers. Wish to quit the business and will sell right. Call on or address,

J. W. WATTS, Rogersville, Mo., Rte. 2

## JACK FOR SALE OR TRADE

Will trade for registered Percheron or Belgian stallion.

B. HOUSLET, Oxford, Wis.

## PERCHERON STALLION—JACK.

Must be sold to settle up an estate. One good Percheron stallion and one good Mammoth jack. Both registered and in good condition. Jack is black with white points; weight 1,000 pounds; height 15 hands. Stallion is black with star in forehead; weight 1,700; height 16½ hands. Write,

M. W. NORFLEET, 4015 Agnes Ave. Kansas City, Mo.

## 9 PERCHERONS; 1 JACK.

Two large, heavy boned stallions; ages 4 and 9; one yearling and one weanling stallion; five mares; ages 2, 5, 7, 8 and 11 years. Registered in P. S. of A.

Black jack with light points; 15 hands; 9 inch bone; registered. Will sell any or all. Would consider a trade on dairy property near school town. Western land not wanted.

H. M. STEPHENS, MUNDEN, KANS.

## MIAMI COUNTY BREEDERS' SALE, Thursday, February 25, 1915.

J. M. Nolan, Paola, Kas., Percherons and French Draft. J. D. DeTar, Spring Hill, Kas., Percherons. J. W. Masters, Paola, Kas., Percherons. L. B. Hefliger & Laskie, Bucyrus, Kas., Percherons. M. A. Kelly, Bucyrus, Kas., Herefords. H. L. McDill, Paola, Kas., Herefords. C. J. Woods, Paola, Kas., Polled Durhams. P. L. Ware & Son, Paola, Kas., Poland Chinas. L. W. O'Keefe, Bucyrus, Kas., Poland Chinas.

For information write, O. C. HAGANS, Mgr., PAOLA, KAS.

## Jacks, Jennets, Percherons

FOR SALE.

7 Big Black Jacks, coming two to 5 years old. Also 7 jennets.

9 Registered Stallions, from yearlings up.

2 Black Percheron fillies

Would like to dispose of this stock and will price to sell. JOE FOX, GREELEY, KAS.

**MILLER STOCK FARM****Jack and Jeanet Bargains.**

One 8-year-old jack, \$300; three 3-year-old jacks, \$600 to \$750; one 2-year-old jack, \$1,000; four yearling jacks by Highball, world's record priced 2-year-old.

From our jennet herd (headed by one of the very few great big good jacks living) we can always spare a few head. Can always spare a few work mules or brood mares.

Would consider trading some of the above stock on a good Percheron stallion and a good Hereford bull. No stock shown on Sunday.

**F. M. LORIMER, Mgr., OLATHE, KAS.****JACKS—CLYDESDALE STALLION.**

FOR SALE—Three jacks, 4 to 6 years old; good flat bone; registered stock. Price \$300 and up. Also two-year-old Clydesdale stallion from imported sire and dam; weight 1,450. Write or come and see me.

For sale. Registered Mammoth jack, age 4, extra quality; also extra good grade stallion, age 5. If you want something good, write

**V. E. BRITT, Solomon, Kans., Rt. 2.**

to expose him to inclement weather but permit him to have daily runnings in protected places if the weather will allow. Locally apply a vesicant to the fetlocks using the cerate of cantharides. Clip the hair from the parts and rub the ointment in with the hand briskly for several minutes. Tie the animal in such a way that he cannot reach the parts blistered for 24 hours. At the end of this time carefully wash the blistered surfaces with soap and hot water and when dry apply a little sweet oil. Internally give one-half ounce of salicylate of soda three times a day for four days. Discontinue for a week and then repeat if found necessary.

**1392—DIFFERENT LIGHT BREEDS**—Will you kindly tell me the difference between a Thoroughbred and Standard bred? What breed is the horse, Dan Patch?—Minnesota Subscriber.

**REPLY**—A Thoroughbred is a distinct breed of running horses. Standard bred are trotters and pacers, the registry of which was founded on performance. Dan Patch is a standard bred. If you will watch the following issues of this paper, you will find complete histories of these breeds, and in fact all live stock breeds of any importance.

**1393—COLTS PAWING IN BARN—**

Will you tell me if there is a way to stop horses from pawing in the barn? I have one colt coming 4 years old and one coming 2 years old, and they are pawing in the barn, and when they eat grain they paw more than they do if they have no grain.—South Dakota Subscriber.

**REPLY**—Pawing while in the barn is frequently observed in young stock or nervous animals, particularly near meal time. Frequently horses short of work indulge in the same habit. If permitted it will become an annoying habit and will be contracted more or less by other horses in the barn. Mention is made of two young animals that are indulging in this habit. We are of the opinion that young stock do better if permitted to have access to a large lot or field during winter months so as to work off the surplus energy and should not be kept long confined in the barn at any time. Sheds well built and deeply bedded with dry straw make good quarters for these youngsters, and you will not find much need of putting them in the barn except on exceptionally rough nights. See that these two animals have ample opportunity for exercise.

**1394—WEAK BACK**—I have a stallion 11 years old that has been ailing for two years; this fall he broke down and I cannot use him at all. I have been working him plowing and hauling. He appears to be weak in the back. His hind legs wobble as he walks and it is all he can do to get up when he lies down, and he groans when anything passes his rectum. His left hind leg has swollen twice on the inside from the ground to the knee. He is in good flesh and eats well. I feed him four quarts of oats, corn and bran three times a day, with whatever roughage I can get here. A professor, who is the only veterinarian we have here, says he has weak kidneys.—Florida Subscriber.

**REPLY**—Clip the hair over the coupling for a space of eight inches in diameter and after thoroughly brushing the skin apply the following, rubbing in briskly with the hand for several minutes. Powdered cantharides, one-half ounce; biniodide of mercury, one-fourth ounce; lard, four ounces. Mix all together thoroughly and permit to remain on 24 hours, at the end of which time wash the blistered surface with hot water and soap. When dry apply a little sweet oil occasionally. Repeat the application in three weeks if any benefit is observed.

**1395—HOG CHOLERA**—Can you tell me what is good to keep hog cholera away from hogs, as the neighbors are losing their hogs with cholera?—South Dakota Subscriber.

**REPLY**—While the use of serum has become quite popular as a preventive for hog cholera, yet it should properly occupy second place in the eradication of this plague from our country. When every hog raiser fully appreciates the good that will come from strict observance of the right kind of sanitary measures, and their rigid enforcement, then he will be in position to do his part in suppressing the costly disease. Granting that you are practicing those methods that conserve the best health of your hogs in the way of general care, you may rest assured that hog cholera will not come to your herd unless it is brought there. The agencies by which the disease is spread is largely through carelessness of members of the human family. Curious owners too frequently visit a neighbor's sick hogs and convey the disease to their own herds by carrying the germs on their shoes. A man may market a load of fat hogs and carry infection home with him from infected yards, on wagons, the feet of his horses, or on his own shoes, or he may purchase grain of a neighbor and infect his premises in that way. When serious sickness is abroad among swine stay strictly away from it and let no meddlesome individual have access to your lots. Dogs, crows, birds, and other living things may be a factor in the spread of the disease, but they are not nearly so frequently at fault as man himself. Remember that this is a disease that must be carried in some way and if you can keep it off your place your hogs will never be afflicted. Should the disease appear then it will be time to consider the use of anti-hog cholera serum, and at

To all men owning horses, who answer this advertisement immediately, I will positively send my introductory course in Horse Training and Colt Breaking ABSOLUTELY FREE.

**World's Greatest System of Horsemanship**

Twenty-five thousand FARMERS and horse-owners have taken my regular course and found that *it does the work*. Even if you have only *one horse*, it will pay you to master my wonderful system. The Beery Course is the result of a lifetime's work as a tamer and trainer of horses. As one of my students has said, "The horse has never been foaled that Prof. Beery cannot handle." My record proves it.

**Master Any Horse**

The Beery Course gives you the priceless secrets of a lifetime—enables you to master any horse—to tell the disposition of any horse at sight—to add many dollars to the value of every horse you handle—and my students are all good traders.

**BEFORE TRAINING****My Graduates Are Doing Wonders**

A. L. Dickinson, of Friendship, N. Y., says: "I am working a pair of horses that cleaned out several men. I got them for \$110, gave them a few lessons, and have been offered \$400 for the pair." Fred Bowden, R. R. No. 2, Keokuk, Iowa writes: "It's worth many times its cost." I have many similar letters from graduates all over the world.

**Break a Colt in Double-Quick Time!**

You can do it by my simple, practical, humane system. There is a lot of money in colt training.

**Make \$1,200 to \$3,000 a Year**

Many of my graduates are making big money as professional horse trainers at home or

**AFTER TRAINING**

traveling. I made a fortune traveling and giving exhibitions. You have the same opportunity.

**PROF. JESSE BEERY**  
Dept. 13, Pleasant Hill, Ohio**GET YOURSELF AN AMERICAN BREEDER BINDER**

**Endorsed in a Dozen States. Will Last for Years and Pay for Itself Every Year in Convenience.**

To the American Breeder:—The Binder that I received last year, I think is one of the nicest things that I have seen in a long time. I would not take three times as much as I paid for it if I could not get another. I have some copies of the American Breeder that I have had for three years.—Tom Collins, Middlefield, Ohio.

To the American Breeder:—The American Breeder Binder purchased of you last season is entirely satisfactory. Incorporated into a bound volume as each issue comes, preserves a complete file in such order as allows me to refer to the information contained therein quickly. All that is wanting to make it complete is an index, which I hope you issue for each volume.—Wm. Henry Ash, Oneida, Ill.

To the American Breeder:—The Binder and Breeder are both all anyone could ask for his money without being put in a class with the swine.—H. J. Covell, Topeka, Kans.

To the American Breeder:—I am so well pleased with the Binder I got of you last season that I hardly know how to express my satisfaction. It is the only way to keep your papers. They are there in succession, and anything you want to look up is always handy. Hurrah for the American Breeder, for it is always in the lead; may it keep the pace set.—W. F. Dussell, Montevideo, Minn.

To the American Breeder:—I find the American Breeder Binder which I got from you last season worth many times its cost, for with it I am able to refer to the valuable information found in the American Breeder at any time.—S. G. Adams, Eubank, Ky.

To the American Breeder:—The American Breeder Binder is a complete success and will say that it is money well spent for everybody that wants to preserve files of American Breeder.—W. H. Blank, Napoleon, Ohio.

To the American Breeder:—I am well satisfied with the American Breeder Binder. It keeps the papers in fine shape and I would not part with it for several times what it cost if I could not get another.—Wm. Cameron, Wilmet, S. Dak.

To the American Breeder:—The Binder is O. K. Will order another when this one is full. It keeps the papers in shape and they are all worth keeping. I have but one fault with the American Breeder—it does not come often enough. I am always waiting for it.—W. T. Bowen, Lamont, Wash.

To the American Breeder:—I am well pleased with the Breeder Binder, also the American Breeder is the best paper of its kind.—H. H. Bartlett, Grafton, Ill.

To the American Breeder:—I have used the American Breeder Binder and find it very useful and convenient.—R. S. Brookings, Richardson, N. Dak.

To the American Breeder:—I can honestly say that the American Breeder Binder is ideal. We find it very convenient and would not be without it. I have from April 5, 1913, to December 5, 1914, now in the Binder and have room for several more.—B. J. Bonnell, Glencoe, N. Mex.

**PRICE \$1.00. SENT BY PARCELS POST PREPAID.****ADDRESS ALL ORDERS TO****AMERICAN BREEDER, 225 WEST 12TH STREET, KANSAS CITY, MO.**

such time your veterinarian will be the best person to advise as to whether serum alone or the simultaneous treatment should be employed. Do not spend your money for fake medicine expecting prevention from such source.

**1396—GERMAN COACH REGISTRY**—Where will I write for German Coach registry blanks? Is there an age limit on registering of horses where the sire and dam are both registered?—Oklahoma Subscriber.

**REPLY**—Write to J. Crouch, Secretary, Lafayette, Indiana.

**1397—MULE FOOT HOGS**—I see you have cuts of all hogs in your paper but the Mule Foot. Why is this? Do you not consider the Mule Foot hog worthy of it? Please give us a little information on the Mule Foot hog in your next paper. Are there very many in the United States?—Oklahoma Subscriber.

**REPLY**—The breeds of hogs already represented on the cover page are, because of their numbers, excellence, age of the breed, or for other reasons, are more important than the Mule Foot hogs. This is not saying anything against the Mule Foot, as it is simply one of the later established breeds which has not yet become widely distributed. There are several other breeds of hogs which our cover page does not show.

**1398—A YEARLING SIRE**—A mare owner bred a mare to my horse and he claims she was served three or four weeks later by her yearling colt. She shows to be in foal. Would you think the yearling foaled her? He was about 13 months old.—Oklahoma Subscriber.

**REPLY**—There are cases on record where yearlings have sired foals. Stallions are not usually fertile, however, at this age. Keep close watch on the mare and get the exact date of foaling. Watch the foal closely as it develops. You can form your own opinion, which may be worth something to you in the future, concerning the individual who claims the yearling colt got his mare in foal.

**1399—PRURITUS**—I bought a draft mare this fall which had run on alfalfa all summer. She was fat and looked like she was in good health. She is coming 5 years old. I began working her soon after I got her. Have fed her grain three times a day; she seems to have a good appetite, but when turned in lot will not eat roughness to do any good; puts in most of her time in rubbing; seems to itch all over; rubs on fence awhile, then will bite her sides with her teeth, and when she stands in stall at night rubs her sides against stall. When in harness she sometimes throws her head around to her sides. Do you think this is caused from the itching? I have examined her for lice several times, but have never discovered any. Her hair lays smooth and she has no breaking out. Please tell me what to do for her, and what the trouble is.—Kansas Subscriber.

**REPLY**—Your mare has been kept too fat and it is quite likely that you are at present feeding her too much heating grain. Reduce her flesh by feeding more bulky food and not so nutritious. Give her a liberal quantity of bran with her oats and feed no corn. If she is not in foal give her an ounce of powdered aloes dissolved in half a pint of warm water. This should physic her which will help to relieve the itching. Follow this with three-fourths of an ounce of Fowler's solution in the feed three times a day for several weeks.

**1400—HAVING SERIOUS TROUBLE WITH HIS STEERS**—I would like to know if you can tell me what is the matter with a yearling steer I have. About three weeks ago I had one that his head swelled some and it seemed to be hard for him to breathe. His knees and hocks also swelled, but he was not lame. The swelling seemed to go down and then he seemed to have something like fits, but did not froth at the mouth. He seemed to be in great pain while he had one of these spells. It would take him from ten minutes to a half an hour to get over one of these spells, and when he was able to stand would go to eating. He had a bad case of scours to start with. He was fed good prairie hay and nice bright corn fodder. I now have another one the same way. He has been running to a straw pile and grass. Both have had plenty of water. The first yearling lived about a week. Is there anything I can do for them? And do you think there is any chance of the other cattle taking it from them? Please let me know if there is any more information you need, as I would like to know what the matter is.—South Dakota Subscriber.

**REPLY**—We are unable to answer from symptoms; write us further,

**1401—BUYING FROM ADVERTISERS**—I see the American Breeder is getting more advertising of machinery and other things sold to farmers. Are you as particular about these advertisements as you are about horse advertisements? Do you really think that farmers can benefit themselves by buying from any of these advertisers?—Oklahoma Subscriber.

**REPLY**—Few people realize the safety with which any one can buy of the advertisers in a reputable publication which uses ordinary honesty and common sense in the advertisements it carries. No manufacturer can afford to advertise an article he expects to market generally unless it has merit. The cost of opening up trade territory, by whatever means, is so great that more business must follow the first sales if any profit is to be made. To sell an inferior article, or to abuse the confidence of a customer would be fatal to a further development of the business. Advertising may not be the most economical way of introducing the many conveniences and labor saving machines which have gone into farm homes and fields the past few years, but it is the only effective way that has appeared. The more our readers mention this paper to the firms advertising the things they are interested in, the better class of advertising we will be able to carry in our columns.

**1402—POOR SERVER**—My four-year-old Percheron stallion fails to make a good service at times. Would like to know the cause and the remedy and if he will outgrow it. He is keen enough but does not always discharge. He will enter, work hard and come off without doing anything. Will it hurt to let him try more than once? He has not been stood heavy this year; never more than two mares a day and last year but a few mares. What is the cause of semen following the horse and coming all out?—Kansas Subscriber.

**REPLY**—This stallion may be practicing self-abuse. In order to detect this it may be necessary to watch him day and night. Many stallions will not do this in the presence of men. If masturbation is discovered, have your veterinarian slightly blister the glans-penis. This blister should be very light; then retire him from service for several weeks. Do not use him as a teaser or allow him to remain where he can see or smell mares in heat. If the blister does not cause any inconvenience, he should be put to light work, and kept there until the breeding season starts next spring. If your stallion is not practicing self-abuse, we would advise lowering the grain ration slightly. Do not use this stallion as a teaser. When the mare is found to be in good heat and ready for service, have her in an accessible place, so that the stallion can make the mount before the erection becomes too severe. After the mount is made, allow the mare to take steps if she cares to; encourage a slight movement of the mare. This will help to put all of the muscles of the sire into action and creates a new desire, as he is afraid she will get away. If the service is not completed satisfactory, put the stallion in the barn and allow the erection to disappear. Then repeat the performance in a few

make a service on a mare having a short vagina. These difficult services should all be made on tall mares.

JOHN HOLIAHAN, PINGREE, N. DAK., AND TWO OF THREE CAPSULE COLTS GOT FROM ONE SERVICE.

GOOD SALE FOR J. C. ROBISON.

In his recent auction of registered Percherons (the twentieth public sale from the Whitewater Falls stud), J. C. Robison made one of the best averages his Percherons have ever made. His offering was likewise one of his best, the attendance large, and the interest both before and at the sale, unusually good. The stallions averaged \$651.11, and the mares and fillies, \$440.20. The top price of the sale, \$1,450, was paid by a graduate of the Graham Breeding School (John Strother of Alva, Okla.) for Vincent \$5804, a Casino weanling. Col. R. L. Harriman and assisting auctioneers did the work on the block and in the rings. A complete list of sales follows:

THE ABDERHALDEN PREGNANCY TEST

In the issue of the American Breeder for November 20, a subscriber asks for the best way to tell when a mare is in foal, and in reply you gave the physical signs. For many cases these are helpful but for an accurate and positive result there is nothing that compares with the Abderhalden pregnancy test.

About two years ago Prof. Abderhalden the famous German scientist discovered that as soon as the membranes began to form in the uterus of a pregnant animal, there was also formed in the blood a peculiar chemical substance called a ferment, that seems to be for the purpose of destroying wandering cells that may accidentally get into the blood. The presence of this ferment in the blood serum is positive evidence that the animal is pregnant. In mares and cows this ferment appears in the blood about five to six weeks after conception and remains in the blood for a month after parturition. The Abderhalden test for pregnancy is a very delicate test

Stallion Service Record Book

This book has 200 pages like the specimen page in this ad. It is substantially bound with a good, strong waterproof cover. It has 20 index pages for keeping the owners' names in alphabetical order so that any name or mare can be found quickly.

The breeding contract at the bottom is the strongest possible kind of a note. It is a big help in making collections, as nearly every state has a law for the collection of labor debts without exemption, and this is a contract to pay for services rendered. Before it is signed run a pencil through two of the lines in the contract, leaving the line that makes the kind of a contract you want. Many will sign a contract who would refuse to give a note.

This book has a calendar and a gestation table. It can be used for several sires without carrying more than one book. This is the most complete and up-to-date service record book printed. It is a nice size and can be carried easily in any pocket. Every breeder should have one. After improving it for several years, the result is this most satisfactory book. A complete new edition is just out. Although this new book has double the capacity of those offered heretofore, it sells at the old price. It is not bulky, as it carries no advertising or other unnecessary matter. It will be the standard record book used by the leading breeders.

If you are not satisfied with the book or do not consider it the best and cheapest on the market, return it and your money will be cheerfully refunded. The price is 50 cents; six for \$2.75; postage prepaid. Send all orders to the

GRAHAM PUBLISHING CO.  
225 West 12th St., Kansas City, Mo.

that must be made by an expert in a laboratory. It is only necessary to send to the laboratory a small amount of blood serum from the animal to be tested. This can easily be procured by a veterinarian. Full directions for collecting the serum are supplied by laboratories making the test. The charge for making this test is about three dollars for a single test.

The Abderhalden test will be of great importance particularly in those cases where mares are sent away to be bred, and in mares that are sold before it is possible to determine by the ordinary physical symptoms, whether they are pregnant.—N. S. Mayo, Sec'y American Veterinary Medical Assn.

FOUR DAYS OF LIVE STOCK LECTURES.

BREEDING CONTRACT  
\$ 15.00 Date Feb. 1, 1914  
For services rendered, I promise to pay (fill in with stallion owner's name) \_\_\_\_\_ or assigns fifteen dollars  
~~When above described mare is known to be in foal~~  
~~When above described mare delivers a living colt~~  
When colt of above described mare stands and sucks or before mare changes ownership, mortgaged or leaves county.  
Signed John Brown Page 16

Above shows exact size of page and the way to properly fill out the blank for one form of breeding contract, scratching out extra lines.

What Breeders Say About Jacksorine

(A DIFFERENT LETTER IN EACH ADVERTISEMENT)

"I have used your Jacksorine, and after having a jack with five different sores on him, and trying every remedy that I could hear of, and giving him up as incurable, I got a box of your Jacksorine and cured him inside of 60 days. I consider it has no equal.—A. M. Perkins, Washington, Ind."

Jacksorine undoubtedly is the best remedy for jack sores ever put out. It is put up in large self-sealing containers from a scientific prescription and was long used with absolute success by the president of this company on his own stock. Remember, the price is \$3.50 per can, postpaid. Remit by P. O. order or bank draft to

O. P. WILSON & CO.  
Lock Box 489, Kansas City, Mo.

Cuts of All Kinds Made from Photographs

If you have a good photograph of your stallion, jack or any other animal, or of your house, barn or yourself, we can make you a cut from it, any size you want. \$2 pays for such a cut 3x3½ inches, or smaller, if photo is clear. Larger cuts in proportion.

Ready Made Cuts at Lower Prices

We keep on hands the best line of stallion and jack cuts to be found in the country—a new line true to life, made from original photographs. Send for sample sheet and subscribers' prices. N. B.—We do not do any printing. We simply furnish the cuts.

# The Best Protection Against Live Stock Losses

**D**OCTORING is of doubtful benefit when animals are suffering from dangerous diseases. Remedies are of little value in preventing the spread of infectious diseases after animals have been exposed. The best protection at all times—always available—is PREVENTION. Animals kept free from worms, and in healthy, thrifty, vigorous condition are well fortified to RESIST diseases. Run-down, worm-infested stock lack the vitality to resist infection—they are the first to suffer, and least likely to recover.

The danger from stomach and intestinal worms is not over-drawn. Veterinarians, Farm Papers, Agricultural Experiment Stations and thousands of Farmers and Breeders are fully alive to the situation. Hogs, Sheep and Lambs are the greatest sufferers, but Horses and Cattle become badly worm-infested.

Stock losses due to worms runs into the millions yearly—the waste of feed is enormous—the risk of disease because animals lack vitality is great. You can stop YOUR losses—rid your stock of worms—put them in condition to better resist dangerous diseases, by allowing them to have free access to

The Great  
Worm Destroyer

REG. U.S. PAT. OFF.

The Great  
Live Stock Conditioner

I don't ask you to take the slightest risk in proving my claims. You can feed SAL-VET 60 days AT MY RISK—no money down—prove its value as a worm destroyer and conditioner, without taking any chances whatever.

Animals take readily to SAL-VET—relish it—go to it naturally and freely. It can be fed as you would feed salt, or mix it with the mash or slop. Feed it regularly—your animals will shortly be rid of worms—they will do better—gain faster, get more good from the ration fed. SAL-VET is highly endorsed by thousands—read the letters of a few.

"I fed about 600 lbs. of SAL-VET to 300 lambs which were badly infested with stomach worms. The lambs were weighed up this week to a Chicago concern and pronounced by their buyer to be one of the best lots he had purchased this year. They made an average gain of 40 lbs. per head. I will never again attempt to feed lambs without using SAL-VET."  
W. S. PATTON, Plattsburg, Ohio.

"Before I received your SAL-VET in November, all of my hogs were sick, and I had 41 head of them. Started to feed SAL-VET and saved 20. I am very sorry I did not get your remedy sooner, as I give the preparation credit for having saved the above. Neighbors all around me had the same trouble with their hogs and the disease made a clean sweep in some of these cases. I consider SAL-VET O. K."—ED. WOLFE, Edinburg, Ill.

"For the past two years, we have fed SAL-VET with excellent results, and therefore, take pleasure in recommending it as a worm destroyer and conditioner. Since feeding SAL-VET, our lambs have been entirely free from worms. Considering the excellent success which we have had with SAL-VET, I am perfectly willing that you should make public use of my endorsement. I cannot speak too highly of SAL-VET."  
D. J. GEIKEN, Supt. Sheep and Hog Dept.,  
N. D., Agricultural College, Fargo, N. D.

"My SAL-VET is all gone, and as common salt does not begin to take its place, I want you to send me another keg at once. I am sure that \$5.00 worth of SAL-VET saves me \$10.00 worth of feed; all of my sheep, cows, and horses are doing remarkably well. My experience has been that SAL-VET and worms cannot dwell together."  
E. A. BONTRAGER, Fairview, Mich.

## Don't Misunderstand My Offer

Tell me how many head of stock you have, or how many you want to feed. I will ship you enough SAL-VET to last them for 60 days. You to pay the freight charges and feed it according to directions; at the end of 60 days report results. If SAL-VET has not done all I claim—I'll cancel the charge and you will owe me nothing. Fill in the coupon and mail it to me today.

# AMERICAN BREEDER

WITH WHICH IS COMBINED CARLSON'S RURAL REVIEW

A Farmers' and Breeders' Paper Devoted to the Breeding and Care of Live Stock and the Welfare of Farm Families and Homes

Published Twice a Month. Subscription Price, One Year 50c, Three Years \$1.00

Volume VIII

Kansas City, Missouri, January 20, 1915

Number 10

WEIGHT IN THE COLLAR, AS EXEMPLIFIED IN VARIOUS PARTS OF AMERICAN BREEDER TERRITORY.

1—A showyard "six" in Indiana. 2—In the Percheron district of France. 3—On a Belgian highway. 4—The Gregory Farm coach on sale day. 5—The famous Paris 3-horse omnibus. 6—Amos Hanson, Story County, Iowa, plowing with pure bred stallions. 7—The French like horses in their holiday pageants. 8—Working a stallion with a big, well broke mule. 9—A. T. Milroy, Thomas County, Neb., gets a double income from a pure bred stallion and mare. 10—Waiting for the superintendent to call draft mares in harness. 11—Using a Ford in exercising draft stallions. 12—H. H. Bohne, Manitowoc County, Wis., and a two-ton combined tractor and multiplier. 13—The Allies—Belgian and Shire, on the farm of W. A. Clark, Allen County, Kans.

# HORSE AND CATTLE BREEDING SCHOOL

## February 1 to 6, Inclusive

### Double Your Income Without Increasing Your Investment

A CLASS OF SUBSTANTIAL BREEDERS AT THE BREEDING SCHOOL LEARNING THE INSIDE FACTS OF THEIR BUSINESS

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate the different diseases and abnormal conditions. Students are impressed with facts in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

The sooner you get this knowledge the longer you can use it. Get a substantial foundation to work on. Get a Diploma. Make your business a pleasure. Breed intelligently.

### REMEMBER THE DATE---February 1 to 6, Inclusive.

#### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Cap—etc.

Remember the date and prepare to be here next term. Tuition is \$25, which entitles all students to a free return privilege for life. For information address

#### EQUIPMENT AND EXPENSES

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

## GRAHAM SCIENTIFIC BREEDING SCHOOL

225 West Twelfth St., Kansas City, Mo.

THE AMERICAN BREEDER

With which is combined  
CARLSON'S RURAL REVIEW.

JANUARY 20, 1915.  
Volume VIII. Number 10.

FRANK B. GRAHAM and T. W. MORSE,  
Editors.

Published semi-monthly (on the 5th and  
20th of each month) by the  
GRAHAM PUBLISHING COMPANY,  
INCORPORATED,  
225 WEST TWELFTH STREET,  
Kansas City, Mo.  
BELL TELEPHONE, 4297 GRAND.

All communications for this paper  
should be addressed to the American  
Breeder, or the Graham Publishing  
Company, and not to individuals.

Subscription Rates within the United  
States: \$1 for 3 years; 50 cents for  
one year. All other countries, \$2 for  
3 years; \$1 for one year.

When sending subscriptions, please  
state whether they are renewals or  
new ones. Always renew under the  
same name and initials as previously  
used, and at least two weeks before  
your present subscription expires, so  
that you will not miss any number.  
When changing your postoffice ad-  
dress, state the old address as well as  
the new one.

If you miss your paper please notify  
us at once and all lost copies will be  
replaced.

Entered as second class matter No-  
vember 23, 1911, at the postoffice at  
Kansas City, Mo., under the Act of  
March 3, 1879.

RETIRED FARMERS.

Nearly every small town or county  
seat contains a large number of re-  
tired farmers. We have often won-  
dered why farmers wish to move to  
town and have nothing to do except  
wait for the end. As a rule, a farmer  
owning a good farm can expect only  
worry when it is turned over to ren-  
ters. If a rest is desired, why not  
build substantial tenant improve-  
ments, reserving a few acres, or make  
such improvements that may be de-  
sired, and remain in the old home-  
stead. Better tenants can be secured  
in this manner. The landowner  
should have something to do in keep-  
ing up necessary improvements at his  
leisure. Arrangements could be made  
to travel, visit or engage in some  
pleasure.

Every individual should strive to  
have a permanent home and the best  
place for retired farmers is in the old  
homestead with the surroundings that  
they are familiar with. The most  
miserable man in the world is the one  
who has nothing to do. The retired  
farmer who moves to town usually  
shortens his days, as an entire change  
of life must follow. He cannot have  
the fresh products from the farm  
which he has been accustomed to.  
Everything is changed at a period in  
life which usually makes such changes  
difficult. If school privileges are de-  
sired or some other change that is of  
special interest to the family, he then  
may have sufficient reason for mov-  
ing to town, but as a rule it is ad-  
visable for the retired farmer to think  
well before he makes such a move,  
or, at least, one which is hard to  
change after certain property changes  
have been made. This is particularly  
true, owing to the advanced age of  
some men. If there are any who

doubt these statements they may visit  
any small town or county seat and  
ask those who have made such  
changes.

RAISING GOOD COLTS.

If a good colt is wanted, would the  
owner of the mare mate her with a  
small, undersized, badly formed, scrub  
stallion or jack. Could that sire pro-  
duce qualities that he himself did  
not possess? If the ancestors of a  
sire, for several generations, have all  
been of the same breed and type,  
would such a sire produce a more  
uniform lot of colts than a sire of a  
mixed breed? If a stallion, having a  
Shire dam and Shetland pony sire,  
was mated with a mongrel mare, what  
would be the result? Such breeding  
represents only the extremes found  
in our inferior mongrel sires. The  
sire that is individually all right, and  
has sprung from good animals for  
many generations, in one particular  
breed, is the most profitable (regard-  
less of service fees), if it has no trans-  
missible weaknesses.

The mare owner may invest \$10 in  
service fees for a mongrel stallion  
and produce an inferior animal that  
must compete with the great bulk of  
horses on the market and be sold for  
a small price. If a better sire is used,  
the result might be an outstanding  
animal, with buyers clamoring for the  
good ones at big prices. With the  
high-priced land, feed and everything  
else in this modern age, the best  
stock is the only kind to produce for  
financial profit, and more so far pleas-  
ure. Why men will use little, inferior  
scrub sires of any kind, at any price,  
is more than we can understand.

THE FEET.

A subscriber asks us how to keep  
the feet of the stallions and jacks in  
good order during the winter months.  
Horses, jacks or mules which are  
closely confined are very liable to  
have bad feet. Moisture is a natural  
need of the feet of horses that are  
stabled, but manure is usually detri-  
mental and more especially wet  
manure. Stock running in pasture  
where their feet are daily wet with  
the dew or frost are not so likely to  
have bad feet. When there are no  
shoes on the feet the foot in walking  
expands in such a way that the frog  
expands the hoof. Oil or grease is  
not usually helpful to affected feet,  
as it prevents the moisture from per-  
forming its natural functions.

A very good manner of keeping the  
frog in a healthy condition is to clean  
out the crevices and tamp all around  
the frog and each crack in the frog  
plenty of salt once or twice a week.  
If the horse is shod, fill the bottom  
of his feet full of clay once or twice  
a week. Fill the stall with clay and  
stamp it down solidly. If there is no  
thrush in the feet, a tub may be pre-  
pared with clay in it about three  
inches deep. This will furnish  
moisture for the feet. Stand the  
horse in this wet clay one hour three  
times a week. This usually will get  
good results.

Practically every horse or jack that  
does not get much exercise might be  
benefited by clipping the hair around  
the top of the hoof, and blistering the  
hoof head with a cantharidies blister.  
The animal should be tied so that he  
cannot get his nose down to his feet,  
for about twenty-four hours. Then  
wash the material off of the feet with  
Castile soap. This might be repeated  
again in about three weeks. Many  
race horses are handled in this man-  
ner. By trimming the feet closely in  
the fall and blistering every three  
weeks, with plenty of tub baths, new  
walls are grown on the feet during  
one winter. There is nothing about  
this that the average breeder cannot  
follow out. One of the important  
things with any animal is to keep the  
barn clean. It will require a lot of  
work to keep the feet in good con-  
dition, when horses are allowed to  
stand in dirty stables, and more espe-  
cially in wet manure. Every farmer  
or breeder should pay particular at-  
tention to the feet of his horse. The  
old saying, "No foot, no horse," is  
quite true.

SANITARY BOARDS.

In some cases there is too much  
politics connected with state sanitary  
boards. If there is an important of-  
fice to fill in any state this one is cer-  
tainly worthy of the very best atten-  
tion that possibly can be given. An  
ignorant man has little business try-  
ing to hold such a job. Some of these  
places are filled by men who have  
never even looked through a micro-  
scope. They have no idea of sanita-  
tion. If a state cannot have in such  
an office one good, clean, reliable,  
graduate veterinarian, there must be  
something wrong? There has been  
a lot of money wasted and the farm-  
ers are paying the bills through these  
losses. Some men have been sent out  
by sanitary boards to "educate the  
people" who first should have re-  
ceived some needed training them-  
selves. There is only one relief and  
that is honest, non-political appoint-  
ments from a class of men trained  
and experienced for such work. Any  
man who is not thoroughly qualified  
should not attempt to supervise or  
serve any live stock sanitary board.  
There are at least two qualifications,  
honesty and education.

RENEWING SUBSCRIPTIONS.

Frequently we receive renewals re-  
questing us to send the back numbers  
which have been missed by those who  
have neglected to renew their sub-  
scriptions at the proper time. Every  
subscriber will receive in plenty of  
time, a letter, notifying him when his  
subscription expires. If each one will  
attend to it at that particular time,  
no copies will be missed. Very fre-  
quently we have orders for extra pa-  
pers in lots of several hundred, so  
that we are not able to supply later  
requests for back numbers. This is  
an exceedingly busy time with the  
subscription department and we ur-  
gently request that all renewals be  
sent in as promptly as possible. It  
will help us much if everyone will  
state whether the subscription is a  
renewal or a new one and in case of  
changing the address please give us  
the old address as well as the new  
one. We wish to thank all of our  
friends for the marvelous growth of  
this paper. The more subscriptions  
we receive the better paper we can  
furnish. We are well pleased with  
the effort that is being made by all  
of our subscribers.

CAPSULE COLTS.

The owner of every scrub stallion  
or jack, in the country, seems to be  
opposed to capsule breeding. There  
are also a few who own good stallions  
and jacks, who are opposed to capsule  
breeding and do not wish to learn  
how to use capsules. There are, how-  
ever, about 10,000 breeders in the  
United States using capsules.

The principal argument put up  
against capsule colts, is that they are  
not up to the standard in some way  
or other. Some very misleading re-  
ports have been circulated. At the  
Hutchinson, Kansas, State Fair last  
year there was a man by the name of  
Brown who stated that he could tell  
a capsule colt on sight. He was re-  
quested to make a careful survey of  
a particular barn that contained a  
number of colts, among which were  
two capsule colts. He was invited to  
pick out the capsule colts in that barn.  
Much to his surprise, he had selected  
nearly all of the other colts and did  
not even suspect his mistake. Mr.  
Hineman of Dighton, Kas., owned the  
two capsule colts, which he said were  
two of the very best colts he had  
ever raised, and he has raised a lot  
of good ones. Capsule colts are just  
as good in every way, shape and form  
as those produced by natural service.  
Those who wish to defeat modern  
breeding methods usually circulate  
false reports on this subject. It is  
amusing to see one of these men try  
to correct his statements after a suc-  
cessful capsule breeder has filled the  
country with such colts.

Capsule breeding is a saving to the  
owners of the mares, in numerous  
ways. It is a money maker for the  
owners of good sires. If the semen  
of a fertile stallion is placed in the  
uterus of a mare in a clean, natural,  
healthy condition and at the right tem-

perature, what more can any stallion  
or jack do? Many sires, however, do  
not discharge semen directly into the  
uterus, where it must be before fer-  
tilization can take place. A capsule  
service when properly made is a com-  
plete service. Occasionally a mare  
owner will object to the use of cap-  
sules. One question will usually set-  
tle him, viz: What more do you want  
than a good colt?

MORE BREEDERS NEEDED.

L. R. Hughie of Alva, Okla., bred  
nearly 900 mares last season to a stal-  
lion and jack. He averaged five and  
one-half mares at each service. He  
believes that more than 70 per cent  
of these mares are in foal. He exam-  
ines every mare presented for breed-  
ing. He uses the microscope at every  
service. He is doing all he can to  
prevent the spreading of diseases  
among the mares in his section. He  
did not breed 900 mares the first year  
he began using modern methods, but  
has gradually increased to that point.

We have a very large number of  
breeders who have done exceptionally  
well. The breeding business, like any  
other occupation, requires some  
thought and energy as well as equip-  
ment and preparation. There is per-  
haps no other business in America  
that offers better revenue and gen-  
eral interest than the breeding busi-  
ness, when the breeder tries to make  
a success. There are many things  
that the successful breeder must be  
familiar with. A breeder will either  
advance in his profession or go the  
other way. Very frequently one gets  
into a rut. Practically every man en-  
gaged in the breeding of live stock,  
who feels discouraged, has not given  
the subject enough thought. This ap-  
plies very largely to all kinds of live  
stock.

THE FOOT AND MOUTH DISEASE.

An injunction may stop slaughtering  
live stock, but a legal injunction  
will not stop the germs from multi-  
plying. A serious mistake was made  
at Chicago in trying to exempt the  
Dairy Show cattle from the usual  
regulations. The men who brought  
every influence to bear to prevent  
the government from destroying those  
cattle, will be losers in the end, and  
they may have started many other  
men to thinking that their stock, also,  
ought to be protected. Of course, a  
serious problem is involved in the  
destruction of such fine animals as  
those dairy cattle, but we contend  
that the slaughtering method is the  
cheapest in the long run.

This country can be cleared of the  
foot and mouth disease if the govern-  
ment is given a free hand. Wealthy  
politicians should not interfere in  
such important cases. Arrangements  
were made to destroy these cattle,  
and should have been carried out.  
This is a serious disease. Just be-  
cause an animal has it once is no  
evidence that the same animal will  
not have it again. There is no telling  
how long the animal may transmit  
this disease after it seemingly has re-  
covered. We contend that the best  
method in this case is to let the gov-  
ernment have a free hand. Those  
who lose the stock and are not fully  
reimbursed should have the sympathy  
of everyone.

Men have worked together in  
Illinois to prevent the destruction of  
live stock infected with this disease,  
and thus interfered with the stamping  
out of this plague. Every man who is  
opposed to the slaughtering method  
should go to Europe and investigate  
the conditions there thoroughly.  
Those counties close to Chicago,  
where the disease yet remains, are  
seriously injuring that section of the  
country in numerous ways. The Chi-  
cago Stock Yards have been seriously  
damaged. There are many who will  
not buy stock from that section of  
the country for a long time. The loss  
is greater to those having high priced  
stock, as the limit of reimbursement  
will not always cover the value of the  
best bred ones. We hope to see con-  
ditions so changed that the govern-  
ment can have a free hand in exter-  
minating this menace to the cattle,  
hog and sheep industries.

## GRAHAM SCIENTIFIC BREEDING SCHOOL, KANSAS CITY, MO., CLASS NUMBER 33---JANUARY 4 TO 9, 1915

In the 33d Class: 1—Vird O. Cudd, 225 W. 12th St., Kansas City, Mo. 2—F. B. Graham, Kansas City, Mo. 3—Murrel Provost, Lambert Okla., R. 1, Box 30. 4—G. W. Murray, Mitchell, Ind., R. 10. 5—J. P. Humphrey (Jack), 225 W. 12th St., Kansas City, Mo.

## SYSTEMATIZE COUNTY FAIRS.

In an address before the Missouri Association of County and District Fair Managers, recently, Jas. A. Houchin of Jefferson City, discussed a plan for comprehensive regulation of these events. One of the points brought out was that the dates of county fairs should be so arranged as to enable exhibitors to make a number of conveniently located fairs in succession. No one can afford to prepare for an exhibit and then make only one or two shows in one trade territory. Neither can one afford to ship long distances or outside his trade territory for such premiums and accommodations as it is possible for county fairs to offer. For that reason Mr. Houchin advocates that every county fair in the state should select its date with regard to the dates of other fairs in that section, and in that way encourage local exhibitors to make local circuits, thus adding greatly to the excellence, number and educational value of all exhibits.

## GETS THE UP-TO-DATE BUYERS."

To the American Breeder:—I will give you praise for your many favors of the past, and will send you an ad in a short while, as I always get results that prove the American Breeder is O. K. and gets the up-to-date buyers that will do business and right to the point. They are the kind of men that I like to do business with.—Isaac C. Lohman, Clinton County, Mo.

## "HOW SUBSCRIBERS USE THE PAPER."

To the American Breeder:—Please find inclosed advertising matter for live stock which I wish to sell. I see

others are getting good results by advertising in the AMERICAN BREEDER, why shouldn't I? I have been taking this paper ever since its birth and like it fine. I think every horseman should read it. Also the Breeding School I am sure is just the thing for the people, but I am old enough to quit the business and wish to sell all my breeding stock. Will sell them reasonable.—J. W. Watts, Webster County, Missouri.

## A WESTERN FEEDER'S EXPERIENCE.

To the American Breeder:—I have been in the stock business in Colorado since 1873, also handled cattle in Southwest Kansas on the range for over 20 years. Have always raised horses for my own use and some to sell. I also handle mules, buy weanlings and hold until they are old enough to work. Sometimes I have a good sale for them and sometimes it is slow. Texas is our best market when they have a good sale for their cotton.

I have fed some sheep, but as a usual thing the corn cost is too much. This winter we are trying a new ration, corn ensilage, alfalfa hay and about one-third of a ration of corn. The sheep are doing well or seem to be. We can tell better when we ship them out and receive our "account sales." If it proves a success there will be more silos built in the Arkansas valley. We have a good climate to feed in, but we never have had any cheap feed except the hay. San Luis valley always beat us on the lamb feeding because they have the peas. Our corn always cost us 10 cents a bushel more than the Kansas feeder, and our freights are higher; so before we ever make a success in feed-

ing sheep in the valley, we must find some feed that will be cheaper than corn shipped in. I trust that the silo will solve the problem.

Some years the feeders make money on sheep, but when they do they have to sell the lambs at 10 and 11 cents a pound in the river markets. We must fatten and market them at cost of from \$2 to \$2.25 per head to have the business on a sound basis. At the sugar mills they can feed cattle on pulp. Pulp takes the place of corn to the extent of half. It seems to take the place of bluegrass in summer feeding in states east of here and yet some seasons they lose if the weather is cold. Pulp is good warm weather feed, and then those that are the most successful have to use cotton seed meal and syrup.—J. W. McClain, Otero County, Colo.

## APPROVAL FROM AN OLD FRIEND.

To the American Breeder:—I want to congratulate you on the strides you are making. I appreciate the good, honest, clean work it is doing and that is what it takes to win. I remember it was a very small paper at first—I mean when it first started, but I liked to read it just the same; and today it is better than I ever expected it to be. And since Mr. G. L. Carlson has decided to take part in the American Breeder by adding to it the Carlson Rural Review, I feel the American Breeder has added to itself a great strength. I have read the Carlson Rural Review, as the American Breeder, from the very first copy, and found them both to be of the highest quality and stand for the right, regardless of the cost. These men are doing a great work and should have the assistance and co-operation of every honest man and woman. Now

I can't stop without speaking a word for the Scientific Breeding School, of which I have attended three terms, and am going to state here that a stockman can't afford to not attend this school. They will go to fairs and other places and spend a week, which is a good place to go to, but they can't learn half as much in behalf of their business there as they can and will learn at the Scientific Breeding School in the same length of time. This is a grand place to send your boys if they want to make stockmen of themselves. They will be associated with as fine a set of men and boys as there is to be found. Men attend this school for the betterment of themselves and their community in the live stock business. And they are not only benefited many times the worth of their time and money spent in that direction, but through the manager and instructors of this school they leave there with a resolution to be better men and boys in every particular and stand for the higher ideals of life.—H. S. Record, Eddy County, New Mex.

## "SILENT," PERHAPS, BUT SUBSTANTIAL.

To the American Breeder:—Please find inclosed \$1.00 for which advance my subscription for three years, as my time will be out in July, 1915. I have been a silent reader of your paper for the past three years, and it is the best paper of the kind published. I am much interested in farming and stock raising and am going to attend the farmers' course at Pullman this winter. Wishing you success, I am, Roy D. Long, Okanogan County, Wash.

# QUESTIONS OF INTEREST TO FARMERS

By G. L. CARLSON

## Money Issued on Cotton.

"Your article, Organizing Farmers, in the American Breeder for December 20, was read with much interest. To organize farmers for the purpose of working together as one man, to the end that all may be benefited in higher prices for their products, cheap money based upon cotton, grain, and other farm products, and so as to control legislation in their favor, is the biggest problem confronting the farmers of this country, and apparently a task so difficult that it is doubtful if we ever will see it fully accomplished. Our government is evidently not for farmers, as evidenced by the manner with which the request recently made by the South to borrow money on its cotton was refused. Will you be so indulgent as to give a little of your time to an article showing how best farmers can bring about these much desired ends?"

The above letter of request comes to me from an Oklahoma subscriber. The letter itself, and more particularly the spirit which prompts it, explains why farmers are so difficult to organize, and why they get so little justice in most legislation. Before we ask for justice we must ourselves be just. This subscriber does not ask for what is just, but for the things he wants. The honest and intelligent farmers of this country are not asking for anything at the expense of other classes; all they ask for is justice, and this they have a right to demand. This subscriber asks for higher prices for farm products, yet wheat is now selling for more money than a majority of the people of this and other countries can afford to pay. He also asks for a control of legislation in favor of farmers. This is no less pernicious or unjust than if Standard Oil was to ask for the same thing. Herein lies the difficulty; while a majority of farmers are just in their demands, so long as a few are both asking and demanding special favors, it will be impossible for those who demand justice only to get even that which should be theirs without the demand.

True it is that government loans money to banks. It is no more right to do this than it is to loan money direct to all the people, but at present it is the law. If government was to loan money on cotton, those who produced other products would demand as a matter of justice that money be loaned on their products. This may be the law some day in this country, but if it is (which I very much doubt), it will apply to all products, and not to one or two.

The farmers of this country have it within their power and right to operate banks and finance themselves without any further legislation. It is not the right, neither is it the possibility of the thing that is against the farmers of this country. It is the condition of the public mind that is at fault. We have for so long a time depended upon special legislation and special favors to help us out of our difficulties, that we are inclined to imagine that nothing can be done by ourselves.

There is not a farm community of any considerable area in this country that cannot operate its own bank and finance itself. It is truly surprising how little real money it requires to finance a community, if that community is properly organized and equipped to use all its credit. The one big nightmare of bankers at this time is the fear that farmers will learn to recognize and grasp this opportunity to finance themselves. This done, and the problem of interest rates solves itself, since it matters very little what the rate of interest is. If we can only be permitted to pay the interest to ourselves. The power of banks disappears immediately we take from them the right to do business and make a profit on our credit. Fundamentally, the only asset a bank has is the credit and prosperity of the community in which it may be lo-

cated. No legislation is required for a community to use its own credit and resources, for the purpose of financing itself. All that it requires is the initiative and intelligence of the people to recognize and make use of the opportunity. The right is already theirs.

If farmers will get together, agree to be just in asking and demanding for themselves no more than they are willing to concede to others, organize banks of their own in every community where one is needed, it will then be possible for them to obtain government money on the same terms that other banks are compelled to make. And this can be done under present laws. Farmers have been permitting others to organize them, and to supply their economic needs for so long a time, that many imagine themselves helpless. What is needed is a more intelligent initiative, more confidence in one another, a broader understanding of fundamental democracy, and a stronger faith in the true importance of farming. When this time comes, farmers will do more and complain less. Their reward will be a larger share of the price which the consumer pays for their products, because of the limited number of middlemen which will then be absorbing the farmer's share, a greater pride in themselves and their calling, and a larger share in the shaping of all national policies.

## The Problem of Landlord and Tenant.

"What is to be the solution of the farm tenant problem in this country? How is the prosperity of the country, the fertility of the soil and community progress to be maintained by the renting process of farming?"

Frankly, it cannot be done under a system of renting our farms. The sooner we give serious thought to this subject with a view to solving it, the better it will be for all of us.

Several things must necessarily be done before we can begin solving the problem. We must recognize the right the community has in values created by the community. Few men are owning and renting land for the income of the land in rentals. If we take the selling price of the land in any county of this country, reduce it to money, place it at interest at 5 per cent per annum, the income will far exceed that of the land as now rented. This should convince any thinking man that landlords are renting land, primarily, in order to secure to themselves the rise in value which has been greater than in the case of any other property. A tax system that will give to the community all values created by it, would in a few years make land owners of most renters.

That our farms are rapidly being depleted of their soil fertility, is no longer being questioned by any intelligent person. Because of this, instead of landlords gaining a rise in the value of their land, before many years they are going to be confronted with the fact that their land possesses little or no value. In the long run, it will be better for land owners who do not care to work their farms, to sell them to our present renters on the amortization plan, on terms of 20 to 30 years at a low rate of interest. This plan will yield a regular income every year during the term of the sale, and few farmers after retiring will need an income beyond this time.

This problem is one that has at some time confronted the people of every civilized country. Different peoples have solved the problem in different ways, but no country ever made any progress in the solution of the problem until the right of the land, as well as that of landlord and tenant, had been recognized. When this is done the landlord no longer benefits by the rise in value, since all

increases of values cease when this is done, except the value added by the tenant, and this value belongs to him by reason of the fact that it was added to the land by him.

It will be found, too, that speculation in farm land ceases in all old countries. While a country is new and has few people, fertile land is bound to advance in value as the population increases, and in the same ratio. In the newer sections of this country where land can be had for less than \$40 an acre, land still has a good speculative value; but in the older sections, especially where land has reached a selling price of \$200 an acre, landlords are going to learn to their sorrow that there are better things than being a landlord. This is not a theory, but a fact, based on the history of land ownership in all old countries. The Irish land bill which became a law about 13 years ago was not demanded by the Irish renter so much as it was desired by his English landlord. If the Irish tenant had only known how anxious his landlord was to dispose of his land, he would not have wanted it. The land owner was most eager in his desire to exchange his land for a British bond bearing a very low rate of interest. The only concern of the Englishman was the size of the bond he was to get. Being a good trader, he wanted the largest bond he could possibly get. To get this, it was necessary to profess sympathy for the Irishman.

The same thing has taken place in a different way in Denmark. It was not very many years ago that nearly all Danish farmers were tenants, while nearly 90 per cent of them are now land owners. It will be the same in this country before many more years have passed over us, and it will be the landlord who is most desirous for the change. He will have no one to blame for this condition but himself, as the present problem is more of his making than it is of the renter.

## Buying Land in Cuba.

"An article printed in Rural Review last year, about Cuba, was of interest to me. I wish to find out more about Cuba, as to climate, rainfall, average temperature, and what good improved farm land in lots of 320 to 640 acres can be bought for within four to ten miles from a railroad town. Would you consider it a good investment to buy land there for speculation, and still live in the United States? Which would be the better plan, buy land in Cuba and live here or there?"

Replying to the above questions, no country in the world has made greater progress during the past ten years than Cuba. As a result of this progress the price of land has easily doubled over the island since the inauguration of President Menocal two years ago, and is bound to increase in price very rapidly for the next ten years.

Improved land near towns will now cost from \$40 to \$300 an acre, while the same land as to location and soil can be bought unimproved for \$10 to \$15. When it is remembered that the cost of improving is slight, it can readily be seen that it pays best to buy unimproved land in all cases.

The survey system of Cuba is a "metes and bounds" system, the same as we find east of Ohio in this country. There are no two pieces of land in Cuba having the same size or shape. The larger the tract the lower the rate per acre. The best investments are the large tracts of 50,000 acres and upwards.

The tax system of Cuba is a good one for the land speculator, but a mighty bad one for the country as a whole. There is no tax on idle land, the tax being on the income from the land. Consequently, if one wishes to hold land out of use for speculation, there is no tax.

No division or section of the earth has soil more fertile than the best soils of Cuba. The best and cheap-

## OUR NEW BOOK DEPARTMENT

The American Breeder receives a great many questions about books on various subjects. Our readers who asked them doubtless have wondered why we did not answer through the paper. We were (as fast as we could get the time) investigating the great mass of books now being offered, for selections that were worth buying and reading. Few people have time to read all the literature offered, and so we have listed only such books as came highly recommended. The list below will be increased from time to time, but we are ready to receive orders at once on any of the books listed. Remit to us the amount given as the price, and we will have the books sent, postage prepaid, direct from the publisher. Address all orders to American Breeder (Book Department), 225 West Twelfth Street, Kansas City, Mo. Make your order on a sheet separate from any other communication.

## Roofing Bargains on Steel Shingles

We Are Offering for a Limited Time  
**UNUSUAL PRICES**  
on **EDWARDS STEEL SHINGLES**

Edwards Steel Shingles are fast displacing wood shingles, which cause disastrous fires, leaky roofs and endless expense. Use beautiful, indestructible Edwards Steel Shingles. Cost less, last longer than wood—better in every way. Over 125,000 Edwards Steel Roofs now in use—the shingles that never rot, rust or burn, due to our patented "Tightcote" process. They come in big clusters, easy to put on, hammer and nails only things needed.

### Edwards STEEL Shingles

are dipped in molten zinc after being cut, no raw or exposed edges. Patented Edwards Interlocking Device permits contraction and expansion—makes joints water-tight forever! \$10,000 guarantee bond free against lightning loss.

#### Direct from Maker, Freight Paid

We sell direct from factory to user. No middle-men's profits. You save 25% to 50%. At this Special 30-Day Low Price, Edwards Steel Shingles offer more for the money than any other roof you can lay! Costs nothing to find out. Write today.

#### Give Roof Dimensions If Possible

It will save time if you can give size of roof when you write.

If you can't, send anyway for new Bargain Circular No. 176 and we'll quote prices that will astound you.

**THE EDWARDS MFG. CO.**

126-176 Lock St.  
Cincinnati, Ohio

est lands are to be found in the east end of the island, in Camaguey and Orientes provinces. No country can grow better sugar cane or cane that will yield a higher per cent of sucrose. This is the most profitable crop grown there, and one that requires very little skill as compared with the growing of tobacco and most fruits. To be highly profitable one should grow a large acreage and own his mill. The manufacture of cane sugar is a monopoly in every country producing it, making immense profits, rather more than is made in growing the cane. A mill calls for about 10,000 acres of land, to be an economic success, which with the mill requires an investment of a half million dollars. Most mill owners have enough cane of their own to run their mills, so that in many sections it is not easy to dispose of a cane crop unless one owns his mill.

The climate of Cuba is one of her best assets. The minimum temperature is 58 degrees, the maximum for all the island about 90. The rainfall is nearly 60 inches, falling through the growing season, with a dry season of three months beginning about December 1. This gives good weather for harvesting the two principal crops, cane and tobacco.

If one buys land in Cuba to improve and grow crops, he had better live there. If he only cares to speculate, it would not matter where he lives.

#### "TRAVELING" A JACK.

To the American Breeder:—I will send you a picture of a jack that I have, which is "an all-around jack." I have traveled him 35 miles a day twice a week, during season, and he is a sure foal getter. When I got the jack I was told that you couldn't travel a jack and get good results. The more exercise my jack receives, the better he is. I would like to know what you have to say about traveling a jack.—Eugene G. Bartlett, Hudboldt County, Calif.

#### SOUTH DAKOTA SUBSCRIBERS TAKE NOTICE.

To the American Breeder:—In regard to the Belgian stallion, Charger 2425, I bought him of A. Latimer Wilson and sold him to Bough & Sims of Manville, Wyo., and L. A. Sims took the horse to South Dakota. I would like to get in communication with the South Dakota subscriber. Did Mr. Cudd mail my picture, as I have not received it yet?—S. Swinbank, Crawford, Dawes County, Neb.—Adv.

## Review of the Markets

Foreign Horse and Mule Buying Increases, Raising Prices on Chunks Suitable For Artillery. Declines in Cattle, Hogs and Sheep. Higher Grain and Feed Prices Tend to Hasten Marketing. Northern States Furnishing More Hogs Than Usual.

Buying of horses and mules for the foreign war zone is of the largest proportions of the season. Every important market in this country has received more horses thus far this month than in the same period a year ago, when receipts were far ahead of normal. No movement of any importance has been credited to domestic demand, so it is a just conclusion that practically all have gone abroad. In two particulars buying has differed from former weeks. One is that mules of larger sizes, and fewer cavalry horses have been taken, but more artillery horses. Also there has been a call for a few saddle horses, above the ordinary in size and conformation and gait. From the latter it is concluded that they were for officer mounts, and it is not unlikely that such animals will be in greater demand as the war advances. In the general buying the increasing scarcity of good horses offered is causing many of lesser value to go through inspections. Buying is not restricted to any certain section of this country and from the way buying is scattered larger numbers are going abroad than is generally estimated. Such a movement is bound sooner or later to absorb the surplus equines of this country, and just as all periods of large selling are followed by scarcity and high prices, so it is safe for higher prices to show up soon.

The South has purchased a few loads of mules since the first of the year and there is evidence of that outlet showing some expansion in the next few weeks. In January last year, cotton states bought more horses and mules than in any previous similar period in her history, and those large purchases followed large fall buying. The South has bought practically none since last July. Cotton is moving in large quantities and seeding time is near, two factors that will increase the need of horse power.

The East seems to be reviving and is beginning to make inquiries for good horses. One thing characteristic of increased need of horses is that Eastern buyers in Chicago have given out the statement that they can use some good draft horses if prices are low. They usually preclude their spring buying with such a statement so that the trade believes that Eastern cities will begin buying soon. Other than for army use there is no well established range in quotations, and all prices quoted are more or less nominal.

Prevailing prices for serviceably sound horses and mules, 4 to 7 years old, are as follows:

Horses—	
Drafters, 1700-pound, extra quality.....	\$200@250
Drafters, good to choice.....	170@200
Drafters, fair to good.....	150@175
Chunks, good.....	140@165
Chunks, fair.....	110@140
Southerners, good to choice.....	120@175
Southerners.....	50@100

Mules—	
13½ to 14½ hands.....	\$ 90@110
14½ to 15½ hands.....	105@135
15½ to 16 hands.....	130@175
16½ or better.....	175@250

#### Sagging Prices for Fat Steers.

Large marketing of feed cattle in that portion of the corn belt east of the Mississippi river and Iowa, the section that has had its cattle calculations upset by the recent scourge of the foot and mouth disease, remains a depressing influence in the market. Prices now are 50 to 75 cents lower than the latter part of December, and the lowest in more than a year past. Conditions are such that no rally is expected in prices until supplies show material evidence of a big decrease. A few prime beefs in Chicago sold the past week at \$9.25 to \$9.50, and one load in Kansas City brought \$9, the top price thus far this year. The few steers selling above \$8.75 in the west are an exception to the rule, and the bulk of the steers going to killers is bringing \$7.50 to \$8.40. The plain to ordinary kinds are quoted at \$6.50 to \$7.25. However, the west is not selling as is

the east; in fact, the entire section west of Kansas City is holding back supplies waiting for the Eastern situation to improve. Some hay fed, beet pulp and meal fed steers were marketed early in the month, but lower prices have shut off that movement. Hay feeders seem particularly strong in their holding back, as hay is plentiful and low in price. The Southwest meal feeders will be an important factor in the market after the middle of next month. Few cattle and those plain in quality are coming from below the quarantine line. Some good full fed steers sold at \$8.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers.....	\$8.75@9.25
Good to choice steers.....	8.25@8.70
Fair to good steers.....	7.50@8.20
Common to fair steers.....	6.00@7.45
Meal fed, choice.....	7.85@8.40
Meal fed, common to fair.....	6.85@7.80
Quarantine steers, fed.....	7.00@8.00
Quarantine steers, grass fat.....	4.75@7.00

#### Butcher Cattle Market Stronger.

Trade in butcher cattle is depending on a large demand for stock and breeding grades to hold it at the present level. Under ordinary circumstances killers would be taking all the female cattle offered, but in order to keep prices on those they have to have to the low point they are making small purchases. Kansas has entered the market for large supplies, and is rebuilding breeding herds that were so depleted in the drought of 1913. Killing cows and heifers are 35 to 50 cents lower than the first of the month and low for this season of the year. Veal calves are firm.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice.....	\$6.40@ 7.00
Common to fair.....	4.75@ 5.15
Good to choice.....	5.85@ 6.35
Fair to good.....	5.20@ 5.80
Canners.....	4.25@ 4.70
Heifers—	
Choice.....	8.25@ 8.75
Good to choice.....	7.45@ 8.20
Plain to fair.....	6.75@ 7.40
Common.....	6.00@ 6.70
Veal calves.....	7.00@10.50
Bulls.....	4.50@ 6.75

#### Liberal Movement of Stock Cattle.

With Chicago still in no position to trade in thin cattle, Kansas City is drawing supplies from Iowa that under normal conditions would go east. This has resulted in liberal supplies here but demand has been large. Kansas, Nebraska and Oklahoma are the chief buyers. Only a few bunches have gone east of the Mississippi river, into Illinois, and some to Michigan. No important change occurred in prices in the past two weeks.

The following quotations are for the various grades of stock and feeding cattle:

Selected feeders.....	\$ 7.65@ 8.00
Good to choice feeders.....	7.15@ 7.60
Fair to good feeders.....	6.45@ 7.10
Plain to fair feeders.....	6.00@ 6.40
Selected stockers.....	7.50@ 8.00
Good to choice stockers.....	6.75@ 7.40
Plain to fair stockers.....	6.15@ 6.70
Stock calves.....	7.00@ 8.25
Stock cows.....	5.25@ 6.25
Stock heifers.....	5.75@ 7.50
Milch cows.....	60.00@110.00

#### Hogs Regain Part of Loss.

Hog prices fell below 7 cents on January 9, for the first time since March, 1912, and for the past ten days have remained in about that position. Heavy receipts at the five Western markets the first weeks in January, the total being 550,000, and large supplies at Northern markets in the past week were the causes of the decline. Packers have made large purchases and now that prices are 40 to 50 cents under the close in December, and \$1.50 lower than a year ago, they are anxious for supplies. Large receipts are pressing the market and will continue through February and March. On present indication no rally is expected in the market for the next sixty days. The quality of the hogs coming now is good. Comparatively few are sick, and average weight is about 20 pounds heavier than a year ago. Though Chicago is the center of the heaviest movement receipts in St. Paul and other Northern markets are

Touring Car \$1085 Roadster

**REGAL**

## The Right Car For Folks

Plenty of room in the NEW REGAL for five full-grown persons—rides easy, too, over rough roads—climbs bad hills—great in mud or sand—controls well, giving a wide range of speeds down to three miles an hour without shifting gears.

## "Best By Test"

say REGAL users—they KNOW. Best for men-folks with its power and enduring qualities—best for women-folks with its easy control, comfort, easy riding, beautiful finish, complete appointments. Best for everybody because it costs less to run and makes the "round-trip" every time.

THE THING THAT USERS LIKE is what Agents and Dealers find it pays to sell. To men of financial responsibility and sales ability who could handle a local REGAL agency, the REGAL proposition is liberal. It is worth investigating. Some good territory is open.

**REGAL MOTOR CAR CO.**  
216 PIQUETTE AVE.  
DETROIT, MICHIGAN

# THE WONDERFUL STORY

## OF POWER FARMING

### SEE for yourself the many uses

# DETROIT FARM ENGINES

*can be put to*

**USE  
CHEAP,  
EFFICIENT  
DETROIT  
FARM  
ENGINE**

It is no longer necessary for the farmer to be an expert engineer because this engine has no intricate collection of valves, cams, gears, sprockets or cranking devices. There is absolutely nothing about the Detroit which can get out of order, and a half grown boy can run it as well as anybody else.

#### The Cost of Operation

An engine which is designed to use only gasoline cannot be run satisfactorily on any other fuel. Three gallons of kerosene can be produced in the same time that it requires to make one gallon of gasoline. So it stands to reason that gasoline may at any time advance in price while kerosene will cost less and less every year. So why buy an engine which uses only gasoline when you can have a Detroit Farm Engine

**GET AN  
ENGINE  
WHICH  
YOUR BOY  
CAN RUN**

**ASK ANYONE  
WHO HAS  
USED ONE**

All the drudgery has been taken out of farming—all the back-breaking effort is a thing of the past. And now—with considerably less effort—the farmer can more than double his profits, and find time for recreation with his family and friends.

The man who is engaged in farming for profit no longer questions the fact that he needs a reliable farm engine for a score of different uses every day in the year.

But the early farm engines were great, massive, cumbersome things, weighing nearly one thousand pounds per horse power. They were complicated and costly. Even when they were finally installed on the farm it required the services of mechanics to keep them in order and—as a consequence—only the well-to-do farmer could consider such equipment. Those days, however, have gone once and for all.

In place of the clumsy, heavy engine (which needed two or more horses to drag it around) we have the compact, ever reliable

## DETROIT FARM ENGINE

which is designed for, and runs successfully, on kerosene. Also remember, the Detroit is not a gasoline engine with "kerosene fittings," but an engine built to run on kerosene, alcohol, distillate, or gasoline—just as you prefer. Furthermore, it uses but one pint of fuel per horse power hour.

The saving in fuel cost in a month's operation of the Detroit, will pay your lubrication bill for a year.

#### What the Detroit Farm Engine Will Do For You

This engine will grind your feed, saw your wood, make perfect electric light, churn butter, separate milk, pump water, mix concrete, operate hoists, truck feed, shell husk and grind corn, run your grind stone, lathe or drill press, run washing machines, shearing machines, threshing machines, and practically any type of machinery around the farm. It will also elevate silage into silos.

No matter what your need may be you will find just the correct engine in the Detroit line to do the work easily and satisfactorily.

#### The Proof of Efficiency

It is not necessary to take our word for the performance of the Detroit Farm Engine. Your neighbors and fellow farmers will tell you what it is doing—what it has done—and what it can do. Ask us for our book of satisfied customers and recent testimonials.

We issue large and instructive catalogues on farm engines, farm machinery, and farm electric lighting plants. We will be glad to send copies of any or all on request.

#### Detroit Engine Works

67 Bellevue Ave.,  
Detroit, Mich.

There are six sizes of Detroit Farm Engines—2½ horse power, 4 horse power, 6 horse power, 8 horse power, 12 horse power double cylinder and 18 horse power double cylinder.

#### This Engine is Sold on Trial

We sell all Detroit Farm Engines with the distinct understanding that the purchaser may try them for thirty days on his own work—in his own way. If, at the end of that time, he is not satisfied with the engine we will refund every penny paid to us without question or argument. Surely there can be no fairer way to back up our claims. Every Detroit Engine is sold with a binding ten year guarantee. A guarantee bond in the sum of \$50,000 is given by us to every purchaser to protect them against any possible failure on our part to keep every agreement we make.

## The Boulonnaise Horse

By Leon Van Meldert, D. V. S.

The Boulonnaise horse is not much known in America. He is, according to the best French horsemen, the first draft horse of France. Sometimes he comes into this country as a French draft horse. It may be interesting to know more about this horse.

The Boulonnaise horse is raised in a district which was named the Boulonnaise and which is situated around the town of Boulogne and includes the departments of the Nord, of the Somme and of the Pas de Calais, in that part of France which joins the frontier of Belgium.

This breed is a very old one and has had a high reputation for centuries. Henry IV, the French monarch, had the breed in great esteem. Those horses were used as saddle horses when the knights wore full armor. Henry IV had such a preference for these horses that as remote as 1587 he had the first horse races in France for those horses, in the large prairies surrounding the Castle of Montoire in the Pas de Calais.

The Boulonnaise horse belongs to the heavy draft type. He has a lean head with small ears set close together and erect. The forehead is straight but the nose is rounded. The neck is heavy and arched. The

## FRANK P. SHEKLETON & SONS, LAWLER, IOWA

IMPORTERS AND BREEDERS OF

### Percheron, Belgian and Clydesdale Stallions and Mares

Our barns are full of the choicest stallions and mares of the above named breeds, both imported and home bred. We can fill your order for one or a dozen at prices that will outdo all our competitors.

CALL AND SEE US. Lawler is on the C. M. & St. P. R. R. (The Iowa and Dakota Division) midway between Mason City and No. McGregor, both points making connections with all points of Minnesota and Wisconsin. We are 8 miles from New Hampton on the Great Western, making good connections with all Lawler trains.

breast is full, the forearms have thick muscles, the legs are lean and bony. The body of this horse is short coupled with heavy haunches. Hide, tail and mane are of fine texture and the horse is lively, able to trot fast in spite of his heavy weight. Some horses of that breed have been able to trot a mile around four and one-half minutes.

In the Boulonnaise district the land is heavy, hard to plow and nothing but mares are used on the farms. Those mares are bred during the winter in December, January and February, and the colts are born early enough to have the mares ready for spring plowing. When the colts are a year old they are sent to the west in the Vimeux and in Normandy.

Those Norman horses which were imported some thirty years ago in America belonged mostly to the Boulonnaise breed. In the Vimeux district, Boulonnaise colts grow fast

**IMPORTED AND HOME BRED STALLIONS AND MARES. PERCHERONS, BELGIANS, SHIRES.** The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perch this year. See what we have before buying elsewhere. Address Hart Bros., Osceola, Iowa.

### RUGGED STUD COLTS

The surplus from a small, but good herd of Percherons. They are 1 and 2-year-olds, got by my imported stallion, Sanson (67842) 78879 and are priced to sell.

Also a few good registered mares. This stock is not fat, but in good breeding condition.

JOHN S. HORSWELL, Estherville, Ia.

### FOUR PERCHERON STALLIONS

For sale, including my imported herd stallion, Marquis, a grandson of Besique. Marquis has the famous blood lines on both sire and dam's side; sound and sure. Also two black three-year-olds and one black two-year-old. Will mature to better than ton horses; sound, with size and quality; registered in P. S. of A. They are priced to sell. Come and see them.

I. C. EVANS, TROY, IOWA.

### Big, Rugged, Heavy Boned Registered Percherons

**50 Head, Mostly Blacks and Grays** These horses are raised in the open; sound and healthy. Many are sired by our famous herd horse, Superior 40605. Unrelated mares in foal to Superior, and Superior fillies in foal to Vermouth. Come or write us.

JAMES LOONAN & SON, Waterloo, Ia.

### SIX DRAFT STALLIONS

For sale as follows: Three 4-year-old dark gray Percheron stallions; weight from a ton to 2,200 pounds. One red-roan stallion; 5 years old; weight over 2,200 pounds. One 4-year-old blue-roan; weight a ton. One bay Shire, 6 years; weight 2,040. They are all registered; sure and sound. Can show colts. They must be sold, as we are going out of the business.

MOLLANCE & RAMSEY, Reinbeck, Ia.

### IMPORTED PERCHERON STALLIONS AND MARES

For sale, or trade for cattle. Two 5-year-old imported black stallions; one 10-year-old imported mare in foal; one 5-year-old French draft mare in foal; one 8-months-old Percheron stud colt.

Also Angus bulls for sale.

R. C. DANNEN, Marshalltown, Ia., Rt.2

### IMPORTED AND HOME BRED STALLIONS

for sale. Can show buyers more registered stallions and mares than any firm in America owns. Come and see my horses and mares and visit the best and liveliest horse country in the West. Reference, any bank in Creston, Iowa.

A. LATIMER WILSON, Creston, Iowa.

### PERCHERON STALLIONS AND MARES

For sale. One stallion, 14 years; can show 50 of his colts. One stallion, 4 years old; can show 20 of his colts. One stallion, 20 months old; good dark gray colt; can show his 2,000-pound mother.

Four full blood mares. Also 40 head good grade Percheron mares; most of them in foal.

(On C. G. W. R. R.)

WM. P. GANNON, VALERIA, IA.

### PERCHERONS FOR SALE

Six home-bred registered Percherons. One dapple grey stallion, weight 2,200, coming 4 years old. One dark grey stallion, weight 2,000, coming 8 years old. Two stallions coming 2 years old, and 2 fillies. Horses sound.

### NORTHEY & THORNBURY

Waterloo, Iowa, Rt. 4.

## 2 Percheron Stallions

For sale—One five-year-old, black, and one 4-year-old grey Percheron stallions; registered, sound, and right in every way; weight 2,000 each.

R. O. LANE, Colfax, Ind.

### 2 FRENCH DRAFT STALLIONS

For sale. Registered; coming 4 years old; black and bay; extra good. Address JACOB LAYLAND, AUDUBON, IOWA.

CHART SHOWING THE PROPORTIONS (INCHES) OF THE BOULONNAISE HORSE, ABBEVILLE.

and make good bone. From there the best stallions come back into the Boulonnaise district or are sent in the Perche and in Franche Comte. There are in the Boulonnaise district stallions enough to take care of the fifty thousand brood mares.

For a few years a great many Boulonnaise mares were bred to Belgian stallions, which they can get by crossing the border, and the prevalent color which was white and dapple gray is becoming sorrel and bay.

The Boulonnaise horse is heavy and full of majesty. He is very proud and makes a magnificent draft animal. Fine specimens of the breed can be seen along the wharfs of Dunkirk and Calais, also in the towns of Lille, Tourcoing and Roubaix.

Following are some of the early records (trotting under the saddle, probably, as that is still the French method) made by the Boulonnaise horses and mares:

- 1847, l'Alezan, at Antum, 1 1/4 mi., 4:55.
- 1855, l'Ami, at Bethund, 1 5-16 mi., 3:50.
- 1857, l'Ardente, at Ronen, 1 1/4 mi., 7:16.
- 1857, Azor, at Bethune, 1 1/4 mi., 7:32.
- 1856, Juliette, at Amiens, 1 mi., 4:00.

Let me send you a WITTE Engine, to earn its own cost while you pay for it.

GET your engine from an Engine Specialist, on any suitable reasonable terms, at a fair price. LOOK AT THESE NEW PRICES!

2 H-P, \$34.95; 4 H-P, \$69.75; 6 H-P, \$97.75; 8 H-P, 139.65; 12 H-P, \$219.90; 16 H-P, \$298.80; 22 H-P, \$399.65. Portable Engines Proportionally low.

Why pay two prices for any good engine, or take chances on a poor or an unknown engine, when the "WITTE" costs so little and saves you all the risk?

You can pay more than my prices, but you can't get better engine-value from anyone. That's what my thousands of customers say and they ought to know.

**WITTE ENGINES,** Kerosene, Distillate, Gasoline and Gas

LIBERAL 5-YEAR GUARANTY. DIRECT FROM FACTORY TO USERS EVERYWHERE.

Styles—Stationary, Skidded, Mounted and Special Sawrig. Thousands in use in all parts of the world. Standard for 27 years—almost ever since there have been any gasoline or oil engines.

In all those years the "WITTE" has proved its high-quality value at all

kinds of work, in all parts of the world. It is today better than ever, while the price is lower. My manufacturing advantages make this possible. I am simply sharing my advantages with engine buyers. Let me write you more about it and post you on engine buying.

1851, Mimie, at Oberville, 1¼ mi., 5:19.

#### HORSE AND MULE TWINS AGAIN.

To the American Breeder:—Am sending you one dollar for three years' subscription to your paper. I am one of the oldest breeders (I don't mean the oldest man) in the state. Have been a constant breeder of registered horses and jacks in Oklahoma for 22 years. I took the first premium that ever was offered at Oklahoma City for a saddle horse in 1893, and in 1914 made 16 shows and got 16 ribbons, taking every color the association offered and was never outside of the ribbons. I showed seven head, consisting of two mares, a 3-year old, a yearling and two colts, all registered saddlers. The best money in the breeding business, in this section, is mule breeding. I have a good registered Jack, 15½ hands high, that I consider one of the best breeders I ever saw. I use the impregnator or capsules to help him out in busy times. In 1912 I bred 176 mares and got 121 live colts. In 1913 bred 207 mares and got 142 live colts. In 1912 I had three sets of twins, one mare saved both and one saved one and one lost both. I had one mare that had been a barren mare until she was 7 years old and had been bred 3 years that I know of and failed. I served her with the jack and then with a registered Percheron stallion. Right away I afterwards bought the mare and then sold her in the fall to T. W. Blackman of Weleetka, Okla., with the understanding that he was to pay for the service fee in case she brought a colt, as we could not tell for sure at the time I sold her whether she was with foal or not. In the spring of 1913 he sent me the money and wrote me that the mare had twins, a mule and a horse colt, both males

#### Watson, Woods Bros. & Kelly Co. LINCOLN, NEBRASKA

#### IMPORTED AND AMERICAN BRED STALLIONS PERCHERONS, BELGIANS AND SHIRES

We have a splendid lot of stallions of various ages selected especially for the requirements for our trade. They are big, drafty, clean boned, well finished and good actors. We have never offered better bargains.

150 choice Holstein heifers, unregistered, from best milking strains, soon to freshen. Our prices are right.

and both alive and doing well. I have real good luck breeding and am still breeding mares for the same men that I bred for 22 years ago. By the way, I examined a cow for a neighbor some time ago and found the womb entirely grown together. I broke it open and he bred her, but she did not get with calf and I examined her again a few days ago and found it grown tight together again and I advised her to be sent to the butcher as she is fat now. If you like, you can print part of this letter, if you see fit, or leave out any or all, just as you like.—J. G. Tyler, Edmond, Okla.

#### JONES' PERCHERON AND SHORTHORN SALE.

In his public sale of Percherons and Shorthorns, on the 12th, C. J. Jones of Rippey, Ia., made an average of \$454.17 on the horses and \$136.60 on the cattle.

The sensation of the Percheron sale was the two gray show and brood mares, Gandine 61,926 (75082) and Ides 94485 (87850), which sold for \$1,700 and \$1,200, respectively. The buyer was W. E. Llewellyn of Albany, N. Y. The two-year-old and yearling stallions, Marvin and Baron Chinda, were among the best values in the sale at \$705 and \$595. The buyers were J. B. Powell, Grand Junction, Ia., and G. B. Hawbaker, Stratford,

#### Percheron Stallions and Mares

For sale—Registered Percheron stallion, 20 months old; weighs 1,500 lbs.; 16 hands high; passed sound inspection; has the best of bone and quality; is black, with small star. Also have two registered mares.

**B. N. LEWIS,** SOUTH BEND, NEB.

#### FOUR PERCHERON STALLIONS

For sale. One 4 years old last September; one 3 years old; one 2 years old and one weanling. Will also sell or exchange the imported sire of these colts for one equally as good. Will test these stallions for prospective buyers with microscope. Am also offering a few mares.

**C. STAHLY,** Milford, Nebr.

#### RIVERVIEW PERCHERON FARM

Offers for sale 15 head heavy boned, rugged built, imported and home raised stallions and mares. Farm joins Ravenna, on B. & M. R. R., 32 miles from Grand Island, Nebr.

**W. R. HANKINS,**  
Owner. Ravenna, Nebr.

#### ELEVEN PERCHERONS

For sale. Four stallions, 2 imported and 2 home bred. Seven mares, 2 imported, balance home bred. Mares old enough are bred. They are large and of the ton kind, with splendid conformation and style. Must be sold by March 1st, as I intend leaving the farm. Write for description and prices. A bargain if all are taken. Come and see.

For sale, including one imported herd stallion, Hercule (75940), a ton horse, and others that will make same kind. W. J. LANYON & SON, Gresham, Nebr.

**KODOMA 43372**

The Great Ton Show Stallion and Percheron sire, for sale. Height 16.3; color gray; age 9 years. Absolutely sound and clean, with the best of feet, bone and pasterns. His sloping shoulders support a beautifully carried head and neck; while his short, broad back, over a deep ribbed middle, smoothly moulds into strong loins and level croup over the best draft hocks imaginable. Kodoma has 12-inch bone below his hocks and scales 1,920 pounds; today in active stud condition weighing some 2,200 pounds; fitted for showing. Guaranteed to get 60 per cent foals. Price \$1,000.

W. T. WILKINSON, Eureka, St. Louis County, Missouri.

**PERCHERONS**

For sale. Two stallions, 2 and 3 years old; big, stretchy fellows; good feet; good bone; choice quality. Four mares; two imported; 5 to 9 years old; all in foal. These mares are big boned; the big quality kind; weight 1,800-2,000. They are priced right. Address

F. C. BARBER &amp; SONS, Skidmore, Mo.

**PERCHERON STALLION—JACK.**

Must be sold to settle up an estate. One good Percheron stallion and one good Mammoth jack. Both registered and in good condition. Jack is black with white points; weight 1,000 pounds; height 15 hands. Stallion is black with star in forehead; weight 1,700; height 16½ hands. Write,

M. W. NORFLEET, 4015 Agnes Ave. Kansas City, Mo.

**SEVEN PERCHERONS**

For Sale—from weanlings to 7 years old. Two stallions, one two-year old French draft. Two jacks; good breeders.

Could spare a pair or two of mules. This ad will appear only once. CHAS. PLUMMER, King City, Mo., R. 1.

**PERCHERON**

STALLIONS

For Sale or Lease.

**M. F. DILLON**

107 Grand Ave. PUEBLO, COLO.

**STALLIONS FOR SALE.**

Two full blooded black Percheron stallions, coming 3 and 7 years respectively. Good ones.

S. R. KLEIN, Blinford, No. Dak.

1a. Among other buyers were Harry Hopley, Lewis, Ia.; G. Parmenter, Harris, Mo.; M. C. Williams, Atlantic, Ia.; Chris Myers, Carroll, Ia.; W. G. Scott, Perry, Ia.; Nelson Ficus, Lisbon, Ia., and C. G. Good, Ogden, Ia.

Among the buyers in the Shorthorn sale were J. M. Bagley, Dayton, Ia.; W. J. Kuberness, Aurelia, Ia.; E. M. Hall, Carthage, Mo.; Perry O. Brown, Lamoni, Ia.; John McElroy, Rippey, Ia.; G. F. Starkey, Boone, Ia., and Harry Hopley.

**AT THE TOP OF ANOTHER LIST.**

To the American Breeder:—In inquiries received for catalogues for my last sale on December 17th, the AMERICAN BREEDER was at the top. I am glad to give you this information and am sure you will be glad to hear it.

I still have 25 big stallions for sale, several will weigh more than a ton by time they go into service. They are a lot of big growthy colts.—J. C. Robinson, Butler County, Kansas.

**Modern Horse Breeding**

By W. F. Dussell, Montevideo, Minn.

There are three things that are very essential in breeding, if we would become successful. The first is a stallion that does discharge live sperm cells; the second, a good healthy mare to receive them; last but not least is cleanliness. If either of the three were lacking there would not be many colts to show for your work.

Now, we will take the stallion first. How are we to know that he does discharge live spermatazoa? We cannot detect it with the naked eye nor can we tell that he ejaculates completely. We may feel the pulsations of the urethra by holding the hand on the lower side of the penis, but that is not a sure sign that he has made a complete ejaculation. Now, how are we to tell? Shall we wait a year and see if that particular mare was fertilized at that time? No.

We have a better way; one that will absolutely tell us in a few seconds. How? By using the microscope, and making an examination at each and every service. It takes only a couple of minutes and you can be sure if the stallion has done its part. By taking a few drops of the fluid you will have sufficient for a test; put it on your slide and flit the glass to distribute it thinly over the surface; adjust your machine, and you have before you a sample of what your horse is capable of at that particular service. You will have countless numbers, if the service is complete, moving over the glass at a very rapid gait, in fact, so fast that the eye of a person not accustomed to it will not detect them; but as they grow cold they move more slowly and you see them more distinctly. The small amount you have on your slide will not be more than a drop or two. But looking down on them you will actually see a good many hundred, all anxious to go some place, going in all directions. Sometimes you get a sample that contains live germs going round and round like a bird with a broken wing; that kind of a germ does not have enough life to travel far enough to meet the ovum, consequently cannot fertilize at that particular time, so this service is lost. Then you will have a sample where there is no life at all. You will however see present small sugar globules floating along. This teaches us that there was not a complete ejaculation of all the glands that are called upon to act, to form a complete service.

We do not know why this is. It may result from overwork or it may be worry or it may be caused from a change of feed or a poor place to make the cover. So you see it is safe to say that the only way to use a stallion successfully is to test him at every service. You are absolutely certain then that the service is good or bad. It only takes one germ to fertilize, all others are wasted. Science teaches us that the average discharge of a stallion is 8 ounces and contains 12,000,000,000 spermatazoa. If only a small fraction of this discharge is taken, you will have enough to fertilize all mares present if they be in breeding condition.

Now we come to the brood mare. It is just as essential that the brood mare be in good health as it is for the sire. If the mare be sick or a little off, you want to know it. You want to be able to make an examination to determine if she be in a breeding condition. Right here is where the speculum comes into play. With it you soon are able to tell at a glance the difference between a mare in the pink of condition and one out of condition. You are not guessing at it. You know and are thus able to either breed her intelligently or turn her down. A stallion groom of today, should school himself to make an examination to detect diseased kidneys and ovaries in the mares presented for service, if there be any suspicious ones. If a kidney or ovary be diseased you stand a poor chance of getting that mare in foal. If you have a bad case it is best to give your veterinary surgeon a chance to either

# First Annual Auction

## Iowa Draft Horse Breeders Association

### February 25-26

Stock Pavilion, Iowa State Fair Grounds

**Des Moines, Iowa**

Consisting of stallions and mares representing the leading draft breeds. A rare opportunity to purchase high class breeding stock from consignments representing all the leading draft horse importers and breeders in IOWA.

**A number of the blue ribbon winners at the leading State Fairs the past season.**

Sale will follow the big free spring stallion show, to be held by the Iowa Department of Agriculture February 24, at which \$1,560.00 in cash premiums will be offered.

Animals will be on the ground the day preceding the sale and available for inspection by prospective bidders.

For catalogs or any information address the secretary, mentioning the American Breeder.

**G. E. O'BRIEN, Sale Secretary,**

Des Moines, Iowa

**JOS. ROUSSELLE, SEWARD, NEBRASKA**

20 Miles West of Lincoln. Farm Joins Seward on the North. Imported Percheron, Belgian and Shire Stallions and Mares. Of the best type; clean, rugged, with bone and action a plenty.

Paris, Mares and Nebraska State Fair winners in our barn. Ages 2 to 5 years; weights from 1,850 to over 2,100 pounds. Intending buyers of herd headers will do well to visit our barn.

Also Shorthorn bulls and heifers. All stock guaranteed. Terms to suit customers.

try his skill or pass her up as he sees fit. By doing this you get along much better with your patron.

Cleanliness comes next and it is just as important as the preceding. Always clean up every mare brought to your barn to be bred, before making an internal examination, have your hands and tools absolutely clean. Use only sterilized water to rinse off the hands and clean up the mare; boil all water used in cleaning your breeding appliances. Use a tail cord to keep the tail up out of your way. If the mare is to be bred with natural service, bandage the tail and you have nothing to bother you then when the horse mounts. Encourage the horse to stay on a long time so that the penis is fully retracted before he dismounts. You will have less trouble with your horse drawing back the discharge and wasting it on the ground. A little patience used at this particular time with a young horse will develop him into a good server. I like a breeding stall for several reasons. First, your horse is not as liable to get kicked at time of service; second, the mare always stands better, therefore you get a better service; third, the mare will hold up more weight than in the open and the groom has a better chance to catch the semen when artificial impregnation is practiced. You can also put the mare on a higher level by using an extra floor to stand her on, in case you are serving a small mare with a large horse.

I consider artificial breeding a big help. In fact, I would not go back to the old way. It is the only way to even up when you have several thousand dollars invested in a horse. It stands a man in hand to see where he can make enough to pull even. With

**MAPLEWOOD PERCHERONS**  
STALLIONS AND MARES

For sale. A good selection always on hand. Ages from 2 to 5 years.

**C. G. ANDERSON**

Hector, Renville County, Minnesota.  
Main Line C. M. & St. P. R. R.

the capsule system he not only breeds more mares but can breed them cheaper and by using the stallion but once a day, you get a much stronger service. If you have any doubtful mares they can be bred with a capsule and no harm done. Shy breeders can be bred more successfully this way than with the natural service. I have bred mares out of heat in this way and have foaled them.

Artificial breeding has come to stay and a man that tries to breed in the old way is behind the times, and will find that he is soon out of the race. A term of schooling at the Graham Scientific Breeding School is in my estimation priceless. One not only learns to breed scientifically but he learns to live a cleaner life. The Graham Scientific Breeding School employs as teachers men of high standing who are authority on the subjects they discuss. It is a school where the boy of fifteen may be sent with perfect safety. I have attended two terms and have met men from almost every state in the Union at these sessions. At this school you meet the best of men. Breeders of today are not the same as those who used to lead out stallions twenty years ago. They are up to date men who do a lot of thinking, lots of studying. Many are, in fact, the very highest type of men.

QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

1403—ORCHITIS—I have a stallion that has a swelling on one testicle and which has been there for the past three months. It started only a small affair but has spread. It has not spread any within the past month but does not seem to diminish any. This stallion is a Percheron, five years old; black in color. Bred 100 mares the past season. I would like your opinion

Our  
**Percheron Sale**  
JANUARY 28  
**DIVERS BARN, WICHITA, KAS.**  
**SPOHR & SPOHR, LATHAM, KAS.**

**KANSAS PERCHERONS.**  
Bone and constitution developed in natural way; breeding the best. We have 50 registered stallions and mares, mostly blacks and grays; weanlings to 7 years. Come and make selections. Write for particulars, mentioning American Breeder.  
**HARRIS BROS., Great Bend, Kas.**

**PERCHERON, BELGIAN AND SHIRE**  
**Stallions and Mares]**  
From suckers up to full age horses. I will sell you a stallion ready for service next spring from \$300 to \$500. Some extra good ones higher. Mares and fillies very cheap.  
**J. M. NOLAN, Paola, Kas.**

**9 PERCHERONS; 1 JACK.**  
Two large, heavy boned stallions; ages 4 and 9; one yearling and one weanling stallion; five mares; ages 2, 5, 7, 8 and 11 years. Registered in P. S. of A.  
Black jack with light points; 15 hands; 9 inch bone; registered. Will sell any or all. Would consider a trade on dairy property near school town. Western land not wanted.  
**H. M. STEPHENS, MUNDEN, KANS.**

**Banner Stock Farm**  
**Home of Inclus.**  
Registered Percherons, jacks and jennets; all ages. Mares bred to the champion stallion, Inclus. Write your wants to  
**BRUCE SAUNDERS, HOLTON, KAS.**

**SIX PERCHERON STALLIONS**  
For sale, including our imported herd stallion, Sirocco, a grandson of Besique. Plenty of size, bone and quality. All sound and recorded in the Percheron Society of America.  
**A. M. DULL & SONS, Washington, Kas.**

**UPLAND STOCK FARM**  
has for sale two black Percherons; 3 and 7 years; weight 1600 and 1800 lbs.; sound; registered in P. S. of A. One dark gray French draft mare; 3 years; weight 1650; sound; registered in F. D. R. One black jack with white points; registered; 15 hands high; 3 years old last July; weight 850. Write for particulars. Prices right.  
**ISAAC HUSCHER, Ames, Kans.**

**For Sale or Trade**  
Black Percheron; weight 1,800. One gray Percheron; 1,950. One Belgian and Percheron.  
One jack, weight 900. One jack, weight 1,050; black; mealy points; extra good breeders.  
This stock is all good and sound. Plenty of good colts to show.  
**F. COUNTRYMAN, THAYER, KAS.**

**FOR SALE OR TRADE.**  
Two large, handsome, registered Percheron stallions, three and five years old, for sale or will trade one for registered Belgian stallion.  
Also 16 hand registered Mammoth Jack, 6 years old; second prize jack in the American Breeder Jack Show of last summer. Will sell to some one wanting an extra good one.  
**H. H. BLKNS, Argonia, Sumner County, Kansas.**

**PERCHERON STALLION**  
For sale, or trade. Black; imported; 11 years; extra breeder; ton horse fillies in the way. Would exchange for another imported stallion as good, same age and breed.  
**W. C. ELLEDGE, HIATVILLE, KANS.**

as to what is the cause and what would remove the swelling. This stallion had an attack of influenza last spring, and recovered promptly.—Illinois Subscriber.

**REPLY**—You will find it difficult to remove the swelling in a manner such as you probably have in mind, but inasmuch as it does not appear to be increasing at this time it is quite probable with the rest your stallion will have between now and the opening of the breeding season, will still further improve conditions. All cases of localized orchitis are apt to give some annoyance during breeding periods, for at this time the parts are more active and more easily aroused.

1404—WEST HIGHLAND CATTLE—I see by your paper of December 5, 1914, a cut of a West Highland bull. Are they for sale in the United States? And can you tell me where I may be able to buy one?—Montana Subscriber.

**REPLY**—We do not know of any West Highland cattle for sale in this country. Any reader who does, kindly furnish the address.

1405—MANGE—I have a setter dog pup, six months old, which has a peculiar form of what I take to be mange. He has a good coat of hair on his back and sides but is raw on the inside of his legs and his entire belly and on the outside of both hocks he had a gathering about the size of a dime which broke and run a sticky, pale yellow pus. He also had several of these sores on the inside of his legs and on his belly. His face from the eyes down to point of muzzle is also bare but no sores. The rims around his eyes are also bare and his nose is dry and hot and his temperature is high like a pup with distemper, but he does not run any at the nose or eyes. He gallops and trots but does not show any weakness in the loin. He drinks freely of water but eats lightly. His principal diet has been table scraps with very little meat. He first showed signs of this affection three months ago, and has been getting gradually worse. He is a pup I had shipped in from Iowa. There is no veterinary surgeon within a hundred miles of here.—Wyoming Subscriber.

**REPLY**—There are different varieties of mange in the dog, one of which is quite prevalent and is very difficult to cure. We refer to the red or follicular mange. This variety causes the pustules mentioned and also causes a very red state of the skin. The ordinary mange will yield to almost any antiseptic agent that is safe to apply to the skin of a dog, but perhaps you had best adhere to some of the simpler preparations. Take a pound of lard and stir into it while warm four ounces of sulphur and add to the mixture two ounces of kerosene. After thoroughly washing the dog with strong soap suds and warm water, wait until he is dry and then thoroughly rub into the skin with the hands the above mixture. Scrape off the excess as clean as possible and in five or six days make another application, and at the end of a week clean him up with soap and warm water.

1406—WRONG ENTRY—I am the owner of a stallion and a jack. A man bred to my stallion. His mare was very small and she gave down as the stallion mounted and as he entered I ran to help brace the mare, so did the man, and he entered the rectum but we did not know it at the time, thinking he was right if the mare was helped. The mare died and the veterinarian said she had been severed in the rectum. In my advertisement in the county paper I say that care will be taken to prevent accidents, but will not be responsible should any occur. Now is this man entitled to a damage?—Illinois Subscriber.

**REPLY**—Small mares, nervous mares, crippled mares and mares which are hard to make the entrance on should all be bred with capsules. No matter what your advertisements may be or what you can prove, this accident will cost you a lot of business. If you have a good business you will

TAYLOR & JONES

**WILLIAMSVILLE, ILLINOIS.**  
Our second importation for 1914 arrived July 6. Anyone wanting the best imported and American-bred Percheron, Shire and Belgian stallions should not fail to visit our barns. Write us for catalog, mentioning the American Breeder.

**TAYLOR & JONES,**  
**BOX 160 WILLIAMSVILLE, Sangamon Co., Ill.**

200 PERCHERONS

Including probably the largest collection of imported stallions of this breed in America, and certainly the largest collection of mares now for sale. We have  
**100 HEAD OF EACH SEX.**  
The Singmaster Percheron business is conducted on the most permanent basis. Every year we import stallion colts and yearlings. In this way really getting first choice and insuring thorough acclimating and development under American conditions. In this way, too, our own breeding herd is constantly strengthened. Our visitors see imported and home bred stock developed side by side in a natural way—the best means of making a satisfactory selection and the best assurance of a satisfactory future.  
**Are They Good? We Simply Ask You to Come and See.**  
We have plenty of ton stallions, plenty of imported mares bred to our famous herd horses, Honorable and Jalap; our prize winnings are a matter of record. The square deal has been our motto for 30 years. Mention the American Breeder when you write us for particulars.  
**J. O. SINGMASTER & SONS, Keota, Iowa**

*None Can Undersell Me, Values Considered*  
**J. C. ROBISON TOWANDA, KAS.**

DANIEL KELLY & SON,

**Lincoln, Nebr. City Office, 1012 O. Street.**  
We have on hands the best all around lot of  
**PERCHERON STALLIONS**  
we ever owned at one time, yearlings to 5-year-olds. Our aim is, **best of blood, big bone and individuality**, that will appeal to any one who wants a draft stallion. We will not handle auction block, second hand or broken down stallions. We give a liberal guarantee, and stand by it. Mention the American Breeder when you write.

What About Imported Percherons?

There are fewer than one-tenth the usual number of imported Percherons now for sale in America. Few, if any, will be imported for several years. Prices are advancing—horses more scarce than ever. We have fifteen big fine stallions brought over last fall. Ton horses. For the purpose of closing our barns within the next four months and moving to the farm, we will sell at lower prices than ever before. All but two are imported and all are broken and acclimated. Bargains if sold quick.  
**PERCHERON IMPORTING CO. Chas. R. Kirk, Pres. ST. JOSEPH, MO.**  
All street cars going south from Union Depot pass our stables.

WHITEOAK STOCK FARM

**American Bred Percheron Stallions and Mares.**  
The best to be had direct from the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to **D. Augstin, Carlock, Ill., R. F. D. No. 2.**  
Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Ill.

Closing Out Bargains in Percherons

I am preparing to quit the farm and  
**My Entire Herd of 50 Percherons—Mostly High Class Mares and Fillies—Is for Sale.**  
I have a few good stallions, of course, and will make close prices on them, but any man who will take all, or a large part, of my mares and fillies, will get a bargain he cannot find anywhere else. Good registered draft mares will be the money makers for years to come.  
**GEORGE HIRSCHMAN, PIERSON, IOWA.**

REGISTERED PERCHERON STUDS

We have them, **BIG FELLOWS**, 1, 2, 3 and 4-year olds. Real drafters, **BIG BONE**; lots of quality and action; grown right. Will go out and make good, both as to sires and foal getters. You lose money if you don't look at **BISHOP BROS.' STUDS** before buying. 20 miles east of Wichita on Mo. P. Ry.  
**BISHOP BROS. BOX C TOWANDA, KANSAS**

## DUNHAMS' PERCHERONS

Are today, as for the past forty-eight years, the breed's best.

As a matter of fact, you can also get more here for your money than elsewhere.

If you are interested in Percherons and want to get in touch with the oldest concern in the business—the one that handles the best class of horses, and whose reliability is proven by the experience of thousands of satisfied customers—come and see us.

New illustrated catalogue on application.

**DUNHAMS, Wayne, Du Page County, Illinois**

### A BIG BARGAIN

Bay Percheron stallion; (inbred Brilliant). A proven foal getter. Pedigree and photo on application to **W. E. BAYLER, Washington, Ill.**

### TWO PERCHERON STALLIONS

For sale. Black; imported; 3 and 12 years old; ton horses; good breeders and absolutely sound. Aged horse was a 1914 winner in the American Breeder's contest.

**A. J. HATTEBERG**  
**PAXTON, ILL. RTE. 4**

#### PERCHERONS

**ARMAND N. GROSSAINT, Clifton, Ill.**

### Imported Percheron and Belgian

Stallions and Mares.

Not so many, but the right kind at the right price.

**J. R. JUSTICE, GALESBURG, ILL.**

### PRIZE WINNING PERCHERON

For sale; a 4-year-old stallion; black, with star and white hind foot; sure breeder and a good sire; weighs 2,100 pounds; a real drafter and fine mover. Was best American bred 3-year-old at International show, 1913. For a good one, see this horse.

**S. S. RUSSELL & SON, Neponset, Ill.**

### PERCHERON STALLIONS

For sale. One 3-year-old, one 2-year-old and one yearling; all blacks; recorded and sound. Also one imported gray; 8 years old; a good breeder and sound. Will sell one or all together. Priced to sell.

**J. C. STEWART**  
**Monmouth, Illinois**

#### STALLIONS FOR SALE.

Two imported Percheron stallions, 5 and 7 years old.  
Also 2 home bred Shire stallions, 2 and 3 years old.  
Will sell any of them cheap, as I have too many on hands. All registered.  
**A. G. HARTMAN, Rte. 6, Tuscola, Ill.**

## FOR SALE

One pair black, registered Percheron mares, 5 years old; with the very best of breeding, and bred to a son of the International champion, "Pink." Photo and breeding on request.

**L. E. TOMPKINS, Palatine, Ill.**

### Seven Percherons

For sale. Four stallions; one aged, one coming 3, one 2, one yearling. Will make ton horses when matured. Three mares, one 9 years old, one 5 and one 2. These horses are registered in the Percheron Society of America. Priced to sell. Will sell one or all. Come and see them.

**L. J. KIRCHER, Strasburg, Ill.**

probably find it profitable to make some kind of a compromise with this man quickly. The breeding business carries with it more or less accidents; you have advertised this, and ordinarily you would not have to pay the damage, unless there were a number of mare owners on the jury. There would be some cost connected with a law suit even if you were not forced to pay for the mare. The next time you breed a very small mare to a large stallion, open her up first, have the owner take hold of both sides of

the bridle bit and hold her very steady, have the stallion come up directly behind, just as slowly as possible, before the stallion enters, place three fingers in the top of the vulva, covering the rectum with the back of the hand, making an entrance with the right hand, then you should have no difficulty. If trouble is expected, it is better in this case to empty the rectum, then there is not usually much danger, if the stallion is allowed to remain on until he ejaculates.

**1407—FEEDING BLACK HAW—I** have a Belgian mare that I bought a year ago last fall and worked her on the wagon until after corn husking time, then turned her out in corn stalks with timber pasture joining. She stayed there until we had a little snow; in a few days we had a kind of a blizzard so I went after her. She was anxious to get home and run out beside my sled and got into snow drifts and fell down twice before I got her home. Four days after she lost her colt but she seemed all right. She is in foal again. I saw a question similar to mine last spring and you advised feeding black haw. I would like to know how much of it to feed.—Illinois Subscriber.

**REPLY—**From one to two teaspoonfuls of the fluid extract of black haw is usually fed in the feed through the period when mares usually lose their colts, with a view of preventing abortion. It operates quite well in this particular and is altogether about the most satisfactory agent known for this purpose.

**1408—STALLION AND JACK INSURANCE—**Can you give me the name and address of the firm that makes a specialty of insuring stallions and jacks, in Kansas City? Do you consider that firm reliable?

**REPLY—**There are no reliable firms that we know of in Kansas City that are making a specialty of insuring stallions and jacks.

**1409—FEEDING SILAGE—I** am feeding 16 mules and four mares 180 pounds of silage per day (140 at night and 140 in the morning). Pit silo filled with corn fodder. Fed it for five weeks. Now if it was going to hurt them what symptoms would I first see?—Kansas Subscriber.

**REPLY—**If your corn was cut at the proper time and so thoroughly packed in the silo that air was excluded, so that no mould is found, you may rest assured that you have a most excellent feed for all classes of stock. Silage is becoming a very popular feed for other stock besides ruminants, and you can very properly make it a small part of the ration for your horses and mules. It is well to permit them access to hay or straw and some additional grain may be necessary to maintain the flesh unless the plants utilized for silage bore a fair crop of corn. The most frequent disturbance evidenced by feeding silage is in the nature of brain disorders which is induced by its having become mouldy or spoiled. Great care should be given to this particular feed. Ordinarily we would not advise taking chances on high priced stock.

**1410—STANDARD MEASURE—I** would like to know what is the correct measurement for a jack, the standard or jack measurement? Is there any difference in measuring them from the ground up and straight across, or from the edge of the hair on hoof over and then take half of the distance?—Colorado Subscriber.

**REPLY—**There is only one method of measuring horses, mules or jacks and that is standard measure. Four inches to the hand from the ground straight up to a point even with the highest point of the withers, when the head is down. Feed the animal in a bucket so as to encourage it to lower

# CLOSING OUT SALE

TO BE HELD IN THE CITY OF GRAND FORKS, NO. DAKOTA

**MARCH 10th, 1915**

**12 STALLIONS -- 12 MARES**

Nine imported Belgian and Percheron stallions; fully acclimated; from 4 to 7 years old; weighing from 1900 to 2200 pounds. All these stallions have been examined by the stallion registration board and pronounced sound, and are licensed to stand for public service in North Dakota.

3 registered stallion colts from 6 to 9 months old.

4 imported Belgian brood mares, from 5 to 6 years old; weighing from 1800 to 2000; all heavy with foal.

4 imported Percheron brood mares, 4 years old; weighing from 1700 to 1900; all heavy with foal.

4 registered fillies, 6 and 7 months old.

**TERMS—**2 per cent discount for cash; 8 per cent interest on bankable paper. Catalog sent upon request.

**E. TOUSSAINT CO., Owners**  
**GRAND FORKS, NORTH DAKOTA**

**FRANK HYLAND, Auctioneer, Devils Lake, No. Dak.**

#### WEST PINE STOCK FARM

Breeder of

#### HIGH CLASS BELGIAN HORSES.

For Sale—The great show and breeding stallion, Magnus (45678) 3680; imported by J. Crouch & Son, Lafayette, Ind. Color sorrel, white stripe in face; actually weighs 2100 pounds. Action, like a "Coachman"; shows a sound state inspection certificate. Has won 10 firsts and championships out of 11 shows. A tried breeder and can show plenty of his colts. Good enough to head a herd of high class registered mares. Good disposition; easy to handle.

Ka-Zak 7497; imported in dam; 2 years old; weight 1950; a good one; wide as a wagon, with an abundance of bone and quality.

Three yearlings weighing up to 1650 pounds and not fat. If you intend to buy a stallion, do not fail to see these before you buy. I have the goods and am always pleased to show them. Buy from the breeder and save the "middleman's" profit.

**HARVEY SMITH, Prop. BOSWELL, IND.**

## IRVINEDALE BELGIANS

SEND FOR NEW PHOTOGRAPHIC CATALOGUE

One of the Few Establishments in America Offering Recently Imported Animals.

#### OUR AUGUST IMPORTATION.

Was one of the best we have ever had, and about the last to leave a European port. We have

40 Stallions; 20 Mares

A few good Percherons among them. Will refund the expenses of any visitor who thinks we have deceived him concerning what we have to offer. Ankeny is ten miles north of Des Moines on the Northwestern Ry. and Ft. Dodge Interurban. Always mention the American Breeder.

**CHAS. IRVINE Box 7 Ankeny, Iowa**

## PIONEER STOCK FARM

THE HOME OF THE BELGIANS

Stallions and mares from weanlings to mature age; both imported and home bred. Oldest breeders of Belgians in Kansas. No reliable firm can sell cheaper, quality considered, or give a better or safer guarantee.

Anyone desiring pure bred stallions or mares will do well to see our stock. Reference, any bank in Harper County. In writing mention American Breeder.

**DAVID COOPER & SONS,**  
**Freeport, Harper County, Kansas**

### Sorrel Belgian Stallion, Fox Re (7365) 1472

For sale. Foaled April 7, 1910; sire Fripon Bogarden 48842; he by Parfalt Bogarden 30814; dam Phany Re 7095; 2nd dam Jeanne Re 35747. Fox Re was imported January 2, 1913; is acclimated and is in fine condition to do a heavy stud season. He is the surest horse I ever owned; weighs 1,680 with his ribs showing. Is broke to work and is a fine worker; has the best of clean, flat legs, with a good foot under them.

The first certified draft for \$700 takes him. Will give him a test with microscope if desired. This is a good one.

**W. F. DUSELL,**

**MONTEVIDEO, MINN.**

Belgian Importers and Breeders

Largest in the West.  
We specialize in the type best adapted to this section—the most modern one—clean, compact, good movers, weighing 1,800 to 2,200. One of the few firms selling good mares in foal and broke to work.  
Stallions Always on Hands.  
BLUE VALLEY STOCK FARM,  
W. H. Bayless & Co., Blue Mound, Kas.

Belgians and Percherons

Chestnuts and Blacks; Typical of These Great Draft Breeds.

Our stallions are twos, threes and fours, some imported last year, some home bred, so that they are thoroughly acclimated. The Belgians are grandsons of the great Brussels champion, Indigene du Fosteau. Come, or write, mentioning American Breeder.

CRAWFORD & GRIFFIN, - - NEWTON, IOWA.

SOME PRIZE WINNERS

For Sale.  
A yearling Belgian stallion; good enough to head a herd of Belgian mares; is a first prize winner and a full brother to Governor Major, the winner of first prize in the yearling class at the Iowa State Fair, 1913; also won Futurity the same year.  
A 6-year-old Belgian mare; a regular breeder; she raised a colt this last year that weighed 1,000 pounds at 6½ months, which I think is the best colt in the state today. Will sell this colt; he will make a great show horse. One weanling grey Percheron stud colt; he is a good one. This stock is recorded and are all prize winners. Will sell worth the money. If you want a good one, come and look at them.  
WM. HARTMAN, Baring, Knox Co., Mo.

IMPORTED BELGIAN STALLION

For sale. Bay, white blaze; weight 1800; 10 years; strictly sound; excellent blood lines; fine and sure breeder. Too many of his fillies around. Will sell at any reasonable offer. Make your bid.  
J. J. BEERENS, Charleroi, Pa.

IMPORTED PERCHERON STALLION.

Gladiateur 62985 (72974); 8 years; gray; 1,950 pounds. A good one.  
I will sell or exchange this horse for Percheron stallion as good, because his fillies are now breeding age.  
Fred Boester, Winchester, Ill., R. F. D. 1.

BELGIAN STALLIONS

Three coming three years, one coming two years; will mature to ton horses with lots of quality. One six-year-old imported Belgian and one registered Shire. If interested, come or write.

STAMP & DONNER, Roachdale, Indiana

FOR GOOD BELGIANS

SEE R. F. FRENCH, Independence, Iowa.  
Twenty imported and home bred stallions for sale that weigh from a ton up to 2,200 lbs., thoroughly acclimated. Also brood mares in foal and with foals at side and re-bred. Matched pairs also.

ROYAL BELGIAN STALLIONS

I have a few imported stallions for sale, 2 to 4 years old; well acclimated. No better horses for this country. Hardy and vigorous. Have won many blue ribbons with them. Prices right. Such horses will not be imported for the next six years. Buy them now before they are out of reach.  
LEON VAN MELDERT, Cedar Bayou, Harris County, Texas.

LEFEBURES' BELGIANS

Largest Collection on Earth.  
Over 140 head on hand November 1, 1914. Two importations received in 1914, before declaration of war. We also have some choice Percherons, 1 to 5 years old, and a number of home bred stallions. Write for catalog and circulars, mentioning the American Breeder.  
H. LEFEBURE & SON, Fairfax, Ia.  
Eight miles west of Cedar Rapids.

PERCHERON, BELGIAN AND SHIRE Stallions and Mares.

Nineteen stallions; 3 and 4 years old; also mares and younger stallions; big, heavy boned drafters; sound, guaranteed 60%; insurance at 8%. Terms if desired. Stallions \$400 and up. We sold 1914 grand champion at Helena. BYRD & HETLAND, Joliet, Montana.  
(Edgar R. R. station, 30 miles south-west of Billings.)

FOR SALE—PERCHERON STALLIONS

Different ages, at bargain prices considering quality and breeding. All grays and sound. Anyone wishing a high class stallion will do well to see this bunch.  
J. P. Detweiler, Congerville, Ill.  
(Between Bloomington and Peoria on L. E. and W. R. R.)

ture and I feed them alfalfa hay; they are in good shape. There are a good many cases of the same sort around here. Please let me know what your idea is about it and what I can do to prevent the rest from losing their colts.—Montana Subscriber.  
REPLY—Your country seems to be full of contagious abortion, or at least numerous complaints come from your section every season. You must exercise the same care with this that you would with any other infectious disease, and that means that the well and infected animals must not mingle. Whenever a mare aborts, separate her from the others. Clean up and disinfect. This is frequently impracticable in some localities, so that it is not always possible to have proper sanitary measures carried out. Never breed a mare that has aborted directly to a stallion. Use the capsule method when she is in shape to be bred.

1412—JENNET QUIT BREEDING— I have a fine jennet and she raised me a jack colt when she was four years old. The colt is now four years old and I have been trying to get her in foal for the last three years but without success. Have bred to various jacks. She is apparently in good shape in every way. Will appreciate any information you can give me.—Texas Subscriber.  
REPLY—Examine her ovaries, one or both of them may be causing trouble. Very frequently one ovary can be removed successfully. If the difficulty is with one ovary it might cause trouble with the other. Bad ovaries are causing much trouble with jennets.

1413—PARTIAL PARALYSIS — I have a mule that got down in the stall one night about three weeks ago. The first night he could raise on his front feet and with a little lift behind he got up, but the next night he got down again and we could not get him up, so we went after a man that doctors horses here and he said that he could not see anything wrong unless he was paralyzed. He said for us to give him one quart of linseed oil, which we did. He eats and drinks the same as he always did, and makes water all right and his bowels are in fine shape. Now this mule run with nine head of other horses and mules but I could not see any sign of his being kicked and there was not a scratch on him. About two months ago he had a rising on both sides of his neck, but they disappeared after rubbing them with liniment, but they appeared again yesterday. Now we raise him and leave him stand with ropes under him so that he cannot lie down for two or three days at a time, and then we let him down to rest one and a half or two days at a time. Do you consider this all right? I have taken him out for exercise several times. He walks all right but yesterday when I had him out I noticed that he knocked his front knees together once in a while when walking. Have been feeding hay and mowed oats and a little ground wheat with a stock tonic. Now this man wanted to give arsenic or strychnine. Would this have been all right?—Missouri Subscriber.  
REPLY—It is quite likely that your mule has been injured in some way which could occur without him showing any external signs of the injury. It is well to continue the use of the slings and give such exercise as he seems to be able to take. Feed him well and try and keep up his strength. Give him one dram of powdered nuxvomica in his feed three times a day.

1414—INBREEDING — Would it be advisable to breed a pure bred Hackney mare to her pure bred son, or to a horse of some other breed if it is almost impossible to breed her to another horse of same breed? Could the colt be recorded if she is bred to her colt?—Iowa Subscriber.  
REPLY—We would not advise mating a pure bred mare to her pure bred son. You will find it more profitable to ship this mare to a good out-

Trumans' Pioneer Stud Farm, Box A, Bushnell, Ill.

HIGH-CLASS SHIRES

For sale. Two extra good growthy yearling Shire stallions. One imported in dam; color gray; weight 1,590; fine style and action; sound. The other from imported sire and dam; color, a beautiful roan; weight 1,550. Won first prize and American bred championship at Bushnell, Ill., Horse Show. These colts are both absolutely sound and will be priced reasonable, quality considered.  
GEO. J. STOLL & CO. CHESTNUT, ILL.

SHIRE STALLION

IMPORTED MOULTON BELL RINGER (27981) 11794  
For sale. Five years old; weight 1,750 in working condition; broke to work; good disposition; good feet; large bone; well proportioned body. Colts on farm to show his breeding. This horse took to masturbating last spring, but is all right now if kept with shield on.  
Will price him reasonable, as we have no use for him next year on account of his colts, and will allow purchaser to give him thorough test with microscope. For further information write,  
CONWAY BROS. CASEY, IOWA.

standing individual, even if it costs a little more. The colt could be recorded from the union you inquire about.

1415—WORMS—I have lately lost two, two-year-old colts and would like for you to tell me what caused it, and the cure, if there is any. Their large intestine was full of small, red worms from one half to three-quarters of an inch long; between the two skins of the intestines seemed to be just alive or red with them. They were in good flesh when put out to pasture in the spring and in the summer the pasture got short, but later they were moved to another pasture and they seemed to pick up some, but when I got them home in October they seemed poor, weak and pot-bellied, and seemed to grow weaker all the time, but had good appetites until they died. Any information you can give me about this will be appreciated.—Iowa Subscriber.  
REPLY—You should employ a qualified veterinarian to look into these cases and identify the particular parasites responsible for your loss, which will be the first step in outlining a course of treatment that can be hoped to reach cases of this kind.

1416—HORSE BREEDING—Have you a book treating on keeping stallions and how to care for them? And also

PRIZE WINNING SHIRE STALLION  
For sale. Dapple gray; imported; coming six; this horse won fourth in Chicago as a two year old, and took first and sweepstakes in Kewanee fair as a three year old. His weight is 1900 pounds, in fair shape; in show shape, 2000 pounds; a sure foal getter. I want to quit the business, the reason for selling.  
HARRY BROADBENT, Annawan, Ill.

SHIRE STALLION.  
For sale; eight years; imported by Trumans' Pioneer Stud Farm; will weigh close to a ton; sound and right every way; sure breeder; nice to handle. Will sell very reasonable, as I am going out of the business, or will exchange him for work horses or Poland China brood sows. This horse won first at Iowa and Indiana State Fairs, as a 2-year-old.  
T. E. ORTH, Washington, Ill.

Buy of the Breeder and save money on registered Percheron Stallions and Mares and Standard Bred Stallions and Mares; \$5 head to select from.—E. P. Hamilton & Sons, Garden Grove, Decatur Co., Ia.

### PARAMOUNT STOCK FARM Breeds and Imports

Percherons, Belgians and Shires.

Home of the Iowa and International Grand Champion FARCEUR 7332 (72924), the greatest Belgian stallion in the world today. Always a select lot of stallions and mares for sale at prices that cannot be beat for high class, sound, 2,000 to 2,500 lb. horses. WM. CROWNOVER, HUDSON, IOWA.

a book on mares. If so what is the price? How should mares be handled to get them bred every year when they are in the habit of breeding every other year? At what age should the colt be when the mare is bred?—Tennessee Subscriber.

REPLY—We furnish our subscribers a book every two weeks. It will give you just as much information

as can be had anywhere else, that the average man can understand and a lot of information that you cannot get anywhere else. Ask your questions. The mare that produces a colt every other year should be watched closely at foaling time. Have a qualified veterinarian make an examination of the uterus just as soon as possible after the colt is delivered. A little piece of the placenta may be left in the uterus. Only those who are thoroughly familiar with infection should make such examinations at that particular time. If there is any placenta left in the uterus the veterinarian will usually do better to remove it gradually by irrigations rather than force. If the mare cleans properly she should be bred on the seventh day with a capsule, by one who is familiar with capsule breeding. This is more especially necessary in mares that are heavy milkers. Much of the energy is directed to the milk supply and diverted away from the ovaries.

1417—AZOTURIA—What is the matter with my mares. They are four and six years old and are in good flesh; look good and have a good appetite. Yesterday I hitched them to an empty wagon and drove them about a half mile when I noticed one of them begin to get lame in the right shoulder and to get very sluggish. I turned around and before I got back to the house she was so stiff in both shoulders she could hardly go and the other had gotten lame in her right shoulder. The mares seem to be affected just alike. They did not seem to be suffering any at all; pulse seemed to be normal but they seem to pant some and to breathe a little hard. I turned them in rye patch and they would hobble around and graze just like there was nothing wrong. This was about two p. m., and by night they seemed to be all O. K.; came to the lot and wanted their feed as usual. I have been feeding them pretty good on maize, sorghum and some baled millet; about all they would eat of the latter. I haven't worked them much of late. These mares weigh about 1,400 pounds each and are, I think, both in foal. About two years ago I had a mare to have the same kind of a spell and it lasted about six or eight hours, but I have never had the same symptoms since. They are very valuable mares and I would like to know what was the matter with them; what the cause and also what to do for them in case they get that way again. These mares run out in pasture when not at work and have access to a straw stack of wheat and rye.—Texas Subscriber.

REPLY—We infer that your mares had a slight attack of azoturia caused by heavy feeding and light exercise. It is a good plan when these mares are not at work to permit them access to some lot or pasture where they can take what exercise they will. By so doing you will more than likely be able to ward off a severe or fatal attack. This disease is to be feared as it yearly is the cause of the death of many of our best horses.

1418—JACK COLOR—What are the objections to a gray jack?—Colorado Subscriber.

REPLY—In the mule market steel gray mules of the draft type bring more money than any other color quality considered. Red sorrel second, and black third. If your jack is large enough and made right and breeds right, we do not know of any objections.

1419—TRAVELING A STALLION—I have a fine Thoroughbred Kentucky horse and want to know if I can drive him half of the time, and drive him 12 miles a day, and if he will be as sure a foal getter as if I did not drive him.—Alabama Subscriber.

REPLY—Twelve miles each day in the week, except Sunday, should not be excessive, provided your horse is started early and having him accustomed to road work. There might come a time when the roads are so muddy that this would fatigue your stallion. During excessive hot weather you might be forced to travel at night. It is not advisable to give your horse too much work. Just enough work to keep him in a good physical

## Jacks, Percherons, Grade Horses, Mules, Cattle and Hogs, at

# DISPERSION SALE

February 9, 1915

On My Farm Two and a Half Miles Southwest of Hampton, Nebraska.

Will trade for work horses, mules or good unincumbered real estate. Get down to business first letter. F. W. POLLMAN, LaCYGNE, KAS.

#### PERCHERON STALLION AND JACK

For sale—Imported Percheron stallion, color black, weight 1,900; a sure foal getter. Also a Mammoth black jack; good breeder and quick worker. For particulars address A. E. GIBBENS, News City, Kn., Rt. 1.

Fine Kentucky Mammoth jacks and jennets, saddle stallions, mares and geldings. Percheron stallions and mares. Write us, describing your wants. Best home grown bluegrass seed; 10 bushel lots and over, 85c. The Cook Farms, Bx, 36, Lexington, Ky.

could be at each stand at a particular hour where you could breed a number of mares with capsules, or at least use the extractor to breed one extra mare at each service. You can use the extractor in this manner without very much preparation.

1420—CAPSULE BREEDING IS A SUCCESS WHEN PROPERLY DONE—I would like to know if the capsule system is a success.—Alabama Subscriber.

REPLY—Capsule colts are so common over the country that hundreds of breeders are holding exclusive capsule colt shows. Nearly every section of the country has a successful capsule breeder who can show you capsule colts until you are tired of looking at them.

1421—BREEDING RANGE MARES WITH CAPSULES—I would like to know if range mares can be bred successfully with capsules, and if it is necessary for them to be in heat when bred. I would like some information about breeding range mares to the best advantage.—New Mexico Subscriber.

REPLY—A lot of breeders are doing this successfully. The best method is to build a chute that will hold a number of mares. One in front of another so that poles can be placed in front and behind to hold them at the right place. Two large swing gates should be placed in such a position that the mares can be forced into the chute one at a time. Take plenty of time in putting the mares in. After the chute is full of mares quietly handle them for some time so as to get them familiar with being in this position. Put them into the chute once a day and be very gentle with them at all times. After they have been handled in this manner a few times

JOHN W. SCHENCK,

I wish to close out my entire Bunch of Percheron Stallions, Jacks and Jennets.

I have six stallions, three gray and three black. Five of these horses are imported and one American bred. All first class stuff and all registered in Percheron Society of America.

I also have two jacks and three jennets. Will sell this stock worth the money, as I want to close them out. This stock is the result of 17 years' careful selection and they are all breeders.

FERRIS, ILL., R. R. No. 1.

## MY ENTIRE HERD

### Percherons, Shires, Jack Stock, For Sale

Privately. Having sold my farm I am going to move to Idaho in March and must sell all my imported and home bred Percheron and Shire mares and fillies—some mares weighing a ton—and 35 head of jacks and jennets.

By March 10 I must be sold out, regardless of price, so come early, or write at once. Reference: Loop State Bank, or First National Bank, Litchfield.

Can use 20 good dairy cows in trade.

HENRY BECK,

LITCHFIELD, NEBR.

#### JACK AND STALLION

For Sale.

One registered jack 6477; 8 years; 15½ hands; black, with white points. Stands straight on his legs with a large bone, hoof and ear; weight 1,100. Quick server and all O. K. in every way. A sure foal getter. Plenty of colts to show. Price \$700, if taken soon.

Also one high grade Percheron stallion; black, with small star; 4 years; sound and O. K. in every way; weight 1,850. This horse was sired by Coco 50033 (62931), an imported Percheron stallion weighing 2,110; the dam a high grade Percheron mare by an imported Percheron horse. This horse stands straight on his legs with a large bone. Is a very easy keeper. Plenty of colts to show. Easy to handle. State license. Reason for selling, am quitting the business. Price \$350. WM. STROHMMEYER

SENECA, NEMAHA COUNTY, KANSAS.

#### PERCHERONS, JACKS, AND JENNETS.

A few tried imported black Percheron ton stallions; extra breeders and well bred enough to head any pure bred herd.

12 head of registered big black Mammoth jacks, from 2 to 5 years old; 14½ to 16 hands high; well broke and quick performers. We have the best herd of well bred jennets in the state, bred to our imported Spanish jack.

Anybody can own a good jack or stallion the way we price them. We have no little stuff.

Come and see us. Farm 30 miles northwest of Hutchinson. Will meet trains at Raymond or Chase.

J. P. & M. H. MALONE, CHASE, RICE COUNTY, KANSAS.

they will not be so badly frightened. It will be better in this case to breed the mares when they are in heat. Arrange a substantial lot and place your stallion in it a little while each day just before you are ready to breed, then allow the mare to come into the pasture where the stallion is confined. It will not usually take them long to

### 40 Jacks and Jennets at Deierling Jack Farm

FOR SALE, from 1 to 5 years old, including our purchase of Otto Brothers' interest in the jacks reserved from our October sale—jacks sired by Pride of Missouri, first prize at the Iowa and Missouri State Fairs and grand champion at the Illinois State Fair, 1912, and the great 4-year-old jack, Deierling's Missouri King, and other good jacks. Our jacks are of the largest known to the breed. Everything guaranteed as represented.

**WM. DEIERLING, On Wabash R. R., QUEEN CITY, MO. (Successor to Deierling & Otto)**

### GOOD JACKS AND JENNETS FOR SALE

One 4-year-old; 15½ hands; broad and deep. One coming 3, one 6 years; 15½ hands; broke to both mares and jennets. Three yearling jacks; extra good; one herd jack, sire of above jacks. These jacks are among the best in Central Missouri. Six splendid jennets. This stock is all black with white points, and registered where old enough. One German Coach stallion, 7 years old, from Crouch & Son. Will price this stuff right, as I want to sell. Write for prices and come to see me.

**O. L. POTTER (8 miles of M. K. & T. R. R.)**

**ROCHEPORT, MO.**

### MAMMOTH BLACK JACK

With White Points, 2d Prize Winner at Kansas State Fair, Topeka. Foaled August, 1911; 15½ hands; 1,000 pounds; in rather thin flesh. This is a very heavy boned jack, a sure colt getter, and a prompt server on mares. Its sire, Admiral Carter, is 16½ hands, weight 1,250; its dam, a big roomy jennet. This jack sells for \$800. Come or write.

**J. F. True, Jr.**

**Perry, Kas.**

### POLAND CHINA HOGS

**Jackson, Missouri, February 23, 1915**

Sale Will Be Held in Big Tents Supplied with Comfortable Seats and Heaters.

Jacks all in good enough flesh to begin the season, ages 2 to 6 years, 14½ to 15½ hands, standard measure; big boned and suitable for mares and jennets. The Poland Chinas are registered; a good practical lot of boars and gilts.

Everything Guaranteed As Represented. Send for catalog, mentioning American Breeder.

**W. F. SCHADE,**

**JACKSON, MO.**

## Third Annual Sale

**Wednesday, February 24, Cape Girardeau, Mo**

#### 20 HEAD OF JACKS AND JENNETS.

Jacks from weanlings to 6 years old. All 2 years and up, 15 to 16 hands standard measure. Some have 34½-inch ear and weigh close to 1,100 pounds.

Everything guaranteed as represented. Write for catalogue.

**BEN M. GREEN, CAPE GIRARDEAU, CAPE GIRARDEAU COUNTY, MISSOURI.**

### ANNUAL JACK AND JENNET SALE

**Savannah, Mo., March 4th, 1915**

25 Black Jacks, big Mammoth type, with lots of bone and substance, 1 to 7 years old.

12 Big Black Jennets, bred to the best possible jack! This is the best offering I have ever made. At least six extra good herd headers are included. Write me at once for illustrated catalog, mentioning the American Breeder.

**G. M. SCOTT,**

**ROUTE 2,**

**REA, MO.**

N. B.—Electric cars every hour from St. Joseph to Savannah.

### JACKS AND PERCHERON

Four jacks, one 3 years, two 4 years and one 6 years old. Also one Percheron stallion.

**J. T. HEWITT, Mendon, Adams Co., Ill.**

## Jacks

For sale. Eight young jacks, from 2 to 3 years old. Good stock. Raised right. Acclimated to cold climate. Scarce of room. Will sell cheap.

**D. E. BAUGHMAN, FORT DODGE, IA.**

### JACK—IMPORTED PERCHERON STALLION

#### And Herd of Good Jennets

For sale or part trade. Jack is 15½ hands high; weighs 1050; 5 years old; black, with white points; a great show jack. All stock sound and guaranteed breeders, and right in every respect. 1 jack; 4 years, 16 hands, weighs 1,200; a great herd jack.

Terms to suit on good paper, or would take some good Percheron mares or mare colts as part pay.

**A. M. Perkins, Washington, Ind.**

#### DON'T WAIT

##### For a Jack

##### Until You Have to Have It.

First buyers get first choice. Look at these offers: 8-year jack, \$300; three 3-year jacks, \$600 to \$750; one 2-year jack, \$1,000; four yearlings by Highball, world's record priced 2-year-old.

Can sell jennets bred to one of the few really great big, good jacks living. Can use some good cattle or big mares in a trade.

#### MILLER STOCK FARM

**F. M. Lorimer, Mgr., Olinthe, Kas.**

39 Steam and Electric Trains Daily.

#### 8 HEAD TENNESSEE JACKS

For sale; white points; 2 to 7 years old; 15 to 16 hands. Good enough for herd jacks—the blecky kind. Will trade for heavy Standard bred horse.

**A. G. BUSH, Fairland, Okla.**

To the American Breeder:—Find inclosed photograph of Mr. John Man of Carterville, Ill., and his capsule mule colt, five and one-half months old. Mr. Man had bred this mare to my Percheron horse several times with natural service. The last time I capuled her with some semen from jack, that I had carried under my arm in a quinine bottle for six hours. I tested it and found it fertile before using it; then bred her with natural service to the

Percheron horse to satisfy Mr. Man. The mare settled all O. K. Mr. Man was sure his mare would bring a filly colt from the Percheron horse so he gave it beforehand to his daughter, who is about 16 years old. But when the colt arrived the young lady owned a horse mule instead of a Percheron filly. Mr. Man named the mule "Quinine," and is well satisfied with capsule work now.—John Farmely, Williamson County, Illinois.

MAMMOTH JACKS

For sale. Large, heavy boned, 15 to 16 hands high. Prices from \$250 up. Located eight miles west of Cedar Rapids, Ia., near Fairfax.

JOHN HENRY, Fairfax, Ia.

FOR SALE OR TRADE.

Two jacks, one 2 years old; weight 1,000 pounds; one 6 years old; weight 1,200 pounds. Both black; 15½ and 16½ hands, standard.

One span Percheron mares; weight 1800 pounds; sound; sure breeders; 7 years old; brown; both with foal. One German Coach stallion; black; weight 1,300 pounds.

Will trade any of said stock for an extra good jennet jack under six years old.

CLEM S. GUDE, Hamburg, Iowa.

Theodore Conrad, Groom, Texas, has 30 black jacks and jennets and a three year old French draft stallion and some mares for sale.

A. G. Bush, Fairland, Okla., is advertising in this issue eight head of Tennessee jacks for sale, or will consider a trade for a Standard bred horse.

Lonzo McClain, Lima, Ohio, is advertising his prize winning Percherons and Belgians for sale. He won over \$1,200 in cash prizes this year.

T. E. Orth, Washington, Ill., wants to sell his Shire stallion, or will exchange him for work horses or Poland China brood sows. The horse is a prize winner. Mr. Orth says he will sell this horse very reasonable, as he is going out of the business.

F. M. Clevenger, Centerville, Ind., has imported and home-bred Percherons and Belgians for sale and wants any of our readers who are in the market to write him for prices, etc.

J. G. Thompson & Sons, Steubenville, Ohio, is advertising for sale in this issue 12 registered Clydesdale stallions and mares.

M. F. Dillon, 107 Grand Ave., Pueblo, Colo., has Percheron stallions and mares for sale or lease.

S. S. Russell & Son, Neponset, Ill., wants to sell their prize winning Percheron stallion, age four. Was a prize winner at the 1913 International.

The Oklahoma Improved Live Stock Breeders' Sale that will be held at Enid, Okla., the week of February 8, will, without question, be the best sale ever held by this association and one of the best ever held in the Central West. The sale opens on Tuesday with about 100 head of hogs equally divided between Poland Chinas and Durocs. The cattle sale will commence on Wednesday at 10:30, and includes Jerseys, Aberdeen Angus, Herefords and Short-horns. For the Percheron sale, Mr. J. H. Jackson of Enid consigns an imported four-year-old stallion that was first in class at the Oklahoma, Texas and Louisiana state fairs. He also consigns a team of mares that weigh 4,410 pounds; one of them was champion of the Texas and Louisiana state fairs, and the other was champion at the National Breeders' & Feeders' Show at Fort Worth. Both of them are safe in foal to Albany 2nd, champion eight times at various state fairs and National stock shows. Mr. Jackson will also sell a number of young stallions and fillies by Albany 2nd. W. S. Boles & Sons will sell a number of young stallions and fillies by Hautain; he is an imported horse that has been champion at the Kansas, Oklahoma and Arkansas state fairs. As a three-year-old he was second to Helix at the American Royal in Kansas City. They will also sell six head of mares, several of them imported, and they have been first in class at the American Royal, and Kansas, Oklahoma and Arkansas state fairs.

Dunham's, Wayne, Ill., want to send their new illustrated catalogue to any of our readers who are in the market for Percherons. Their ad starts in this issue.

F. Connellyman, Thayer, Kas., has some Percherons and jacks to sell, or trade for land.

Ben M. Green, Cape Girardeau, Mo., holds his third annual sale February 24, when he will sell 20 head of jacks and jennets. He guarantees all his stock as represented. Be sure to write for catalogue, and attend the sale.

E. Fosberg, Littlefield, Tex., sells Sudan Grass seed for 60c per pound in small lots; 50c in 50-pound lots.

James Auld, Wakefield, Kas., advertises first class Shire stallions.

Fred Boester, Winchester, Ill., wants to sell or exchange his Percheron stallion.

W. F. Dussell, Montevideo, Minn., is offering his imported Belgian stallion for sale at \$700. Read the description of this horse in Mr. Dussell's ad in this issue.

Daniel Kelly & Son, Lincoln, Neb., say they have the best lot of Percheron stallions that they ever owned at one time; give a liberal guarantee, and stand by it. See their ad.

Jones & Frederick, Lima, O., send the following testimonial in regard to their remedy, "Ichnobate": "One of my horses had a dry, troublesome cough for three years. Veterinarian said it could not be cured. After using several other remedies without success, decided to try Ichnobate Distemper Cure. One bottle has entirely cured it. I will not hesitate to recommend it to my friends. No stable is complete unless it has this valuable remedy in it.—E. Foltz, Deshler, O."

Lew Jones, Alma, Kas., starts his regular season's advertising in this issue. He has Belgians, Percherons and jacks.

I. N. Green, Kiowa, Kas., holds a public sale February 5, on his farm, consisting of 102 head of jacks, jennets, stallions, horses, mules and cattle. Write him for full information.

William Strahmeyer, Seneca, Kas., has a jack and a Percheron stallion advertised in this issue. Look up the ad.

Lock Box 666, Grand Island, Neb., wants to trade land for stallions and mares. If interested, look up the ad and write for further information.

David Cooper & Sons, Freeport, Kas., have Belgian stallions and mares from weanlings to mature age, both imported and home bred. Anyone in the market for a Belgian should write and get their prices.

D. E. Banghman, Fort Dodge, Ia., has eight young jacks which he says he will sell cheap.

TWENTY-TWO JACKS AND TWENTY JENNETS FOR SALE.

Ages from Yearlings to Six Years Old.

Blood lines that represent the Dr. McCords, Dr. Long, Starlight, Peacock, Jumbo, Orphan Boy, and other noted animals. Matured jacks are not less than 15 hands (standard) to 16½. All matured jacks have been tried out and a gilt edge contract accompanies every sale. Write me about our jacks and Percheron stallions. We will answer you.

40 head of fine registered jacks and jennets for the fall trade. I raise most all my jack stock and can sell them cheaper than any man that deals in them. My jacks are all black with white points; in age from colts to 8 years; in sizes up to 16 hands. Formerly of Flemingsburg, Ky.

U. G. SAUNDERS, FAIRLAND STOCK FARM, LEXINGTON, KY.

THREE JACKS

For sale. Black, with white points; registered; two, four years old; one, three years old; well broke; good individuals; good bone; good conformation. Will dispose of these jacks right on account of sickness. Come and look at this stock.

Claude Thompson, Liberty, Mo., Rt. 2.

JACKS AND STALLIONS

For sale. Some of the best big jacks in Missouri. Priced to sell. Some extra good Percheron stallions, weighing a ton or better. All to be sold with a guarantee backed by 30 years of honorable dealing.

J. E. PARK, Cameron, Mo.

CENTRAL KANSAS JACK FARM

15 Mammoth Jacks

2 years to 6 years—all broke to serve. See this stock before you buy. I can save you money.

Everything guaranteed as represented.

D. J. HUTCHINS, STERLING, KAS.

Jacks, Jennets, Percherons

FOR SALE.

7 Big Black Jacks, coming two to 5 years old. Also 7 jennets.

9 Registered Stallions, from yearlings up.

2 Black Percheron fillies. Would like to dispose of this stock and will price to sell.

JOE FOX, GREELEY, KAS.

JACKS, JENNETS AND MULES.

15 jacks, as good as can be found in Missouri; 15 jennets, all good; 30 high-class work mules, 4 to 7 years, all mares; 24 mare mule colts. None better in Missouri. Prices will suit you. Will pay your expenses if stock not found as represented.

G. B. DOWELL, Center, Mo.

JACKS AND JENNETS

For sale; 30 black Mammoth jacks and jennets; recorded; some in foal by Jumbo R. 3964, one of America's best. And a 3-year-old French draft black stallion, and mares. Inquire

THEODORE CONRAD, Groom, Carson County, Texas.

FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address.

J. C. HUCKSTEP, Eolia, Pike County, Mo.

MAMMOTH JACKS

For sale. Registered, well boned, one to six years old. If you need a high-class jack, we have them. Prices right.

NEILD BROS., Ogden, Boone Co., Ia.

**JACK WANTED; JACKS FOR SALE.**  
Ten big, black, heavy boned Mammoth jacks for sale, from weanlings to 6 years old. Some are good enough to head any herd of jennets in the state. I want a first class herd jack, not related to my jennets. Would trade one with any man whose wants are the same, provided they have one that is first class and young. All stock fully guaranteed and will be priced very reasonable.

**JAS. M. SPURGEON,**  
Lewis County, Williamstown, Mo.

#### JACKS—JENNET

For sale. One 4 year old jack; 15:1 hands; 900 pounds; broke. One 3 year old jack; 15:1 hands; 800 pounds; broke. One 3 year old; 15:2; 900 pounds; unbroke. Spotted herd jack.

One 12 year old jennet; 16 hands; 1100 pounds.  
This stock is all black with white points and registered. Easy terms. Come and see them.

**E. E. Laughlin, Foster, Bates Co., Mo.**

#### JACKS AND REGISTERED JENNETS

For sale or trade for other live stock. Would prefer registered Morgan or Percheron stallion, or a good herd jack.

**WILL ALBIN, Saffordville, Kans.**

#### COLLIE PUPS

For Sale. Dark yellow color, with white markings. Bred of working stock. Price \$5.00.

**John Scherer, Olney, Ill., R. 8, Box 11.**

#### REGISTERED ABERDEEN ANGUS CATTLE AND SHETLAND PONIES

For sale; either sex.

**LOVE OAK STOCK FARM,**  
**F. S. Dallaer, Prop., Lockridge, Ia.**

#### HEREFORD BULLS

For Sale and Wanted.

My herd is strong in Beau Brummel blood. Cannot spare females at present, but **Bulls From Calves to 18 Months** always on hands. Prices reasonable. When you write state what you want or what you have for sale. Always mention American Breeder.

**W. F. SIPES, WINDSOR, MO.**

#### WHEAT FARM FOR LIVE STOCK

I want to sell or trade for live stock, a 160-acre wheat farm in Alberta, Canada, 20 miles from the U. S. line; 3½ miles from good railroad town. All tillable and under fence; 70 acres ready for wheat. Small house and stable. Rents readily. School on farm. For other information, write—

**W. H. GOSNEY, Route 1, Goddard, Kas.**

#### SADDLE HORSES.

#### TO CLOSE A PARTNERSHIP

We will sell the noted Kentucky bred stallion, Prince Rupert 887 and Augusta Chief 3991. If you want the best, see these horses.

**Kentucky Saddle Horse Co.**  
1008 E. 15th St. Sedalla, Mo.

#### Public Sale February 2, 1915

Consisting of 60 head of registered saddle stallions, mares, jacks and jennets of the best blood that Missouri and Kentucky affords.

Sale held in pavilion rain or shine, on farm one mile south of Mexico, Mo., on Pike. If interested write for catalogue.

**HAMILTON BROS., MEXICO, MO.**

#### Saddle Stallion

For sale or exchange. Carrol Bourbon 3920; sire Bourbon Chief; dam Red Squirrel; chestnut; 16 hands; great individual; an excellent and sure breeder. Could use pair of Percheron fillies; registered. This ad will not appear again.

**G. D. CARPENTER,**  
**R. F. D. No. 1, Sanders, Ky.**

#### SADDLE STALLION BARGAIN.

For sale or trade—My fine saddler, Collin King, 4503 A. S. H. A.; 7 years, 16 hands, 1,200 pounds; bay with little white in face; left hind foot white. A fine breeder and perfectly gentle. Must move him account of his fillies and will sell cheap or trade for a good young jack.

**H. D. POWER, Alto, Tex.**

#### REGISTERED SADDLERS

For sale. Stallions, mares, fillies and geldings, by Rex McDonald 833, Rex Monroe 2063, Star McDonald 2526 and Fos McDonald 2096; out of the finest lot of brood mares in the land. 60 head to select from. Address

**H. A. GREENWELL, LAKENAN, MO.**

#### FOR SALE OF EXCHANGE.

Elizabeth Stage 9568, A. S. H. R., by Rex Peavine 1796; dam Jewell Eagle 4295, by Woods Eagle Bird; 2nd, 3rd and 4th dams registered. Dark bay; 16.3. weight now 1075; foaled 1911; well broke single and to ride; goes fast and straight in harness and will make a high class saddler and brood mare. Absolutely sound and a fine individual. Price \$250, or will exchange for high class saddle gelding, 4 or 6 years old, that can be used by a woman. Am prepared to pay difference for right kind.

**JOHN C. GRAFF, Rushville, Ill.**

**E. Toussaint Co., Grand Forks, No. Dak.,** will hold a closing out sale March 10. They have 12 stallions and 12 mares—Belgians and Percherons. Send for catalog and get a description of all the stock. Stallion men throughout the Northwest can find acclimated stock here. Mention the American Breeder when writing.

**R. C. MacMillan, Hebron, Ind.,** is offering a prize winning Clydesdale stallion for sale.

**J. W. Hodgson & Sons, Lexington, Nebr.,** have two Percheron and one French draft stud colts for sale at reasonable prices. Also one Percheron stallion, one Belgian stallion and two aged stallions.

**The Cook Farms, Lexington, Ky.,** have jacks and saddle horses for sale at all times. Also home grown blue grass seed.

**W. H. Hawkins, Ravenna, Nebr.,** is offering 15 head of home bred and imported stallions and mares for sale.

**J. J. Beereus, Charleroi, Pa.,** will sell his imported Belgian stallion at a reasonable price, as his fillies are in the way.

**Sanford Hutsell, Hampton, Nebr.,** holds a dispersion sale on February 9, on his farm two and a half miles from Hampton. He is selling jacks and jennets, Percheron stallions and mares, grade Percherons, Shorthorn cattle and stock hogs; also farm machinery and other articles. Read the advertisement in this issue and when writing Mr. Hutsell, mention the American Breeder. As this is a dispersion sale, it holds the usual opportunity to get the kind of breeding stock often kept in reserve. Hampton is on the main line of the Burlington, 60 miles west of Lincoln.

**How It Acts—Spohn's Cure** acts directly on the organs most affected, and does it through the blood. It is an alterative and its properties are diuretic, antiseptic and germicidal. It will not act as a cathartic or purgative, and is not intended to do so. Spohn's Cure acts quickly in most cases, even when horses cannot swallow, and when put on the tongue enough is carried into the circulation by the absorbents of the mucous membranes so that in three hours' time the offensive odors of the poisonous matter driven from the system through the kidneys and bowels can be detected.

**Chas. A. Galt, Mound City, Kas.,** has a large young jack advertised in this issue.

**Wm. Hartman, Barling, Mo.,** says he will sell some prize winning stallions worth the money and wants any one in the market to come and look at his stock before buying elsewhere.

**Frank Busch, Villa Ridge, Mo.,** has black Spanish jacks and jennets, and will send description and price on request.

**F. C. Barber & Sons, Skidmore, Mo.,** have two Percheron stallions and four mares, which he says he will price right.

**Gus Weber, Garnett, Kas.,** has a black jack for sale or trade for live stock.

**J. M. Price, Vandalla, Mo.,** has 12 jacks, a French draft and a trotter for sale.

**B. S. Holloper, Bigtimber, Mont.,** has 60 head of horses, from weanlings up, for sale.

**W. H. Gosney, Goddard, Kas.,** offers a wheat farm for live stock.

**R. L. Harriman, the West's leading live stock auctioneer,** whose specialty has long been horse and jack stock, Shorthorn cattle and large type Poland China hogs, is an advertiser we are glad at all times to recommend. Col. Harriman repeatedly has been called thousands of miles—to Texas, to the Pacific coast, to the Gulf states, to the Atlantic states—to make public sales. In the corn belt he is constantly in demand. Address him at Bunceton, Mo., as per advertisement.

The light question is still important and will be until the last of March. Those who have not investigated the offer made by the Mantle Lamp Company should answer at once this company's advertisement on the back page. Be sure to mention the American Breeder when writing.

The Detroit Engine Works, 67 Bellevue Avenue, Detroit, Mich., has a page advertisement in this issue, illustrating the many uses to which their engines actually are put. One of the important features about the Detroit is that its engines are built with a view of adapting them to these special uses. When you write this company for information, as everyone should do who contemplates buying an engine, state the work for which you expect to use the engine, and always mention the American Breeder.

One of the most useful remedies and staple articles for horse owners is Corona Wool Fat, sold by the Corona Mfg. Co., 21 Corona Block, Kenton, O. This firm starts its season's advertising with a small announcement in this issue.

Fence buyers, or any one, in fact, who is likely to need fencing or gates of any sort the coming spring or summer, should write at once for catalogues of the Ward Fence Company, 618 Ward Street, Decatur, Ind., and the Ottawa Mfg. Co., 221 King Street, Ottawa, Kas. These companies specialize and can save almost any buyer money.

The Witte Iron Works, 2552 Oakland Avenue, Kansas City, Mo., do a successful business in gas, gasoline and oil engines. This company also sells practical, inexpensive saw rigs suitable for power. The Witte company manufacture one of the biggest assortments of special engines to be had

Astral King 2805.

## Astral King Excels

IN FORM, STYLE AND SUBSTANCE  
and Breeding Ability, and  
At Everyone of the Saddle Horse Galls

I have Astral King stallions and fillies for sale. No young breeder can afford to start with the wrong kind and no established breeder can afford not to have some of the most up-to-date breeding. Can give time to the right kind or buyers.

Registered Herefords for Sale—Weanling bulls and heifers at \$100, and yearlings at \$150.

**JAMES HOUCHIN, JEFFERSON CITY, MO.**

## R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer  
of the West

I sell more horses and jacks than all others. Terms always right; work always up to the highest standard.

anywhere, and every prospective engine buyer should get their catalogue. Please mention the American Breeder when writing.

**King's Housewrecking S. & L. Company,** 1814 Troost Avenue, Kansas City, Mo., can save money every month of the year for buyers of building material, roofing, all sorts of house and farm equipment, fencing, pumps, etc. It pays to write this company every month or so for special catalogue, as they always have something new to offer at a money saving price. Always mention the American Breeder when writing.

February 25 and 26 are the dates selected for two of the biggest state draft horse association auctions ever held in this country. The Nebraska draft horse breeders will hold their combination sale at Grand Island, and 100 draft stallions and mares, representing all the important breeds are listed. For a catalogue of this sale address H. H. Hall, secretary, Grand Island, Nebr. On the same two days the Iowa draft horse breeders will hold a public sale in connection with the winter draft horse show conducted by the Iowa Board of Agriculture at the State Fair Grounds. This will be the largest gathering of strictly draft horse men for the year in Iowa, and doubtless will bring out the most important sale offering. For catalogue of this sale address G. E. O'Brien, sale secretary, Des Moines, Ia., care of the State Board of Agriculture.

#### TELL ABOUT YOUR BREEDERS' ASSOCIATION.

To the American Breeder:—As secretary of the Pine County Breeders' Association, in a county so preeminently a stock and dairy county, I should like to have plans for association threshed out which would result in something so plain and simple and effective that farmers and breeders would see at a glance that they could not afford to be without it. Can you start something to draw out plans and suggestions—200 or 300-word articles?—P. A. Christianson, Pine County, Minn.

Editor's Note.—Mr. Christianson's point is a good one. We hope several breeders will write us how the breeders of their section were interested, and how they went about forming organizations, how often they meet, what they do, etc.

#### EASTERN HORSEMAN ENDORSES FRAVELS.

Fravel's Distemper Remedy for horses and mules is now known from coast to coast as a compound that will absolutely cure Distemper, Shipping and Acclimation Fever and other kindred ailments of horses that cost to horse breeders and buyers of this country millions of dollars every year. Pneumonia and Pleurisy are prevented or cured by this great remedy. Many experiments have been made with the remedy and horses bought in every section of the country have been put together in the same pens and barns after giving them the preventative dose of Fravel's Distemper Remedy, and it has been proven that it is a preventative of contagion as well as an absolute cure for the diseases mentioned and of kindred ailments. Frank Matty of Syracuse, N.

## STALLIONS ARE SELLING

First Buyers Get Best Values.  
In Standard breeds we offer bargains in two stallion colts (1 and 2 years), both by Claremont Director (Matinee) 2:17, a 1,260-pound horse, and out of Beatrice Butler, that has shown a 2:15 gait.  
Can use 'good cattle or heavy mares on a trade.

#### MILLER STOCK FARM

**F. M. Lorimer, Mgr., Olathe, Kas.**  
39 Steam and Electric Trains Daily.

#### REGISTERED MORGANS FOR SALE.

A choice lot of young stallions and mares, weanlings to 4 years old. Weanlings and yearlings can be crated and delivered to any point by express at a moderate price. Can sell fillies and stallions of different breeding that would be suitable to mate together. Could sell a car load of registered mares and fillies that have been bred to registered Morgan stallions, at a very moderate price. Most of my young stock is out of The Admiral. Headlight Morgan is now at the head of my stud and I am expecting at least 40 colts from him next spring.

**RICHARD SELLMAN, Rochelle, Texas.**

## STANDARD BRED STALLION.

Swastika 45382, for sale or trade. One of the best bred stallions in the South. Also some good brood mares, ready bred. Prices right. Reason for selling, fillies in the way. Shorthorns, Duross or stallion colt considered in trade.

**W. P. DORTCH, Jr.,**  
**Kerrs, Lonoke County, Ark.**

#### WAR HORSES

Registered Black Hawk Morgans, stallions and mares; all ages; one or a carload. None better for cavalry horses. Or will trade for a large jack or land. Write fully in first letter.

**E. F. BROWN, Derby, Lucas Co., Ia.**

## Be an Auctioneer

Travel over the country and make big money. No other profession can be learned so quickly, that will pay as big wages. Write today for big, free catalogue of Home Study Course, as well as the Actual Practice School.

**MISSOURI AUCTION SCHOOL,**  
Largest in the World.

**W. B. Carpenter, Pres.**  
818 Walnut St., Kansas City, Mo.

#### LOUIS A. WILSON

LIVE STOCK AUCTIONEER, Logan, Ia.  
I am conducting sales for the best breeders in the country. Reference: American Breeder. Write me for dates.

#### JOB WANTED ON FARM

or with live stock. Have experience in breeding and all kinds of farm work, and want steady job at fair wages.

**G. W. ENGLE, Shelbyville, Ill.**

#### WANTED, POSITION

on first-class horse, cattle or mule ranch as general manager or foreman. Can give first-class reference as to ability. Address **F. T. HILLIARD, Box 1, New Castle, Colo.**

## THREE FARMS FOR SALE

Wm. M. SPRINGER

521 Gas and Electric Bldg., Denver, Colo.

## Hotel Convention

Large rooms, good beds. Special rates to students of the Graham Scientific Breeding School, as low as 35 cents per day. Good restaurants in connection and nearby. Only a block from the school and Convention Hall.

Y. writes, "I can honestly say that I have not lost a single horse when I have used the Fravel Remedy and I have used it on 250 head. I cannot

say too much in favor of the true merits of this great remedy for horses that are shipped from one state to another. No more doping every two hours; no more setting up all night to give the medicine. All a horse needs is a dose of Fravel's Remedy once in every 24 to 36 hours and in most cases, once in 48 hours." This remedy is made and sold by A. W. Fravel, Ph. G. V. S., Centralia, Mo.—Adv.

## Questions and Answers

(Continued from page 15.)

find their way up to the horse if they are in heat. Breed all of the mares that are in heat and have three different colors of paint, representing three different weeks of breeding. Take the paint brush and put a streak of paint on each mare bred, then when she comes in heat you will know if it is time to breed her or not. You will want gentle, clean, healthy mares to make the services on. Three services a week will breed a large number of mares, as many as 20 head can be bred at one service by making only three services a week. You can take a cracker box and place two lamps in it with a galvanized tank placed over it and hold the temperature of your water plenty long enough to fill the chute several times with mares. Mares which are in foal should be kept out of the chute until after delivery. All "wild west business" should be eliminated. Do not attempt to use capsules until the weather gets warmer.

1422—EXERCISING STALLIONS—Please inform me the amount of exercise, in your judgment, a three-year-old Percheron colt ought to get. This colt was imported in 1913. Does his not being acclimated, in your opinion, interfere with his being a sure foal getter? He will get about seven out of 20 mares.—Wisconsin Subscriber.

REPLY—Your stallion ought to have enough exercise to keep him in a good physical condition. You should begin by giving him one mile each day now and gradually increasing it until you think he is getting sufficient exercise. Do not wait until the breeding season starts. Begin preparations for the breeding season at this time. Do not feed too much, but use the best of feed at regular intervals, gradually increasing as the individual requires. The fact that your colt sired a few colts ought to be evidence that he can be made a breeder. Freshly imported horses occasionally get out of order. Examine your mares carefully so as not to scatter any infection from one mare to the other.

1423—CHARLES RAY—Is Charles Ray connected in any way with the American Breeder? He has not done as he agreed to with me. Have you received any complaints besides mine concerning the sale of his breeding instruments?—Kansas Subscriber.

REPLY—No such party is connected with the American Breeder and we do not know him personally. We have, however, had a good many complaints concerning a person with some such a name, and if the nature of these complaints is any indication of the way he conducts his business, he is, in our opinion, doing a great deal of damage to the cause of modern horse breeding methods in this country.

1424—COLORADO LIEN LAW—How can I collect service fees in this state? Several mares have been traded off and the parties who bred them refused to pay.

REPLY—Section eight of the new Colorado Stallion Law reads as follows: The owner or owners of any licensed stallion or jack shall have a lien upon the get of any such stallion or jack until the service fee has been paid, and it shall be unlawful to sell or dispose of or remove from the county any colt upon which the owner of a licensed stallion or jack has a lien as provided for in this section without the written consent of such owner, nor shall any mare served by a licensed stallion or jack be sold or removed from the county prior to payment of service fee without the written consent of the owner of the stallion or jack which served said mare.

1425—RIDGLING—Is a stallion that has only one testicle down, as sure a breeder as one who has both testicles down? Is such a stallion much more

## World's Greatest System of Horsemanship

Twenty-five thousand FARMERS and horse-owners have taken my regular course and found that it does the work. Even if you have only one horse, it will pay you to master my wonderful system. The Beery Course is the result of a lifetime's work as a tamer and trainer of horses. As one of my students has said, "The horse has never been foaled that Prof. Beery cannot handle." My record proves it.

## Master Any Horse

The Beery Course gives you the priceless secrets of a lifetime—enables you to master any horse—to tell the disposition of any horse at sight—to add many dollars to the value of every horse you handle—and my students are all good traders.

## Break a Colt in Double-Quick Time!

You can do it by my simple, practical, humane system. There is a lot of money in colt training.

Make \$1,200 to \$3,000 a Year

Many of my graduates are making big money as professional horse trainers at home or

## My Graduates Are Doing Wonders

A. L. Dickinson, of Friendship, N. Y., says: "I am working a pair of horses that cleaned out several men. I got them for \$10, gave them a few lessons, and have been offered \$400 for the pair." Fred Bowden, R. R. No. 2, Keokuk, Iowa writes: "It's worth many times its cost." I have many similar letters from graduates all over the world.

WANTED—To hear from owner of good farm for sale. Send cash price and description. D. F. Bush, Minneapolis, Minn.

1427—CORN STALK DISEASE—Are you prepared to explain your ideas upon the cause and development of our so-called "Corn Stalk Disease" which (it has been estimated) has taken 500 horses out of our (Shelly) county and corresponding numbers throughout Central Illinois counties? There are various reasons here about the disease and its cures, but so far I have heard of no reliable cure.—Illinois Subscriber.

REPLY—This is one of the terms applied to a disease that has for several years past been the cause of serious loss among stock owners. Corn stalk disease is some form of forage poisoning, no doubt induced largely from the presence of moulds. Following those seasons when worms that infest the developing ear of corn, this disease is very much in evidence. It has been proved from time to time that such mouldy corn will kill animals. There are years when the stalks

## I Want to Send Every Reader of This Paper

I don't even ask you to risk a penny for postage. I want to prove to you before you pay and at any risk, that Corona Wool Fat is the greatest healing compound ever used on the farm for all kinds of hoof and skin diseases. Produced from the skin and wool of the sheep, this great natural remedy has no equal as a cure for Hard and Contracted Feet, Mud Fever, Split Hoofs, Corns, Grease Heel, Thrush, Quarter Crack, Barbed Wire Cuts, Galled Shoulders, Sore Teats of Cows, Ulcers, etc. It

### Heals Without a Scar

—grows hair over cuts and sores—makes new hoofs. Often worth hundreds of dollars by saving injured animals from lameness and permanent blemish.

### Send No Money—I Pay the Postage

Just drop me a postcard or letter saying you want to try the big can of Corona Wool Fat 20 days at my risk. Use it according to directions and when the 20 days are up if you find it does what I claim, send only 50 cents payment in full—if you are not pleased, simply say so—I'll take your word for it and cancel the charge. Write today. Mention allment you intend to use it on.

# Stallion Service Record Book

This book has 200 pages like the specimen page in this ad. It is substantially bound with a good, strong waterproof cover. It has 20 index pages for keeping the owners' names in alphabetical order so that any name or mare can be found quickly.

The breeding contract at the bottom is the strongest possible kind of a note. It is a big help in making collections, as nearly every state has a law for the collection of labor debts without exemption, and this is a contract to pay for services rendered. Before it is signed run a penroll through two of the lines in the contract, leaving the line that makes the kind of a contract you want. Many will sign a contract who would refuse to give a note.

This book has a calendar and a gestation table. It can be used for several sires without carrying more than one book. This is the most complete and up-to-date service record book printed. It is a nice size and can be carried easily in any pocket. Every breeder should have one. After improving it for several years, the result is this most satisfactory book. A complete new edition is just out. Although this new book has double the capacity of those offered heretofore, it sells at the old price. It is not bulky, as it carries no advertising or other unnecessary matter. It will be the standard record book used by the leading breeders.

If you are not satisfied with the book or do not consider it the best and cheapest on the market, return it and your money will be cheerfully refunded. The price is 50 cents; six for \$2.75; postage prepaid. Send all orders to the

## FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat. A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by A. W. FRAVEL, Ph. G.V.S. Centralia, Mo.

# Safety First

## Safeguard Your Stock—Rid Them of Disease-Breeding Worms

You can't expect big profits and big prices for your stock unless they are kept in the pink of condition. And you cannot put them in good condition unless they are free from worms. Worms multiply rapidly, and are known to cause 90 per cent of all stock losses—because they keep animals in a run-down, unthrifty condition—unable to get the good of the food given them. The best of care and feed will not put fat on a wormy animal, nor prevent disease.

In their wild state all animals instinctively sought the roots, herbs and barks that kept them healthy. Domestic animals require a worm destroyer and conditioner to keep them healthy.

**The Great  
Worm  
Destroyer**

**and  
Live Stock  
Conditioner**

—is a "Safety First" preparation. Its mission is to rid stock of dangerous disease-breeding worms. In order that animals will more readily take the drugs which destroy worms, and the tonics which improve the digestion and tone up the system, these drugs are combined with salt in such proportions, that while the animals are satisfying their natural desire for salt, they are doctoring themselves. No dosing—no drenching—no starving. They take on new vigor and soon grow into profit. Read the following letters:

"I must say that I found SAL-VET a very good tonic and worm destroyer. I noticed worms pass from one colt, and since that time the colt has been doing nicely, and growing rapidly. My brood mares are in better flesh than I ever had them before, on practically the same feed. Cattle and hogs are doing very nicely, also."  
—Harry Vincent, Hanoverton, Ohio.

"I have been feeding SAL-VET to my hogs, and they passed a lot of worms. When I butchered some of the hogs, I could not find a single worm, nor a sign of a worm in any of them. My neighbors lost all of the hogs they had, but I have not lost a single one."  
—John Sauer, Fort Wayne, Indiana.

"The seven head of horses to which I have been feeding SAL-VET are now feeling fine, and look as sleek as a bunch of ground moles. Have also fed it to my pigs, and every one on the place has his tail tightly curled and is always ready for his feed."  
—Samuel Brice, Prop., Walker Stock Yards, Rt. No. 13, Grand Rapids, Michigan.

"SAL-VET did the work. I think it is the best tonic and worm expeller ever. Since feeding it, I have the best bunch of shoats I ever owned. They are larger, seem bigger boned, and are free from worms, although before I fed the remedy, they were infested with worms. I never saw hogs do as well as these."  
—V. T. Pease, Conway, Iowa.

## I'll Feed Your Stock 60 Days at My Risk

In order to prove to you the value of my Great Worm Destroyer and Live Stock Conditioner, I freely make this liberal offer to every farmer and stock raiser, so that all may prove its value. Not only will SAL-VET destroy worms in your farm animals, but it will stimulate the appetite, relieve constipation, and put your hogs, sheep, horses and cattle in condition to better resist dangerous diseases. Thousands of farmers regularly feed SAL-VET to stock for SAFETY; you should not ignore this liberal offer. Here is the cheapest live stock insurance you can get.

### Send No Money—Just the Coupon

Just fill out the coupon—tell me how many head of stock you have, and I'll ship you enough SAL-VET to last your stock 60 days—you simply pay freight charges when it arrives, and at the end of 60 days report results. If SAL-VET has not done all I claim, then I'll cancel the charge, and you won't owe me a penny.

Shipments for 60 days' trial are based on 1 lb. of SAL-VET for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular sized packages.

### SUDAN GRASS AS A FORAGE CROP FOR THE CENTRAL AND SOUTHERN GREAT PLAINS.

That Sudan grass, which is closely related to the cultivated sorghums, is an excellent forage crop in the central great plains south of North Dakota, and promises to fill a long felt want for a hay grass in the South, is the conclusion of Farmers' Bulletin No. 605, shortly to be published by the U. S. Department of Agriculture. The grass also does remarkably well under irrigation in the Southwest.

Sudan grass is an annual, the leaves of which are broader and more numerous than those of Johnson grass. It is distinguished from the Johnson grass, to which it is related, by the absence of rootstocks, and while this necessitates annual planting it also prevents Sudan grass from becoming an obnoxious weed like the perennial Johnson grass. When seeded broadcast or in drills, it averages about three to five feet in height and has stems a little smaller than a lead pencil. When grown in rows and cultivated it reaches a height of six to nine feet, with rather larger stems. The hay of the cultivated crop is somewhat coarser than that of the broadcast crop and is not so desirable for market hay.

Sudan grass does best on a rich loam, but it has been grown successfully on almost every class of soil from a heavy clay to a light sand. Where the soil is quite sandy, a light yield may be expected. The ground must be fairly well drained.

When given plenty of room the grass stools very freely, especially after the first cutting, and it is not uncommon to find over 100 stems arising from one crown.

From seeding to first cutting, 75 to 80 days are usually necessary. The second cutting comes about 45 days after the first, and in sections where the growing season is at least six months, a third cutting can be made 50 to 55 days later. By cutting the grass earlier each time, four cuttings can be made in some sections, but it is probable that three cuttings give an equally large yield of hay of better quality. The total yields vary from one to eight tons of cured hay per acre.

It has been demonstrated that Sudan grass is palatable, and analysis shows it to be about the same in chemical composition as Johnson grass and timothy hay. The percentage of protein decreases from the heading period until the seed is ripe, but the hay is as valuable about blossoming time as at any previous stage. Being an annual, it can be fitted into any rotation without much trouble, but very little benefit to the soil will result from growing it, as it is a rank feeder and leaves nothing in the soil for improvement except the decaying roots. It is suitable for growing in mixtures with cowpeas, soybeans and other legumes, because its stiff stems support the vines of the legumes and make harvesting easy, and allow the legume vines to cure more quickly by preventing the matting of the leaves.

### TEXAS GIRL HELPS FATHER WHO CANNOT SELL COTTON.

Annie Davis, who was last year the grand champion girl of Texas and came to Washington with the other champions, has this year come to the aid of her father who raised a cotton crop and couldn't sell it. She had saved up her money to take a course at an industrial school, but the cotton crisis came along and her money was given to help the family. This young woman from the funds which she earned last year has purchased her father a team of horses and a wagon.

The Texas girls have shown an unusual interest in poultry in addition to their canning and garden work. This is only the first year of the poultry work, but already 250 young women have accomplished actual results, and in not a single case did the girls fail to make a profit. The result has been that in many cases the whole flock of poultry on a farm has been turned over to the daughter. The marketable value of infertile eggs has been emphasized, for in the past great

quantities of eggs were sent to the market when they were beyond the point of using.

### HOW SHETLANDS ARE MADE PETS.

To the American Breeder:—In the care and feeding of Shetland ponies, I first teach my ponies to be gentle at all times and under all circumstances. I have 30 of these little pony friends now in my yard and there is not one of them that can be made to kick at me or anyone else. They are as gentle as so many little lambs and come to me to see if I have an apple or a piece of candy for them, as they are all very fond of such a treat. When I go out to feed in the morning I always nicker at them when I leave the house door and nearly all of them will answer me and then come to meet me at the gate. I never let anyone tease any of my little pony friends because it might tend to spoil them and make them lose the love for their master, which if once lost you can never get again. The Shetland pony requires but little grain in the winter, not more than one or two small ears of corn twice a day, and in summer not so much. There will be no hay or grain go to waste in their yard. It is better for them if they can be loose in a yard and to go in the barn or to stay out just as they like, either summer or winter. They do need lots of exercise at all times. It is a very pretty sight to see my little three-year-old girl go to the gate with something to feed the little fellows and see them come running to see which can get there first. There is nothing that can be given a child that is equal to a nice Shetland pony, as it attracts their attention out in the pure open air, which is very valuable to children.—W. H. Fulcomer, Republic County, Kas.

### TREES FOR DRY LAND PLANTING.

To the American Breeder:—The following species of trees have been found to be best adapted to our climatic conditions for unirrigated land: Broad leaf species—Green ash, white ash, black locust, honey locust, box elder, Russian olive, American elm.

For evergreens, the native western red cedar and the yellow pine. The latter species should be nursery grown stock. The red cedar, however, can sometimes be obtained from the foothills.

Land for these trees should be in a good state of cultivation, if possible, by having produced several preceding crops. The smaller sizes of nursery stock three to four feet in height are better than larger trees. If planted when the soil is moist, it will be necessary to use water. For a windbreak or shelter belt, plant in rows with the trees eight feet apart in the row and in rows ten feet apart, allowing the trees in one row to alternate with those in the next. Give thorough cultivation throughout the growing season as for a crop of corn. Protect the trees from prairie fires and live stock.—B. O. Longyear, Colorado Agricultural College.

### MAKING USE OF RICE.

To the American Breeder:—Rice, thoroughly cooked, is a nutritious and easily-digestible food. Compared with wheat, rice is poor in nitrogenous material and fat, but rich in non-nitrogenous (carbonaceous) material.

Whole rice brings a much higher price than broken rice, but broken rice will furnish as much nutrition as the head rice.

Rice may well be used as a substitute for potatoes, and is excellent to combine with foods rich in protein, thereby adding to the rice that which it lacks. Rice should be used more freely in our everyday menus, and undoubtedly would be, if the unpolished and less expensive rice could be made more popular.

In making scalloped dishes, like rice with cheese, nuts, or meat, the cheese, nuts, or meat supply the protein, making a palatable, nutritious dish. In making custards and puddings, where eggs and milk are used

with the rice, the protein is supplied by the eggs and milk. Such dishes, if properly cooked, are wholesome and easily digestible.—Mary L. Bull, Extension Domestic Science Specialist, University Farm, Minn.

### SUDAN GRASS

Most productive grass grown; rich in protein; several cuttings each season. Grows anywhere. This seed has been inspected and recleaned. 60c a pound in small packages; 10 pounds, 50c per pound. Cash with orders. Write me for prices on 50 pounds or more.  
E. FOSBERG, LITTLEFIELD, TEX.

2 3/4 yards of 44-inch material for the skirt, and 7 yards for tunic and waist for a 36-inch size. This calls for TWO separate patterns, 10c FOR EACH.

1163. Ladies House Dress.—Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 3/4 yards of 36-inch material for a medium size. Price, 10c.

1170. Girls' Dress with Separate Skirt. Cut in four sizes: 8, 10, 12 and 14 years. It requires 3 1/4 yards of 44-inch material for an 8-year size. Price, 10c.

1160. Girls' Dress.—Cut in four sizes: 6, 8, 10 and 12 years. It requires 3 1/2 yards of 44-inch material for a 10-year size. Price, 10c.

1147. Ladies' Dressing Sack. Cut in three sizes: Small, medium and large. It will require four handkerchiefs or squares 20 inches in size if made without collar, or five handkerchiefs with collar. If made of material it will require for a medium size, 4 yards of 36-inch material. Price, 10c.

9964. Boys' Suit.—Cut in four sizes: 3, 4, 5 and 6 years. It requires 2 yards of 36-inch material for a 4-year size. Price, 10c.

1159. Dress in Basque Style for Misses and Small Women.—Cut in 4 sizes: 14, 16, 17 and 18 years. It requires 6 1/4 yards of 44-inch material for a 16-year size. Price, 10c.

1145. Ladies' Apron.—Cut in three sizes: Small, Medium and Large. It requires 4 1/2 yards of 36-inch material for a medium size. Prize, 10c.

### WHOLESALE HANDLING CANNING CLUB PRODUCTS.

Missouri girls have placed on the shelves of grocery stores a new brand of tomatoes—the "4 H Brand"—and hereafter the girls say they are going to get their share of the market sales. These tomatoes were grown and canned by Missouri Girls under the supervision and inspection of the Agricultural Extension Department, University of Missouri.

Ordinary commercial cans are used and a colored wrapper is supplied. On this wrapper is written the name of the girl producing the product, her address, net weight of contents and the date. The University has a system of inspection to see that every can is an honest product. Sales are made through the wholesale companies. These companies are glad to handle the products. The raising of tomatoes by clubs over the state was a success the past year. Some girls have made as much as \$50 from tomatoes sold, as well as supplying the home.

# About Incubators

BY C. D. ADAMS, WAUKESHA COUNTY, WIS.

I take it for granted that it is no longer necessary to set forth long arguments to prove that an incubator is one of the essentials on a modern farm. I know it is possible to raise chickens by the hundreds by the good old fashioned way—I know it for I have gone through it and retained my love for chickens—because most of the work and worry fell upon my wife. But she was not so fortunate—she lived through it but lost her love for the work and I have never blamed her. She is still indispensable during batching and brooding time, but it is a work of duty and dollars and not a work that she enjoys, for she cannot forget those days and nights of worry about the sitting hens. So I bought an incubator and am still buying them. I have never entirely dispensed with the sitting hen, though I have threatened to on several occasions when, through shortsightedness I have put valuable eggs under an untried hen. It is almost as bad as putting them in an untried incubator—I have tried that, too.

We have all read the arguments brought forth by the incubator manufacturers to prove that the hot air system was the only practical system and we have then turned to the next catalogue and just as good arguments in favor of the hot water machines. I have tried both and got good results from both, and results are what we want. It is the reliability of the man who makes the machine more than system of heating. That is a point I wish to emphasize. A friend of mine was selling a certain well known make of incubators. I looked over the machine and I looked through it and studied the catalogue. It looked good to me. I met a man who had been connected with the poultry department of the best known colleges in the United States. I asked his opinion of the incubator. He said they had used a number of that make and found them among the best and the poorest machine made—that they were not uniform. I told my friend, the dealer, and he did not thank me. My next door neighbor bought one and I almost envied him as he took it in his cellar. He put in his fine White Orpington eggs. In a few hours he called me over—the regulator did not seem to work right. I looked for the cause and was not long in finding it. One of the castings that worked on a knife edge pivot had never been filed smooth and was very imperfect. I called the dealer and he said that was a small thing—all I had to do was to file that casting down.

I knew it was a small thing, but it might easily have been a very expensive thing. I afterwards used that same machine and I was convinced that the theory that the manufacturer worked on was a good one and he used fairly good material in the construction, but he certainly is not careful enough in the finishing. It is somewhat expensive to test every machine turned out, but for my part I prefer to buy a high priced machine and take no chances. I think the best hatcher I ever operated cost \$10 when new and I bought it for \$4, and that spoilt me—or rather a great number of valuable eggs for me—I was tempted to buy two more cheap ones. One of them appealed to me on account of the small number of eggs it held—just the thing for hatching pedigreed chickens. I tried it, as I always do, before putting in eggs and it acted very nicely. I put \$10 worth of eggs in that \$5 machine. I was raised on a farm and had experience with all kinds of stock from the hog whose head was on the wrong end to the broncho who delighted in a contest of stick-to-it-iveness; I have plowed in stumps and I have tried to cut wheat with an old binder—but I never was as completely beaten as I was with that simple little thing that “has nothing to get out of order.” Well, mine never got out of order, for it was never in order after I put the eggs in. I soon gave up all hopes of hatching those eggs, but I de-

termined to regulate it so I could batch the next batch, but I never did get it to stay at a reasonable temperature three bours in succession. I gave up but my neighbor was even more persistent. She bought one and tried it for six weeks but never a pip did she get from an egg. Yet thousands and tens of thousands of that make are sold and from the indorsements it has many people are successful with them. I have never met but one of these successful ones, and he was quite anxious to sell his.

So incubators are like hens—they are not all reliable, but when I do get a good one I feel reasonably safe in putting high priced eggs in it and I can use it at any time of the year, and I can batch them by the hundred instead of the dozen with the hen. The important thing with me is the ease with which a good incubator is run. I have a good basement and it is very little trouble for my wife to glance at the thermometer a few times a day. If necessary she can fill the lamp and turn the eggs, but I try to arrange that so I can do it at morning and night.

For my purpose and way of raising chickens it is most convenient, because I believe in hatching nearly all my chicks early—very early.

So I batch the bulk of mine before April and then I can sell all my eggs for hatching. I have never had a very strong demand through January and February for eggs for hatching, so I keep every hen busy laying and my lamps trimmed and burning. Later I will tell you how easily I raise these early hatched chicks. I have never had half the discouragement in raising them that I have had in hatching. But get an incubator if you have not a good one already—and while you are getting, get a good one. The failure to hatch a dozen or so chicks will cause you to lose more than the little additional price you would pay for a good incubator.

## DANGER FROM FROZEN ALFALFA.

Reports have been made of turkey losses thought to have been caused by the turkeys eating frozen leaves from the alfalfa on which they grazed. All through the summer and fall turkeys running on alfalfa consume great quantities of insects, particularly grasshoppers, which is one of the arguments in favor of raising turkeys on farms where considerable alfalfa is produced. When, however, the season has advanced to a point where alfalfa tops are frozen, insects of any sort must be extremely scarce. The plan of preventing this trouble, which naturally suggests itself, is to supply the turkeys well with some feed which will take the place of their accustomed insect diet. Thus provided turkeys probably will not eat enough alfalfa to hurt them.

## THE KNAPP SCHOOL OF COUNTRY LIFE.

Announcements have been received concerning the establishment of a school of farming and country life at Nashville, Tenn. This school has been named after Dr. S. A. Knapp whose extension work in the South for the United States Department of Agriculture was the foundation for the best service in this line, which our various agricultural institutions are now giving. Prof. K. C. Davis who has had a wide experience as an agricultural instructor and editor since his graduation from the Kansas Agricultural College in 1891, is the manager of the school.

## WAYS OF CLEANING KITCHEN IRON WARE.

To the American Breeder:—There is usually more or less iron about a kitchen, and this iron must be frequently cleaned.

If it has not been exposed to dampness and is not rusty, washing with hot soapsuds or weak sal soda water

# A BIG, STOUT, LUSTY CHICK

and rubbing dry with a cloth is all that will be required.

Iron sinks that are rusty may be cleaned by rubbing the inside with mutton fat, free from salt, and sprinkling with powdered quicklime. Leave over night and in the morning wash with plenty of water and a brush. Rinse thoroughly with a sal soda solution and then with clear hot water.

Rust may also be removed by scouring with powdered emery, cut with benzine. This must be used on a cold surface and away from any fire.—Home Economics Department, University of Wisconsin.

## THE FEEDING OF YOUNG CHILDREN.

To the American Breeder:—The second summer is a period of anxiety to most mothers and well it may be since so many children suffer from bowel troubles.

At this time children are usually given all or in part solid food. Doting relatives and careless servants will not refuse the pet of the household whatever it desires. Hot weather and a little of this or that dainty or a few bites from grandmother's plate are the cause of four or five visits from the physician and the outcome is watched with bated breath.

Young children are best fed simple foods, as they do not need or demand a variety. Plenty of pure, good cow's milk should form the principal article of diet. All starchy foods should be thoroughly cooked. Cereals are best cooked two or three hours and strained. Meat, with the exception of a little well cooked bacon, should not be given at all. The juice of steak or roast beef dish gravy may be used on well baked bread or potatoes. Meat broths and strained soups are allowable. Vegetables should be well cooked, and seasoned with butter and salt only, after rubbing through a sieve. Spinach is especially very good for children on account of the large percentage of iron it contains. The juices of fruits are much better than whole fruit.

Fruits and vegetables contain the mineral matter so important to the growing child. Straining fruits and cereals and rubbing vegetables through a sieve, remove the indigestible part, a source of irritation to the

## The OLIVER 7 Typewriter No. 7

The Standard Visible Writer

## Now the Supreme Achievement

This Brand New Oliver Model Inspires All

In making this extraordinary announcement we realize how the typewriter world has waited for what we now give. How typewriter users look to us for the first advances and refinements. Our responsibility has grown with every Oliver innovation—visible writing, visible reading, Printtype, and our numerous epoch-making inventions.

## The No. 7 Model

Reduces human effort to the minimum. Performs automatically many operations.

The new cushioned keyboard, the new anchor keys—all the ingenious advances that raise this model to the peak of typewriter perfection. Less effort required, less attention, less eye-strain. Yet utmost speed and 25 per cent more value!

## 17 Cents a Day

We have applied our popular purchase plan to this new Oliver. And we will not increase the price one penny.

Now see this typewriter at any Oliver agency. Send for the Oliver No. 7 De Luxe Catalog—FREE.

**THE OLIVER TYPEWRITER CO.**  
102 W. 9th St. Kansas City, Mo.

intestines—a common cause of diarrhea.

It is also important that all water given the child should be boiled, as drinking water contains the bacteria which bring on summer complaint.

A child should have regular hours for eating. At this age, he should have five meals a day. At meal time his attention should be confined to his

food, by having him sit quietly and eat from tray or table, instead of allowing him to munch crackers for an hour or two while playing.

If we could only realize how undeveloped a child's digestive tract is at

birth and how it develops—just as his mind—the importance of the right food to develop it would be realized.

Too many grown-ups suffer from indigestion and other digestive troubles "which flesh is heir to," on account of

improper feeding in childhood.

At the Experiment Stations of Pennsylvania and Ohio, they have found that proper food and care in feeding means a better and more rapid development in raising a litter

of pigs, and consequently more money for the same when sold.

If proper feeding is important for pigs, why not for babies?—Margaret H. Haggart, Colorado Agricultural College.

YOU can ALL enjoy the evenings if they are brightened by the beautiful, white light of the

## ALADDIN KEROSENE MANTLE LAMP

Better than Electric—But Uses Less Oil than an Old Style Lamp

Showing Aladdin Table Lamp Style (101-A) in Use

—There's an Aladdin style for every place and purpose.

# Try It—10 DAYS FREE—Send No Money

### Don't Pay Us a Cent

until you have used this wonderful new modern incandescent light in your home for 10 days, putting it to every possible test and then if you don't say that it is the greatest oil light that you have ever seen, or you are not thoroughly satisfied, you may send it back at our expense. You can't lose a penny. We want you to prove for yourself, as thousands upon thousands of others have, that the Aladdin has no equal; that it makes the ordinary oil lamp look like a candle; that it saves one-half on oil; that it beats electric, gasoline or acetylene; lights and is put out like old style oil lamp; burns common kerosene (coal oil) without odor, smoke or noise; is clean, safe. Guaranteed.

### This Man Succeeded Without Experience

Osakis, Minn., Aug. 24, 1914.

The Mantle Lamp Co., of America

Gentlemen:—I have been handling the Aladdin Lamp since the first of March, canvassing throughout the entire country, especially amongst the farmers, during the most adverse season of the year. The farmers are then busy in the field, there is a scarcity of money and the evenings are very short. In spite of this big handicap as well as being only a common laborer with very little education and no experience as a distributor at all, I succeeded very well.

As yet I have not received one complaint. Last year there was another kind of a mantle lamp in this country and the people were so dissatisfied that they threw these lamps out of their homes and the Aladdin has taken their places.

I have only worked during spare time—about thirty days in all—and have sold eighty lamps. I have not missed one sale on any one trip and have sold as high as four and five lamps a day. I always recommend the table lamp as an all around lamp but where the people want a very fine light in the parlor or sitting room, the No. 115 hanging lamp cannot very well be beat.

Last Saturday, August 15th I sold three hanging lamps No. 115 and one No. 101 table lamp. I started the day at 9:30 and worked until 4 o'clock. Then drove twenty miles for home as it was Saturday evening and I tell you, gentlemen, my day's wages looked fine to me, after having been used to working with a thrashing machine in the Fall from 10 to 14 hours a day in the dust and dirt for only \$2.00 a day.

Yours very truly,

Route 5

J. A. JUNGNER.

### Sold 25 in Three Evenings

Stockett, Mont., Jan. 14, 1914.

Dear Sir: Find enclosed draft to cover order. I have been out only three nights and sold 25 lamps all told. This lamp beats anything I ever saw to sell. Everybody wants it. Look out for my next order. I remain,

C. C. BOYNTON.

## Pays For Itself In Oil Saved

### 14 Great Universities Back Our Claims

Recent tests by great light scientists at 14 leading Universities throughout the United States and Canada, show that the Aladdin gives nearly three times as much light as the best round wick, open flame lamps and yet burns only about one-half the oil.

These same scientific tests showed that the quality of the light of the Aladdin has no superior, even excelling Tungsten electric, and nearest of any to sunlight.

Lights the whole room. Reading, sewing, fancy-work, studying, games—all can go on, in any part of the room, with comfort and pleasure for everyone. A good study light is necessary for good results in school work. Save the eyes of your children.

## Many Men With Rigs or Autos Are Making \$100.00 to \$300.00 Per Month Delivering Aladdin Lamps on Our Easy Trial Plan

No previous experience is necessary. Practically every farm home or small town home needs it and will buy after trying. One farmer who had never sold anything in his life before writes: "I sold 57 lamps the first seven days." Another who ordered over 200 in 30 days says: "I consider the Aladdin the best agency proposition I have ever had, and I have done agency work for 10 years." Another says: "I disposed of 34 lamps out of 31 calls." Thousands of others who are coining money endorse it just as strongly.

### Another Sold Over 800 Lamps with Money-Back Guarantee — Not One Returned

He writes: "I have sold over eight hundred Aladdin lamps in the past year and a half, requesting every buyer to

return the lamp to me at any time they preferred their money back. I have never had a lamp returned."

### Sold 275 in Six Weeks

Here is an exact copy of a letter written us recently by one of our enthusiastic farmer distributors who has made over \$2000 during spare time the past two winters:

"It is a pleasure to sell the Aladdin. It makes good on all your claims and it is easy to convince people that it is the best lamp on the market.

"I still use my first lamp as a demonstrator and it works perfectly although it has had pretty rough usage for over a year and a half.

"Between Jan. 2 and Feb. 20 I sold about 275 lamps. I never saw anything that would sell equal to the Aladdin."

## No Money Required—We Furnish the Capital

You can get into a business of your own and make more money than you ever made before, without investing your own capital. We help you by giving you liberal credit.

## You Can Get An Aladdin FREE

We want one user in each locality to advertise and recommend the Aladdin. To that person we have a Special Introductory Offer under which ONE LAMP IS GIVEN FREE.

## Use This Coupon

Today and Get Our Great 10-Day Free Trial Offer.

Portland, Ore. Waterbury, Conn. Montreal and Winnipeg, Can.

## 3 Million People Now Enjoying Its White Light

Every mail brings hundreds of enthusiastic letters from satisfied users endorsing the Aladdin as the most wonderful light they have ever seen. Such comments as, "You have solved the problem of rural home lighting"; "I could not think of parting with my Aladdin"; "The grandest thing on earth"; "You could not buy it back at any price"; "Beats any light I have ever seen"; "A blessing to any household"; "It is the acme of perfection"; "Better than I ever dreamed possible"; "Wouldn't have believed it 'til I saw it," etc., pour into our office every day. Good Housekeeping Institute of New York tested the Aladdin and writes us under date of September 5th, 1913—"We are pleased to inform you that we have given this device a most thorough trial and find that we can approve it."

## \$1000.00 in Gold Will Be Given

to the person who shows us an oil lamp equal to the Aladdin (details of this Reward Offer given in our circular which will be sent you). Would we dare invite such comparison with all other lights if there were any doubt about the superiority of the Aladdin?

### Women and Children Can Operate It With Ease

There are no complicated parts to get out of order, no "installing" necessary, no pumping up, no sub-flame, no dangerous features. Lights and is put out like the old style lamp everybody is familiar with. No matter how many lamps you may now have you cannot afford to be without an Aladdin if you value the eyesight, appreciate good light and wish to cut down your oil bill.

# 1000 HORSE BREEDERS

Are Equipped to Make 1915 Doubly as Profitable a Year for Their Business as They Ever Could Have Done Without the Help of

**THE ONLY BREEDING SCHOOL**  
IN THE UNITED STATES

**A Class of Over 100 Breeders**

Is Now in Attendance at This Successful School Learning the Inside, Practical Facts of Their Business. You Have a Chance to Join the Ranks of the Most Progressive in Your Profession, Benefit From Your Past Experience While You Learn, if You

**Come to the Next Term**

**March 1 to 6 Inclusive**

A term of this school is one full, intensely interesting and profitable week, beginning every morning at 7:30 and continuing until 10:30 at night. Proper changes in the manner of instruction are made, so as not to tire the students. Sufficient exercise is taken each day with the entire class.

This is the only school in the world, devoted exclusively to breeding. More practical information is given concerning the genital organs of breeding stock, than at any other school. The instructions are made so plain that the average breeder can surely master it.

Carcasses of mares and cows for class work are supported in natural position. Students are required to take the practical work of dissecting and making examinations under the instruction of experts, each student passing to the next animal after finishing a particular subject. Females are selected to illustrate the different diseases and abnormal conditions. Students are impressed with facts in a way they will remember.

After the dissecting, the different genital tracts are then removed from the animals and placed on a table to allow more thorough comparison. By this method, students are easily taught things that would require much greater time, if they were compelled to prepare in a technical manner.

All technical work that can be is eliminated. The object is to give a course the average breeder can master in a short time. The genital organs of cattle and horses are so similar, that after a breeder becomes familiar with horse breeding, a little extra time prepares him as a cattle breeder. Cattle breeding can be given with

practically no waste of time to the horse breeders. Nearly all of the lectures are just as necessary for cattle breeding, as for horse breeding.

All of the instructors, excepting two, are post graduate veterinarians, or professors of animal husbandry, doing work recognized by the United States government. The instructions given at this school have stood the test of the best posted men. A fortune has been invested in the development of the course. Nearly every section of the United States has a student from this school.

This is a clean institution. Men are given plain lectures on subjects every human adult should be familiar with. The lectures are illustrated with lantern slides. Students help each other like brothers. Mothers and wives need not be afraid to send their sons or husbands.

This school is guaranteed to be satisfactory in every respect, or the tuition fee will be refunded. This offer has been in effect from the beginning. Not a single student has been dissatisfied. Nothing succeeds like success. Distance should not prevent any one from attending. Breeders from across the ocean have been in attendance and glad they came.

Learn to avoid the dangers in the breeding business that cause so much loss to owners of good stock. We have no agents. Do not ask for commission or cut rates. After August 1, 1915, the tuition will be doubled.

The sooner you get this knowledge the longer you can use it. Get a substantial foundation to work on. Get a Diploma. Make your business a pleasure. Breed intelligently.

**REMEMBER THE DATE---March 1 to 6, Inclusive.**

#### SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Females, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse and Mule Judging—Barren Females—Barren Males—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female Generative Organs—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Cap-sules, etc.

Remember the date and prepare to be here next term. Tuition is \$25, which entitles all students to a free return privilege for life. For other information address

#### EQUIPMENT AND EXPENSES

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lecture on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from \$1 to \$1.25 a day—sufficient to provide quarters for all who come.

CONFIDENCE IN BREEDING AND ADVERTISING.

There is no other business in which confidence means as much as it does in the buying, selling and breeding of better live stock. The individual who wishes only to make a profit on a "shady" transaction cannot stand the light of day. Buyers of live stock must have confidence in the individual who is selling the stock, as well as the breeder. The party who assists in a fraudulent transaction knowingly is just as guilty as the one who commits it.

When we began to refuse advertisements from certain large draft horse advertisers, some of our friends and others informed us that we were shortsighted and that it was not profitable. The editor of this paper informed such advisers that if he could not make an honest living in the newspaper business, he would seek some other occupation. We have missed getting a lot of money that could have been had for the asking. Well informed men understand this. We have made a lot of permanent enemies by refusing to carry the advertising of certain large firms. The editor of this paper formerly was in the breeding business and had a very fair idea as to the policies of many of the large breeders, dealers and importers.

Confidence is not only a necessity with those who have stock to sell, but very important with others. Readers of this publication know of cases which have been adjusted satisfactorily to the purchasers, that could not have been settled as satisfactorily in court. Those friends will not buy breeding stock advertised anywhere else if they can help it. This confidence is very largely the cause of our advertisers getting such excellent

results. In the American Breeder of January 20 there were 44 per cent more advertisements of horses, ponies and jacks than in the corresponding number of our closest competitor. The closest competitor mentioned carried advertising for seven large draft horse firms whose business either has been refused or is not solicited by this paper. It is not our intention to sacrifice our friends for a few paltry dollars. The successful breeders throughout the country are demanding cleaner methods in the breeding business. Crooks are gradually looking for other fields. Confidence should be the basis of all effort in the live stock business.

FUTURE HORSE MARKET.

A North Dakota subscriber asks our opinion on the future horse market. He has a number of mares and is undecided as to whether it will be profitable to breed them or not. In this day and age it is difficult to judge the future by the past. Little did we think a few months ago that a majority of the European people would now be at war. But the greatest war ever recorded began, and is not yet over.

There is one thing certain, that those who live must eat. Live stock is vanishing rapidly in the nations at war. This is especially true of horses. In England, for instance, about half the horses have been taken for war. A farmer owning two horses usually had to part with one, leaving the mares on the farm when possible. All of those countries will almost need restocking with horses when the war is over. More horses are dying and being destroyed than one would naturally expect. A very large number of horses have been shipped from North America and only a few men have any idea of the great number that have been taken. Most of the purchases have been for light horses. During the last few weeks a slightly heavier class for artillery horses have been purchased. A good number of medium light mules have been also taken.

More horse power will be needed in this country to raise grain to feed the people than ever before, as resources in Europe have been greatly depleted. We can see only a great future for good horses and mules.

The war has further upset our financial conditions even after the country already was feeling depressed times. This is more than enough to account for the weakness in the present horse markets. The South has not been able to sell much cotton and there is but little demand from that source. When the South regains its normal condition mules and light horses should command much better prices. Good young horses and mules ought to be an excellent investment now. We would advise everyone to breed every good mare.

SEVERAL SUBSCRIBERS COMPLAIN.

Several subscribers have written us that their paper was sometimes from three to six days late. These readers perhaps do not realize that this paper has grown to such an extent that it requires about six days to print and mail each issue. We do not know of any other publication that has made such a genuine and substantial growth during the last few years. Our printing is, of course, solicited by plants that could get the paper in the mail quicker and which would also be cheaper for us. But such plants require cheaper paper, such as many other publications are printed on. It might be well to compare this copy of the paper with other papers you are receiving, concerning the quality of the white paper and the workmanship. The cost could be greatly reduced, but the service would be impaired. We could also save much expense on pictures, as cuts show up too poorly on cheap paper.

But it is our desire to put out a good, clean publication, striving to make each issue a little better than the last one. We hope our readers will bear with us on an occasional delay. More satisfactory arrangements probably can be made in the near future. We are glad to have our read-

ers interested with us in our development. The American Breeder owes its success largely to its army of loyal subscribers.

MAKING CONTRACTS.

Much litigation is a result of misunderstandings. Quite frequently an individual is continually having trouble, much of which could be avoided. Every contract should be plain and thoroughly understood by both parties at the time the contract is made. Everyone should make it his special duty to see that the other party understands the contract, and that both parties understand it exactly alike. There is one particular time when both parties should not be in a hurry, and that is when the contract is being made. If both parties thoroughly understand the contract a lot of needless law suits would be avoided. If a written contract is made, everything pertaining to that particular contract should be specified in such a contract. It is usually held that when a written contract is made, verbal statements can not form any part of the contract. A little more care as to the understanding of all transactions will save an abundance of trouble and litigation.

PUBLIC SPIRITED MEN.

In traveling through the country an experienced man can soon tell whether good sires have been used or not. One community may have a class of small mongrel brood mares. This class of mares are very often inferior in conformation. An animal not having the proper conformation will not stand as much work as one properly formed. These poorly formed, undersized mares are very often thin in flesh and look bad generally. The owners do not take any pride in them. They have not had any schooling along this line. They have not been stimulated to want to use big, fine, outstanding, well bred sires. They have never given the subject of live stock improvement much thought. They haven't realized that they are raising horses at a loss.

Another community not very far away may have a lot of fine brood mares. It doesn't take long to realize where the development was started or who is pushing it. In that community those animals kept for service have a greater monetary value. Their owners take great pride in them. Very frequently they have difficulty in keeping them, as buyers are looking for the best. Those who have money with which to purchase usually know what they want to buy. For all of this improvement in horses, one man, or a few men, in a community should have the principal credit. The public spirited men, who make a study of their business and are not afraid to pay a good price for a sire to be used in the upbuilding of live stock in their community, are doing more for that community than practically any other citizen in it. The colts, after being properly developed, are usually worth double the amount of those produced from inferior mongrel sires. This clean profit is really produced and adds value to that community. There are many of these public spirited men who will not advise their friends to use the scrubs. Very often these men get discouraged because the mare owners are shortsighted for the time being. Usually the individual who maintains the best sires get the best mares, makes the most profit in the long run. In most cases there comes a time when the products from these good sires are placed on the market, then it is so plain that the owners of good mares should not hesitate.

That breeder who establishes a reputation for maintaining good sires has something which money cannot buy. When anyone has use for a good sire his friends or neighbors will say: "Go down to that breeder; he keeps only good ones. He has studied our mares and knows what kind of a sire we need; he understands the breeding business; he can get our mares in foal and he can give us a lot of good advice."

"Justice is sometimes tardy with these public spirited men, but the reward is usually certain.

LEARN TO SEE.

An argument took place a short time ago between two breeders. One stated that it took the entire discharge of a stallion to produce one single colt. The other contended that it only required one spermatozoon, and then proceeded to show his friend, with the microscope that there were countless numbers of spermatozoa in each drop of fertile semen from the stallion.

One of the greatest difficulties with humanity is that of short vision. Take the semen, for instance; when it is viewed with the naked eye there is no life to be seen in it. The magnification must be at least 100 diameters before the spermatozoa can be seen; 500 diameters are much more satisfactory. Only about one breeder in a thousand, throughout the country, has ever viewed the spermatozoa through a high powered microscope. It is a wonderful curiosity to most of them, but it makes them think. Testing semen with a microscope has converted more men to modern horse breeding than practically any other one thing. Nothing convinces men quite so easily as seeing things. After a demonstration of this kind, whether the individual sees stars or not, he can readily understand why the capsule method of breeding is possible. Only one cell from the stallion is required to fertilize a mare. The rest of the great quantity of spermatozoa is wasted from that service, when natural service alone is employed.

A trained and careful breeder can easily breed 20 mares at one service of the sire, with just as good results as if all of the mares were bred with the natural service. In many cases the capsule breeding will be better, as a less number of services are being required from the sire. Stallions or jacks that make too many services frequently discharge semen which does not contain any fertile cells. If the capsule breeding is done properly, the semen is deposited in the uterus of the mare, where it must be before fertilization can take place. Spermatozoa can easily find its way from the uterus to the uterine duct where fertilization really takes place in the mare.

The individual who states that the entire discharge of a stallion is required to fertilize the ovum of the mare makes just one of the many careless or ignorant statements frequently heard from men who ought to be better posted.

BREEDING APPLIANCES.

A Minnesota subscriber is asking what breeding instruments he will need for capsule breeding, and where to get them. He further states that we recommend modern breeding methods and should be familiar with the subject. In other words, he believes that we should be authority on what should be used.

The new Natural Temperature Semen Extractor can be used as a semen extractor or an impregnator, or both. Special pointed breeding capsules and two kinds of special hot water thermometers are made and tested especially for breeding. The above instruments can be purchased only from the Kansas City Impregnator Company, Kansas City, Mo. Other firms may have substitutes, or claim to have this material. It will be necessary to have a galvanized pan 40 inches long, 6 inches deep and 8 inches wide, and a non-transparent vessel of some kind, with a smooth surface, for catching semen in case it is withdrawn.

Every breeder should have a clinical thermometer for testing mares or stallions. A stallion should be tested frequently. In case of a rise of temperature, the stallion or jack should be withdrawn from service until his temperature becomes normal. In testing semen breeders find that the spermatozoa are dead in cases where the temperature of a sire increases very much. It may be only temporarily or it may be the beginning of some sickness. There is no time to lose, and no chances should be taken during the breeding season, when a sire shows indications of having a sick spell. Very frequently breeders fail in the breeding business because they did not have proper material to work

with. Some of them try to use any old thing. It is not wise to save a little money and lose a lot of colts and business. Some breeders try to use artificial breeding by raking the fluid into a pan or by trying to catch it in a capsule, and many other ways which are not successful. Those who expect to practice artificial breeding should prepare for it. Those who expect to use an impregnator only should use the new Natural Temperature Semen Extractor, as it is the best instrument on the market for that purpose. It has been improved so that it holds temperature better; the semen can be obtained more easily with it. It is worth more than all of the other instruments combined, as a semen extractor or an impregnator.

#### SELLING TRIED BREEDING STOCK.

A breeder writes us that he has a good grade stallion that can be castrated and sold for about \$250.00. He is asking if he can buy a good tried stallion, eight or ten years old, by paying down what he would get for the grade stallion and get time on the balance, by giving a first mortgage on the stallion purchased.

There are a great many breeders who own stallions they want to change them on account of the fillies. They do not seem to know what to do with these old stallions. A lot of them are standing around in the barns eating their heads off, when they should be out somewhere used to their full capacity. The country is full of buyers looking for these tried sires. They want to see the colts so that they can go home and tell their customers how they breed. There are some men who will not buy untried stallions, because they want to know just how the stallion breeds. Those having tried stallions to dispose of can easily be convinced that there are plenty of buyers, by advertising them. If the owner of an old horse needs a new horse in his community and does not care to advertise him, he should write the large breeders, dealers and importers who advertise in these columns. Some of them will take in tried horses as part payment. We are anxious to see every good stallion located where it can do the most possible good. There is bound to be a shortage of good horses and mules for years. Breeders all over the country are beginning to realize this more now than ever before. Breeding stock will all be higher in a year or two than now.

#### STARTING SIRE.

In a very short time the weather will get warmer and the days longer. Then the mares will begin to shed and the other natural changes will follow. When the farmers begin to realize that it is time to breed their mares, they will begin to look for sires. About that time many stallion owners will begin to make a search for their breeding stock, much of which has been stored away for eight or nine months without any exercise, fresh air, sunshine or proper care and attention. Then there will be complaints about the stallion not settling his mares for several weeks. In many localities the breeding season opens with a rush. Many sires will begin with two or three services a day, which, in a great many cases, injures the animal temporarily, or perhaps permanently. Every sire that is to be used for breeding purposes should be brought into use gradually. One service the first week, two services the second week, increasing a service a week until the matured sire is making nine natural services per week, which is usually the limit, with no two services closer than ten hours apart.

What would be the result of taking a racehorse out of the barn, where it had not had any exercise for several months, and driving it several fast miles at top speed. That horse would be seriously injured as a racing prospect for months and probably for all time. What is the difference in the over-exertion of the propelling power and that of the generative organs, excepting that the latter is the most difficult to repair?

When any part of the body is seriously exerted, without any preparation, the result is well known.

Breeders had better arrange to give away a few early services, if necessary, in order to bring the animal into service gradually.

#### THEIR AGRICULTURE, AND OURS.

In the Pyrenees mountains between Spain and France, the writer saw farming carried on under conditions calculated to impress any one from this country. The land had been farmed for centuries. The farms average about seven acres. If a farmer owned four cows and was able to lease a farm, he was considered very well fixed. The cows were worked in the field as horses; they produced calves and milk. When they were too old for service they were used for beef. The land being very sloping naturally washed badly. With all of these handicaps these farmers live and raise families. There is more waste on an average eighty-acre farm in the corn belt, than an average farmer in the Pyrenees mountains produce. Those mountain farmers are required to pay proportionately large sums for fertilizing.

In Belgium the average farm is a little less than three acres. Even with these small farms the largest Belgian horses are produced. Several crops annually very frequently are raised on the small land. Nothing is allowed to go to waste.

In England the highest priced land is frequently found in pasture. Upon

the date of the paper in which they are to appear. Going back to the question of advertising reading notices, we believe our readers generally will appreciate the change. Some papers, published more frequently than the American Breeder, seem to have space to "burn" and fill it with long, "sloppy," complimentary notices about advertisers. We never have been troubled in that way. We appreciate our advertising patrons and work for their success along legitimate lines. This paper will contain reading notices, as some orders had been sent in with that understanding, but after this issue our policy will be as already outlined, and we confidently expect our advertisements to bring better results than heretofore.

#### NO MORE ADVERTISING READING NOTICES.

One of the few cases in which the American Breeder has conformed to an old custom, instead of standing by our own judgment in the matter, has been in the publication of "field notes" in connection with advertising. This custom has been followed for years by the papers carrying live stock advertising, and naturally a great many advertisers expected (and requested) it of the American Breeder. So, rather than give our friends possible cause for feeling that their patronage was not appreciated, we continued to do somewhat as other papers did in the matter. But from every issue we had

#### HOG CHOLERA.

Those who have lost hogs by hog cholera are about ready to study the problem of prevention. More and more hogs are dying and the virus and serum manufacturers are getting richer. Hog cholera is being spread through the use of virus. Virus is the blood of a cholera-sick hog. One drop of virus spilled on one's premises may start hog cholera in his neighborhood. Virus is injected into the hog and at the same time the hog is vaccinated with the serum. The serum is a preventative for hog cholera, which lasts six or eight weeks and in some cases longer. When virus and serum are used successfully at the same time it establishes a light case of hog cholera, and usually brings permanent immunity. If the serum is not of proper strength to counteract the virus, the hog has cholera. The serum is expensive and hard to manufacture; this is probably the reason why many breeders desire the double vaccination method. But when virus is carelessly handled and allowed to contaminate the premises, hog cholera may spread throughout that neighborhood. Virus is dangerous material and should always be so regarded.

Satisfactory results with this disease will never be brought about until breeders throughout the country become more familiar with the necessity of quarantine and other preventative measures. Cholera can be carried from one farm to the other on shoes, wagon wheels or practically any other thing that is conveyed from one place to the other, or by birds or animals, or by the wind.

If the writer had hogs in a section where hog cholera was present, he would build a hog pen on the highest place on the farm, and as far away from roads as possible. He would put there a good supply of feed, so that it would not be necessary to convey any material to those hogs from other places for a considerable length of time. He would vaccinate only with serum given by a competent, careful man. When he went near the hog yards for any purpose, he would change to rubber boots and disinfect them. He would lock all of the gates so that no one could drive in.

By establishing the hog pens in the center of the field, the buildings and sheds and all of the material could be burned without much loss, in case the disease would get a foothold. When hog cholera gets established in permanent quarters, it is very hard to eradicate. Breeders, generally, are not paying enough attention about having the stock quarantined against outside invasion. There is usually plenty of time to use the virus and administer the simultaneous treatment as a last resort. When hog cholera invades a neighborhood, those who have hogs dying should be requested to burn the dead hogs as quickly as possible, and all comers should be requested not to visit herds or premises where hog cholera is present. Any breeder who knowingly spreads the disease in any way, shape or form is guilty of a crime. If every breeder could visit Pettis County, Missouri, or Lafayette County, Ohio, where the serum and quarantine measures are adopted, they would advocate having action in their state to get the same results. It would not cost as much to clean a state, as a rule, as it costs the farmers everywhere in losses.

#### WHY DO YOU TAKE THE AMERICAN BREEDER?

The same reasons will apply to some of your neighbors. We want you to tell them why you subscribe and get them to subscribe, too. We want you to get acquainted with all our subscribers in your community and get the subscription renewals. In fact, we want you to be our agent and represent us personally, if we do not already have an active man in your community. We pay for this service, for it is a matter of business, as well as friendship. Good substantial breeders and stock farmers in hundreds of neighborhoods are sending us subscriptions, but we may have none in YOUR neighborhood. Please write us about it at once, addressing

FRANK B. GRAHAM, Pres., American Breeder,  
225 West 12th Street. Kansas City, Mo.

this high priced land has been developed over half of the prominent breeds of American live stock.

We mention these section in Europe and their conditions, for comparison with our own conditions. Fertility as well as area in this country will be more appreciated as time advances. A careful study of the eastern states, which have been farmed less than a century, shows they are being rapidly depleted. The one crop states in the South emphasize the need of better methods of maintaining fertility. Live stock is the solution. No more useful live stock can be raised than good horses and mules. The land must be thoroughly tilled. Two-thirds of the farm land in this country is not properly handled. A better tilling of the soil would pay an additional revenue. Other live stock, as a byproduct, should be found on every farm, regardless of its size. If England can pasture land worth a thousand dollars per acre, what can we do with our land?

Rotation of crops, better tilling of the soil and better live stock will bring abundant results for the American farmers. Every American born citizen should be thankful that he is an American with the wonderful opportunities on every hand in this new, fertile country.

#### SAVING OR MAKING MONEY.

Two boys left home some months ago. The father was very anxious to hear from them. He chanced to meet a visitor who had assisted these young men. The first question asked by this father was: "Are the boys saving their money?" The boys were having a hard time. They were young men starting out in the world. They had been raised at home. They had been taught to save their money, but unfortunately the father had failed to teach them how to make money. They were not prepared to enter in the great conflict in the financial

to omit some good article, because of the space required for these reading notices. We took the matter up with a number of our regular advertisers and found that a majority of them favored doing away with the "field notes," provided that in their place good straight reading matter was printed alongside the advertisements. To do just that has always been our wish. When the forms were closed for the last issue of the American Breeder, there remained in type on the galleys enough unused material for ten or twelve pages of solid reading matter. Some, of course, was prepared for use later, and is better suited for spring, summer or fall reading, but many columns would be of interest at this time. It is our belief that such reading matter as this, printed alongside of a column of advertisements, is worth more to the advertisers than if the same space was given up to reading notices, referring to their own advertisements. Of course, the advertiser reads his own notice with interest, but it is the buyer he seeks to interest (and not himself) when he pays out money for advertising.

We want our advertisements themselves to be interesting. For that reason we ask every advertiser to change frequently the wording of his advertisement. Most of our advertisements change every month. Many change every issue. Nobody has to run an advertisement a year in the American Breeder to get a moderate rate. We want every advertisement in the paper to be not only reliable, but interesting and up-to-date, and the satisfactory results which advertisers are getting indicate that such is generally the case. Any advertiser who is not getting satisfactory results should at once study the problem of making his advertisement more interesting and keeping it "alive." We make no extra charge for changing the wording or form, but all such changes should be received at this office a week before

# INVESTMENT AND MONEY QUESTIONS

By G. L. CARLSON

## Land and Mortgages the Best Investments.

"I get more genuine benefit and solid satisfaction in reading your writings on subjects of farm finance and economics than from anything else I can find to read. You present your subjects in such a way that they both interest and instruct one, while most writers present such subjects so as to confuse the mind, and the reader is injured by the confusion more than he is benefitted.

"Without regard to one's business, but wholly from the viewpoint of a safe and profitable investment, what do you regard as the best investment a person can make with money he has no special use for?"

The above question is asked by an Iowa subscriber. There are but two games played with money that the mind of man has been unable to beat. The one is money at interest, the other investments in land, that is, the right kind of land.

There are few minds keen enough to understand the power of money at interest. All people in all countries have always been, and always will be, the slaves of those who either own or control the money of their respective countries. The average interest rate in this country is around eight per cent. One dollar at this rate compounded annually for 350 years will amount to more than four times the value of all wealth in this country. In 450 years it amounts to more than a million billion dollars, a sum so great that no mind can grasp its meaning. In less than 400 years a single dollar at interest at this rate, compounded annually, would absorb all the wealth in the world, including the value of all land. No business has ever been prosperous enough to withstand a continuous drain upon it in the way of being compelled to pay interest. It matters not what the rate is, if paid long enough interest will take any business, or even all wealth of all people. Therefore, money at interest is the best of all investments, but to be good it must be invested in securities that do not fluctuate in value. This brings us up to land as an investment, since good land is the basis of all securities, and must remain the only safe security for permanent investment.

Money invested in land may be both an investment and a speculation. It is an investment because of the permanent character of the property. It is a speculation because of the chance of an increase in value, if we buy the right kind of land. But not all land will increase in value, and it is in this one fact that there lies a possibility of loss in land investments. Those who possessed the foresight to buy land in northern Illinois 50 years ago are now, if living, well-to-do. It is the same with those who bought land in Iowa at that time or later, just as it is true of all sections where the value of land has reached a value of \$100 or more per acre. A man invested \$35,000 in northern Iowa land at \$1.25 an acre. He died about two years ago leaving an estate valued at more than seven million. This man had never been interested in any business but the one of watching his investment multiply its original number of dollars by a high rate of ever-increasing value. Some of this once very cheap land reached the \$200 mark, while upon other tracts cities were built before he died.

It will be noticed that all who made their wealth in land investments, are those who bought their land in new or sparsely settled sections of the country, while the land was very cheap. It is doubtful if any land in this country that has reached a selling price of \$200 an acre can be considered a good investment. Such land is not earning as good a revenue as will the money at interest at current rates, which it takes to buy it. It may reach a higher price, but the rise in value will not be sufficient to compensate for the loss in revenue. It

is easy to print beautifully worded and profusely illustrated prospectuses showing the great profits in high priced land, but when we have parted with our money and the land becomes our own, the big profits never materialize.

There are not the opportunities for making money in land investments at this time, that were ours in the past. There will be less cheap land every year, and before we have time to do much thinking on the subject there will be no cheap land at all. At the present time good cheap land is to be found only in the South and West, and there is no longer any land as cheap as that which our fathers could buy in any one of several states.

When we speak of land investments which include a speculative value, we must not overlook the cities. More men have made fortunes in city investments than have made them in farm land investments. A few dollars invested in New York City land by the eldest Astor made his one of our wealthiest families. Farmers are inclined to look at city investments with a great deal of suspicion, although there is more safety and a greater certainty of profit in city investments than there is in farm lands. It is not always easy to determine the true value of farm land, especially as regards the future, while there is always a known value for central or business property in the cities, based on population. There is also a known center of values in all cities, and the rise in value will be in keeping with the increase in population. Central values are so high in large cities that only the

wealthy can own or invest in such properties, but there are hundreds of good small cities with populations of ten thousand and upwards, and where the increase in population is most certain. One can safely expect the central acre in every city to gain not less than \$4,000 for each 1,000 increase in population of the city. It will be found on investigation that the central acre in all large cities is given a value not lower than that ratio.

Most of the unfortunate investments in city properties are the result of investing in outside or residence property. It is well known to investors that residence properties in large cities have a value but little higher than similar properties in the smaller cities, unless they are so situated that they may be given a prospective value for future business purposes. With very few exceptions there is always room in abundance on the outside of large cities to take care of the housing needs of the future growth of population, and because of this well known fact most residence properties are held too high for safety. On the other hand the increase of population in every city is increasing the amount of business to be transacted, and this in turn adds to the value of central locations which control the business made possible by a large population compactly located. In other words, it is people that make land values, and the more people the higher the value must be.

This question has been answered in a manner that will prove of small interest to many farmers, but the subscriber asking it wanted to know

what the best and safest investments were "without regard to one's business." This made it necessary to answer it as above. However, the best and safest investments for the average farmer are in his own farm and farm equipment, so as to increase the earning power of his farm; and also in making life the better worth living for himself and family.

## When Will Money Be Easier?

An Idaho subscriber wants to know if money will be easier to obtain in the next six months. There are many others who would like to know the same thing. Optimism is a splendid asset for any people, and we are all trying to make ourselves believe that the worst is over. I really believe it is, but I can not see how we are to have an abundance of money for some time yet, possibly several years.

Business is improving in many lines of activity. I was talking this week with an eastern dealer in metals. He stated that two months ago there was nothing doing in his business, but now there was a very good demand for most metals, and country buyers were again buying. There is great activity in hides and leather. All farm products, except cotton, are selling at a high price. Wheat and rye are very high. There are many new industries being started in this country to manufacture those things which we have been buying from countries now at war. This will create a new demand for labor, and we must ever keep in mind the fact that it is money paid for labor that buys our surplus products.

For the farmer or stockman who is out of debt there can be only good times. For all who are very deeply in debt there will not be good times, for some time at least. This will be better understood when we remember that with no debt and good prices, there can be only good times, for those producing under such conditions, while for those in debt and for those who depend upon capital other than their own with which to carry on their business, it always requires "easy money" to make good times.

I can see no reason for anyone believing that the best of times are ahead of us. Everybody is economizing. All business men are eliminating wastes and cutting expenses as never before. Our national, state, county and city officials are trying to do likewise. There can be no easy money when everybody is trying to see how little he can spend. Then, too, we owe to Europe somewhere between five and six billion dollars. The holders of these securities will need their money because of the destructive war being waged there. Even if we advance no money on these securities, most of our exports will be paid with them. This makes it quite certain that the most we can expect from Europe in return for our products, is the cancellation of our debts. It will be a mighty good thing for us when it is over and our debts are paid, but in the meantime there will be very little money coming to us. We may think times are a little hard here, but they are much harder there, and the people of Europe are going to have very little money with which to buy our products for some time.

Whatever opinion different ones may have of our present condition, it is of our own making. There is nothing that consumes the fruits of our efforts and labors so rapidly as interest paid on debts. We have been traveling at a rapid pace on other people's money, and we must pay the price by paying the debt. Much of our boasted prosperity has been the result of our reckless and wasteful living. The lesson we are now learning is a costly one, but let us hope it may prove well worth the price we must pay.

## THE SAME TO YOU, MR. FOLTS!

To the American Breeder:—I have been a reader of your valuable paper for a number of years, and I welcome

## OUR NEW BOOK DEPARTMENT

The American Breeder receives a great many questions about books on various subjects. Our readers who asked them doubtless have wondered why we did not answer through the paper. We were (as fast as we could get the time) investigating the great mass of books now being offered, for selections that were worth buying and reading. Few people have time to read all the literature offered, and so we have listed only such books as came highly recommended. The list below will be increased from time to time, but we are ready to receive orders at once on any of the books listed. Remit to us the amount given as the price, and we will have the books sent, postage prepaid, direct from the publisher. Address all orders to American Breeder (Book Department), 225 West Twelfth Street, Kansas City, Mo. Make your order on a sheet separate from any other communication.

every issue. I admire it for being a good, clean paper, chuck full of good, common sense and valuable information, and would like to see it in the home of every farmer and live stock breeder. Inclosed find check for my renewal for three years, also for Mare Owner editions.

Wishing you and the readers of the American Breeder a Happy New Year, I am, C. A. Folts, York County, Neb.

#### A CAUSE OF PERIODICAL ABORTION.

A great deal has been said and written relative to the cause of abortion, and especially as to abortion in mares. While some data may have been given us upon this subject based upon facts, most of it has been theory only. It is quite possible that no two cases of abortion, other than contagious abortion, have similar causes.

A pregnant mare owned by an Iowa subscriber broke through the floor of an old building in December, 1911. Considerable difficulty was experienced in getting the mare out of the cellar into which she had fallen. Three days later she aborted an eight months' fetus.

This mare appeared in good condition at the time of aborting, apparently suffering no pain, and seemingly experiencing no loss of appetite or flesh as a result of it. She was bred the following spring, conceiving with a single service, as she has every spring since, only to abort during the same week in December of every year that the first accident occurred in.

All who are at all observing can recall similar cases. The interesting thing from the point of view of the student, is that of the abortion occurring annually at about the same time every year, and always at or near the time of the first abortion.

This is not so strange when we remember that throughout the period of gestation the organs of reproduction are changing to meet the needs of a constantly changing fetus, and if an accident occurs at any particular stage of fetal development, the organs are affected only as they are at that particular period, hence the recurring abortions every year at or near the same time.

Some advocate a change in the time of breeding mares that have once aborted. A better plan is to give the mare a rest of a year or more before rebreeding. This will give the affected organs a chance to regain their normal condition, after which there will be little likelihood of a second abortion.

#### MORE LIVE STOCK NOW THAN A YEAR AGO.

For the first time in many years, information collected by the United States Department of Agriculture shows that all classes of live stock in the United States are increasing in numbers. Thus the real facts contradict, absolutely, sensational reports that prices for meat and shoes would rise to unprecedented figures in the immediate future. It has even been said that a government statistician predicted meat at 50c a pound and shoes at \$10 a pair within the next two years. Such a prediction, the real government statisticians say, is quite unwarranted.

On January 1, for example, the number of beef cattle showed an increase of 3.4 per cent over the number a year ago, and an actual increase of 1,212,000 head. Hitherto the number of beef cattle in the United States has declined steadily since 1910. There are also more milch cows in the country than last year, the increase being 2.5 per cent, or in numbers 525,000. Swine, however, showed the greatest increase of all classes—9.6 per cent. On January 1, 1914, there were only 58,933,000 swine in the country; on January 1, 1915, 64,618,000.

There are also more horses on the farms of the United States than a year ago, the increase being 233,000 head, or 1.1 per cent. The total exports since the war began have been much less than 100,000, the government statisticians say. No figures are given on the number sold for war purposes, but still in this country awaiting export.

## QUESTIONS AND ANSWERS

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

Sign Your Name and Address to all Questions.

**1428—RUPTURED AT NAVEL**—We have had quite a lot of colts coming all right, but after they were about a month old they would become ruptured at the navel. One in particular I thought would not be ruptured. I cut the navel and tied it with a string, but it was ruptured, too. Would like to know the cause and if they can be kept from becoming ruptured, would like to know how.—Nebraska Subscriber.

**REPLY**—We are not in much favor of ligating these parts, yet that may not be the cause of your trouble. Sometimes ailments of this sort are of a hereditary character as weaknesses of this kind may be transmitted in the same way as other weaknesses.

**1429—BOG SPAVIN**—I would like to ask why a wind puff or a bog spavin cannot be reduced from a horse's hind hock joint.—Nebraska Subscriber.

**REPLY**—For the reason that they are distensions of synovial structures

150 cows and some years we have fifteen or sixteen cows to lose their calves that way. Some years we only lose two or three out of the bunch; they generally lose their calves five to seven months after being bred. Can you tell me why this is and whether changing bulls makes any difference? Do cows that are kept over and bred the same year lose their calves the next year, as a rule? Please give me all the information you can on this subject.—Texas Subscriber.

**REPLY**—Yours is the same old story. When a person is the owner of quite a large herd of cattle he becomes impressed with a greater loss even though the proportion is no greater. The most of the cases of abortion are of the infectious class, and in fact as a matter of precaution all cases should be so regarded. It is a disease that may be transmitted by coition or association in a herd, and is very difficult to fully eradicate when it has once appeared on the

## HOW TO JUDGE THE VALUE OF AMERICAN BREEDER ADVERTISING

A great many of our readers are asked questions concerning the American Breeder by men who are thinking of advertising in our columns. That is one reason why we frequently publish letters from advertising customers giving their experience. A subscriber who has had no occasion to use our advertising space himself can refer any inquirer to some of these letters, for we receive a great many of them, and one or more of them appear in nearly every issue. They furnish reliable and unbiased information as to the value of our advertising service.

Occasionally a prospective advertiser says, "Why, your rates are as high as some of the older papers." That may be true. As a rule we bring better results than any other paper, cost considered, and without a doubt we have many more genuine, cash, "paid-for-the-paper-itself" subscribers than many papers with possibly larger claims and lower rates. We know very little about the rates of other papers, but try to keep our own advertising pages free from crooked, deceptive or harmful advertising and at the same time get a reasonable profit from our space. That we also secure profitable business for our patrons has been demonstrated hundreds of times, but we cannot refrain from printing another statement of results (given below) because of the exact information it affords as to comparative returns when cost is considered. Mr. Jones, who gave us these figures direct from his records, states that, from all sources, 314 requests for catalogs were received, and of this number 149 mentioned the papers which brought them, as follows:

Report of C. F. Jones, Rippey, Ia., on the replies received from the advertising of his Public Sale of Percherons and Shorthorn Cattle:

Papers Used—	Amount Paid	Replies Received	Average Cost Per Inquiry
American Breeder.....	\$125.00	60	\$ 2.08
Breeders Gazette.....	225.00	39	5.77
Wallaces Farmer.....	185.00	25	7.40
Iowa Homestead.....	175.00	21	8.33
Journal Stockman (Omaha).....	40.00	3	13.33
Live Stock World (Chicago).....	40.00	1	40.00

and the pressure of the fluid within stretches and weakens the supporting parts to such an extent that the enlargement cannot be reduced except by rather radical surgical means.

**1430—HEAVES**—Is there any danger of threshed red top hay giving horses the heaves? Is timothy hay better for horses threshed or unthreshed?—Illinois Subscriber.

**REPLY**—Any course provender that has been permitted to ripen to that point where the seed has well formed is usually of a very woody indigestible nature. We would not regard either red top or timothy very good for horses. If fed at all it would be well to feed a reasonable amount of good hay in addition. Indigestible coarse food, as well as mouldy food is productive of heaves.

**1431—ABORTION IN COWS**—Why do cows have their calves before time? I have had some trouble with this ever since I have been in the cow business. When we only had fifteen or twenty we sometimes lost one or two calves a year and we only sold that cow for beef, and now we keep about

premises. Cows that have aborted should not be permitted to remain with the remainder of the herd. A cow that has once aborted should be treated if she is to be kept, and not bred for a year after the mishap. To bred her, as is usually done, only continues the trouble on the place.

**1432—SCRATCHES**—I have a 3-year-old horse that has had either scratches or grease heel for three months. Will you please give me a remedy for same?—New Mexico Subscriber.

**REPLY**—Keep the animal in a large roomy box stall, and keep the stall scrupulously clean and well bedded. After thoroughly washing the parts with warm water and tar soap, and clipping the hair from the affected limbs if necessary, apply the following three times a day: sugar of lead two ounces, zinc sulphate one and one-half ounces. Water one quart. Shake this preparation well before using. Feed the horse moderately on laxative food. Wash the limbs as

(Continued on page 29.)

## ORIGIN OF THE SUFFOLK HORSE.

To the American Breeder:—The first volume of the Suffolk Stud Book was published in 1880, the author, Mr. Herman Biddle having first spent some 20 years in compiling the pedigrees contained therein.

This being a "labor of love" great care was taken as to the accuracy of everything printed while most exhaustive search was made for everything that would throw light on the subject. The files of the county papers for over a hundred years were open to him. He found and talked personally with old grooms who had been youths at the beginning of the century and who remembered individual animals. He had brought to him handbills of many of the old stallions traveling, while he had also the assistance of the records of the Royal Agricultural Society.

Everything that could not be verified was thrown out, so that our breeders feel that in this first volume they have more authentic history concerning their breed than have the supporters of any of the other draft breeds.

The first individual animal of which we have specific record is known as "Crisp's Horse of Ufford" foaled in the year 1768. Mr. Biddle states, however, that previous to this time there were stallions traveling the county that were undoubtedly of pure Suffolk breeding, while he quotes from a historian of that county who, writing about the year 1750, speaks of changes that have taken place in the breed since his boyhood. This would prove that the sorrel horse of Suffolk was recognized as a distinct breed as early as the beginning of the 18th century.

From the time of "Crisp's Horse of Ufford," the record is undoubtedly clear and authentic. This shows that at various times outside blood was introduced which had an influence on the breed. Five stallions having such influence are mentioned by Mr. Biddle but in a later volume of the Stud Book, Mr. Biddle makes mention that at that time, probably about 1833, the blood of these five stallions in the male line was entirely extinct, the last individual having any being exported to Australia. Of course, we recognize that all breeds have had such extraneous blood introduced, most of them at a very much later date than the Suffolk, but it is most improbable that we have today any breed outside of these sorrel horses of East England, which has now eliminated such outcrosses.—A. Graham Galbraith, Secy., American Suffolk Horse Association, DeKalb, Ill.

## BIG YEAR FOR PACKERS.

It is stated that the gross sales of Swift & Co., for the company's fiscal year ending Sept. 26, 1914, were \$425,000,000 against \$400,000,000 the previous year. The business was the largest in the history of the company. This showing in the matter of sales is even better than the figures alone indicate, since the previous high mark in 1913 was made largely because of the absorption of National Packing Company plants and the figures for 1914 include very little, if any, of the big orders resulting from the war in Europe.

On the gross sales of 1914 the profits are stated to be 21.5 cents on the dollar.

Earnings applicable to dividends on the company's \$75,000,000 capital were 12.6 per cent, as against 12.23 per cent in 1913.

That some progress is being made in the Southwest toward conserving the supply of young cattle is shown by the fact that calf receipts in 1914 (at Kansas City and St. Joseph alone) were 72,500 less than in 1913, when the mark of 600,810 was reached.

## "AM GETTING WORLDS OF ANSWERS.

To the American Breeder:—Please find inclosed check for my last ad. Am getting world's of answers; far more than I expected. Wishing your paper great success the coming year, I remain, C. D. Stowe, Ashtabula County, Ohio.

# A COMPARATIVE STUDY IN THE CONFORMATION OF DRAFT BREEDS

Drawings and Measurements by Dr. Leon Van Meldert.

PROPORTIONS OF THE BELGIAN DRAFT HORSE.

PROPORTIONS OF THE CLYDESDALE HORSE.

PROPORTIONS OF THE ENGLISH SHIRE HORSE.

PROPORTIONS OF THE PERCHERON HORSE SEDUCTEUR 8850.

## AMERICAN DRAFT HORSES.

The most valuable class of live stock in America is not receiving attention in accordance with its value. Horses and mules in this country represent a greater value than any other class of live stock. Heavy horses represent more value in this country than all other horses and mules combined.

At the present time there is no established standard for an American draft horse. If a new breeder was expecting to start into the production of draft horses, would he follow the type of one of the recognized breeds or would he use the city markets or agricultural markets as his standard? Possibly he may have been watching the prize winners at the leading draft horse exhibitions. These are mighty important questions at the present time. No other country has given us a standard. Who has taken the lead in this country in an educational way on this subject? An agricultural horse would not meet demand as a first class city draft horse. The judges at the leading shows have not followed uniform standards. Prominent decisions have been reversed. Breeders of the various draft breeds have different ideas. Is it not time for the American draft horse breeders to discuss this particular subject more intelligently? This country is peculiarly adapted to the very best draft horse conditions. The broad, fertile prairies, with their abundance of feed, offer the very best of opportunities, but before the best progress can be made a standard must be established.

Weight is the first requirement of a draft horse, conformation is second in importance. Conformation largely influences endurance, soundness, action and beauty. A horse having proper conformation will be sound, unless some accident has occurred. Weight should not be taken to mean fat, although the ability to maintain flesh under normal conditions is important. Size should mean a large, strong rugged animal, built for service.

We have discussed this subject several times, but will take it up again in the form of lessons on horse conformation. Drawings will be used for illustrations. These lessons will begin in an early issue. The first lesson will show the names and locations of the different parts of a horse. We hope everyone will study that chart carefully, as it will be the basis for later lessons. In the meantime we want everyone to study the four outline drawings of draft horses in this issue, as a breed comparison, which were drawn and furnished by Dr. Leon Van Meldert. They represent four prize winners: Percheron, Shire, Clydesdale and Belgian stallions. The figures represent no specific unit of measure, but are percentages of the height (at the withers) of the particular animal for which they are given. The number "100," on the perpendicular line at the shoulder of each drawing, does not mean that the four horses are of the same height, but simply is a basis of comparison, to show, for instance, that the Percheron is 11 per cent longer than high, the

Shire 6 per cent longer than it is high, etc.

We want all of our readers to feel perfectly free to enter into the discussion of the type which should be a standard for American draft horse breeders.

## MASSAGING THE OVARIES.

In a great many cases mares or cows having bad ovaries can be made producers by massaging the ovaries. Last spring, at a public breeding demonstration, a mare having very defective ovaries was used as the subject. During the demonstration the instructor taught about 20 men how to locate and examine her ovaries. The mare had not bred for years and was considered a hopeless case. It is quite likely that the frequent manipulation of the ovaries at that time stimulated them to activity, as the mare was bred a little later and is now heavy with foal.

## WRITES OF THE BREEDING SCHOOL.

To the American Breeder:—I attended one term of the Graham Scientific Breeding School and was more than pleased with what I learned about the breeding business, in just one term. I expect to double my income, from the knowledge gained at this school, with the same amount of money as last year invested. Anyone in the breeding business cannot afford

to miss at least one term in this school. I found it to be a clean school and all O. K.—Theo. Nelson, Saline County, Kansas.

## WINTER SPREADING OF MANURE.

To the American Breeder:—The question frequently arises, Should manure be spread thinly over the land in winter when it is hauled, or should it be dumped in piles to be scattered in the spring? The answer to the question is largely one of location. In a great deal of Colorado territory, the winters are dry, with dry, very windy springs. Where such conditions normally prevail, scattering manure broadcast on the land during the winter means that the manure will dry out and frequently be blown away by the first heavy spring wind storm.

Dropping in piles to be hand scattered later saves a part of this loss. Where snow is on the ground and where winds are not a menace, or where conditions permit disking the scattered manure into the top soil, this loss by blowing is prevented. From the standpoint of labor, dropping in piles increases the labor. From the standpoint of saving the manure, it sometimes saves an appreciable percentage, while broadcast scattering would lose all of it. The farmer will have to decide these questions for himself in his own localities, based upon the points above enumerated.—Alvin Keyser, Agronomist, Colorado Experiment Station.

## DEVELOPING DRAFT COLTS

By DR. C. W. McCAMPBELL, Kansas Agricultural College

The Department of Animal Husbandry of the Kansas Agricultural College has received many inquiries during recent years regarding the many problems and phases of growing and developing draft colts. As oats are scarce and expensive in most parts of the state, the question most frequently asked was: "Can good draft colts be grown and developed without the use of oats?" An experiment was planned for the purpose of securing accurate data along these lines.

Two lots of colts were used, each consisting of five grades and five pure-breds. Lot 1 was fed a grain ration of oats, and Lot 2 a grain ration consisting of an equal amount by weight of a combination of corn (70 per cent), bran (25 per cent), and linseed oil meal (5 per cent). Both lots received equal amounts of roughage, consisting of alfalfa hay, straw and corn stover. The experiment was started January 14, 1913, the average age of the colts at that time being about 8½ months. It was aimed to secure maximum growth and good conditions without overloading with fat. The colts had the run of a 20-acre pasture, both summer and winter. During the summer of 1913 they were fed grain to the extent of about six pounds per 1,000 pounds live weight, and during the summer of 1914 they were fed grain at the rate of three pounds per 1,000 pounds live weight until July 25, and no grain from July 25 to October 20.

The rate of growth for the first year, from January 14, 1913, to January 9, 1914, 360 days, is shown in the following table:

LOT 1 (Oats).					LOT 2 (Corn, Bran and Linseed Oil Meal).				
Kind	Aver. Initial Weight	Aver. Final Weight	Aver. Gain in 1 Year	Aver. Daily Gain	Kind	Aver. Initial Weight	Aver. Final Weight	Aver. Gain in 1 Year	Aver. Daily Gain
Colts.	Lbs.	Lbs.	Lbs.	Lbs.	Colts.	Lbs.	Lbs.	Lbs.	Lbs.
Grade. . . .	834.9	1,263.3	428.3	1.19	Grade. . . .	798.	1,297.3	499.3	1.38
Pure-bred. . .	866.6	1,355.6	489.	1.36	Pure-bred. . .	854.6	1,347.3	492.7	1.37

On January 9, 1914, the stallion colts were removed from the experiment, being approximately 20 months of age. These stallion colts were placed in a three-acre pasture and fed for the fall market on a mixture of corn, bran and linseed oil meal. These colts were Clydesdales, Belgians and Percherons, and of only average quality and averaged 1,332 pounds in weight on January 9, 1914. On January 4, 1915, one year later, they averaged 1,865 pounds in weight, making an average gain of 533 pounds each, or 1½ pounds per day. The purchase price of these colts averaged \$210 each, and the total cost to date has been approximately \$375 for each colt. One of these colts has been sold for \$800 and another for \$900. These figures show that growing and developing young stallions is a profitable line of horse husbandry,

tory bone development is desired. Oats are generally considered the best bone and flesh-forming feed available, but we find that a combination of corn (70 per cent), bran (25 per cent) and linseed oil meal (5 per cent), contains practically 60 per cent more phosphoric acid than an equal weight of oats. The ash of flesh is principally potassium phosphate, and as the combination of corn, bran and linseed oil meal contains practically 90 per cent more potassium, as well as 60 per cent more phosphoric acid than oats, we see another advantage of this combination of grains over oats as a feed for developing draft colts. The protein, carbohydrate and fat content of a ration are important, but the ash content, which has been very much overlooked, is just as important. The results of this experiment are in keeping with the results one would expect from a chemical study of the rations used, for we have secured just as much or more size, bone and weight in Lot 2 as we did in Lot 1.

These grade colts were farm raised, receiving no grain previous to weaning. They were purchased from farmers of Clay, Riley, Pottawatomie and Wabunsee counties. The sires of these colts are registered pure-bred stallions, averaging 1,900 pounds in weight in breeding condition. The dams of these colts varied in weight from 1,250 pounds to 1,600 pounds, the average being 1,380 pounds. It will be noticed that the grade colts from these crosses average 1,530 pounds in weight, at a little more than 2½ years

of age. Particular attention is directed to the fact that there has been no attempt to fatten these colts. Our purpose has been to secure the maximum amount of growth, and this can be attained only by liberal feeding. The farm cost of these colts to date has been \$110, and two men who handle hundreds of market horses each year appraised them from \$175 to \$250 each, the average for the lot being \$200. These colts are broken to harness and are ready to go to work and pay their way from now on.

It is interesting to note the fact that colts developed in the communities where these colts were raised, sired by the same stallions and out of the same class of mares, average approximately 300 pounds in weight less than these colts and would sell for little more than half the appraised value of

### WEIGHT RECORDS, TWO YEARS 720 DAYS.

LOT 1 (Oats).					Lot 2 (Corn, Bran and Linseed Oil Meal).				
Aver. Initial Weight	Aver. Final Weight	Aver. Gain in 2 Years	Aver. Daily Gain		Aver. Initial Weight	Aver. Final Weight	Aver. Gain in 2 Years	Aver. Daily Gain	
Lbs.	Lbs.	Lbs.	Lbs.		Lbs.	Lbs.	Lbs.	Lbs.	
Grade. . . .	834.9	1,527.5	692.6	.962	Grade. . . .	798.	1,535.	737.	1.023

but especial emphasis must be placed upon the fact that stallions must be well grown and well fitted if the owner expects to receive the high dollar for them at sale time.

The development of the grade colts used in this experiment should be of particular interest to every farmer who does not grow pure-bred horses.

A careful study of the chemical composition and the development of bone, as given by the best authorities, reveals the fact that ash makes up approximately 65 per cent of bone, and about 85 per cent of the ash of bone is calcium phosphate. Lime or calcium is found rather plentifully in most feeds, alfalfa hay furnishing a larger per cent of lime than any other feed, either concentrate or roughage. The phosphoric acid content is really the important element to consider in providing feed for colts if a satisfac-

the colts developed in this experiment, which shows very plainly that one cannot afford not to feed draft colts liberally during the early part of their life. They must not only be bred right, but they must be fed right. Good draft horses, when properly developed, are a profitable farm product.

### THAT'S A FAIR PROPOSITION.

To the American Breeder:—Inclosed please find two checks for \$1.00 each, to pay for two three-year subscriptions to your valuable stock paper. Please send one paper to my address it being a renewal and one paper to W. D. Bangs, Sage, Mont.

Have taken your paper since it was published and will continue taking it as long as you keep it as good as it is.—Frank E. Fee, Towner County, N. Dak.

### MODERN BREEDING.

The breeder who employs only the natural service should be qualified to make a careful examination of every mare presented for breeding. Those who have not studied technical names and have not had an opportunity to make practical examinations with competent instructors, cannot always get the best results, even though they have read carefully on the subject. When the natural service alone is employed, every service should be made to count. This is more especially necessary during the busy breeding season.

The breeder who cannot make a rectal examination or who cannot use a speculum to best advantage, and make many other examinations of a similar nature, cannot expect to get the best results until he has taken some special training. There is only one school in the world where breeding is taught exclusively and that is at the Graham Scientific Breeding School. A Breeding School is different from any other school as the time is devoted almost exclusively to the generative organs. What breeder would not become well posted on these organs, if he could spend an entire week beginning at 7:30 in the morning and working continuously every day until 10:30 at night with the very best instructors, and all of the modern methods of teaching on this particular subject.

Breeders get practical work and all of the subjects are handled in a plain manner for the benefit of breeders who have not had technical training. Every breeder ought to be thankful that there is such an institution. It opens up a wider field for him and offers a wonderful opportunity for further investigations and examinations which breeders alone can have. It makes their work interesting. It gives the student an opportunity over his competitors in every way. It establishes confidence with his patrons, but its greatest importance is that it increases the revenue without increasing the investment. It is not surprising to hear these students say that their lives have been changed. They see things they have never seen before. If the work at this school was given in a technical manner it would take many months to get the same results.

No other business offers the great opportunity for the amount of capital invested that the breeding business does when carried on along modern lines. The breeder who wishes to make this his profession can make more out of it than nearly any other profession, because there are not so many in it. When a practical breeder attends this school it is not long until his competitors can be seen in attendance.

The principal objection that breeders make to attending this school is that they cannot leave home for a

week. This is only imagination. A good neighbor can usually be employed to look after the stock for that period of time. He can be instructed to give the valuable breeding stock one-half of the regular ration; then there will not be very much danger of the stock getting sick. Every breeder is entitled to a little recreation. There is no better place for him to spend a few days than at the Breeding School. The breeder who never gets away from home is in a rut. He should get away and see what other breeders are doing. This is one of the strong points of the Breeding School. One learns from many other men their experiences on different subjects about breeding. Many profitable breeding stock exchanges are made at the school. Those who wish to buy

## Lowest Prices on Steel Shingles

### Save Money—Save Roofs From Fire, Rot and Rust

But you must act NOW. Offer will soon be gone. Edwards Steel Shingles now cover 135,000 roofs. Cheaper than good wood shingles. Last five times longer. Need no after-care. A man with a hammer and nails can quickly apply them. The Edwards patented "Tightcote" process prevents rot, rust, fire. Millions have been saved to Edwards users.

### Edwards STEEL Shingles

No raw or exposed edges. Dipped in molten zinc after they are cut. Joints everlastingly watertight through Edwards Patented "Interlocking" Device. An Edwards roof lasts as long as the building. Insurance from lightning free under our \$10,000 guarantee.

Free Roof Insurance

Offer Limited

Factory prices. Direct to you. Freight paid. Have a better roof, every way, and save money by acting now. Offer soon gone. More for your money every way. Quick action important. Costs nothing to find out. No obligation. Write now—RIGHT NOW.

KANSAS CITY,  
MO.

stock are given an opportunity to state what they want, and those who have stock to sell are given a chance to explain what they have to offer. Some men state that they do not

attend the school because their wives are afraid for them to associate with a lot of tough "stud horse men." If such wives could attend this school themselves and know how it is con-

ducted they would be glad to have their husbands attend. On many occasions men have said they wished their wives were with them and could hear some of the lectures. There is

nothing given at this school that ladies could not hear. We doubt if there is a cleaner place in the country than this breeding school. There are no signs of toughness displayed

# WHY 40,000 "DETROIT" ENGINEERS

## USE ENGINES LIKE THIS DAILY!

### Our \$50,000<sup>00</sup> Cash Bond 30 DAY FREE TRIAL OFFER

#### OUR GUARANTEE

SATISFACTION ABSOLUTELY GUARANTEED OR YOUR MONEY BACK

We guarantee you that if for any reason whatever you would rather have the money than the engine, and notify us of your desire to return same within thirty days after it arrives at your depot we will immediately advise you where to ship the engine and, upon your complying with our request in this matter, every cent you may have paid us for the engine will be cheerfully repaid to you, without question and without delay, immediately upon receipt of engine.

Section torn from our Cash Bond Guarantee

## 5 Big Reasons WHY

Thousands of farm homes use "Detroit Engines" for sawing, threshing, spraying, pumping, churning, grinding feed, running a dynamo to light the house or barns, etc., etc.

#### The 2-cycle "Detroit" has only 3 movable parts

- 1 This means simple construction, easy to run, no cams, valves, gears, push rods, guides to break and cause loss of time and money for endless repairs. Other engines have 19 movable parts.

#### The Detroit operates perfectly on kerosene

- 2 or gasoline, alcohol, naptha or distillate, but most "Detroit" owners use Kerosene, because it's cheap, easy to get—it don't evaporate—gives more power, and it don't explode.

#### "With 2 strokes of the piston"

- 3 The Detroit 2-cycle engine does the same work which requires 4 strokes in the complicated 4-cycle engine. The "Detroit" creates a power impulse every 2 strokes, other engines require 4 strokes.

#### You don't crank the Detroit

- 4 It starts instantly, without cranking. It can be reversed while running, the speed may be changed while running. The Detroit Fuel Injector insures perfect combustion.

- 5 A \$50,000.00 cash bond guarantees you against loss on our 30-day free trial

## THE AUTO-OILED WINDMILL WITH DUPLICATE GEARS RUNNING IN OIL

Every bearing is constantly flooded with oil. Two quarts of oil in the gear case of this 8-foot auto-oiled windmill will keep the gears and every bearing flooded with oil for a year or more.

The galvanized steel helmet covers the gears, keeps out rain, keeps out dust, keeps in oil. The mill needs oiling but once a year.

There is a windmill, known the world over as "the windmill which runs when all others stand still." This new windmill with gears and bearings flooded with oil runs in much less wind than that well known windmill.

The two large gears, which lift the load straight up, are each independent of the other and each is driven by its own pinion on the main shaft and must take its half of the load at all times.

The auto-oiled windmill, with its duplicate gears and two pitmen lifting the load straight up, is unbreakable. Every 8-foot mill is tested under a pumping load of 3000 pounds on the pump rod. For the larger sizes the load is proportionately greater. We know that every one of these windmills is unbreakable. We venture the assertion that this is the most nearly perfect, best made, best tested, best oiled, most nearly perpetual, automatic and self-sufficient of any machine of any kind ever made for farm work and the most nearly fool-proof.

There is no friction on any part of the furling device when the mill is running and very little when the wheel is furled.

**DUPLICATE GEARS  
RUNNING IN OIL  
Oil Annually  
EVERY BEARING  
FLOODED WITH OIL**

A small child can easily furl this windmill or an automatic regulator can take care of it. One of these mills has been furled 10,000 times in one day by a man on our premises—more times than it would ordinarily be furled in 30 years of service.

A band brake, of the automobile type, is used, and it always holds.

The gear case contains two pairs of gears and the supply of oil. From this gear case the oil circulates to every bearing in a constant stream. It flows out through the friction washers in the hub of the wheel and is automatically returned to the gear case. Not a drop of oil can escape. It is used over and over. So long as there is any oil in the gear case the gears and every bearing will be flooded with oil.

If you are tired of climbing a windmill tower; if you are tired of buying repairs and having them put on; or, if you are tired of waiting for a big wind, let us furnish you an unbreakable, self-oiling, ever-going mill to go on any old tower. It costs but little and you will get the difference between no water in a light wind and an abundance of water in almost no wind. The flooding of all the working parts with oil, the perfect balance of the wheel and vane on the tower, the very small turntable on which the mill pivots and the outside furling device make this difference.

Now there is no objection to a high tower. Have as high a tower as you need to get wind. You don't have to climb it. Your dealer can come once a year and put in oil, if needed, and inspect the mill.

Running water purifies itself—stagnant water, standing water, collects and retains impurities. If you pump from your well constantly all the water it can spare, the water that comes in to take its place will be pure. If the water in your well stands until you happen to want some, and you pump but little, then it is likely that surface water will flow into it and carry in impurities. The unsafe well is the one that has standing water. A flowing stream is the thing to be desired.

The auto-oiled windmill makes all this possible as it can run from one year's end to the other with practically no wear and no cost. If interested, write Aermotor Co., 1146 So. Campbell Ave., Chicago. Why not have flowing water, cool in summer and warm in winter, always fresh and pure? It will cost next to nothing. It will give health to your family and stock. Let the water run into a good size reservoir and raise all the fish of the choice kinds your family can eat, and have water to irrigate your garden and make it raise many times as much as it would otherwise. Water costs nothing. Use it.

We need and must have the best dealers everywhere. They need us if they are going to remain in the windmill business. Write right now.

To let it stand is to abuse it.

here. Fathers who have attended do not hesitate to send their sons alone to this school. Those who may have any tendency to be tough do not show it around these men. If wives only knew what lectures their husbands receive at this school they would be glad to have them come.

The next term will be held March 1st to the 6th.—Advertisement.

### AN INFLUENCE TOWARD BETTER THINGS.

To the American Breeder:—Please find inclosed \$1.00 to pay for your paper for three years. I have taken it three years, and I see my time is almost out and do not want to miss an issue. I received it this morning and have been reading same. I think it is a great paper for a farmer. The editor always advocates the best, in which I heartily agree with him. I wanted to attend the Breeding School next month, but cannot on account of sickness in the family. I think it will pay anyone to attend the school whether they practice the capsule breeding or not. There is nothing taught there but what is good and fit for anybody to learn. I have attended three terms and would like to attend them all. It makes one want to do better and to have better live stock. I went from the school two years ago to J. Crouch & Son and bought Mon Gros and Betsy De Voorde, which were both Belgian champions at the International in 1911, and the horse was also champion in 1912. The mare was second in 1912, and I think she ought to have been first that year. I have a colt seven months old out of her and Mon Gros which weighs 900 pounds and has a great bone and fine action.—M. S. McMahan, Jersey County, Illinois.

### NEW SHORTHORN RECORD VOLUME.

A new volume (No. 83) of the American Shorthorn Herd Book is out. The bulls recorded in this volume number from 385001 to 394000, inclusive—9,000 animals. The females recorded are numbers 149000 to 160000,

inclusive—11,000 animals. This book costs \$2. Address F. W. Harding, Sec'y., 13 Dexter Park Ave., Chicago.

### FOOT AND MOUTH DISEASE IN KANSAS.

New emphasis has been given to the many and repeated cautions concerning quarantining by the appearance of foot and mouth disease in Southern Kansas. The disease was first discovered a few days ago in a herd of Holstein cattle near Winfield, Kas. These cattle had been brought from Wisconsin, making a trip of nearly a thousand miles, and probably brought the disease with them all that distance.

If Kansas had been enforcing such quarantine regulations as should have been enforced, this source of danger might still have remained a thousand miles away. Four Kansas counties have been quarantined as a result of the discovery and it is hoped that these measures will prove a safeguard against possible further spread of the disease from points along the route followed by the car which brought the cattle. There is, however, no absolute assurance as to this, as many an experience has proven. There is no certainty as to what will be the final result from the failure of the live stock sanitary rules to protect domestic animals within the state.

### WHY BEEF HERDS ARE DECREASING.

During the past ten years, the beef herds of Kansas have decreased 50 per cent, said W. A. Cochel, professor of animal husbandry in the Kansas State Agricultural College, in an address before the state board of agriculture upon the subject, "Will Beef Production Increase in Kansas?" This condition has been brought about by a variety of causes, believes Professor Cochel, among which is the conclusion of the farmers that beef production is unprofitable. This conclusion, believes Professor Cochel, is not always based upon sound logic.

Farmers have broken up thousands of acres of pasture land which should

never have been plowed. The tenant farmer must have a long lease or other incentive before he will change from a grain grower to a live stock producer. The present deficiency in the supply of beef is largely due to the decreased capacity of the pastures. In a four-year period, beginning in 1910, there has been an increase of 72 per cent in the acreage necessary to support a steer and an increase of 31 per cent in cost of renting land for a steer.

### VAGABOND DOGS VS. FARM PROFITS.

To the American Breeder:—About three quarters of the area of the state of Missouri is devoted to farming. Twenty-five per cent of the land devoted to farming is classed as unimproved land. This unimproved land does not include the rougher land of the Ozarks, but the parts of the farm not under cultivation for various reasons. In all there is some eight million acres of this type of land adaptable to only grazing systems. This by no means includes all the grass land of the state, as much of the tillable land is wisely kept in pasture.

The lesson which I wish to draw from these figures is that nearly one-fifth of the land of this great state of Missouri is not being utilized as fully as it could easily be. The greater part of this unimproved rough land does not afford a pasture on which cattle will do well. Frequently it is overgrown with brush, weeds and grasses which cattle do not eat. Hence, on many farms, it is simply an idle tract of land not earning the tax assessment on it. Why is this condition allowed to exist?—primarily, all because the Missouri farmer has not insisted upon his right of using this land to the best advantage. That is, he cannot embark in the sheep business because of the danger of prowling dogs and wolves. This unimproved land alone would support about eight times the number of sheep that Missouri is now accredited with. The state does not encourage, but actually impedes the farmer

from maintaining a farm flock and utilizing this rough land. Under the present law, should you kill a dog running your sheep or otherwise molesting your flock, you put yourself liable to the cost of a lawsuit and the damages for killing the dog. This is hardly giving the stock farmer a square deal. Many a farmer would keep a small flock of sheep if he could do so with reasonable safety, but with the dogs having all the privilege, he will often give up the idea. The wolf question also needs attention. The bounty described by law for wolf scalps has not been paid in many counties and the question should be taken up by the sheep men.—H. Hackedorn, Secretary Missouri Sheep Breeders' and Feeders' Association.

### QUICK ACTION ON RINDERPEST.

Nearly half a million dollars will it is expected, be saved to the Philippine Islands by the adoption of the recommendation of Dr. Henry Jackson Waters, president of the Kansas State Agricultural College, for the control of rinderpest, a disease which has in some places caused a loss of more than half the cattle.

The disease has been found extremely difficult to stamp out by means of quarantine regulations, particularly in places where the people are not educated to understand the value of such measures. Upon his return from the islands last fall President Waters recommended immunization of susceptible animals, and though he mailed his report only a few weeks ago, news comes from the Philippines that this recommendation has already been put into effect.

### A LESSON ON PIGS.

To the American Breeder:—The boys in the North Dakota Pig Clubs have worked out some very interesting information during the present year. Charles Russell produced 2,902 pounds of pork from one litter of pigs in 203 days, at a cost of a little less than 3c per pound. The sow was a Yorkshire; number in litter, 14; number raised, 14; total cost of feed, \$83.12; profit, with pork at 6c, \$91.06 for the litter.

All the pigs entered in the contest averaged as follows, by breeds: Poland Chinas, 193 lbs., at 213 days; Duroc Jerseys, 185½ lbs., at 227 days; Yorkshires, 182 lbs., at 219 days; Chester Whites, 180 lbs., at 210 days; Cross breeds, 188 lbs., at 217 days.

The average weight of the hogs in the 24 litters that stood highest was 212 lbs., at an average age of 213 days.—W. E. Vaplon, State Leader Boys' and Girls' Clubs, Fort Collins, Colo.

### WINTER CARE OF EWES.

To the American Breeder:—The winter care of the flock is just as important as the careful cultivation of the corn crop. This is the growing season of the lamb crop to be harvested in the spring.

The Feed.—The condition or the amount of flesh the ewes are carrying must guide the feeder. Ewes in good condition need not be fed grain until about a month before lambing, when they should receive from one-fourth to one-half a pound of grain. Straight corn is not the best grain ration. The grain feed should contain some of the blood and muscle-building material. A ration of 6 parts corn, 3 parts wheat bran, 1 part linseed oil cake, by weight, has proven satisfactory at the Missouri Agricultural Experiment Station. A ration of corn, oats and bran, equal parts by weight, can also be recommended.

The sheep should receive as much clover or alfalfa hay as they will eat. The amount of hay eaten can be cut down by use of corn silage or corn stover. Two pounds of clean, sweet corn silage can be used to replace about one pound of hay. Well-cured corn stover is also relished by the ewes. Ordinarily there is little danger of the sheep eating too much of it if hay is fed once a day. The greatest danger of corn stover comes from making it the exclusive feed. Under

# 11¢ a Rod!

## The Very Best Wire Fence Ever Made Now Sold Direct To You From Our Big Ottawa Mills With All "Middle" Profits Saved For You!

NOW you can buy the highest quality wire fence of every kind, weight and size direct from the factory at a net cash saving for YOU of from **one-third** to **one-half** the price you have always paid.

This is possible because you pay only **one** profit instead of **three** profits, when you buy on our factory-to-farm plan! When you buy from the local dealer you must pay the **very same factory cost** as if you bought direct from the maker. And in **addition** you must pay **three** profits—the manufacturer's, the wholesaler's and the retailer's. When you buy from the Ottawa Manufacturing Company, you pay the **same** factory cost—and one small manufacturing profit in addition. And you pay a **smaller** manufacturing profit on Ottawa fence because we are able to operate on a smaller margin of profit on each rod of fence on account of our enormous volume of business.

We buy wire in train load lots from America's greatest mills—and we take advantage of every slump in price during the dull seasons of each year to lay in our factory supply. We make up this wire into fence of every style and size and distribute our entire output in carload lots to our big warehouses in Ottawa, Kansas, Brazil, Ind., Denver, Colo., Fort Worth, Texas, San Francisco, Cal., Lincoln, Nebr.

Your order is shipped direct from the warehouse located nearest to you, and this plan of manufacturing, distributing and selling has enabled us to build up a great national direct-sale business, which is making a **reasonable** profit for us and enabling us to save for our customers **one-third to one-half** on usual cost.

## 164 Serviceable Styles From

## Which To Select!

hundreds of the most expert wire fence makers to be found in America. We make 164 different styles of wire fence and gates—a style, grade, size and weight to meet **every** requirement—and we sell it direct to you in **any** quantity, large or small, at 11¢ and up per rod. No matter what you may desire in this line—whether it is hog fence, poultry fence, field fence, ornamental fence or what—you will find it illustrated, fully described and priced at a figure **surprisingly low** in our big, two-color 40-page catalog.

At our two big modern factories—at Ottawa, Kansas, and Brazil, Ind.—we constantly employ

## Guaranteed

## "Every Inch Perfect"

## Or Your Money Refunded!

Furthermore, you are going to be completely satisfied with the fence we send you—it is going to come up to your expectations in **every** way or it must come back to us and **every penny** of your money will be refunded and we stand transportation charges both ways!

Our own patented manufacturing process is used in making "Ottawa" fence—the Ottawa non-slip tie is the most valuable idea ever used in fence making. It is positively guaranteed not to slip—it will hold under all conditions. Our wire is every inch perfect—it is heavily galvanized and will withstand all weather conditions. If the Ottawa tie ever slips—or if the fence fails to make good in **any** way—tear it down, send it back to us and your money will be promptly refunded.

## Get This Big Book of Wire Mill Bargains

You will find our big free wire fence catalogue the most interesting and instructive volume of the kind you ever used. It is filled with wire fence facts from the first page to the last. Scores of illustrations show you just how every style of Ottawa Fence is made and used. Complete descriptions accompany each illustration and every price we quote in this book is a genuine bargain price.

Use the Coupon—or a postcard—and send us your name and address so that we may send you, free and prepaid, YOUR copy of this valuable, money-saving book. Address

184 King Street, Ottawa, Kansas.

**WANTED—POSITION AS MANAGER** on large farm or ranch, to be run on a strictly business basis. Agricultural college education; practical experience with soils, crops, breeding, feeding, buying, selling, and handling labor. Single, industrious, and unquestionable evidence of ability and integrity. No position considered paying less than \$1,200. Address, **RANCH, Care AMERICAN BREEDER, KANSAS CITY, MO.**

## THREE FARMS FORSALE

Will consider good trade offers. One of 90 acres; well improved; all cultivatable; adjoins Salt river and only 3 1/2 miles from Shelby, Shelby County, Missouri. Price, \$12,000.

One of 140 acres; good improvements; gas, timber and water available; all good land; only 1 1/2 miles from Havana, Montgomery County, Kansas. Price, \$7,500.

One of 62 acres; with some timber (no improvements); all rich, level bottom land; 3 miles north of Warrensburg, Johnson County, Missouri. Price, \$6,000.

Can make good terms to intending buyers of good farms for a home, near good settlements and markets. Will give full particulars. Write to

**HELDER & HOSTRUP, Manhattan, Kans.**

## 98-ACRE FARM AND TWO TOWN HOUSES FOR SALE OR TRADE

75 acres of the farm is under cultivation; 23 acres are in saw timber. 1 1/2 only 1/2 mi. from good railroad town, 2 elevators, stock yards, bank, cannery, factory, mill, good schools and churches. The two houses are in nearby town on same railroad.

Will consider registered draft stallions or any other live stock on trade.

**G. W. WILSON, Springfield, Mo.**

## LAND FOR EXCHANGE

For Stallions and Mares.

400 acres; 9 miles from county seat; 160 acres adjoining town of 400 population; 160 acres, Wichita County, Kansas. Land clear. Priced at cash price. Do not write unless you mean business. Address,

**LOCK BOX 666, Grand Island, Nebr.**

## TWO FARMS FOR SALE.

One is three miles southeast of Plantersville; 320 acres, 150 in cultivation, 60 or 75 in pasture, balance in wood land. Suitable for raising corn, cotton, small grain, alfalfa. Five deep wells of fine water on place.

Also some land in Southwest Texas for sale; one-half section; level, rich land, unimproved. For further information, write

**J. F. McWHORTER, Plantersville, Miss.**

## FOR SALE OR TRADE FOR LAND.

Black Percheron; weight 1,800. One gray Percheron; 1,950. One Belgian and Percheron.

One jack, weight 900. One jack, weight 1,050; black; mealy points; extra good breeders.

This stock is all good and sound. Plenty of good colts to show.

**F. COUNTRYMAN, Thayer, Kas.**

## TO EXCHANGE

For Draft Stallions or Jack. South 1/2 section 3, township 16, range 19, San Miguel County, New Mexico. All tillable and no incumbrance. Close to Las Vegas. Write the **Bonesteel State Bank** your proposition. Bonesteel, So. Dak.

## THE KANSAS CITY SOUTHERN COUNTRY

Has good land at low prices. Descriptive magazine free for a year.

**W. K. NICHOLSON, IMGR. AGENT, K. C. S. Ry., Kansas City, Mo.**

## LAND TO TRADE FOR STALLION

Good, 160 acre Lane County, Kansas, land worth \$1,800, for a good registered stallion worth up to \$1,200.

**JAS. HILDRETH, Preston, Kas.**

## TO EXCHANGE

For Dairy Stock. Sixty acres, all in cultivation; four miles from R. R. Valuation \$3,600.

**CRILLY BROS., Bonesteel, So. Dak.**

## LAND FOR SALE OR TRADE.

Will take a couple of good young stallions and some registered or high grade mares on a trade for 160 acres of land.

**A. H. MCKENZIE, EUREKA, KAS.**

**WANTED—To hear from owner of good farm for sale. Send cash price and description. D. F. Bush, Minneapolis, Minn.**

(Continued from page 10.)

this condition, "impaction" with other attendant troubles will often result.

Clean salt and water should be kept before the flock.

Sheep should always have a dry, well-bedded floor to lie on.

The flock should have sufficient hay rack and grain trough room so that all can eat at a time without excessive crowding. A complete report of the work done by the Missouri Experiment Station with breeding ewes is found in Bulletin No. 120.—Howard Hackedorn, Missouri Agricultural Experiment Station.

# THE BREEDS OF LIVE STOCK

## NUMBER III—BERKSHIRE HOGS.

Editor's Note: The following article is the third in a series that is satisfying the desires of thousands for authentic information in this line. Again we urge upon our readers that not a single copy of the American Breeder be misplaced or destroyed while this series is running. Many times it is impossible for us to accommodate requests for extra copies. Single orders for several hundred papers of some special issue often exhaust the last of our reserve supply. The only way to be sure of this series, complete, is to save every copy of the paper. No publication (book or periodical) has ever covered the subject in a way to so well meet the demand for information on breeds, as does this series of special articles.

The Berkshire hog originated in South-Central England, in Berkshire and Wiltshire counties. The foundation seems to have been the old English hog—a domesticated descendant of the wild boar—a large, long-legged, coarse and rough animal, with heavy, flap ears. Some weighed 1,000 to 1,100 pounds. They were sandy colored, or reddish brown, with black spots on some individuals. The hair was coarse, long and curly. The hams were narrow and light. They were active, strong in constitution, fattened readily, but were slow maturing.

Upon this foundation was introduced crosses of Chinese, Siamese and Neapolitan blood. About 1830, after the introduction of foreign blood, they were described as large, sandy or whitish brown, spotted with dark brown or black. The bristles had been displaced by long, rather fine and somewhat curly hair. The ears were erect and fringed with long hair. The head and snout were short, the body thick and medium long, the legs short, skin thin, flesh of good flavor, and the bacon superior. They were early maturing, easy fattening, small boned, hardy and prolific. Considerable variation occurred, however, in color, size and type.

Improvement in later years seems to have been by selection. Prominent early improvers were Richard Astley, Lord Barrington and William Hewer.

The Berkshire first came to America in 1823, being imported at that date to New Jersey. In 1832 there was an importation to New York state. They have become widely distributed in the United States and Canada, and have had a part in producing some of our own American breeds. The breed has been handled and encouraged largely by men of means, although to a large extent it is also in the hands of what may be termed farmer-breeders. The American Berkshire Association was organized in 1875. This association publishes the American Berkshire Record, in which about 200,000 animals have been recorded to date.

The Berkshire is a medium-sized hog; boars should weigh 600 pounds or over at maturity, and sows 450 pounds or over. The color is black with white points. There are six of these white points—four white feet, a white streak in the face, and more or less white on the tail. These markings need not occur exactly as described, but these are the desired markings. White spots sometimes occur on the jowl, arm, foreflank or side. Compared with other breeds, the color of the Berkshires may be called uniform. The body color sometimes shows a tinge of bronze or copper color, and this does not disqualify.

In general form, the Berkshire is long-bodied, moderately wide, rather deep, and moderately long of leg. The top line shows a slight arch, and the underline is straight and tidy.

The head is short and broad. The snout should be short, the face rather short, nicely dished and very wide between the eyes. The eyes should be large, very clear and of a dark hazel or gray color. The ears are sometimes almost erect, but generally incline forward somewhat, and should be medium-sized and rather fine. The jowl is well developed and fairly smooth and firm. The neck should be short and broad on top.

The shoulders should be fairly broad, but not wider than the rest of the hog, being smooth and well laid in. The back is nicely arched, moderately wide, very long and well muscled. The loin is similar to the back. The sides are excellent, being straight, long, of good depth, and bordered below by a neat underline. The belly is trim, for this breed is not paunchy, but tucked up and trim in underline. The belly is, however, meaty.

The rump should be long and level, with the tail set well up. The rump should be as wide as the parts in front of it. The hams are only moderately full; they lack in the extreme depth, thickness and plumpness which characterizes some breeds, but are, on the other hand, firm and trim, whereas some breeds are too loose and flabby in fleshing on the hams.

The legs should be fairly short, with plenty of bone of the best quality, being clean-cut in joints and smooth in shanks. The pasterns should be strong and the toes not spreading. The coat is abundant, especially in the boar, and the hair is fine and straight. The skin is smooth and fine. In quality throughout, as indicated by the bone, head, ears, skin, hair and smoothness of form and fleshing, Berkshires are distinctly high class.

The amount of lean meat is good and its quality is of the best, but this breed is not inclined to take on an extremely heavy covering of fat. The fleshing is smooth and free from wrinkles. As developed in this country, the Berkshire is not a true lard type, comparable to the Poland-China and some other breeds, but has a type midway between the bacon and lard types. It is, however, a highly useful and desirable type of hog. In England the Berkshire is regarded as a bacon breed, and is bred and developed accordingly, but in this country we have remodeled the type to make it more suitable to cornbelt conditions. There is, then, an "English type" and an "American type" of Berkshires; the latter is a thicker, slightly shorter and heavier fleshed hog than the former.

In its type and carriage the Berkshire is in a class by itself. Its sprightly gait, short, dished face, erect ear and fine quality give it a stylish appearance and a distinctiveness not found in any other breed. It is the aristocrat among the breeds of swine. This breed is early maturing, but it is not entitled to rank above the Poland-China in this respect. Its adaptability is excellent; it is raised successfully in the colder parts of the United States and Canada, and also in the South, where it is a favorite. It is doubtful if any other breed of swine is bred and fed successfully under more varied conditions than is the Berkshire.

In prolificacy this breed is medium. Figures compiled from a large number of litters show the Berkshires to average 8.22 pigs per litter. This surpasses the Poland-China, but is inferior to the Duroc-Jersey, Hampshire, Chester-White, Yorkshire and Tamworth.

Berkshires are good grazers and rustlers. They are active and are more inclined to take exercise than are some of the American breeds. They are good feeders and make economical gains, but they do not fatten quite so quickly nor heavily as the true lard breeds. In breed tests at the Iowa Experiment Station the average daily gain and cost of gains per hundred-weight for three breeds were as follows:

Berkshires: .98 pound daily—\$2.33 per cwt.  
Poland-Chinas: .90 pound daily—\$2.23 per cwt.  
Chester-Whites: .89 pound daily—\$2.46 per cwt.

When slaughtered, the Berkshire dresses a high per centage of carcass of the highest quality. There is a large amount of lean meat, but the

## GOING TO BUILD OR REPAIR?

### Get This Book

Send for the greatest money-saving catalog ever issued. For Farmers, Builders, Contractors and Home Owners. Thousands of Bargains in New Lumber, Roofing, and merchandise from the 'Shelby' and 'Reelers' Sales. We buy in train loads, Hardware, Mill Work, Doors, Window Sashes, Plumbing and Supplies, Paint.

## Paint Without Oil

REMARKABLE DISCOVERY THAT CUTS DOWN THE COST OF PAINT SEVENTY-FIVE PER CENT.

### A FREE Trial Package Is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fireproof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r., 807 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

### Why Pay Two Prices for Fences?

## SUDAN GRASS

Most productive grass grown; rich in protein; several cuttings each season. Grows anywhere. This seed has been inspected and recleaned. 60c a pound in small packages; 10 pounds, 50c per pound. Cash with orders. Write me for prices on 50 pounds or more.

**E. FOSBERG, LITTLEFIELD, TEX.**

yield of lard is not as great as from some other breeds. The quality of pork is excellent, being fine in grain, of good color, and showing a nice intermixture of fat with the lean. No other breed surpasses the Berkshire in quality of product, and few equal it.

Famous American Berkshires have included the following animals, from which the best animals of the present time are descended: Longfellow 16835, Lord Premier 50001, Lord Premier II 92708, Masterpiece 77000, Star Masterpiece 10200, Baron Lee IV 33446, Governor Lee 47971, Charmer's Duke 13360, Columbia's Duke 33855, Combination 56028, Model Duke 17397, Premier Longfellow 68600 and Lord Premier's Rival 92805.

In conclusion it may be said that the good points of the Berkshire are: 1. Quality of meat. 2. Quality throughout. 3. Style and general attractiveness. 4. Smoothness. 5. Uniformity of color. 6. Fairly uniform type. 7. High yield of carcass. 8. Good rustlers and grazers.

## A Department For Women

### THE HOUSE AND THE YARD.

To the American Breeder:—House conveniences to save work and increase the attractiveness of the home are now essential on a modern farm. A good bath tub, with hot and cold water from the kitchen range, and a good drainage and sewage-disposal system are not expensive and are within the reach of every up-to-date farmer. Water should be piped to the house, and the windows and doors should be carefully screened to keep out flies and mosquitos.

The yard around the home should be made attractive and beautiful with trees, grass and flowers. They have a restful and uplifting influence on any tired soul, and greatly increase the value and salability of the property, while the cost of planting and care is trifling.—A. F. Woods, Dean, Department of Agriculture, University Farm, Minn.

### THE BUYING OF FRUIT TREES.

To the American Breeder:—The commercial fruit grower and the farmer fruit grower, in particular, have suffered from careless buying of fruit trees from irresponsible tree dealers and agents. Many are induced to purchase because the trees are offered at a low price, so low in fact that the reputable nurserymen cannot afford to grow them and sell them at the price quoted. The difference in cost between first-class trees and culls is insignificant when we consider that the trees planted are to grow and produce fruit for a great number of years and that the first cost of the trees is the smallest item that we consider at the time during which the trees are supposed to be productive. Further, the irresponsible dealers and agents are apt to sell any kind of tree, regardless of the variety that is ordered. In other words, they are in the business for immediate gain and not for the future. They seldom appear in the same locality for more than one year.

When a farmer or fruit grower purchases fruit trees, he wants to be reasonably sure that the trees are first class and true to name. The fruit growing industry in Colorado has suffered more from wrong varieties and poor quality of trees planted than from any other source and it is a sad fact that most of the orchards, commercial and otherwise, consist of a mixture of more or less worthless varieties for which there is little or no demand.

The best tree for planting is a yearling one, straight and unbranched. It should have a well developed root system and be free from crown-gall and other diseases which are apt to be transmitted to other trees in the orchard. While it is difficult for the average farmer to tell whether his trees are free from diseases or not, he can easily tell whether the roots have a clean appearance and free from gnarls or knots and hairy roots. Two and three year old trees should never be bought, as they are harder to start to grow and difficult to prune to a desirable shape, as the branches are already formed in the nursery, where they grow under crowded conditions. Yearling trees are easy to obtain, especially from western nurseries, though more difficult to obtain in the

east, where the growth is slower and yearling trees are hardly large enough to sell. Fruit trees are sold by diameter, regardless of shape. In other words, size is the standard by which the nurseryman sells his trees, and when two or three year old trees are bought, they are headed to suit the nurseryman but not always the grower.—E. P. Sandsten, Colorado Agricultural College.

### WHAT MAKES MILK, BUTTER AND BEEF FAT YELLOW.

That the rich yellow color demanded by the public in dairy products is primarily due to the character of the cow's feed is demonstrated by recent experiments carried on by the United States Department of Agriculture in co-operation with the Missouri State Experiment Station. For some years dairy experts have been studying this question. Their conclusion is that, although to some extent a breed characteristic, the intensity of this yellow color may, within certain limits, be increased or diminished at will by changing the animal's rations.

Chemical tests show that the yellow pigment in milk consists of several well-known pigments found in green plants. Of these the principal one is carotin, so called because it constitutes a large part of the coloring matter of carrots. The other yellow pigments in the milk are known as xanthophylls. These are found in a number of plants including grass, but are especially abundant in yellow autumn leaves.

These pigments pass directly from the feed into the milk. This explains the well-known fact that fresh green grass and carrots increase the yellowness of butter. On the other hand, a large proportion of these pigments is deposited in the body fat and elsewhere in the cow. When the ration is changed to one containing fewer carotin and xanthophyll constituents, this hoarded store is gradually drawn upon and in consequence the yellowness of the milk does not diminish so rapidly as it otherwise would. This yellowness increases, however, the instant the necessary plant pigments are restored to the ration. Green grass is probably richer in carotin than any other dairy feeds.

In cows of the Jersey and Guernsey breeds the body fat is frequently of such a deep yellow color that some butchers and consumers look with disfavor upon beef from these breeds. For this prejudice there is absolutely no justification. The yellowness of the fat springs from the same causes as the yellowness of the milk fat, and there is no reason for objecting in one case to the very thing that is prized in the other.

### PATTERNS FOR WOMEN AND CHILDREN.

**SPECIAL ANNOUNCEMENT.** We will forward, on receipt of 5c, the Winter number of the Home Dressmaker, illustrating the latest embroidery designs as well as hundreds of designs of garments for Misses, Women and Children, and containing two pages of hints on Home Dressmaking.

**1211. Dress for Misses and Ladies.** Cut in four sizes: 14, 16, 17 and 18 years, for misses, and in 4 sizes for ladies: 36, 38, 40 and 42 inches bust measure. It requires for a 16-year size 3 3/4 yards of 44-inch material for the overdress, and 5 3/4 yards of 27-inch material for the underdress. For a 36-inch size it requires 3 3/4 yards of 44-inch material for the overdress and 6 1/2 yards of 27-inch material for the underdress. Price 10c.

**1180-1178. Ladies' Costume.** Waist 1180 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1178 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. ## This Girl Could Not Walk or Stand

—at the age of four

Pink Vosburg, daughter of Mrs. Sula Vosburg, Bedford, Ia. Mrs. Vosburg brought her daughter to this Sanitarium January, 1911, for treatment of Infantile Paralysis. The child could neither walk nor stand alone, but could only crawl on her hands and knees. She was here eight months; now walks, goes to school and gets about splendidly. Mrs. Vosburg will affirm the above. This is not a selected case, nor are the results unusual.

### The L. C. McLain Orthopedic Sanitarium

is a thoroughly equipped private sanitarium devoted exclusively to the treatment of crippled and deformed conditions, such as Club Feet, Infantile Paralysis, Hip Disease, Spinal Diseases and Deformities, Wry Neck, Bow Legs, Knock Knees. Let us advise you regarding any crippled, paralyzed or deformed child or person in whom you may be interested. It will cost you nothing, and in view of over 30 years' experience in this work, our advice should be valuable. Our Pamphlets and Book of References will be sent postpaid and free of all charge, on request.

The McLain Orthopedic Sanitarium  
858 Aubert Avenue, St. Louis, Mo.

### THE ACORN LANTERN

Storm and Rain Proof

Absolutely Wind, Bog and Dust Proof. Burns 15 hours on one filling, costs 1/4c per hour, made to stand hard knocks. Farmers, livery barns, garages, watchmen, store-keepers, every one, buy at sight. AGENTS MAKE MONEY—Men and Women. Quick, easy, sure, every home a prospect—Write Quick.

ACORN BRASS MFG. CO. Dept. 12 CHICAGO, ILL.  
Mfgs. Gasoline Lights, every description, for every purpose.

## REGAL

To Men of Financial Responsibility and Sales Ability Comes Opportunity

Touring Car \$1085 Roadster

### The New Regal

You know the REGAL as a good automobile—not just a common, ordinary car—but a STRONGER, BETTER-BUILT, BETTER-LOOKING, MORE EFFICIENT and economical vehicle for transportation.

Frankly speaking: Wouldn't you like a local agency for a car like THIS—backed by a big factory and a masterful organization of progressive, brainy men?

By REGAL'S constant co-operation and your earnest effort it can be made to pay you well. The REGAL proposition is very liberal.

SOME EXCELLENT TERRITORY IS OPEN. It is well worth your while to investigate at once.

REGAL MOTOR CAR CO.

216 PIQUETTE AVE.

DETROIT, MICHIGAN

## Sunshine Lamp

300 Candle Power **FREE**

To Try In Your Own Home

Turns night into day. Gives better light than gas, electricity or ordinary lamps at one-tenth the cost. For Homes, Stores, Halls, Churches. A child can carry it. Makes its light from common gasoline. No wax. No chimney. Absolutely SAFE.

**COSTS 1 CENT A NIGHT**

We want one person in each locality to whom we can refer new customers. Take advantage of our SPECIAL FREE TRIAL OFFER. Write today. AGENTS WANTED.

SUNSHINE SAFETY LAMP CO.  
204 Factory Bldg., Kansas City, Mo.

## Horses & Mules

increase in value  
when  
**Clipped**

Not only in selling price but in working value. You don't go at the spring work with your winter clothes on—then why expect the horse to do so—he feels the warm weather just as much as you do. Clip off his heavy coat that holds the wet sweat and dirt. It will give him new life and energy. He'll rest better, feel better, work better and repay you many times for the little it requires to clip him. Pays also to clip the udders and flanks of your cows—prevents dirt from dropping into the milk. The best and most generally used clipper is the
